CONTENTS

CONTRIBUTED PAPERS

Reference books of 1905: third supplement to the A.	
L. A. "Guide"	Alice B. Kroeger 1
Library work for the blind	E. E. Allen 3
Special libraries	R. H. Whitten 12
Methods of bookbuying	{ Theodosia Macurdy, F. H. Whitmore, Mary L. Lamprey 17
How a small library supplies a large number of people with books	Mary L. Titcomb 51
An innovation in library meetings	Lutie E. Stearns 55
Library legislation in 1905	Asa Wynkoop 57
The library in the community	E. C. Richardson 107
The organization of a library in a small town: a personal experience	Eliz. D. Renninger 112
Opportunities for bibliographical work	W. C. Lane 118
Methods of school circulation of library books	G. T. Clark 155
Is there a need for instruction in library methods by the normal schools and universities?	F. B. Cooper 157
A library course given to city normal school students. Princeton preceptorial system and the university li- brary	Linda M. Clatworthy 160
School work of the District of Columbia Public Li- brary.	V. L. Collins 163
Systematic instruction in the use of the library at Grand Rapids, Mich.	G. F. Bowerman 165
Library and school work in Newark, N. J.. . . .	May G. Quigley 166
Books and life	Marjary L. Gilson 167
The Library of Congress classification and its printed catalog cards	E. A. Birge 203
The use of printed cards in the Northwestern Uni- versity Library	F. C. Hicks 255
The printed catalog cards of the Library of Con- gress: further comparisons of use	Lodilla Ambrose 257
Further notes on the number of catalog cards to a book 260
Practical bibliography: notes on the making of printed book lists	W. W. Bishop 270
Remarks on the art of using a library	Augusta H. Leyboldt 303
The business end of a library	Louise Connolly 308
Book lists and bulletins in the children's rooms	Annie A. Pollard 311
United States public documents and their catalogs	Alice G. Whitbeck 316
Library Association of the United Kingdom, An- nual meeting	Edith E. Clarke 317
Address of the President: One phase of library de- velopment 324, 720
Library progress in Rhode Island	Frank P. Hill C3
The library as a factor in modern civilization	H. L. Koopman C10
Subjects fit for fiction	W. H. P. Faunce C18
The librarian of the desert	Owen Wister C20
The relation of libraries to municipal government	H. L. Koopman C25
The public library as a municipal institution, from the administrative standpoint	David L. Boody C28
The song of the library staff	H. G. Wadlin C30
The basis of taxation for public libraries	Sam Walter Foss C35
	J. H. Canfield C36

GENERAL ARTICLES:

Report of the Librarian of Congress . . .	18	Association of Law Librarians	324
Bibliographical Society of America . . .	19	Bibliographical Society of America . . .	667, 773
Interstate meeting of Southern libraries . .	21	No help for it	671
Bulletin work of the Plainfield (N. J.) Public Library. <i>Emma L. Adams</i>	23	Labor papers, 1827-1837	671
Carnegie Free Library, Alliance O. <i>Louise Russell</i>	24	The annual meeting of German librarians .	672
Service of the public library	25	A library problem	673
Is a library a monument?	26	Net prices in Great Britain	674
Italian literature in American libraries . .	26	New York Library Association "Library week"	675
Ontario Library Association	59, 220	American libraries through New Zealand eyes.	715
Proposed prohibition of importation of copy-right books	60	The conference and the press. <i>Herbert O. Brigham</i>	715
American Library Institute	71	The public library as an aid in Sunday school work	717
Andrew Carnegie's gifts for library purposes, 1905	72	Greensboro (N. C.) Public Library: Carnegie building. <i>Bettie D. Caldwell</i>	718
"For information only"	73	The Krupp Library at Essen, Prussia. <i>Frank Weitenkampf</i>	719
Carnegie Institution grants	73	"Library week" at Twilight Park, 1906 . .	722
Atlantic City Library meeting	74, 172	Inscription for a library. (Poem.) <i>John Russell Hayes</i>	768
Supervision of libraries in Iowa state institutions	74	The Frederick Ferris Thompson Memorial Library building. Vassar College	769
The public library's aim in bookbuying . .	119	Bryn Mawr College Library. <i>Isadore G. Mudge</i>	770
Carnegie library gifts.	123	Architectural program for Brooklyn Central Library building. <i>Prof. A. D. F. Hamlin</i> .	771
Free mail transmission of library books. <i>A. E. Bostwick</i>	124	Education Building and State Library at Albany	772
"The Pseudonyms" discuss the universal catalog	124	French Library Association.	774
Bill for a library post	125	Carnegie Founder's Day	774
The library of the New York Metropolitan Museum of Art	125	Madison (Wis.) Free Library building . .	812
Suggestions on forming a professional library for teachers. <i>C. A. Scott</i>	168	Catalog game played in the Young People's room, Free Public Library, New Haven, Ct.	815
How may teachers lead children to read good books. <i>P. W. Kauffman</i>	170	<i>Gertrude Fitch White</i>	816
A children's room of the Pittsburgh Carnegie Library	170	Children and the public libraries. <i>Montrose J. Moses</i>	816
Importation clauses in proposed copyright bill. Library copyright league	171, 172	Books suitable for Christmas gifts . . .	816
Proposed association of French librarians .	173	Poole's Index Supplement	816
Libraries of historical societies	212	A conglomerate in periodicals: The Methodist Review. <i>J. C. Thomas</i>	817
Destruction of San Francisco and other California libraries	213	Social Education Congress, Boston, Mass., Nov. 30-Dec. 2, 1906	817
Library reform in France. <i>J. I. Weyer</i> . .	215	Library receipts and expenditures. <i>Willis K. Stetson</i>	819
A national library for the blind	218	The public library for scholars. <i>Charles F. Lummis</i>	819
Dr. Richard Garnett	218		
The Milton (Mass.) Public Library . . .	219		
Greenwood's library for librarians . . .	272		
Report on damage to California libraries by earthquake and fire	273		
Financial condition of German libraries .	274		
Library associations in Denmark and France.	274		
Library and education conference at Birmingham	275		
Copyright bill introduced into congress . .	275		
National Association of State Libraries . .	275		
Library round table meetings in New York State	276		
American Library Institute	277		
The reading public	277		
Books of 1905 recommended for a village library	318		
"Library week" of New York Library Association	319		
Hearing on the copyright bill	320		
Dr. Richard Garnett	323

THE LIBRARY JOURNAL

VOL. 31

JANUARY, 1906

No. 1

IN reviewing the library record of the year just past, the Portland Conference of the American Library Association stands out as the leading incident, not so much, perhaps, in its immediate and intrinsic importance as in its effect as a stimulus to library advance in the Pacific Northwest and to the broader national development of the Association itself. Only twice before in the thirty years of its existence has the American Library Association held its annual meeting west of the Mississippi River; the 1905 conference, with its transcontinental journey for nearly two hundred Eastern delegates, its wonder trips to Alaska and the Yellowstone, and its flying visit to California, has brought new interests and new activities into the Association and makes it evident that the West and the Pacific Coast are henceforth to be counted upon for a fairer proportion of conference meeting places. In its immediate activities the Association has extended its work; the *A. L. A. Booklist*, after a year's existence, has proved its usefulness, has added new features, and is now distributed free to all members; plans for the establishment of a central office have been framed more or less explicitly; and efforts have been continued through the assistant secretary to secure maintenance funds for the projected headquarters. The membership of the Association has been considerably increased, and it is probable that the next conference, which will be held at a summer resort near the center of Eastern library activities, will bring out an attendance unprecedented in *A. L. A.* records.

DEVELOPMENT of library interests in the several states has been notable, through commissions, state associations, and courses of instruction. The League of Library Commissions has given greater unity and strength to the work of the commissions, and its closer relations with the Publishing Board of the *A. L. A.* has had a most useful influence. State and interstate meetings continue to increase in frequency and at the same time in attendance. The joint

meeting of the library associations of the Pacific states, held in connection with the Portland Conference, the effective meetings of the California Library Association, and the energetic beginnings of commission, association and instruction work in Washington and Oregon, are bright auguries for the future. In the South library development has been particularly marked. The opening of the Southern Library School in the Carnegie Library of Atlanta meets a well defined need and must materially raise standards of library efficiency. The Florida Library Association, formed several years ago by members of the Southern Educational Association, gives promise of more independent activity; and Virginia adds to the chain of state library associations an organization differing somewhat from its sister bodies in its close relation to the state library.

MARKED evidence of this Southern library advance was given at the recent interstate meeting arranged by the Georgia Library Association. Ten Southern states were represented, six of them by officers of their state library associations, and from all came reports of new libraries and of efforts toward improved conditions and equipment. Discussion centered upon the proposition offered by the Tennessee Library Association for the organization of a Southern Library Association, with the result that it was decided that such action was inexpedient at this time. It is to be hoped that this verdict may be regarded as decisive, and that the Tennessee association may withdraw from its position as sponsor of the proposed organization. The history of library development so far has gone to show that strong state and local associations, working in harmony with one another and with the national association give the most effective system for the transmission of library energy. A state association should be the body best qualified to understand and advance the library interests of its own state; joint or interstate meetings allow for a wider interchange of experience and opinions among the librarians.

ians of neighboring states; while the American Library Association conferences give the widest fellowship and lead to a broader view of library problems and conditions. A series of sectional associations—Northern, Western, Southern, Southwestern, the names might be multiplied indefinitely—seems to offer no broader opportunities than are afforded already, while it would divert from the state associations time, energy, and interest that could be ill spared from state work. The adoption by the Southern librarians of a resolution looking toward the holding of the national conference in Asheville in 1907 has on this account special importance, as it indicates the most effective means of strengthening the bonds of fellowship and sympathy between the A. L. A. and the Southern state associations—nearly all of which have been organized since the Atlanta Conference of 1899—and of giving to the national body the stimulus and example of Southern enthusiasm and library spirit.

IN its personal record the year was marked by the retirement of Mr. Dewey from the headship of the New York State Library, and the appointment as his successor of Mr. Edwin H. Anderson. Just a year ago the JOURNAL chronicled the retirement of Mr. Anderson from the Carnegie Library of Pittsburgh, which he had administered with high efficiency from its organization nearly ten years before. It was then believed that his connection with the library world had been permanently given up, and it must be cause for sincere satisfaction to all who have library interests at heart that he has been prevailed upon to return to his chosen field in a post where his capacities and abilities should find ample opportunity. With Mr. Anderson as head of the state library and director of the library school, and Mr. Wyer as his able lieutenant, fears for the future of the school should be set at rest, and it will be felt that the library interests of New York state—which to a marked degree affect the library interests of the entire country—are in safe hands. The New York appointments emphasize again the wisdom of making professional fitness an essential requirement in library appointments. Examples to the contrary have not been wanting, notably in the

case of Los Angeles, where the library has received unenviable notoriety during the year owing to the summary removal of the librarian; and, in somewhat different fashion, in the little city of Owatonna, Minnesota, which has given the interesting example of an entire community demanding the retention in office of a librarian displaced for insufficient reasons and in direct opposition to the expressed desire of the public.

THERE were no remarkable additions to library literature during the year. Courtney's "Register of national bibliography;" the second volume of Evans' "American bibliography;" the beautiful catalog of the Hubbard collection, issued by the Library of Congress; the bibliography of "Writings on American history," brought out by the Carnegie Institution; and the third part of the bibliography of "State publications," covering the Western states and territories, stand among the bibliographical publications of first importance. In the more general field, the Chicago Library Club has made a useful contribution to local library history in its handbook of Chicago libraries; the pamphlet "Leather for libraries," issued by the Library Association of the United Kingdom, contains information of practical value; and the A. L. A. Publishing Board is represented by two extremely useful little manuals—on "Cataloging for small libraries," by Miss Hitchler, and on "Essentials of library administration," by Miss Stearns. The *Cumulative Book Review Digest* was started, as an ingenious periodical presentation of current book reviews, intended to aid librarians in book selection; the "Readers' guide to periodical literature" appeared in a five-yearly cumulated volume, covering less material than the five-yearly Poole but in more effective index form; while the *Library Index* appeared in an experimental form, as a monthly and quarterly continuation of the Poole series. The Library of Congress cards are still to be counted as the most important enterprise in current bibliography; and Mr. Putnam's last report shows that this undertaking has now passed the experimental stage and has justified its permanent maintenance as a national service to the libraries of the country.

REFERENCE BOOKS OF 1905: BEING THE THIRD SUPPLEMENT TO THE A. L. A. "GUIDE TO REFERENCE BOOKS"

BY ALICE B. KROEGER, *Drexel Institute Library.*

THE year's publications in reference books include a number of new editions of old standard works, more or less thoroughly revised—some of which are omitted owing to the slight revision of their contents—several important contributions in the line of indexes to periodicals and public documents, and several important bibliographical works, besides many small general reference works of more or less importance. A series of reference books published in England by Routledge (N. Y., Dutton) under the general title of "Miniature reference library" has been omitted, as the volumes are of very small size (64°), which would make it impracticable to shelve them in a reference department. They belong rather to the student's desk. The subjects covered by this series are those about which there are many inquiries. These can generally be found in other and larger works.

ENCYCLOPEDIAS

"Collier's self-indexing annual, 1905" (N. Y., Collier, 1905, \$5), is the first issue of what appears to be a useful reference book. The discontinuance of Appleton's "Annual" and the "International year-book" makes the new annual doubly welcome. The illustrations are one of its chief features. The events of the year in politics, economics, science, arts, sports, education, etc., are set forth in an interesting way. The arrangement is alphabetic and there is at the beginning an excellent sketch of the year 1904.

THEOLOGY

"The blue book of missions for 1905," edited by Rev. H. O. Dwight (N. Y., Funk, 1905, \$1), gives the most recent statistics and facts regarding missions and missionary societies.

SOCIOLOGY

Census.—Two special reports have been issued by the Census Office. They are: Street and electric railways, 1902, Mines and quarries, 1902 (Wash., 1905, 2 vols.), and Central electric light and power stations, 1902 (Wash., 1905).

Post-Office.—"A postal dictionary," by Edward St. John (N. Y., Grafton Press, 1905, 25c.), is a very small but convenient handbook, giving in alphabetic order information in regard to postal rates, laws, and regulations.

Commerce.—"The British trade year-book" for 1905 (Lond., Murray, 1905, 10s. 6d.), covers the 25 years from 1880 to 1904. It shows the course of British and international trade by giving yearly averages during each successive decade. Chiefly of value for the British statistics.

"Philips' mercantile marine atlas" (Lond., Philip; N. Y., Hammond, 1904, 63s.), is a work of much value in a reference department. It is a series of 30 fine plates which contain over 100 charts and plans, with tables of 8600 distances between ports, national and house flags, lists of British and U. S. consulates and an index of 20,000 ports, of use to merchant shippers, exporters, ocean travellers, etc.

Customs.—McCurdy's "Holidays; a bibliography of articles relating to holidays," is a useful list of references including mention of lists contained in library bulletins and special lists, published in the *Bulletin of Bibliography*, vol. 4, Oct., 1904-July, 1905. A small edition of a reprint of this list was published, but is now out of print. As the *Bulletin of Bibliography* is to be found in most libraries the list will prove helpful to many seekers after material on the holidays.

PHILOLOGY

Wright's "English dialect dictionary" (Lond., Frowde, 1898-1905, 6 vols.), has been completed. The last volume contains a bibliography and a supplement.

The publishers of Grimm's "Deutsches wörterbuch," which has been issuing very irregularly and at long intervals, have this year brought out volume 10, part one.

Fernald's "Connectives of English speech" (N. Y., Funk, 1904, \$1.50), deals with the correct usage of prepositions, conjunctions, relative pronouns and adverbs.

Loring's "The rhymers' lexicon" (Lond., Routledge; N. Y., Dutton, 1905, \$2.50, 7s. 6d.), is a work similar in purpose to the well-known Walker's "Rhyming dictionary." The words are grouped according to the accented vowel sound.

Farmer and Henley's authoritative work, "Slang and its analogues," which was completed in 1904, has been condensed by the compilers into one volume, entitled "A dictionary of slang and colloquial English" (Lond., Routledge; N. Y., Dutton, 1905, 7s. 6d., \$2.50). It is the best one-volume work on slang.

SCIENCE

Natural history.—Champlin's "Young folks' cyclopædia of natural history" (N. Y., Holt, 1905, \$2.50), is uniform with the other Champlin "Young folks' cyclopædias," and is valuable in a general reference library for the convenience of arrangement. The cyclopædia covers the entire animal kingdom in an elementary manner, the articles being put under the popular nomenclature. It is illustrated.

USEFUL ARTS.

The eighth revision of the "Pharmacopœia of the United States" is issued by the United States pharmacopœial convention of 1900 (Phil., Blakiston, agents, 1905, \$2.50).

Military and Naval.—Wisser & Gauss' "Military and naval dictionary" (N. Y., Hamersly, 1905, 50c.), is a condensed manual of modern military and naval terms.

Sports.—The "Sportsman's year book for 1905" (Lond., Newnes, 1905, \$1.25), contains the record for the year in regard to horse-racing, cricket, foot-ball, motor racing, motor boating, polo, lawn-tennis, croquet, hockey, lacrosse, amateur athletics, rowing, coursing, cycle racing, and yacht racing. English sports only are recorded, so that the book is of limited use in American libraries. There is a large portion of the volume devoted to biographies of well-known English sportsmen and sportswomen.

FINE ARTS

One of the most important reference books of the year is "The Royal Academy of Arts; a complete dictionary of contributors and their work, from its foundation in 1769 to 1904," compiled by Algernon Graves (Lond., Graves; N. Y., Macmillan, 1905, \$11 net per

vol.), of which volumes 1, 2 and 3 are ready. The work will be completed in 12 volumes. It gives names of artists, their addresses, states whether the artist is painter, sculptor, etc., and gives a list of exhibits arranged by dates. The *Nation* says of it: "an admirable labor, generously executed."

The Library of Congress has added to its other important publications a "Catalog of the Gardiner Greene Hubbard collection of engravings, compiled by A. J. Parsons" (Wash., Gov. Print. Office, 1905), which is of value in a reference library for the biographical and bibliographical notes, as well as for the dates and schools of the engravers.

LITERATURE

Allusions.—Bombaugh's "Facts and fancies for the curious" (Phil., Lippincott, 1905, \$3 net), is a work similar to his "Gleanings for the curious" (issued in 1890), and contains a great deal of miscellaneous information frequently required in reference departments to answer unimportant queries.

Quotations.—Gray's "Toasts and tributes" (N. Y., Rohde & Haskins, 1904, \$1.25), "is intended to deal with the social and domestic relations of life." A subject and title index and an author index add to its usefulness.

Latham's "Famous sayings and their authors" (Lond., Sonnenschein; N. Y., Dutton, 1904, \$2), is a collection of historical sayings in English, French, German, Greek, Italian, and Latin, and includes dying words, bon mots, etc.

Fiction.—The Free Public Library of Newark, N. J., has issued a useful list bearing the title "A thousand of the best novels" (Newark, 1904).

Concordances.—An important work is Sheldon & White's "Concordanza delle opere italiane in prosa e del canzoniere di Dante Alighieri" (Oxf. University Press, 1905, \$12). It will not be needed in the small public library, however.

HISTORY

A new revised edition of Chevalier's important "Répertoire des sources historiques du moyen âge; bio-bibliographie" (Paris, Picard, 1905), has been begun, four parts (A-I) having been issued during the year.

Harbottle's "Dictionary of battles" (Lond., Sonnenschein; N. Y., Dutton, 1905, 7s. 6d.;

\$2.00), is brought down to the present time, including some mention of battles of the Russo-Japanese war. Of course, there are some inaccuracies and omissions, but it is nevertheless a helpful compendium.

United States.—That very useful compilation entitled Townsend's "U. S., an index to the United States," has been long out of print. It is now re-issued with changes under the title "Handbook of United States political history for readers and students" (Bost., Lothrop, 1905, \$1.60 n.), and is brought down to date. Every public library should own a copy of this book if it has not the original "U. S."

GEOGRAPHY

The United States Geological Survey bulletins contain many numbers which are valuable as reference books. Bulletin no. 258 is on "The origin of certain place names in the United States" (2d ed., Wash., 1905, free), by Henry Gannett.

A work that has long needed revision is "Lippincott's gazetteer." The new edition bearing the title "Lippincott's new gazetteer, edited by Angelo Heilprin and Louis Heilprin" (Phil., Lippincott, 1906, \$10 sheep), is a thorough alteration of the old work which for so many years bore the name of Joseph Thomas as editor. Many new place names have been included and the information has been brought down to date. It is a necessary addition to the reference collection in public libraries.

BIOGRAPHY

German.—A German "Who's who" bears the title "Wer ist's? unsere zeitgenossen" and is by H. A. L. Degener (Lpz., Degener, 1905, 9.50 m.). Names of prominent persons of other countries are included as in the English "Who's who," but this is unimportant compared with the German portion. There is a collection of about 2600 German and Austrian pseudonyms.

American.—"The book of Chicagoans," by J. W. Leonard (Chic., Marquis, 1905, \$8.50), is a biographical dictionary of leading living men of Chicago modelled after "Who's who in America."

Special classes: Artists.—"The Artists' year book for 1905-06" compiled and edited by A. N. Hosking (Chic., Art League Pub. Assoc., 1905, \$2.50), is the first issue of a refer-

ence book in which may be found brief facts regarding 2500 living artists presented in much the same way as those given in "Who's who."

Authors.—A new edition (the fifth) of Adams' "Dictionary of American authors" (Bost., Houghton, 1905, \$3.50), contains a supplement of 146 pages, including more than 2800 additional names. This is about 1300 more names than the supplement to the 4th edition.

Musicians.—A brief supplement of about 50 pages has been made for Baker's "Biographical dictionary of musicians" (N. Y., Schirmer, 1905, 25c., pap.).

Saints.—Dunbar's "Dictionary of saintly women" (Lond., Bell; N. Y., Macmillan, 1905, 2 vols., \$8), contains facts and legends concerning Catholic women saints.

PERIODICAL INDEXES, LISTS, ETC.

The Library Index to Periodicals and Current Events is the new monthly periodical index (N. Y. Publication office, 1905, \$3 per year), of which the first number appeared in January, 1905. It is an author, title and subject index to 40 periodicals, including also an index to the dates of principal events, constituting an index to daily newspapers. The index has a quarterly cumulation which is, however, issued separately (with the monthly index \$2 per year, separately \$3 per year). The plan for the coming year is to include these quarterly cumulations with the subscription to the monthly index.

The first supplement to the "Abridged Poole's index" (Bost., Houghton, 1905, \$5), covers the contents of 37 periodicals for five years, 1900-04.

The first volume of the five-yearly "Reader's guide to periodical literature" (Minneapolis, Wilson, 1905, \$15), is a consolidation of the *Cumulative Index* and the *Reader's Guide* and includes the years 1900-1904. Sixty-seven periodicals are indexed very fully under authors, titles and subjects. Book reviews are indexed and mention is made of maps, portraits, and illustrations. A very thorough index.

Ringwalt's "Briefs on public questions with selected lists of references" (N. Y., Longmans, 1905, \$1.20), is a series of argumentative briefs and lists of references on 25 of the most important questions of to-day, including

political, economic and sociological subjects. This volume does not duplicate altogether the subjects in "Briefs for debate," by Brookings and Ringwalt (1897), and is much more recent.

SOCIETIES

A new edition of the Smithsonian Institution "International exchange list" is corrected to September, 1903 (Wash., Smithsonian Institution, 1904).

GOVERNMENT DOCUMENTS

United States.—The Free Library of Philadelphia has issued a "Selected list of United States public documents specially useful in a small library," prepared by W. R. Reinick (Bulletin, no. 6), which is arranged under subjects.

A second edition of Wyer's "U. S. Government documents in small libraries" (Madison, Wisconsin Free Library Commission, 1905, 15c.), is revised and enlarged. The notes and explanations make this a more helpful list for the small library than the preceding.

The 10th "Consolidated index" of U. S. documents, which appears under the title "Index to the subjects of the documents and reports and to the committees, senators and representatives presenting them, with tables of the same in numerical order," is for the 58th Congress, 1st and 2d sess., Nov. 9, 1903-April 28, 1904 (Wash., 1905).

Bulletin no. 22 of the U. S. Geological Survey is a "Catalogue and index of the publications of the Hayden, King, Powell and Wheeler survey," by L. F. Schmeckebeier (Wash., 1904).

One of the most important of the many valuable catalogs of the Documents Office is its "Bibliography of United States public documents, Department list, no. 1," which is a "List of publications of the Agriculture Department, 1862-1902, with analytical index" (Wash., 1904). It is not only an analytical index, but also a check list of the publications of this department. Reviewed in LIBRARY JOURNAL 30:53.

John G. Ames, of the Department of the Interior, has issued a new "Comprehensive index to the publications of the United States Government, 1881-1893" (Wash., 1905, 2 vols., free), which fills the gap in the series of catalogs of government documents between Poore's "Descriptive catalogue" (to 1881),

and the first volume of the series of "Documents catalogs," issued by the Documents Office. It is arranged in the same manner as the compiler's former "Comprehensive index, 1889-1893" (described in the "Guide to reference books," p. 62), which is included in this new volume, the manner of indexing being different from that of the "Document catalog."

BIBLIOGRAPHY

Early literature and incunabula.—The second volume of Pellechet's "Catalogue général des incunables des bibliothèques publiques de France" (Paris, Picard, 1905), has been published. The first volume appeared in 1897.

NATIONAL AND TRADE

English.—The second volume of Arber's "Term catalogues, 1668-1709 A.D." (Lond., Arber; N. Y., Dodd, agents, 1905, \$70 for set of 3 vols.), has been issued; the first volume appeared in 1903. This is "a contemporary bibliography of English literature in the reign of Charles II., James II., William and Mary, and Anne, edited from the very rare quarterly lists of new books issued by the booksellers of London." It is of great importance to bibliographers.

American.—The "American catalog, 1900-1905" (N. Y., Office of the *Publishers' Weekly*, 1905, \$7.50), differs in size and arrangement from the previous volumes of this important series of trade bibliographies. Instead of, as formerly, appearing in two parts, author-title and subject, this latest volume includes authors, titles, subjects and series in one alphabet. It is made up from the entries of the monthly cumulated lists of the *Publishers' Weekly*. Titles are briefer than those in the earlier series.

A second or supplementary volume contains the full title entries with annotations given in the weekly record of the *Publishers' Weekly* during the years 1900, '01, '02, '03, '04 in five alphabets (\$12 for both volumes, \$7.50 for each separately). The supplementary volume is very useful for the annotations, but would have been easier to consult if there had been only one alphabet.

The second volume of Evans' "American bibliography" (Chic., privately printed for the author by the Blakesley Press, 1904), covers the period from 1730 to 1750.

Livingston's "Auction prices of books"

(N. Y., Dodd, 1905, 4 vols., \$40), the 4 volumes of which have been published at intervals during the year, is a model of promptness in publication. Its aim is to include every important book in the English "Book-prices current," the "American book-prices current," and other sales catalogs. The arrangement is alphabetic and the price, binding, name of sale, or auctioneer, date of sale, etc., are specified. Records of several sales are given for many of the books.

"Price's catalogue of paper-covered books," by Warren E. Price (N. Y., *Publisher and Retailer*, 1905, \$5), is a title-author-subject list, locating edition, publisher, and price of any obtainable paper-bound book.

BIBLIOGRAPHY OF BIBLIOGRAPHY

Courtney's "Register of national bibliography" (Lond., Constable, 1905, 2 vols., 31s. 6d.) has a somewhat misleading title. It is rather a bibliography of bibliography, containing an alphabetic subject list of bibliographies published in England and other countries. There are no notes. Reviewed at length in *LIBRARY JOURNAL*, 30:426-428.

SPECIAL SUBJECTS

The John Crerar Library, Chicago, has published a "List of cyclopædias and dictionaries with a list of directories" (Chic., 1904, 30c.), including books in that library, which is limited in its scope to the social, physical and natural sciences. There is an index of subjects, titles, names of persons, institutions and places.

The Library of Congress bibliographies for the year include a list of references on the United States consular service, a select list of references on impeachment, the Kohl collection of maps relating to America, the Benjamin Franklin papers.

BOOK SELECTION

The first number of the *A. L. A. Booklist* appeared in January, 1905 (A. L. A. Publishing Board, 50c. per year, monthly except June, July, August, September). This list is designed to assist librarians in selecting and buying current books. Brief descriptive and critical notes are given, also prices of books.

A selection is made for small and medium-sized libraries. The later numbers contain brief selected subject bibliographies.

The *Cumulative Book Review Digest* (Minneapolis, H. W. Wilson Co., \$5 per year) the first number of which was issued in March, 1905, is a digest of reviews from 44 periodicals. The cumulation is monthly and the December number will be a full cumulation for the year. The trend of each review is indicated by the signs + and — for favorable and unfavorable.

The League of Library Commissions has issued a "Suggestive list of books for a small library." Part 1, "Books for adults," which is compiled by the Wisconsin Free Library Commission (Madison, Wis., Free Library Commission, 1905), includes 1200 titles.

CHILDREN'S READING

The "Annotated catalogue of books used in the home libraries and reading clubs conducted by the children's department of the Carnegie Library of Pittsburgh" (Pittsburgh, Carnegie Library, 1905, 25c.), is a useful subject list of books for boys and girls, with a list of books for the younger children. There is an author and title index. The selection is popular in character.

LIBRARY CATALOGS

The eighth volume of the "Second catalogue" of the Peabody Institute Library (Balt., 1905) completes the alphabet.

The last volume of the supplement to the "Catalogue of printed books in the British Museum" has been issued, thus bringing down to 1900 this remarkable author catalog, a monumental bibliography.

SPECIAL COLLECTIONS

The "Annual report of the American Historical Association for 1904" (Wash. Government Printing Office, 1905), pp. 651-696, contains a valuable "Report on the collections of material in English and European history and subsidiary fields in the libraries of the United States," by W. H. Siebert, which should prove useful for locating the best collections along those lines. This has also been issued as a separate.

LIBRARY WORK FOR THE BLIND*

BY EDWARD E. ALLEN, *Principal Pennsylvania Institution for the Instruction of the Blind, Overbrook*

WHEN in 1899 I was preparing a paper on "Libraries for the blind," for an audience of librarians supposedly ignorant of the subject,† I found it easy to write; but now when I come to address those who are conversant with the matter I find my pencil much less ready.

When the blind boy Leseur, Valentin Haüy's first pupil, ran to his master with a piece of paper on which the letter "o" had been accidentally embossed crying, "Sir, I can feel it; it is the letter 'o,'" then was put into the master mind of that great man the idea he had been groping for during thirteen years: how to give the blind matter they could read themselves. From that day in 1784 the real education of the blind dates. Dr. Howe, too, in Boston, and Mr. Friedlander in Philadelphia, fifty years later, founded their little schools upon tangible print. In the days when pupils were constantly exhibited to raise money, that which accomplished more than any amount of talking and writing about the needs of the sightless was their reading with their fingers. The education of the blind, then, was made possible by the invention of tangible print and was spread through its instrumentality.

Since those days the printing presses have never rested. Nowhere else in the world are the blind so well provided with embossed books as in this country. Do you realize that the American Printing House for the Blind at Louisville has in its store rooms and vaults today 2407 boxes of stereotyped plates; that it has on hand 3500 volumes of unbound books, and 1000 pamphlets; that it lists for sale 937 titles, which, with other American printing offices listing 386, makes in all 1323 different books and pamphlets obtainable from embossed plates and so capable of indefinite multiplication? How many of these books

may be found distributed in our 39 schools, 12 employment institutions, and 40 public and other libraries, and in private families I have no way of knowing, but I do not deem 110,000 too large an estimate of their number.*

This really large array of books was manufactured either for or by the schools whose function is the education of the blind of school age. School children must have books; modern education is based upon the ability to read. There are text books for study; there are books for collateral reading; then there are books for relaxation and amusement, and others again for exhortation and contemplation. Reading in all these classes the schools have supplied as fast as practicable. Though the reading habit is desirable for everybody, it is particularly so for any who are at all shut in. Those who cannot see are necessarily shut in, and no effort should be spared which will incite them to read much. There is nothing so broadening, so correcting, so fortifying, nay, so saving.

For school pupils I have proved to my own satisfaction that, given a type easily felt and well printed, books in variety and of such kind as young people want, together with the artificial spurs of keeping up an interest in the library and of a few compulsory reading periods, 100 per cent. can be made to read with pleasure to themselves. But outside the schools where 15-16ths of the blind are—how are we to approach adequate library use there? This is another story and far more difficult of realization. The institutions, though they have long been lending books to former pupils and to others who ask for them, are not any longer considered the only or even the best distribution centers, for departments for the blind in connection with public libraries to the number of forty are already in more or less active existence. Enthusiastic librarians are in charge of them and no stone is left unturned to extend their

* Read before a Convention of Workers for the Blind, Saginaw, Mich., Aug. 24, 1905.

† Read before Atlantic City library meeting, March 18, 1899 (L. J., 24:162), and published by the Pennsylvania Library Club as Occasional paper no. 9, July, 1899.

* The Report of the U. S. Commissioner of Education for 1902 gives 105,804 in the libraries of the schools alone.

usefulness. Naturally, with the coming of the free mailing concession, that which was formerly the chief bar to circulation, the problem of book transportation, has been solved. There are even now books enough obtainable to increase this work a hundred-fold, and their variety is already considerable. People who make public clamor of the poverty of embossed literature do not know what they are talking about. "Yes," you may say, "but most of these books are text books." Not so; of the 1323 different embossed books above referred to 957, or nearly three-quarters, are what in distinction may be termed general literature. That which the departments for the blind in public libraries most need to do, then, is to obtain copies of books already published. According to the last report of the American Printing House 16 of these libraries, during the year ending June 30, 1905, spent there \$1859.64 for books. While this is not much, still it indicates the growth of the movement. There are other indications: within the last year a paper on the subject was read at a convention of librarians in Atlantic City, New Jersey;* in the monthly organ *Public Libraries* for April, 1904, there is an article of 15 pages on "Literature for the blind," including detailed accounts of the work of 19 departments of embossed books in connection with public libraries. In the editorial which follows occur these words: "The schools for the blind are public institutions, for the most part, and it would seem that having given the blind person the first privilege of learning to read, the second, of furnishing at least a center where they may continue to enjoy the power of books, would naturally follow as part of the duty of public libraries."

This does follow. But just as in schools it is not enough simply to get together the books, so in general library work for the blind, in order that it may be successfully conducted, the conditions for circulation must be made favorable. The first essential condition is again attractive books in variety, printed in the types which the adult wish and as they prefer them to be embossed; the second, the diffusion of the information that these books may be borrowed without expense to the borrower; the third, a recognition of the fact by

the library authorities that most of the books will have to be sent to the readers; and the fourth, that the work will of necessity employ visiting teachers.

As to embossed types, there are but four needing attention in America—the Boston line type, the Moon system, the New York point, and the American Braille. All that need be said of the line type is that those who learn to read it well when young generally prefer it to any other. This is because it is pleasant to the touch and is unvarying in spelling; but it is unquestionably the least tangible of the systems, and for this reason will probably not endure. Nevertheless, it is represented by a choice though small list of books, and no library should hesitate to obtain some of them. Next, by contrast, Moon's system is by all odds the most readily learned, and because it is so it is not only holding its own but is growing in use and is destined to survive. Schools and school children do not need it, but the majority of the adult blind do, as proved by the experience of some 80 home teaching societies in Great Britain, by the Pennsylvania Home Teaching Society, which has been in existence since 1882, by the four travelling teachers sent out by Massachusetts, and the two by Rhode Island, and by the field officer supported by the Philadelphia school.

According to recent statistics the average age of the blind of Great Britain and Ireland is 49 years and the average age of their becoming blind is 31.* The same is probably true of the blind of this country. We know that great numbers of the adult blind are old and decrepit; that many have lost all ambition and have neither the self-confidence nor the patience to learn to read with the fingers unless urged and helped. If they read at all they must begin with the Moon books, and most of them will need no other. The variety of literature in this system is not yet equal to that in either of the other systems; but the old complaint that all Moon books are religious is no longer justified by fact. Such novels as "John Halifax, Gentleman" and "Ivanhoe" are now appearing in this type. A monthly known as *The Moon Magazine* is announced for 1906; in fact, the advanced first number is already out. In the year 1904 by far the largest circulation of embossed

* Moon, R. C. Books and libraries for the blind. L. J., May, 1905, p. 269.

* Meldrum's "Light on dark paths," p. 155. Edinburgh, 1891.

books from the Philadelphia Free Library was in the Moon system, or 4245 volumes out of a total circulation of 5284.

If the Moon system is required for the majority of adults, so a dotted or point system is needed by the young and the able-bodied. The schools could no more dispense with it than the city of New York, for example, could dispense with its system of rapid transit. A point system is not only writable, but if well and uniformly printed is highly tangible; in fact, it can be read more rapidly than any other. Its invention in 1829 by Louis Braille marks the second great epoch in the history of the education of the blind. There are two point systems in our land, the New York point and the American Braille, each used in prominent schools and each represented in a splendid list of books. Any blind person who has spent two months in acquiring the ability to read in one of these systems can by applying himself for two hours learn to read in the other. Hence, any library pretending to be representative and wishing to increase its usefulness will possess books in both point systems and so double its variety of reading matter. Of course, areas where New York point predominates will give preference to New York point books; so territory preferring American Braille should be supplied first with American Braille books. Not that I believe both systems will survive; I cannot think that the duplication of books in systems so nearly alike need go on much longer. One of these will either prevail over the other or else some third system will take the place of both. I venture to predict, however, that the point system of the future will embody the following principles: 1, ease of writability alike by young and old; 2, facility of correction; 3, greatest number of possible characters within a practical letter base; 4, possibility of reading the maximum length of time without fatigue to the finger; 5, the use of full spelling, of capitals, punctuation marks, and all signs required in printed books, making embossed books models for written work done with slate and stylus.

Any one really conversant with the subject will perceive, I think, the bearing of these propositions and admit their force, except possibly that referring to full spelling in printed books; and I believe upon due consideration any one of open mind will be will-

ing to admit the force of that proposition also. To be able to use contractions and special abbreviations in writing is to be able to save time, labor, and paper—a sufficiently important possibility. Contractions are, therefore, proper in written work and an important adjunct to it. In printed books the only item gained by contracted spelling is space or paper, but the mental labor of the reader is increased. A facile reader whether using eyes or fingers does not read by characters singly, he reads by words and context. Now, any change in the usual feeling of a word—any departure from the customary look of it—requires additional thought, causing a slight hesitation, and so introduces an element of loss. As a matter of fact, by far the best and most facile readers of Braille with whom I am acquainted read most rapidly in books printed with unabbreviated spelling, and these read along as fast and as well as anybody. Dr. Javal, in his recent book "On becoming blind" admits that the reader gains nothing by contractions, his exact words being: "for reading, experience demonstrates that the increase in speed is nil." Now the mass of the adult blind who have once read with their eyes demand that their fingers shall meet with the same unabbreviated spelling. Moon's system has the advantage of full spelling. The teachers of the home societies assure me that their adult pupils, having only the 26 characters to learn to feel, feel them ever so much more readily and hopefully than though they had to stop to commit and decipher characters not represented in common print. And these teachers tell me, too, that their adult pupils of the Braille not only prefer the books printed in full, but generally refuse to make use of any other until driven to do so in order to keep supplied with reading matter. Teachers of the young blind are more and more realizing the importance of making school books models of good English, as was shown at a recent convention of instructors of the blind where several superintendents of schools using the New York point asked for books printed in full, saying that if they could not get them printed they would use the Braille books which are so printed.

Books in two systems, then, will always be needed—a point system for the young and the able-bodied, and the Moon system for all the rest of the 64,763 blind people in the

United States who by any possibility can be induced to read. It is interesting to know and remember that the originators of these two embossed prints were blind men.

Now as to the classes of books desired by adult readers. The conditions under which the work has been conducted so far are not such as to make statistics of circulation of great value. Such as they are, however, they indicate the following order of preference—fiction, history and biography, general literature including poetry, and religion—religion being strong because adults read the Moon books, most of which treat of religious subjects. Public travelling and circulating libraries for the use of the blind must, therefore, give preference to books in these classes.

I have said that library work for the blind is growing rapidly. But unfortunately it is not being started everywhere or even being conducted as I should prefer to see it; when it is done upon the charitable and sentimental basis it is to my mind done wrongly and may do much harm. The blind of any community have the same right to a proportional amount of free reading matter as have other citizens of the community. Then let us say so politely to the proper authorities and have the books obtained. If the desired readers will neither fetch away books from the libraries nor send friends for them in sufficient numbers to justify the outlay for these special departments, the library authorities must upon request send out the books to the readers; and this work the free franking privilege makes possible and practical. Lending libraries for the blind must become sending libraries.* But even this feature is insufficient; each library will have to employ one or more teachers to go to the blind in their homes to teach them to read. Home teaching work is by far the most effective agency to increase the number of readers and the consequent circulation of books. It is a good employment for the blind themselves; they make, in fact, the very best teachers of embossed reading. The states of Massachusetts, Rhode Island, and Pennsylvania have already contributed public funds for this very purpose. Here is a field

of labor open to our people which I for one expect to see enlarged.

I am in close touch with several of the teachers of the home teaching societies and they all corroborate the testimony of Mr. Moore of Philadelphia, one of those longest in the work and one of the most successful, who, when I recently asked, "Do you find it hard to get the aged blind to read?" replied, "Yes, oh yes. They say, 'I am too old to learn and too nervous; it is no use; I couldn't do it.' But if I can persuade them to put their fingers on the Moon card or even the Giant Moon they often find that they can feel it and when they perceive the similarity of the characters to print letters they become interested and learn readily, that is, in a few days." "Are they grateful?" I asked, "are they glad to be able to read again?" and he replied, "Words cannot express their gratitude to me for what being able again to read means to them."

Library work for the blind, then, is as just and proper as it is wise and necessary. Our state schools cannot alone perform it, much less a single library center for the whole country. This fact is recognized in the recent large increase in the number of public libraries which keep embossed books and from which these may be received without delay. It is repositories of books that are wanted, not special reading rooms; the blind even more than most people prefer to read at home. Every means must be taken to advertise the fact that the books are available and that they will be sent out upon request and may be returned without expense to any one. Lists of the books should be published and alphabet cards carried to the would-be readers by special visiting teachers paid out of the library fund. This is not charity; it is simply justice. There is in every community missionary zeal seeking an outlet. This may be set to work writing out single volumes in point print for the blind and so increasing the variety of reading matter for them. The blind of England benefit greatly from such means. This is better and more practical service than getting them in to be read aloud to. The reading of embossed books benefits the blind more than we who have eyes know anything about; except work, it is their chief resource.

* Strongly made "telescope" shipping cases of canvas, as used at the library of the Employment Institution for the Blind, Saginaw, Mich., will be found alike serviceable and economical.

SPECIAL LIBRARIES

By ROBERT H. WHITTEN, *Legislative Reference Room, New York State Library*

THE ideal library is one organized much after the plan of the great university of to-day—not a single school but a cluster of schools around a central school. In the great library the general collection should primarily be used to supplement the special libraries clustered about it. Only in this way will the library begin to perform its most important function—that of so organizing the vast amount of printed material that it can be used in the world's work. In this age of organization there is no field in which such chaos reigns as in that of printed information. We are rich beyond calculation in books, pamphlets, and especially periodicals containing valuable information on every conceivable subject, but how seldom is it available for use in current problems of industry, commerce, finance or government. We are overwhelmed with a wealth of material. The problem is one of organization. The material must be so organized that it can be used by busy men in the settlement of the problem that must be decided this day or hour—by the lawyer preparing his brief, the physician treating a case, the legislator drafting a bill, the engineer or architect preparing a plan, the editor writing an editorial, the business man making an investment.

The present chaos is enormously wasteful. Facts of importance socially and industrially appear momentarily in the current periodical and are then lost in a boundless sea. If organized with similar facts and made readily available they would play a part in the world's work for years to come.

A general library of the ordinary type is no more suited to supply the needed organization than was the old style college to supply the higher scientific, technical and professional education that was demanded. At the great university we now have separate schools of law, medicine, pharmacy, dentistry, veterinary medicine, mechanical, civil and electrical engineering, agriculture, forestry, pedagogy, journalism, library economy, commerce, etc. The number is steadily growing. The former simple organization has given

place to one most costly and complex. The library of to-day is like the college of yesterday—performing a useful function but not very vitally connected with the world's work. Organized, classified and cataloged with reference to general or average wants or uses, it is no more suited to the particular wants of the lawyer, the editor, the legislator or the engineer than was the old style college to the training of the farmer or the electrical engineer.

A special library of course implies a special staff and special methods. It should be in charge of a librarian specially trained in the subject dealt with and having a special interest in and capacity for the organization of information.

The material of the special library will be drawn from every source. Much of the most valuable material in a legislative library, for example, will be drawn from the hundreds of engineering, medical and law magazines, from the public documents of Great Britain, the national government and a few of the more important states, especially Massachusetts and New York, and from reports of the various state and national organizations interested in special legislative problems.

Material when received must be cataloged and arranged with reference to the particular uses served by the collection. Standard universal classifications have necessarily been constructed with reference to the convenience of the average user. The special library serves a special constituency having special problems. Material must therefore be classified around these problems.

Methods of organization will vary greatly with the various kinds of raw material with which the library has to deal. One factor, however, is common to all special libraries—the supreme importance of quick service. By this is meant not merely speed in getting for the reader the particular book asked for, but rather speed in placing desired material before the man who does not know where to look for it. For a library that aims to be a working library for busy men, quick service

is indispensable, a fact as yet very imperfectly realized.

It is a well-known fact that every improvement in cheapness or rapidity of transportation has multiplied the amount of business done. Certain classes of goods are influenced more by cheapness, others by rapidity. In the movement of coal, wheat, lumber, etc., cheapness is the more important factor, while in the movement of fruit, vegetables, meat, milk, express packages, mail, persons and telegrams speed is the more important. Systems of transportation and communication have become a most important and vital element in modern life. The street car, mail and express service, telephone and telegraph are vital factors in every day life. They are performing services in kind and amount unthinkable 50 years ago. This result is most largely due to speed and frequency of service.

Quick service will have much the same effect in increasing the volume of business done by the library that it has had in transportation. Use of various kinds of library material will be multiplied many times when it is made quickly available, and the library will become a vital force in the every day social, industrial and commercial life of the community.

To realize quick service in the special library all information bearing on a particular problem must so far as practicable be brought together in compact form. To do this it is not only necessary to separate volumes of sets and series, but to systematically cut up periodicals and in some cases books in order that articles on the same subject may be brought together. It is information rather than particular volumes or sets that is to be organized.

In the Legislative Reference Room of the New York State Library an experiment in this direction is being made. Important articles on legislative topics are regularly clipped from some 500 engineering, medical, law and general periodicals. They are then placed in manilla covers or pockets of uniform size and filed vertically with other manuscript and pamphlet material in large cases having drawers 21.5 cm. wide by 28 cm. high by 60 cm. long. Material is thus kept clean, compact, and can be consulted most readily.

The clipping of periodicals may seem ex-

travagant but it must be remembered that for a large proportion of magazines clipped only one or two numbers each year contain articles on legislative problems. It is therefore for these much cheaper to buy the numbers than to subscribe for the magazine regularly and have in addition the expense of shelving and binding. As to magazines that contain numerous articles on legislative topics, clipping adds considerably to the expense and for justification must show compensating practical advantages. Suppose a newspaper man wants something on the smoke nuisance. Under old methods he goes to the catalog and finds references to a score of magazine articles and laws on the subject. It then takes perhaps 30 minutes, perhaps an hour, perhaps longer to have all the volumes containing these articles, scattered as they are over a large library, delivered at his table. He looks over a pile and picks out one or two articles that contain the facts desired. Under the system under discussion he goes to the vertical file, picks out a handful of articles on the subject, selects the one or two desired, the whole operation occupying only a few minutes. In nine cases out of ten he only has the few minutes to spare so that the longer method is prohibitive. This is but an illustration of the way in which the use of the library is multiplied by quick service.

In a special library of almost any branch of science or technology periodical literature far outranks all other in importance. All achievements in science and art are recorded in the periodical long before they appear in book form. To the specialist of every kind periodical literature is indispensable. It is to it that he must look for light on every current problem. It is therefore much more important that periodical articles upon a given subject should be brought together, than that books should be arranged by subject rather than by author. The special library is used by busy men in the consideration of problems that often do not admit of long delays for the bringing together of desired material. The clipping and classifying of articles saves the time of the librarian and of the reader and multiplies the use to which the material is put.

To summarize briefly: One of the most important functions of the public library is the organization of the vast amount of printed

material so that it can be used in the world's work. For this purpose the great library should be organized after the plan of the great university—there should be the central library with numerous special libraries clustered about it. The special library should be collected and classified with reference to the special needs served by it. Quick service is of the utmost importance and will result in multiplying use. All material on a given problem should be brought together in compact form, even at the expense of separating sets and cutting up certain books and periodicals. Periodical articles form the most valuable part of the special collection and it is particularly desirable that they should be regularly clipped and arranged by subject.

METHODS OF BOOK BUYING

At the last meeting of the Massachusetts Library Club "Methods of book buying" were considered in a general discussion, based upon short papers read by representatives of three public libraries (see L. J., November, 1905, p. 871). As the papers brought out some interesting differences in practice and point of view they are now presented to a wider audience.

METHODS IN THE BOSTON PUBLIC LIBRARY

It has been said that the buying of books is like the making of friends; more often than not it is a haphazard business, delightful, precarious, fraught with great consequences, expensive, necessary, and sometimes most unfortunate. Be that as it may, the method of buying in a large library may be of interest to those who follow, perhaps, a less formal process. I am not speaking of the book as literature, but as a matter of commerce. The Boston Public Library in its business relations with the booktrade is represented by a special division, which, after the decision of purchase is made, places the orders and conducts the correspondence with booksellers. It is also the channel through which the recommendations for purchase are forwarded to the librarian. These recommendations, which form the basis of the orders, are submitted every week to a book committee of the trustees, and each title is drawn off on a card in the form of a brief catalog entry, containing the price of the book or an estimate of its cost.

Those titles approved by the book committee are incorporated in a typewritten list which is authorized for purchase by the board of trustees. It is the permanent official record. The orders are transmitted to the booksellers in the form of lists, of which duplicates are kept, and the cards—from which

they are finally prepared—are filed alphabetically, and withdrawn when the books are received. A number of clerical details are grouped about this routine, but they are not important.

The particular method of buying is governed of course by the special material to be bought, and varies accordingly as the selections for purchase are made: (1) from current books sent by the booksellers for inspection; (2) from the priced catalogs of books not current; (3) from auction catalogs; (4) from particular material submitted for consideration; (5) from the recommendations of library officials. For although the orders are placed in conformity with a general scheme, each title must be scanned to determine where and with what agent it shall be placed, whether Boston, New York, London, Paris, or Leipzig.

Take, for example, the current books received on approval. Arrangements are made with certain booksellers to send a copy of every new book they may have in stock, subject to return. There are of course omissions, but on the whole a large number of the books of the day are received in this way. They are chiefly in the English language, but a limited number of French, German and Italian books are also sent for inspection. This method obviates the order list, enables one to see the book, to judge of its typographical features in addition to its literary merit, and to make comparison, if necessary. In fact if any title is dubious the book is requested for examination. These current domestic books are supplied at the prevailing prices, in which we all fare alike; the foreign at a stipulated rate, of so many cents to the mark, franc, lira and peseta. Among these books, however, there will always be a certain number of American editions of English books, *i.e.*, books originally published in England and reissued in this country. As you know, Lippincott, Doubleday, Scribner, Dutton, and others are actively engaged in bringing out such books. The question of price at once arises. Is it cheaper to buy the American book which has the advantage of being at hand, or to import the English book with a delay of five weeks? There is no guide to this knowledge save a comparison of prices and the English bibliographies are consulted for the information. It is not found cheaper in every case to import the English edition, but it is in the majority of cases.

For example, of 26 books, all American editions of English publications received at the library within the last two weeks, six were in effect as low priced, or slightly lower, than the English edition, with the shilling reckoned at 23 cents on the list price, which includes all expense. The remaining 20, however, could be imported at a saving of nearly \$6. The Macmillans, for instance, publish the

series of "English men of letters" at 75 cents a volume in this country, or 68 cents to libraries. They publish the same book in London for 2s., or 18 cents less than it can be bought here. The editions are practically the same, possibly the paper in the English edition is of a little better quality. When an order in this series is for 10 copies for the branches, we order them from London and save \$1.80. It is not the single instance which counts for so much, but in the course of a year a careful comparison of prices in these international editions and then consequent ordering has a distinct economical effect on the book funds.

As to auction catalogs. In the large book centers — Boston, New York, Philadelphia — there is on an average a daily sale from October until July. The library receives the catalogs, checks them, determines the bids for such books as it may require, and in all important sales sends an employee to represent it. In minor sales outside of Boston the bids are sent to an agent. But if it is possible the books are examined before they are bought. A book or a broadside may be very enticingly cataloged, but a personal examination will often reveal grave defects. In determining the prices to be offered, which calls for a special sense of commercial values, the records of previous book sales are referred to, also the indexed catalogs of the great booksellers, such as Bernard Quaritch. The new consolidated "Book prices current" gives the history of all the public sales of important books. Special records are kept of the sales in which the library takes part, which yield the number of items bid for annually, the percentage secured, and the amount of money expended. The title of every book bid for and not obtained is filed, with the price which it brought, and serves as a guide should the same item come up again, and the catalogs of all important collections are priced and kept for reference. The auction sale is looked upon as an opportunity to acquire material to enrich many of the large special collections and to fill in the deficient files of newspapers and periodicals. It is not considered an opportunity to recruit the popular collections at the branches, such as correspond most nearly to the libraries of moderate size. Personally, I do not believe that the librarians of small libraries can benefit themselves very much by perusing these catalogs, because they rarely contain books which coincide with their existing needs.

The priced catalogs of remainders and second-hand books afford, however, opportunities common to all of us. They range from juvenile fiction at 15 cents a volume to the bibliographical rarity at thousands of dollars. They frequently contain such good books at such low prices, that the librarian forgets his grievance on account of the limited discount on new publications and turns his attention to the book which has survived a year, or a

hundred years. From them is often obtained the book which was lost at the auction. For instance, a somewhat rare old book which the library wished to possess brought \$190 at a New York auction not long ago, a price which made it prohibitive to us. A few months later a good copy of the same book was bought from a second-hand London catalog for \$80. Another book published last November, Furnival's "Decorative tiles," at £6 6s., or \$31.50, which was not bought then on account of the price, has just been obtained from a remainder catalog for \$8. These, of course, are extreme examples, but they are fresh at hand. Books from these sources are ordered without delay. If rare, important, costly and from a foreign source, the order is cabled direct to the bookseller. Scattering and minor orders are sent to an agent, who collects and forwards the books and charges them on his account at a fixed commission. This refers to foreign dealers. The popular American lists and catalogs are used as far as possible to replenish the needs of the branches, and they frequently catalog desirable books at a low price, especially books of reference.

We have found less use for fiction catalogs since some of the Boston booksellers have begun to keep in regular stock good, well bound volumes of popular fiction, such as Crawford, Henty, Booth Tarkington, etc., which they sell to libraries for 45 cents a volume, all fresh copies. The auction room and the clearance sale both present their spectacular bargains, but after all they are incidental and unbalanced means of obtaining books, and the library has to depend on the established bookseller for the great bulk of those which must be bought from week to week. Most of the domestic books are bought of Boston booksellers, the French and German through a foreign agency in Boston, which secures weekly or semi-weekly shipments, the English direct from London, the non-current German direct from Leipzig, each book with the limit of price named in the order. The London and Leipzig books are forwarded through an international express company, which attends to the clearance at the custom house. So far as is consistent with good service, the orders are consolidated to secure the benefit of rates and discounts. I think I have outlined the general methods of buying in the library. Among minor things, it discourages the book agent, avoids the subscription book, does not send out competitive lists, and does not buy of the department store. It aims to keep on good terms with the booksellers and its reasonable ambition may be paraphrased from the motto of the American Library Association, as being to obtain "the greatest number of books for the largest number of readers at the lowest cost."

THEODOSIA MACURDY,
Order Department, Boston Public Library.

SOME GENERAL PRINCIPLES

The problem of buying would be immensely simplified for any library if its purchases were limited to current publications. The popular conception is, perhaps, that this is the case, but along with the requests which come from borrowers alone are many suggestions for books which the library's agent does not have in stock, or, indeed, for books which may be altogether out of print.

We may safely say, however, that orders for current American books will preponderate and that for the supplying of these books the library should have a regular agent.

Unless the trade is to be distributed for local reasons it will probably be an advantage to deal almost wholly with one firm. There will be only little, if any, variation between different houses in the matter of prices, and with the trade centered in this way the possibility of confusion in orders will be eliminated, there will be a saving of carriage, and in time there will be a better understanding of the needs of the library and the temper of its patrons on the part of the dealer. Many elements will come in to effect the choice of the library agent, but the size and the standing of the house and the intelligence and promptness of the service would seem to be the determining factors.

Every library will settle for itself the nature of the relations thus established between its agent and itself. One may prefer to send selected lists from time to time, another may have books sent on approval, while a third may through its librarian select books for purchase.

Perhaps the best results will arise from a combination of the examination of catalogs and reviews and an examination of the books themselves. Certainly there can be no substitute for the occasional examination of books, before purchase, on account of the almost invariable tendency of the reviewing journals to unduly praise current publications. In order, however, to make the best use of this personal examination, unless one has the books sent to the library for a careful reading, a fairly constant reading of reviews, catalogs and announcements will be necessary.

The librarian will naturally have at hand as many as possible of the trade catalogs, publishers' lists, etc.—what we may call the tools for purchase. All matters of cost and discount will, of course, be left to the agent, but, I believe, that, so far as the library is able to do it, the price of every book ordered should be written on the order slip. This will not only tell the price of a particular book ordered, but will give what is important, at any rate towards the close of the financial year, the aggregate for the outstanding orders.

All this assumes that the orders are for American books. Unless the library agent is an importer the library will have to add perhaps an English, French, German, or Italian

agent. Unless also the American agent has an extensive import trade or has foreign connections there will be a saving to the library in selecting some well established firm, either in this country or in Europe, which makes a specialty of foreign books. Except in those cases where the book is rare or out of print the library will save time by placing the order with some importing dealer in this country and run the risk of his having the book in stock. In the case of books difficult to obtain the library will undoubtedly gain by ordering direct from some large European book center. If a library is filling its deficiencies the need for this is likely to arise constantly, but if the foreign orders are not large or difficult to obtain it will simplify matters to have them in the hands of one or, at least, two agents.

Besides the methods of purchase through the regular library agent there remain at least three other ways, all of which are worth consideration as the need arises. These are: 1, orders from priced catalogs; 2, orders from auction catalogs; 3, personal examination of books at the stores of the second-hand dealers.

1. No library will fail to receive at fairly frequent intervals priced catalogs for books which dealers can supply at once. These catalogs frequently contain bargains which it is worth the while of the library to avail itself of if there is need of anything on the list. There is undoubtedly a standard price which particular books tend to proximate, but different dealers will have different opportunities to come by their books and occasionally there will be a considerable variation in price. A dealer's stock is largely replenished from buying private libraries and from bids in the auction-room. If the prices that he himself paid are low he can in turn afford to sell at a lower figure than some other dealer who has to pay more for his books. But perhaps the chief advantage from buying in this way is that out of print books can be obtained at once and at a fixed price.

2. The sale of books at auction furnishes another method of purchase. We are apt possibly to associate these sales with high prices and with the bids of private buyers. There are many instances, of course, where prices increase, but it is equally true that certain classes of books tend to depreciate in value. Unless a library has a very ample book fund it would hardly be justified in competing at auction for books, the chief interest of which lies in their typographical excellence or for certain coveted first editions. Almost every sale, however, contains material which it is within the province of a library to buy. Material, that is, which will be bid in by the second-hand dealer and perhaps sold again at an advance to libraries. Here is an opportunity to save, provided the bids are carefully made. To make the best use, however, of auction sales requires constant study not only of current, but of past sales, and to do

this extensively would perhaps take more time than the practice would be worth to the library.

In these cases we should certainly have to count the librarian's time as worth something and add this to the cost of the book. In arriving at the value of a book, however, we shall be aided, in a measure, by "Book prices current," but perhaps more by the worth of the book to us, the buyers. The auctioneer will, if instructed, use his discretion in bidding for the library. He becomes in such a case the library agent and can be depended upon to execute the library's orders with fairness and good judgment. Few librarians can personally attend many sales, but the descriptions in the catalogs are sufficiently full for all purposes of identification. Many will find it useful to hold orders for the rarer books until the volumes turn up at auction and then send in whatever bid the library can afford. A certain number of these orders may be allowed to accumulate for a time and if the bid is wisely placed the library will gain by the operation.

3. Finally, there is the method of purchasing by personal examination of the shelves of the second-hand dealers. Here we come to a field which has been made familiar through the pages of Burton, Andrew Lang and Eugene Field. It has, however, besides this special and antiquarian interest to the individual buyer, a distinct use to libraries. Here are oftentimes large collections of books, many of which the library may stand in need of, gathered from many different sources, and usually offered at moderate prices. Libraries will frequently find it desirable to examine the stock and to consult the dealers. These men have a marvellously complete acquaintance with their own collections, a wide acquaintance with the book-market and with book-prices. As a class, few men give themselves more devotedly and unreservedly to their calling, and when we pay them what seems a round sum for some rarity we are, unless we are well posted on prices, doing better than we should by buying at auction, and we pay them therefore for their knowledge and experience.

All of these methods will come in for a share of attention by any library which buys at all extensively. No one can be pursued to the exclusion of the others, without loss.

FRANK H. WHITMORE,

Librarian Brockton (Mass.) Public Library.

A FEW QUESTIONS AND REFLECTIONS

I take it there are three ends to be had in view in buying books—to get what you want, when you want it, with the least outlay in money and labor. I am not here to tell anybody how to do this, but to inquire.

Does it pay for the librarian who does all the work save that of the janitor in her library, who must select and order, catalog and

deliver books, run five weekly deliveries, and instruct classes in the use of reference books, be able at any moment to suit an elderly lady who wants "a new, cheerful book with large print," or the little lover of fairy stories who wants "that book that tells where the hours and the minutes come from and what becomes of all the pins"—does it pay, I ask, for such an one to spend much time in studying bargain lists and hunting auction sales?

If your work is in a little town where only an occasional reader wants a late work on the microscope, does it pay to keep him waiting a couple of months while you import it more cheaply from England? Is it a saving, anyway, when you want to buy a few books, often, to import books at all? I ask, not disputatiously, but for information.

If it is within two weeks of high school graduation and the principal begs you to get Shaw's "Municipal government" for a boy who has an essay to write and learn before that important day, does it pay to have any special system of red tape that must be complied with before you can do it?

Yes, I know you can get Sir John Everett Millais' life now for about half the original price; but we have been enjoying it for these many happy winters, and we had it when people wanted it.

Would it pay to wait till "Mrs. Wiggs" was old enough to be subject to discount before satisfying the demand of eager readers?

Can the small library with only one busy librarian do better than to patronize for the most part its one reliable bookseller, filling in the chinks between the "must-haves" with attractive bargains from the more obvious catalogs?

In a small library the highest duty of a librarian is not to collect, but to dispense. It seems to me so much more important to know your books and your people and bring them together that I have never worried myself much about methods, but have bought what I wanted when I wanted it and when it seemed easiest or cheapest to get it.

I have one rule, which I do not always live up to—never to buy of agents. "It is a poor rule that isn't worth breaking," so I occasionally break this when I think I have sufficiently good reason. Patchwork sets I invariably eschew. "Libraries of universal gullibility" and "World's great humbugs" I show promptly and courteously to the door. They always duplicate a lot that you already have, without giving enough of any one thing to do anybody any good. Mr. W. P. Cutter has said in discussing this general subject: "Never buy encyclopædias as they are coming out." I don't feel so sure about that. But I do feel sure of this: "Never buy a biographical encyclopædia that offers to include your own biography if you take the set, and your portrait for \$5 extra."

MARY L. LAMPREY, *Librarian Ames Free Library, North Easton, Mass.*

REPORT OF THE LIBRARIAN OF CONGRESS

THE report of the Librarian of Congress for the fiscal year ending June 30, 1905, is less extended than its predecessors, covering a little over 300 pages. It records net additions of 68,951 books and pamphlets (22,998 purchased), as against 80,136 in 1904; 6615 maps and charts; 25,934 pieces of music, and 25,273 prints. The total contents of the library, including the Law Library, is given as 1,344,618 books, 82,744 maps and charts, 410,352 pieces of music, and 183,724 prints. Appropriations for the year were \$589,435, including Copyright Office; expenditures, \$587,028.75, of which \$328,353.66 were for salaries (Copyright Office, \$74,662.46), \$99,784.29 for increase of library, \$76,594.95 for care and maintenance, \$32,244.67 for fuel, light, etc., \$39,989.26 for furniture and shelving, and \$2763.05 for Sunday opening. The total number of visitors to the building during the year was 923,116. No statistics of use in the main reading room are given, as it is thought that these are misleading in their inadequate indication of the total use of the library. Ground for this opinion is afforded by criticisms of the undue cost of the library made by a member of Congress, whose figures were obtained by dividing the total library expenditures on all accounts by the number of volumes "circulated" from the main reading room; but it is to be regretted that such misconception should have resulted in so complete a subordination of the department in the year's record. "The number of books sent out on interlibrary loans reached last year 934, as against but one-third of that number during the year preceding."

Accessions made to the collections during the year were notable, in the Division of Manuscripts especially. The "Select list of recent purchases" for the last four years, printed as an appendix to the report, has been discontinued, but important gifts and purchases are fully noted by Mr. Putnam or in the appended reports from the heads of the Law Library and the divisions of manuscripts, maps and charts, and prints respectively. The collection of Orientalia has been increased by the gift from the Chinese government of 198 works in Chinese, comprising 1905 volumes shown in the Chinese exhibit at the Louisiana Purchase Exposition; other gifts, mainly of photographs and reproductions, have been made by the governments of Italy, Germany, and the Argentine Republic.

In the Manuscripts Division perhaps the most important gift was that of the Breckinridge papers, by Miss Sophonisba Preston Breckinridge and Desha Breckinridge. These cover papers of John Breckinridge (1760-1806), John Breckinridge, his son (1797-1841), Robert Jefferson Breckinridge (1800-1871), and his son William Campbell Preston

Breckinridge (1837-1905), estimated as numbering between 25,000 or 30,000, and of great value in their bearing upon the social, political and historical development of American life. Important additions to the Martin Van Buren papers were made by Dr. Stuyvesant Fish Morris, of New York; the archaeological papers of Ephraim George Squier add valuable material in the ancient history of America; and notable gifts of manuscripts have been made by Mrs. James T. Fields, Wendell P. Garrison, and others. It is pointed out that great care is exercised in the custodianship of manuscripts and private papers, in setting aside material personal in character, and in permitting access to the collections only for legitimate and reasonable purposes of study or research. "The most recent papers are naturally kept from general inspection more rigidly than are the collections of manuscripts of the eighteenth century. After a century personalities have lost their sting; contests, political or personal, have been decided, and the sense of injury has become deadened. The questions are now historical questions, and the personal character is of minor importance. With letters of or concerning men still living and still active in public life the precautions just described are applied most carefully, and they are as safe from misuse and far safer from loss than if they were retained in private hands and stored in private houses."

Purchases included considerable collections of manuscripts dealing with American politics and history, an interesting set of manuscripts of the sacred writings of Burma, and important Philippine broadsides. The Jefferson and Madison papers, formerly preserved in the Department of State, have been transferred to the library, where they have effectively rounded out the existing collections. It is pointed out that the library cannot compete in the open market for manuscripts or purchase largely in that direction on account of the various demands upon its funds, and that it is thus seriously handicapped in obtaining desirable and increasingly rare Americana. A large collection of Spanish documents, stored in the office of the United States Surveyor General in Tallahassee, Fla., have been transferred to the library as a permanent deposit. "The papers number 62,224 pieces, with some volumes bound under the Spanish rule. The number of papers in the volumes can hardly be determined as they now are, as the *polilla* busily bored through and through an entire volume, and even the parchment covers until a sheet looks like a bit of lace work. The damage thus done is in some cases irreparable, and forcibly illustrates the risks and dangers attending the care and preservation of manuscripts in semi-tropical or tropical climates where a rainy season and heat favor the development of those destructive pests."

In the Catalogue Division 111,373 volumes were cataloged during the year, and the work of recataloging made material advance. The distribution of printed catalog cards, now in its fourth year, has passed the experimental stage. "The volume of business is now so considerable and growing so rapidly that a rapid increase must be sought in the service and a more elaborate system of record." Much of the increase of sales is due to the demand for cards covering the titles in the "A. L. A. catalog," of which the entire collection may be had for \$154.56. "For this small sum, therefore (less than three months salary of a competent cataloger), a library having or buying this collection may secure the cards for a complete dictionary catalog of it under author and subject. It is little wonder that libraries newly starting or reorganizing should promptly adopt this method of solving the difficult problem of selection and the expensive problem of cataloging." It is estimated that by the use of the printed cards a library saves in cataloging cost from four to seven times the amount paid for the cards. Receipts from sales of these cards amounted to \$16,000 during the year, so that the saving to libraries may be given as from \$64,000 to \$112,000. Mr. Putnam says: "Let us take the mean of this as certainly within the mark. It is \$88,000. The distribution of our printed cards has then directly saved the libraries of this country during the past year not less than \$88,000. This saving is equal to the total sum (\$88,140) expended by the government during the year for the maintenance of our entire force of classifiers and catalogers, 91 in number."

Attention is given to the effort now being made toward a revision and codification of existing copyright laws. The two conferences on the subject held during the year, in New York, are noted, with a list of the delegates, and emphasis is laid upon the importance of securing an authoritative draft, as the result of the counsel and co-operation of every interest affected by copyright provisions.

In conclusion Mr. Putnam submits recommendations for needed legislation, including amendments to the postal law giving explicit free transmission of mail matter to and from the library and to senders of articles for copyright deposit.

The report of the Register of Copyrights, summarized in the main report and given in full in the appendix, records receipts of \$75,058, and expenses of \$75,630.18. There were 113,374 entries of title, the highest number in the history of the Copyright Office; of these, 103,544 were titles of works by citizens or residents of the United States. Work was continued by the special force provided for the purpose on the arrears of copyright business prior to July 1, 1897. The copyright legislation pending during the year is re-

viewed and text of new legislation is given, and there is brief record of the undertaking for consolidation and revision of the copyright law more fully noted by Mr. Putnam.

Among the appendixes the report of the Card Section, dealing with the distribution of printed cards, is of particular interest. There are now 608 subscribers to the card service, of whom 221 were added during the year. Of these new subscribers about 40 per cent. are public libraries of less than 10,000 volumes. The increase in the sale of cards as compared with the sale of last year was over 106 per cent., largely due to orders in connection with the "A. L. A. catalog." The stock of printed cards now amounts to about 180,000 different cards, with an average of about 40 copies of each card; about 75 cards are reprinted each week on the average, and as in every reprinting entries are conformed when necessary to present standards, the stock of cards tends to become thoroughly uniform. Full record is given of the various discussions and tests regarding the desirability of changing the thickness of card stock from "R," the intermediate weight now in use, to "L," the thinnest grade, as to which no decision has yet been made. Further experiments, it is pointed out, will probably lead only to the still more difficult question of deciding whether a loss of from 5 to 10 per cent. in time is more important than a gain of 30 per cent. in space.

Other appendixes include a full and interesting report on the accessions, work and present collections of the Law Library by the custodian, Dr. George Winfield Scott; and lists of noteworthy accessions in the Law Library, and in the divisions of manuscripts, maps and charts, and prints.

BIBLIOGRAPHICAL SOCIETY OF AMERICA

COUNCIL MEETING

A MEETING of the Council of the Bibliographical Society of America was held at Baltimore, Md., on Wednesday, Dec. 27, 1905, at 3 p.m., in room 19, McCoy Hall, Johns Hopkins University. Messrs. Lane, Legler, Putnam, Thomson, Thwaites and Nelson were present; President W. C. Lane in the chair. The minutes of the meeting of April 28 were read and approved. The treasurer's report was read for information.

Invitations from the Economics — History — Political Science Association of the University of Wisconsin and from the State Historical Society of Wisconsin were presented by the president, asking that the society meet at Madison, Wis., the last week in December, 1907; on motion of Mr. Putnam these invitations were laid on the table for the present.

The secretary reported progress on the

printing of volume I, part I of the papers and proceedings. A general discussion followed on what other publications might be undertaken by the society. On motion of Mr. Putnam, seconded by Mr. Legler, it was *Voted*: That the publication committee be authorized to include in part I of volume I of the proceedings and papers the proceedings and papers of this annual meeting, provided the additional expense be not greater than \$125.

Mr. Thomson read the report from the committee on incunabula to be presented to the society at its annual meeting, submitting specimens of the proposed method of printing titles and of facsimiles. Mr. Thomson thought that the expense involved would prevent making the proposed catalog one of the regular publications of the society and this expense would have to be supplied by subscriptions from libraries and individuals interested.

Mr. Putnam suggested that an inquiry should be made by sending out a circular with an announcement of the scope of the work, the size of the unit of publication and the cost of each unit. After a lengthy discussion of the matter it was *Voted*: That the committee on incunabula be authorized to issue a circular to ascertain if the undertaking recommended in their report meets with sufficient encouragement to warrant the society in beginning its publication.

The secretary presented a statement explaining why the committee on index to bibliographical serials had failed as yet to arrange for its continuation.

On motion of Mr. Legler, it was *Voted*: That the price of volume I, part I of the proceedings and papers be fixed at \$2 each for copies remaining after members of record are supplied, and that they be sold only to new members.

Adjourned at 5.30 p.m.

C: ALEX. NELSON, *Secretary*.

FIRST ANNUAL MEETING

The first annual meeting of the Bibliographical Society of America was held at Baltimore in connection with the meetings of the American Historical Association, American Economic Association and the American Political Science Association on Dec. 28, 1905. With these older organizations the Bibliographical Society shared the generous hospitality of Johns Hopkins University and of the citizens of Baltimore. The first session was called to order by the president, William C. Lane, in Levering Hall at 10.40 on the morning of the 28th. Provost Uhler, of the Peabody Institute, made a brief and cordial address of welcome on behalf of the librarians of Baltimore, who were present in force. The president then read his annual address, which, it is hoped, may appear later in the *JOURNAL*.

He explained the circumstances which

caused the first annual meeting to be held so much later than was originally intended and not in connection with the American Library Association, as future meetings will doubtless be. President Lane sketched the history of the society and noted possible lines of work which it might take up.

The report of the Council was given by the secretary, C. Alexander Nelson. The chief items were the adoption of by-laws, which were read in full; discussion of the publication of the proposed list of incunabula; and the announcement of the publication of the first volume of proceedings, designed to include the papers which were offered in July, as well as those read in Baltimore. Mr. Nelson also reported the organization of the Chicago Chapter of the Bibliographical Society.

The treasurer's report showed the very satisfactory balance of \$437 in the treasury. \$100 of this sum results from two life memberships received during the year. The election of officers was by unanimous vote of the members present deferred until the annual meeting in June, the present officers thus holding over until that time.

Mr. John Thomson presented the report of the committee on the proposed list of incunabula. His main contention was for an exceedingly full description of each title and copy, with all needed tables and indexes. These, he thought, should be published in semi-annual parts with 100 titles in each part, and cumulated tables. Mr. Thomson had prepared and caused to be printed a sample list of fifty titles with the six tables he proposed and five facsimiles of pages. These he submitted for discussion and criticism. He said that descriptions of over 2000 titles are already in the committee's hands, and that many more could be secured. It was proposed by the committee to issue a prospectus inviting subscriptions to the list when published, with the understanding that it should not be furnished free to members.

Considerable discussion of this report followed. Mr. Paltsits called attention to the modern methods of cataloging incunabula and to the scheme proposed in Germany with governmental support for an international catalog of the same. Dr. Richardson endorsed the remarks of Mr. Paltsits and suggested that the work should be very carefully considered on modern lines of editing before publication was commenced.

Mr. Beer advocated a simple, short title list showing what incunabula there are in American libraries; he also advocated the publication of a periodical list of the contents of all bibliographical periodicals, to be issued each month.

President Lane expressed the hope that, whatever might be the result as to the committee's scheme for a catalog of incunabula with facsimiles, the society would not give up the publication of a simple check list

showing where incunabula are to be found in America. No action was taken on the report, it being in the nature of a preliminary discussion rather than a final report of plans.

The following resolutions were passed: *Voted*, That the society request the Council to consider the subject of having the society incorporated, and if it is deemed desirable that the Council take the necessary steps to secure incorporation.

Voted, That in the publications of the society a note be inserted to the effect that the society does not hold itself responsible for opinions expressed by its contributors.

Prof. Alfred L. P. Dennis, of the University of Wisconsin, then read a paper on "European histories of the Turks in the seventeenth and eighteenth centuries," after which the society adjourned until the afternoon.

The afternoon session was called to order at 3.40 p.m. The secretary read the paper of Mr. J. C. Bay on "Contributions to the theory and history of botanical bibliography." President Lane announced the preparation of a bibliography of forestry at the Arnold Arboretum; he then read Mr. A. G. S. Josephson's paper: "*In re* a Bibliographical Institute," which closed with the following motion: "That the Council of the society be asked to take steps toward securing a grant for preparatory and experimental work preliminary to establishing a Bibliographical Institute."

Mr. C. H. Hastings seconded the motion and said that he had found from personal experience the need of such an institute. A general discussion followed in which W. J. James, T. W. Koch, H. E. Legler and others joined. Mr. Legler suggested an amendment to Mr. Josephson's resolution which would not commit the society to so definite an endorsement of the establishment of an institute.

On motion of the secretary it was *Voted*, That Mr. Josephson's paper and appended resolution be referred to the Council for consideration, to be reported on at the next meeting of the society.

Mr. Hastings then read Mr. C. H. Lincoln's paper on "Material in the Library of Congress for a study of United States naval history."

On motion of T. W. Koch it was *Voted*, That the thanks of the Bibliographical Society of America be and are hereby tendered to the Johns Hopkins University for courtesies extended in connection with this, the first annual meeting, and also to Mr. Theo. Marburg and to Bishop and Mrs. Paret for their kind hospitality.

A notice from the Chicago branch in regard to the publications of the Chicago Bibliographical Society was read by the president. The society then adjourned, to meet in connection with the American Library Association in June.

INTERSTATE MEETING OF SOUTHERN LIBRARIANS

THE fifth annual meeting of the Georgia Library Association was held at the Carnegie Library, Atlanta, Ga., Dec. 8-9, 1905. The advance programs spoke of the meeting as an interstate meeting designed to bring about co-operation among the libraries of the Southeast. In projecting this meeting there was no thought of a permanent organization, as it has been proven that the best results in library work can be obtained by strong state associations, and by a cordial support of the American Library Association.

The success of the meeting convinced every one present of the advisability of holding interstate meetings at regular intervals, as it was the first time that Southern librarians had been able to get together for discussion and social intercourse. The following states were represented: Virginia (1), North Carolina (6), South Carolina (2), Georgia (11), Florida (1), Alabama (4), Louisiana (1), Mississippi (1), Tennessee (6), Kentucky (1), Wisconsin (1) and Massachusetts (1). Of the 12 states represented 10 were of the Southeast. The North Carolina Library Association was represented by its president, Mrs. Annie S. Ross; the Alabama Library Association by President Thomas M. Owen; the Tennessee Library Association by President G. H. Baskette; the new Virginia Library Association sent a word of greeting by Mr. Wm. H. Sargeant; and Mr. George B. Utley, of Jacksonville, Fla., presented an invitation from Miss Carolyn B. Palmer, president of the Florida Library Association, inviting those present to attend the Florida association meeting. It was regretted that the Texas Library Association was not represented. This would have completed the state associations already formed.

Mr. W. F. Yust, of Louisville, reported progress in the organization of a state association for Kentucky, and the South Carolina representatives went home full of enthusiasm to organize a state association in South Carolina.

The program as printed was carried out with the exception of the address of Mr. Melvil Dewey, who was detained by a meeting of the Board of Regents of the New York State Library.

The first session was called to order Friday morning, Dec. 8, by the president, Mr. Walter B. Hill, whose eloquent address was a feature of the meeting. The first topic for discussion, "What a library association can do to promote the library interests of the state," was opened by Miss L. E. Stearns, of Wisconsin, who told of the work being done in her state and district associations. Reports were made on the various state associations by Mr. J. Frank Wilkes, of North Carolina; Mr. G. H.

Baskette, of Tennessee, and Mr. Thos. M. Owen, of Alabama.

The second discussion, on "Library legislation, library commissions, state libraries, state aid and travelling libraries," was opened by Miss Stearns and Mr. Owen. Mrs. John K. Ottley, of the state federation of women's clubs, Mrs. Eugene Heard, and Mrs. N. Peterson spoke of the various library activities in operation by the women's clubs.

After luncheon at the Piedmont Driving Club the visiting librarians returned to the library to attend a celebration of the birthday of Mr. Joel Chandler Harris by the children of the Carnegie Library. Mr. Lee Jordan told the Uncle Remus stories in the charming dialect of ante-bellum days. The faces of the children evidenced a happy appreciation of Mr. Jordan's efforts.

The evening session was introduced by addresses of welcome by the mayor of Atlanta and the vice-president of the Carnegie Library. Miss Stearns then read a paper on "Some phases of Western library work," an epic of the life of the logger in the frozen Northwest. An interesting feature of this session was the round table, presided over by Mr. Owen, president of the Alabama Library Association. Mr. Owen is a new factor in the library work in the South, and his efforts for better library legislation in the South, and for a library commission in Alabama will be watched with interest during the next session of the Alabama legislature. Mr. Owen called upon Miss Skeffington, state librarian of Tennessee, and she gave an account of the travelling libraries to be issued by that library, January first. Mr. Yust, of the Public Library of Louisville, Ky., spoke of the organization and opening of that library, an interesting feature being its branch library for negroes. Mr. George B. Utley, of the Public Library of Jacksonville, Fla., spoke of the value of collecting local history.

The third session was opened at 10 a.m. Saturday morning, and was devoted to the discussion of technical subjects. Miss Marie E. Binford presented a paper on the work of a library organizer in the South, and of the many new libraries she had helped to organize. Miss Julia T. Rankin, of the Carnegie Library of Atlanta, spoke of the use of Library of Congress cards in a small library. An interesting feature was the statement that by the use of the Library of Congress cards the head of the cataloging department was enabled to spend every afternoon in the open shelf department of the Carnegie Library of Atlanta. She was followed by Miss Nina E. Browne, secretary of the A. L. A. Publishing Board, who spoke of the cards published by the A. L. A. The meeting being composed almost entirely of those directly interested in library administration, the discussion was con-

finied entirely to technical subjects, and a free discussion followed on technical problems.

Miss Wallace then called Mr. Thomas M. Owen to the chair and presented the following resolution, which was unanimously adopted:

"Resolved, That this gathering of Southern librarians, representing ten Southern states, cordially endorses the invitation of Asheville, North Carolina, to the A. L. A., to hold its 1907 meeting in that city, believing that the meeting at Asheville will be productive of good results to the library interests of this section, and that the members of the A. L. A. will find in Asheville an ideal meeting place, combining all the advantages of both a city and country meeting."

The secretary then read a circular issued by the Tennessee Library Association proposing the organization of a Southern Library Association and its discussion at the interstate meeting. After a free and somewhat heated presentation of the benefits of such an organization, the following resolution was offered by Miss Annie F. Petty, of Greensboro, N. C., and seconded by Mr. W. F. Yust, of Louisville:

"Resolved, That it is deemed inexpedient by those participating in this meeting to form a Southern Library Association at this time."

The resolution was adopted. The discussion brought out the fact that Mr. William Harden, of the Public Library of Savannah, Ga., was a charter member of the A. L. A., and his warm advocacy of the national association was an interesting feature of the discussion.

The fourth and last session was called at 3 p.m., and Mr. Duncan Burnet, librarian of the University of Georgia, spoke on the college library. He was followed by Mr. Harden, of Savannah, who spoke of the rare books in the collection of the Georgia Historical Society of Savannah. The work of the Peabody Normal College Library was treated by Miss Jennie Lauderdale, librarian.

The progress of library development in the South since the meeting of the A. L. A. in Atlanta in 1899 was evidenced in the symposium of librarians representing the new libraries in the South. The discussion was participated in by Mrs. Annie Smith Ross, Carnegie Library, Charlotte, N. C.; Miss Laura Elmore, Montgomery Library Association, Montgomery, Ala.; Miss Margaret Dunlap, Chattanooga Public Library; Mr. George B. Utley, Public Library of Jacksonville, Fla.; Mr. W. H. Sargeant, Public Library of Norfolk, Va.; Miss Louise Thompson, Carnegie Library, Ensley, Ala.; Mrs. Emma Menko, Carnegie Library, Albany, Ga.; Miss Annie F. Petty, State Normal School, Greensboro, N. C.; Miss Laura Hammond, Georgia School of Technology Library. Of particular interest was the report

of Miss Margaret Dunlap, of Chattanooga, in the matter of gifts. Miss Dunlap has secured over 6000 volumes by public subscription.

On adjournment the visiting librarians were entertained in the rooms of the Atlanta Art Association, where a representative exhibit of paintings by American artists was being held. This closed the conference, which was the most representative ever held in the South, and was characterized by the library spirit which animated the discussions. Much pleasure was added to the meeting by the presence of Miss L. E. Stearns, of Wisconsin, and Miss Nina E. Browne, of Massachusetts, who had come South to lecture to the Southern Library School, and whose visit was timed so as to include attendance at the meeting.

ANNE WALLACE, *Secretary*.

BULLETIN WORK OF THE PLAINFIELD (N. J.) PUBLIC LIBRARY

EACH week our two local papers give the library about three-quarters of a column to fill with library news. While this gives the newspaper a certain amount of matter upon which it may count, it affords to the library an opportunity of keeping itself before the public.

This space is filled in two ways, by articles on our work and by lists. For the former we take up something of general interest, such as "What Plainfield people read," and show for what purposes people are using the library, how they are steadily growing to use it for more serious purposes, what authors people like best, etc. This was made from analysis of the annual report, omitting statistics, but telling some of the interesting things that they reveal. Other articles have been on "Preservation of local history," "The library as an information bureau," "Books as tools," etc. When the number of gifts is sufficient for the purpose, a description of these is written, or if the library is to give an exhibit, that forms subject matter for another article. "Little ways in which to help the library" explains itself. The library's published periodical list furnished material for an article and enabled us to call attention to our especially valuable serial collection.

Our first bulletin described the plan and enumerated some of the "Points of library service" as follows: "Do you want a book that will help you in your business? Have you a paper, a speech, a debate, or a toast to prepare? Do you want a pleasant story to read aloud? Are you preparing for an examination, civil service or college entrance? Do you want to educate yourself by reading the best books? Do you want to know which are the best books for your children to read? Do you want to read up in any line, and do not know with which books to begin? Do you

want little books that you can carry in your pocket to read on the train? If you are a teacher would you not like to know about the teacher's privilege? Do you want a good book of games? If in these or in other ways which may suggest themselves, the public library can be of service to you call at the library, or address The Librarian, Public Library, Plainfield. Requests in person or by mail will receive prompt attention, and effort will be made in every case to put the resources of the library at the inquirer's command."

We also had slips printed, postal card size, stating that the *Courier-News* and the *Daily Press* publish each week lists on timely subjects, and other library news. These were lightly tipped to the fly-leaves of new books. The plan was thus very thoroughly advertised.

Though articles are written from time to time, oftener the space is filled by annotated book lists on some special topic, with an occasional unannotated list of books added. Timeliness, either general or local, usually determines the topic to be bulletined, as it goes without saying that much of one's work is done when we have only to take advantage of interest already aroused. The Russo-Japanese war, for example, suggested bulletins on Japan and upon Russia, and lists of books by Russian authors, and while the local question of municipal ownership of the water supply was being agitated in the papers, a brief annotated list of the best books was prepared on this topic. When a topic is a disputed one, care is taken to list the best on both sides, and to make brief annotations, showing the scope of the book or article, the writer's position, etc.

We rarely make complete lists of all the library contains on a given topic, as our end is better served by stimulating the seeker for information with a selective list than by showing the voluminousness of the subject, which in many cases would only discourage. Our lists, moreover, are of far more value if we weed out the superseded, and otherwise valueless material. In fact, much of the value of a public library lies in its ability to direct readers, and this it can do by the aid of its bibliographical tools. True, a library's selection of books is in some sense an evaluation, though this is so in inverse ratio to its age and its size. So if in any real way it is to guide people in their reading, it must indicate the relative value of its books, and discriminate between the best books for the student and the best for the general reader. If a list, for example, of popular books on the Colonial period is made, the list is headed "Best popular books, etc.," and a note appended to the effect that further material will be supplied to those wishing to go more deeply into the history of this period, while the individual an-

notation shows the scope or value of each book listed.

When we publish lists for any special class of workers, such as "Best books for the steam engineer," or "A dozen good books for teachers," we further see that they reach those for whom they are intended by sending copies to the factories and schools respectively.

Not all our lists are by any means of what library workers term "classed" or "non-fiction books." The effort is to raise the standard of quality, regardless of form, form being in itself of no particular consequence. So, for example, we take advantage of the summer season when the average person is reading for amusement rather than for instruction, to bring out such lists as "Good stories for summer reading," "Some good essays," "Cheerful stories to read aloud," "A group of American humorists," "One hundred good short stories," etc. Similar lists for children are made, as "Fairy tales for children," "Poems that tell stories" (this was taken from the Pratt Institute bulletin, with many additions), "Books that the library recommends to young people" (this list was in three parts, the first for children under eleven, the second for those from eleven to fourteen, the third for older boys and girls). Such lists as the library *recommends* require more care, for if the library is to acquire any real leadership in reading, it can only be by conscientious care in its recommendations. Books of fiction and juvenile books, especially, we usually find it safer to read first.

For the times when no special topic suggests itself lists are made up in advance, such as "Attractive editions of famous books." In this attention was called to our policy of providing standard books in good attractive editions, as there is no question but that a book in good make-up will circulate many more times than the same book with poor type and mean binding.

Effort is also made to bring out the literature of various occupations, as "Recent books for teachers," "Home decoration," "List on carpentry," "Some good cookery books," "Books of interest to lawyers," "Recent books for the clergy and other religious teachers," "Books for the municipal worker," etc. With a view of interesting men more widely a series of business bulletins is under way. That on "Banking" was submitted to a prominent banker before publication. Others in the series will be on "Printing," "Qualities necessary for success in business." The various trades will also be bulletined.

For after use of these bulletins we are grouping them roughly by subject, and placing them in binders. Later those of sufficient importance will be filed in envelopes, each with its class number, and a bibliography card entered in the catalog. Each list is dated, so

that it may be readily brought to date at any time.

In making these lists bulletins of other libraries are freely used, often as suggestive, but occasionally borrowed outright. In such cases credit is of course given to the compiling library.

It is evident that this cannot be done without an expenditure of considerable time and thought, and the question that presents itself to every busy librarian is—"Does it pay?" After fair trial I am convinced that it is one of the things that distinctly pays, and though it may be said, perhaps, that the results are intangible, they are, nevertheless, real, and we may not unfairly point to this as one cause of an evident growth in appreciation of the value of our library. It keeps the library before the people; it has improved the quality and increased the quantity of books read; it has increased the number and value of gifts; it helps to convince people that the public library is the place to go for material for an editorial, a sermon, a paper or debate; for books which will help one in one's occupation in life, be it trade, profession or business; or for any philanthropic, religious or municipal work in which one may be engaged; that it provides the means both for self culture, and for mere amusement or recreation; that it stands for no one school of thought on any subject, but strives to present the best in all, and further, it helps enforce the fact that the library is not merely a distributor of books, but to those who wish so to make use of it, an evaluator of them, and, to sum up, it is one of the forces helping materially to make the library a strong educational force in the community.

EMMA L. ADAMS.

CARNEGIE FREE LIBRARY, ALLIANCE, OHIO

WHEN a library building is a Carnegie gift to a town it is sometimes not fully appreciated by the citizens, or it may be a subject of critical comment in other towns, where the citizens have built their own libraries or have declined Mr. Carnegie's offers and no library building exists. There is perhaps some justice in this attitude, because what people do for themselves they appreciate most fully, and those who accept gifts are likely to be viewed with slight criticism by others, who do not need donations or will not receive them.

Like everything else, however, this particular library problem has more than one point of view. No city is really independent any more than is any individual. There is no such condition in government or society as absolute independence. Consequently, a community which takes pride in the fact that it has built its own library, though having some

reason to be proud, may not have been really much more democratic than the one which accepts a gift from an outsider. Indeed, the former is probably more aristocratic, since some of its citizens have amassed sufficient fortunes to contribute directly and generously to the enterprise, or to so increase the city tax receipts that a library can be built by issuing bonds.

In a small city, where wealth is fairly evenly distributed, people may treat the problem of a library building in one of two ways. Either they must do without a library until sufficient of the money of the town is amassed by a few people, who will then have the means and leisure to bestow a library building on their community, or they must accept Mr. Carnegie's generous offer and its conditions.

In the little city of Alliance, Ohio, there is a population of about 12,000 busy people, so absorbed in the gaining of material comforts for themselves and their city, so burdened with the expenses of well-paved streets and similar improvements that they have had little time or money to devote to libraries. A library building seemed an unnecessary luxury. Hence, the very desire for books had to be fostered before the thought of a library of any size would be entertained by the community.

The natural channel in which to work for an interest in books and educational advancement is the school system. Children soon learn to value good literature, if they are given an opportunity to form a taste for it. In Alliance the children brought the library building. No library of any kind was in existence, except a small collection of books circulating as a public school library, until 1900. Then a few more volumes were added to those already provided for school use, and this library of about 2000 volumes was opened to the public in a room of the high school building. From this modest beginning interest in the movement was so aroused that in 1903 Mr. Carnegie's offer of \$25,000 was accepted and the new library was built on a corner of the high school lawn, given by the board of education.

The building is similar to many of the smaller libraries. Its main octagonal court, with pillared openings into the reference, stack and work rooms, children's department and reading rooms gives an ideal delivery room for a small library. The location of the delivery desk is such that the attendant commands a view of every part of the main floor of the building. A committee room and ladies' club room on the second floor are small luxuries much appreciated, as are also the well finished and light basement rooms, intended for gymnasium, but used for debating clubs, sketching classes and many assemblages of like nature.

The materials used in the construction of the library are of the best. Light colored pressed brick, with foundations, steps, cornices, pillars, etc., of stone, form the exterior of the building. Dark filled and rubbed quarter sawed oak is used for the interior finish. The floors are hard wood, except in the delivery room, where there is tile mosaic. Out of the \$25,000 given for the building all the library equipment has been purchased, modern and good in every way, with steel stacks and heavy oak tables, chairs, and filing cabinets.

No attempt has been made to construct a fireproof building. This would have been almost impossible with the funds available, and unnecessary, when the steam heating apparatus is not in the building, but across the lawn in the high school building. This saving of expense left funds for many minor conveniences and helped to make the library building as a whole light, roomy and practical for library purposes. LOUISE RUSSELL.

SERVICE OF THE PUBLIC LIBRARY

From the fourth report of Washington County (Md.) Free Library

THE functions of a library are manifold, but still may all be summed up in one word—service.

To that end we systematize our work, keep our records, catalog, etc., with the strictest care;—send out our deposit stations, studying the wishes and tastes of each community; look for Sunday schools which may be helped—leave nothing undone which may bring the boys and girls to the children's room and keep them there; stimulate by all means in our power the use of the library by the schools; send out our book wagon; in short, conserve our various interests and multiply others, but in the retrospect of these daily activities, it is well to remember that after all the highest service which a library renders can never be incorporated in any report, since it can do no better thing than to give pleasure—just plain pleasure to a large number of people. It may accomplish this end in various ways, by the gradual intellectual advancement, by the slow uplift of the moral tone of the community, by the increase in material prosperity, for since a general increase in education produces a more intelligent class of wage earners, the public library certainly has this effect; still these are only means to a greater though intangible ultimate purpose, the enrichment of life, the expansion and the cultivation of all powers which make for happiness.

And the great army of men and women who use our public libraries read because it gives them pleasure—because through books

they are lifted out of the dull routine of every day life, their imaginations are quickened and for the brief space that the book holds them in thrall the colors of life assume a brighter tint. This is the greatest service literature ever performs. To increase from year to year the roll of those who know what this pleasure is, and to help them year after year to find it in an ever ascending scale of literature must always be the clear high aim of the public library.

IS A LIBRARY A MONUMENT?

AN interesting decision rendered in a recent California law suit affirms that a library building may reasonably be defined as a "monument" to a deceased person. The case in question concerns the will of the late George H. Fancher, of Merced, Cal., and the decision was given in a petition by Jonathan W. Fancher, Jr., for an order restraining the executors of the George Fancher estate from using certain funds of the estate to erect a free public library in Merced, as a "monument" to the late Mr. Fancher. The paragraphs of Mr. Fancher's will on which the executors founded their purpose were as follows:

"Fourteenth—I set apart from my estate for my funeral expenses and proper interment of my remains and a suitable monument to my memory, \$25,000.

"Fifteenth—It is my request to have my remains buried on my Bear Creek ranch, in township 7 south, range 15 east, Mount Diablo base and meridian."

The executors, in answer to the petition of the contestant, thus stated their intentions:

"First—Bury the remains of the deceased on the Bear Creek ranch at a point south of the Santa Fe railroad reservation and east of the Merced and Bennett ranch public road.

"Second—Erect over the grave of deceased a granite monument ten feet high and six feet square, etc., and on the side of said monument facing said public road, in large letters, place the following inscription: 'George H. Fancher. Born, New York, 1828. Died, California, 1900. Founder of George H. Fancher Memorial Free Library, Merced, Cal.'

"Third—Construct on a suitable lot in some public and prominent place in the city of Merced a fireproof library building, to be used as and for a free public library by the citizens of Merced County, said building to be named, known as and called the George H. Fancher Memorial Free Library, and to be known, used and maintained as such, and in some suitable place in said building, to be reserved therefor, to place a tablet of marble or other suitable inscription to the memory of said deceased."

They added that the board of trustees of the city of Merced had expressed their willingness to accept the building as a trust and assume the duty of maintaining a free public

library therein, and to care for the grounds and preserve the memorial tablet.

The decision, which was rendered by Superior Judge Rector, of Merced County, denied the petition for a restraining order in the following statement: "One definition of the word 'monument,' found in all standard dictionaries, is the term 'a building.'

"The structure proposed to be erected by the defendant executors is certainly a building. That it would be monumental to the memory of the deceased seems to the court equally certain. The term 'Memorial Library' is a familiar one in this country. As it is proposed to make it fireproof, it will, in all probability, be as enduring as a marble or granite shaft would be. The deceased left it entirely to the executors as to what would be a suitable monument. We are not to inquire beyond their decision, as long as it is reasonable. Viewed from that standpoint, the court sees no ground upon which to step in and restrain them. They have followed the wishes of the deceased to have his remains buried on the Bear Creek ranch, and have chosen as public a place thereon as can well be found, and propose to mark the spot in a most public and enduring manner. Upon this gravestone, or monument, there is to be inscribed a clear and suitable reference to the greater or more distinctive monument in the nearest city (Merced), which is the county seat and was the home of the deceased at the time of and for a long time prior to his death. This, as a plan to commemorate the deceased, seems to the court perfectly reasonable and proper."

It is probable that an appeal will be taken, so that the erection of the "monument" proposed is not yet assured.

ITALIAN LITERATURE IN AMERICAN LIBRARIES

A SECTION of the International Exhibition to be held at Milan, Italy, in 1906, will be devoted to "Italians abroad," and will be organized to show all printed matter which can be collected concerning the Italian emigration to foreign countries and all literature relating to the life of Italians in these countries. The librarian of the Biblioteca Nazionale di Brera requests all public libraries in the United States that have established special branches for Italians, formed special collections of Italian literature, and published catalogs, finding lists, or any printed matter for the use of Italian patrons, to be good enough to forward copies to Giuseppe Fumagalli, Direttore della Biblioteca Nazionale di Brera, Milano, Italy.

It is hoped that a liberal and prompt response to this request will be made by all American libraries interested.

J. I. WYER, JR.,

Secretary American Library Association.

State Library Commissions

LEAGUE OF LIBRARY COMMISSIONS, Miss Alice S. Tyler, secretary, Iowa State Library Commission, Des Moines.

A meeting of the executive committee of the League of Library Commissions was held in Indianapolis on Dec. 13. Besides holding business sessions, the members of the league were given opportunity to study the work of the Indiana Public Library Commission, and to visit the library school recently established under the commission's auspices at the Winona Technical Institute. A reception in honor of the visitors was held at the Technical Institute on the evening of Dec. 13. The business transacted at the meeting included the passage of a resolution urging the library commissions represented in the league to ask their senators and congressmen to co-operate with the Governor of Alaska in taking the necessary steps to secure for Alaska a library commission whose first efforts shall be directed toward establishing a system of travelling libraries.

State Library Associations

ALABAMA LIBRARY ASSOCIATION

President: Thomas M. Owen, Department of Archives and History, Montgomery.

Secretary: Junius M. Riggs, State Supreme Court Library, Montgomery.

Treasurer: Miss Laura Elmore, Carnegie Library, Montgomery.

The second annual meeting of the Alabama Library Association was held in Mobile, December 4-6, 1905. The association was organized and held its first meeting in Montgomery November 21, 1904. The Mobile meeting showed growth in membership and in interest, and gave encouragement for the future. The attendance was representative, and the social features of the several sessions added much to the pleasure of all. Dr. Thomas M. Owen and all of the old officers were re-elected and their administration was enthusiastically endorsed.

The first session was called to order at eight o'clock on the evening of Monday, Dec. 4, in the small lecture room of the Y. M. C. A. building, when a few words of welcome were said by A. C. Harte, secretary of the Y. M. C. A. President Owen presided. In the absence of the secretary, Junius M. Riggs, Miss Laura Elmore was appointed secretary *pro tem*. The invocation was delivered by Rt. Rev. Edward P. Allen, Bishop of the Catholic Diocese of Mobile; Mayor Lyons gave an address of welcome; and "The greeting of the libraries" was extended by Hon. Peter Hamilton, of Mobile, who then presented an instructive review of "Alabama literature." President Owen then read his annual address, reviewing at length library conditions and opportunities in Alabama and

suggesting the following recommendations: adoption of suitable provisions for the inauguration of a system of travelling libraries by this association; that all members of this association, as far as possible, join the American Library Association and subscribe for the *LIBRARY JOURNAL* and *Public Libraries*; passage of resolutions of thanks to the Alabama Federation of Women's Clubs for the gift of its travelling libraries; adoption of a resolution urging provision in the university summer school; provision for a committee on school libraries to co-operate with a like committee from the Alabama Educational Association.

On Tuesday morning the association was called to order at ten o'clock, the first item being an address on "The library as an educational force," by Dr. Charles C. Thach, of Auburn. The report of the executive council showed a healthy condition of the affairs of the association; three formal meetings had been held by the council during the year. Papers on "Fiction in public libraries," by Mrs. Theresa Miller, of Eufaula, and "Practical suggestions on school libraries," by Miss Nimmo Greene, of Montgomery, were read by title, in the absence of the writers. Miss Addie Moses, librarian of the Mobile Library, gave a paper on "The trials of a library pioneer," setting forth the history of the Mobile institution, which was established through her efforts in 1874, as the first subscription circulating library in Mobile. Her address was delightful in its spirit and enthusiasm, and in its mingling of personal and historical reminiscence. This closed the morning session, and in the afternoon the members were entertained at the home of the Hon. Peter Hamilton.

A stereopticon lecture on Alabama by Dr. Owen, president of the association, was the feature of the evening session. The attendance was large, the seating capacity of the hall being taxed. The lecture proved most interesting and instructive. Some seventy-five pictures were shown, among them illustrations of Alabama life and affairs from De Soto to the present date, state flags, views, scenes and maps.

Wednesday morning's session showed a large increase in attendance. The report of the treasurer was read, and various communications presented. Resolutions were passed, thanking the Alabama Federation of Women's Clubs for its recent gift of travelling libraries; directing the installation of a system of travelling libraries by the association; and extending thanks for the hospitality and welcome of the Mobile hosts. The following important resolution, offered by Mr. Harte, was adopted, after a full discussion:

... "Resolved, That it is the sense of this Association that a course in library science be offered by the University [of Alabama] Summer School, if not inconsistent with plans already projected, and if it can be done without embarrassing superior interests."

It is believed that the university authorities will favorably respond.

The committee on nominations made its report, and in accordance the following officers were elected for the ensuing year:

President, Dr. Thomas M. Owen, Montgomery; vice-presidents, Mr. A. C. Harte, Mobile; Dr. C. C. Thach, Auburn; Dr. H. A. Sayre, University of Alabama; secretary, Junius M. Riggs, Montgomery; treasurer, Miss Laura M. Elmore, Montgomery; executive council, Dr. J. A. H. Phillips, Birmingham; Miss Sara Callen, Montevallo; Prof. D. P. Christenberry, Greensboro; Prof. W. E. Striplin, Gadsden; Miss Frances Higgins, Selma.

Miss Frances Higgins read a paper prepared by Mrs. Kate M. Jarvis of the Carnegie Library, Selma, on "The children's room in public libraries," a careful and extended review of the development of library work for children, its importance, and the methods in use.

Dr. E. F. Buchner spoke at length on the needs and conditions of the University of Alabama, and then dealt with "The use of libraries in school instruction," emphasizing the great value of the library as an aid in "freeing the school from the tyranny of the textbook," and giving information and practical suggestions regarding co-operation between school and library. Mrs. F. H. Happer, librarian of the Mobile Y. M. C. A., read a paper on "Early American poetry;" and the next paper, on "Library work in the public schools of Jefferson county," was summarized by the president in the absence of Prof. S. A. Ellis of Birmingham. This gave an account of an effort being put forth for a central library from which small libraries will be circulated, to reach every school in the county. Luncheon was then served by the Y. M. C. A.

At the afternoon session, Prof. Douglas Allen, of the First District Agricultural School, Jackson, read a paper on "Books as factors in scientific agriculture." George W. Jones, president of the Central Trades Council, of Mobile, spoke on "How to interest laboring men in public libraries." This was effective and practical, recommending that libraries keep on file and readily accessible copies of the magazines and publications of the various organized crafts; that lists of industrial and other books be circulated in shops and factories, and that small collections of such books be sent in the same way for working men to select from; and that libraries use the newspapers more constantly for the dissemination of lists and library information. The other subjects considered were "The library and men," by A. C. Harte, secretary of the Y. M. C. A.; and "The travelling library work of the Alabama Federation of Women's Clubs," by Mrs. C. T. Randall, read by Mrs. Erwin Craighead. Prof. D. P. Christenberry was asked to speak informally on "The rural library movement."

The papers read will be published in the formal proceedings of the meeting.

LIBRARY ASSOCIATION OF CALIFORNIA

President: Joy Lichtenstein, Public Library, San Francisco.

Secretary: Miss Anna L. Sawyer, Public Library, San Francisco.

Treasurer: Miss Anna Fossler, Library University of California, Berkeley.

The association has issued as circular no. 4, a general summary of the work done during 1905. The year, it is pointed out, "has been a momentous one for California librarianship," mainly on account of the Pacific Coast meeting of the A. L. A. Librarians are urged to put themselves in touch with the national association and with the library periodicals and to work for the higher effectiveness of the state association. By reducing the number of meetings yearly from eight to four, a useful concentration of energy has been obtained. "The tendency should be still further in this direction. Our state is unusually large, many of us are isolated from the benefit derived from frequent contact with the fellow members of our profession. In order to fulfil its purpose as a state organization, the C. L. A. must cover the whole territory." During the past two years the membership of the association has more than doubled.

DISTRICT OF COLUMBIA LIBRARY ASSOCIATION

President: George F. Bowerman, Public Library.

Secretary: Earl G. Swem, Library of Congress, Copyright Office.

Treasurer: Wm. S. Burns, Jr., Office of Documents.

The 89th regular meeting was held in the lecture hall of the Washington Public Library on Wednesday evening, Dec. 13, 1905. In the absence of the president and of the vice-presidents, the secretary called the meeting to order at 8.15 o'clock, and Mr. Edward L. Burchard was elected chairman for the evening. After the reading and approval of the minutes of the November meeting, the annual reports of the secretary and treasurer were presented, showing that 36 new members had joined the association during the year and that a balance of \$151.16 was on hand in the treasury on Dec. 13, 1905.

The annual election of officers being next in order, the chair appointed Mr. W. D. Goodard and Mr. H. T. Dougherty as tellers, who proceeded to collect and count the ballots. During the count Professor Frederick V. Coville, of the Department of Agriculture, delivered the address of the evening on "Botanical libraries of the District of Columbia." He said that in the early days of Washington scientific book collections there was little systematic purchasing of botanical books. The first real botanical library dates from the organization of the Department of Agriculture in 1868. During the last 20 years, however, there has been great development in

this direction. Among the more notable collections are the following:

The Library of Congress, at present containing 1463 serials and 3623 books and pamphlets on botany. More than half the serials belong to the Smithsonian deposit, while more than half the books and pamphlets are the property of the Library of Congress. This collection is rich in books in the English language and in elaborately illustrated books.

The library of the National Museum, which has perhaps one-fourth as many botanical books as the Library of Congress, including many which supplement the last-named collection. The museum is the depository at present of the botanical library of Professor Edward L. Green, consisting of about 4000 volumes, rich in pre-Linnaean books, including many not elsewhere to be found in Washington. The museum is also to become the possessor of the library of Captain John Donnell Smith, of Baltimore, of about 1200 beautifully bound volumes.

The library of the Office of the Surgeon General, which also contains a small but useful collection, including some valuable works on diatoms and algæ.

The library of the Department of Agriculture, the largest botanical library in Washington, containing about 77,350 volumes. The general bearing of this collection is in the direction of economic and systematic botany.

The Geological Survey also possesses a noteworthy lot of books not elsewhere to be found in the District. The Patent Office library contains a few very interesting old botanical works, including the "Gardener's chronicle."

Among the private collections of note is that of Theodore Holm, of Brookland, rich in works on Arctic flora.

Professor Coville then gave an interesting and illuminating account of the Department of Agriculture's system of co-operative purchasing of botanical books. The first step taken in the inauguration of the system was to learn what books were already in the various collections. Next came the preparation of lists of desiderata, for which the titles of books requested by investigators but not found served as a basis. Dealers were next induced to send advance sheets of their catalogs, so that the inevitable delay in getting out requisitions for purchase might be offset by advance information of the offers of booksellers. Special steps were also taken to secure promptly the necessary official authorizations to buy. Mention was made of the understanding between the Department of Agriculture and the Library of Congress to inform the latter promptly of offers of early desirable books.

The speaker exhibited photographic copies of a number of rare books of which the originals are not obtainable. In several such

cases originals have been borrowed and photographed by permission, the copies serving every necessary purpose for reference. The cost of such reproduction is moderate, especially when compared with the value of the originals.

Mr. J. David Thompson spoke of the efforts of the Library of Congress to co-operate with other Washington libraries, not only in the purchase of botanical books, but all scientific books, the aim being to supplement other collections.

Miss Barnett, assistant librarian of the Department of Agriculture, spoke of the relation between the sectional libraries and the main library of the department.

The tellers then announced that 72 ballots had been cast and that the following persons had been elected as officers for 1906: president, Mr. George F. Bowerman, librarian of the Public Library; first vice-president, Mr. Theodore L. Cole, of the Statute Law Book Company; 2d vice-president, Mr. Edward L. Burchard, chief of the Order Division, Library of Congress; secretary, Mr. Earl G. Swem, of the Copyright Office; treasurer, Mr. William S. Burns, Jr., Office of the Superintendent of Documents. Members of the executive committee: Mr. C. B. Guittard, librarian of the Coast and Geodetic Survey; Miss Beatrice C. Oberly, Library of the Department of Agriculture; Miss Emily A. Spilman, of the Public Library.

Mr. Burchard declined the office of second vice-president on account of certain special work which he had planned for the future. On motion the secretary was authorized to cast the ballot of the association for Mr. C. H. Hastings, of the Card Distribution Section of the Library of Congress for second vice-president. Mr. Burns also declined a third term as treasurer. On motion the new executive committee was empowered to fill the vacancy.

The meeting adjourned at 9.30. The attendance numbered 35. Members not able to attend mailed their ballots to the secretary to cast for them.

FREDERICK W. ASHLEY, *Secretary*.

FLORIDA LIBRARY ASSOCIATION

President: Miss Carolyn Palmer, librarian Stetson University, De Land.

Secretary-treasurer: W. W. Hall, principal High School, Miami.

The annual meeting of the Florida Library Association was held at Miami, Dec. 27-29, 1905, in connection with the annual conference of the Florida Educational Association. The officers named above were re-elected, and in addition an advisory committee was appointed, consisting of George B. Utley, librarian of the Jacksonville Public Library, and A. A. Murphree, president of Florida Female College, Tallahassee. A few reports

of progress from various parts of the state were made, but no regular program was carried out. On Dec. 28 Mr. Utley gave an address before the Educational Association on "The public library in relation to the school," giving practical suggestions for the establishment of libraries in towns or larger places and urging especially that libraries be placed on a basis of municipal support. At its close it was *Voted*, That the subject of "Libraries" be represented at each succeeding program of the Education Association conference.

The Florida Library Association was organized in 1901, and has since then held an annual meeting in connection with the Educational Association; but as there were only two or three library workers in the state—indeed, only one, the librarian of Stetson University, whose whole time was devoted to the work—the membership was, and is, mostly composed of teachers. It is hoped that the establishment of the Jacksonville Public Library—the only free public library in the state—and the growing interest in libraries, may increase the membership and activities of the library association during the coming year and that at its next meeting it may be able to present a regular program and hold something more than merely a business session.

NEW HAMPSHIRE LIBRARY ASSOCIATION

President: M. D. Bisbee, Dartmouth College Library, Hanover.

Secretary: Miss H. L. Johnson, Free Library, Berlin.

Treasurer: Miss Edith Simmons, City Library, Massachusetts.

When it is said that a meeting of the New Hampshire Library Association was held on Dec. 12, 1905, in the lecture room of Miss Garland's new library building in Dover, N. H., the success and enjoyment of the two sessions may be taken for granted. The attractiveness of this new "shrine of St. Andrew" (Carnegie) was enhanced by the assistants meeting us with hot chocolate and "delicatessen," appreciated by the many who had taken an early cold start.

In 1792 Dover had the first of those social libraries which were the nuclei of public libraries. Colonel Daniel Hall, long an efficient trustee, in greeting the association, gave this and other interesting facts concerning the model development of this library from 4000 to 34,000 volumes, the institution having ever been to Dover more than could be told in words.

The president, Professor M. D. Bisbee, librarian of Dartmouth College, responded to Colonel Hall with a delightful dry wit, which characterized all his presiding and his introduction of the speakers. His mention of Miss Garland's work (with fellow-officers of the A. L. A. and fellow-editors of the *Booklist*) voiced the common feeling that through her

our remote local conference touched the broader library issues.

The regular program opened with a capital paper on "Genealogical research," by Mr. Otis G. Hammond, of the New Hampshire State Library. It showed how a dull subject can be fanned into glowing interest by having, as a backlog, mastery of your subject, and then throwing on humorous and concrete illustrations.

An unexpected pleasure came next in hearing from Professor George Little, librarian of Bowdoin College, whose presence together with that of a few librarians from Massachusetts gave our meeting an unusual feeling of territorial expansion.

The next two speakers were Miss Clara F. Brown, of the Concord Public Library, and Miss F. Mabel Winchell, city librarian of Manchester. Miss Brown, in careful extracts from addresses made at Portland, gave a "Résumé of the A. L. A. Conference." Miss Winchell by word, photographs and souvenirs imparted most interestingly many things not heretofore told the stay-at-homes, giving "Glimpses along the route of the A. L. A. party."

A pleasant luncheon was served in the Unitarian vestry by the ladies of that parish.

The afternoon program was completed by representatives of two colleges. Professor R. W. Husband, now of Dartmouth, lived formerly in California, and was the pioneer teacher in the wild region near Banff. His paper treated of "The library as an interpreter of topics of the day," and was of a high order. Stimulating criticism and practical suggestion in terse style and thought followed upon his postulate that "the library exists to give borrowers that which it is most advantageous for them to have." The public librarians present were fortified in their "persistent skepticism" as to the merits of new publications by Professor Husband's plea "for limiting the function of the popular book." He proposed creating interest in instructional works by having right at hand in the reading room a case of books changing rapidly with the events of the day and the seasons, to give worth-while information on worth-while current topics.

Professor C. W. Scott, of the New Hampshire College at Durham, spoke on "Library cranks," and pricked with genial and whimsical satire some foibles of librarians, the public, architects and publishers. Hearty applause followed, after which the presiding officer, who had been doing profound thinking, announced that Dover rhymed with clover, and the meeting adjourned as library meetings do in this state and presumably elsewhere, just in time to catch the train. If the association met in order that "the knowledge of each might become the possession of all" its object was fulfilled.

GRACE BLANCHARD, *Secretary pro tem.*

NEBRASKA LIBRARY ASSOCIATION

President: George H. Thomas, State Superintendent of Schools, McCook.

Secretary: Miss Nellie J. Compton, University of Nebraska, Lincoln.

Treasurer: Miss Margaret A. O'Brien, Public Library, Omaha.

The annual meeting of the Nebraska Library Association was held Dec. 27 and 28 at the Lincoln City Library. Miss Edna D. Bullock presided. There were over 60 people in attendance representing 20 different libraries.

The general topic for the first meeting was children and their books. The first paper was by Miss Kate Swartzlander of the Omaha Public Library on "Work of a children's librarian." She brought out the desirability of having a comfortable, well-lighted room or corner, as the case may be, for the children, with furniture suited to their needs and with no obstruction between them and the attendant; few pictures and those of subjects which will appeal to the child: a globe, plants, if well cared for, anything that will add a more home-like effect. Only books which are truthful and deal with wholesome material in a wholesome manner should be allowed in the children's shelves, and the good books whose number is not really large should be duplicated rather than buy those which are not so desirable. There should be a special catalog for the children's department, with the subject headings simplified and no technical names introduced.

To teach the children whose standards we wish to raise, and interest them in the better things, nothing is found so effective as new copies of the books we wish to circulate. Having these on the table with the front covers up will do much toward lessening the circulation of the poorer books. A children's librarian should have a knowledge of the school course of study and be able to furnish books relating to it which will be read with pleasure.

Miss Frances Morton, of the Lydia Bruun Woods Memorial Library, Falls City, read a paper on "What the librarian of a small library can do for the children." This was exceedingly helpful, as there are only two libraries in the state which have special children's librarians. As much liberty for the children as possible, books within easy reach, and encouragement to handle them as their own treasures, were some of the things named as possible to every one. The smaller the library the more carefully must the books be selected to apportion them rightly to the different grades and classes of readers and their varied demands. In the small library it is especially important to teach the children to help themselves. They enjoy consulting the lists or choosing for themselves from the shelves. And from this they may

go on to really helping the librarian, keeping certain shelves in order, doing errands and the like. This is one of the best ways in which to get into touch with the children, really the most important thing of all.

The discussion of these two papers was led by Miss Anna V. Jennings of the Kearney Normal School Library.

Miss Elizabeth N. Robinson, of the Lincoln City Library, talked on "Picture books for children," of which she had a large number to illustrate her points. She made a plea for the small picture book rather than the large, heavy, expensive one, so awkward to handle and so much more quickly soiled and worn out. Pictures should be well drawn and colored, the treatment simple and the subject within the reach of the children's minds. The humor or sentiment which appeals to the older person are often not understood by the children. The bad influence of the Sunday newspaper picture supplement, with its crude drawing and coloring, its caricature of everything that should be respected, was emphasized. Miss Robinson divided picture books into three classes—those absolutely bad, as the "Buster Brown" and "Katzenjammer kids" books; those which are doubtful, either because children do not appreciate them or because they have a questionable influence. Among these were included Peter Newell, "Father Goose," "Slovenly Peter," and the later "Goop" books. Last were those absolutely good—among which were the books of Kate Greenaway, Elizabeth Shippen Green, Howard Pyle, and Jessie Wilcox Smith.

Miss Florence S. Smith, of the Beatrice Public Library, led the discussion on this subject.

The session closed with a paper by Miss L. E. Stearns, of the Wisconsin Free Library Commission, on "The library beautiful."

Wednesday evening the Lincoln City Library board and the Woman's Club held a reception for Miss Stearns and the visiting librarians. This was preceded by short talks by Prof. E. W. Hunt, of Syracuse, and by Miss Stearns. Prof. Hunt's home, in the center of a rural district and four miles from a town, is a travelling library station "open all day every day in the week." He gave a graphic description of the benefits derived from this library in the community, where to ninety-five per cent. of the people it is the only possible means for culture and self-improvement. Miss Stearns told most entertainingly of the library commission work in Wisconsin.

After the more formal part of the reception occurred one of the most enjoyable features of the meeting when the librarians present drew their chairs into a circle and took part in a story-hour, with Miss Stearns and Mr. Wyer alternating as story tellers in chief.

Thursday morning Mr. J. I. Wyer, Jr., University of Nebraska Library, gave an instruction-hour for librarians on "Reference work in a small library," which was most helpful. He brought out with strongest insistence that the main thing is for the librarian to know thoroughly all the material which she has in her library, so that every scrap that comes into her hands can be used and used quickly. Careful clipping of the daily papers will be worth while. Thorough examination of each number of each periodical that comes to the library as well as of all books was insisted upon.

A suggestive list of the six periodicals most useful for reference work in a small library was given, also a minimum number of reference books necessary in the small library.

Prof. C. R. Merrifield, Grand Island College Library, spoke on "The periodical collection," telling how he had managed to build up a collection of nine hundred and fifty volumes of periodicals by collecting from the town people alone during the past three years and of how they were cared for when collected. Miss Fannie Geer, Columbus Public Library, in her discussion, related her experiences in the same line of work in a way which must have given an inspiration to several present to go and do likewise.

An appreciation of Miss Rachel Berry, who was elected president of the association at the last meeting, but died during her term of office, was given by Superintendent G. H. Thomas, of McCook.

The session closed with a round table conducted by Miss Stearns on "The problems of a small library." Miss Stearns' presence at the meeting was an inspiration to all present. Her helpful papers and talks, her frank discussions and suggestions, her knowledge and experience, added greatly to the benefit and pleasure derived from each session.

Officers were elected for the ensuing year as follows: President, Superintendent of Schools Geo. H. Thomas, McCook; 1st vice-president, Miss Fannie Geer, Columbus Public Library; 2d vice-president, Miss Mary K. Ray, Kearney Public Library; secretary, Miss Nellie J. Compton, University of Nebraska Library; treasurer, Miss Margaret A. O'Brien, Omaha Public Library.

NELLIE J. COMPTON, *Secretary pro tem.*

VIRGINIA LIBRARY ASSOCIATION

President: John P. Kennedy, State Librarian, Richmond.

Secretary: Edward S. Evans, Assistant State Librarian, Richmond.

Treasurer: Miss Mary G. Lacy, Virginia Polytechnic Institute, Blackburg.

The Virginia Library Association was organized in Richmond on Dec. 6, 1905, when a constitution was adopted and officers elected

as follows: President, John P. Kennedy, state librarian; 1st vice-president, W. H. Sargeant, librarian Norfolk Public Library; 2d vice-president, John S. Patten, University of Virginia; secretary, Edward S. Evans, assistant state librarian; treasurer, Miss Mary G. Lacy, librarian Virginia Polytechnic Institute, Blackburg; executive committee, S. S. P. Patteson, J. C. Metcalf, Alice B. Dugger, Mrs. C. E. Hartsook.

The constitution gives the purpose of the association as being "for the promotion of a closer intercourse among librarians and all interested in library work in Virginia, and to further library interests in general" and adds: "and we hereby recognize the state library as pre-eminent in the library field of Virginia, and in like manner the Library of Congress in the national library field." A regular annual meeting is provided for, with other meetings to be held in the discretion of the executive committee. "The executive committee shall hold monthly meetings in the state library in the city of Richmond." Membership dues are \$1 a year. "Local representation" is provided for, as follows: "The executive committee shall appoint a representative in each county whose business it shall be to keep in touch with the library interests of his or her county, correspond with the main organization and make such reports to the state library as the librarian of that institution shall deem necessary for the furtherance of library interests throughout the state." Another provision deals with "local organizations": "Any local association consisting of not less than five members may become an associate member of this association upon an affirmative vote of the executive committee. The annual dues of each local association shall be one dollar. This association shall give such associate members all possible aid in the furtherance of local library work."

At a meeting of the executive committee, held Dec. 13 in Richmond, it was determined that all funds not needed for current expenses of the association should be used in the advancement of library interests throughout the state. The method prescribing how these funds should be disbursed, it is hoped, may result in the establishment of libraries in many communities now without such institutions. The association will give \$100 worth of books to any community producing a similar sum from other sources. A guarantee will also be exacted, pledging the support of the community to the library thus established; and in the event of a failure to carry the obligation into effect, the library becomes the property of the association. It is believed that in addition to the funds accruing from annual dues considerable money may be secured from private persons interested in this method of establishing libraries throughout the state.

Library Clubs

CHICAGO LIBRARY CLUB

President: Mary Eileen Ahern, *Public Libraries*, 156 Wabash avenue.

Secretary: Evva L. Moore, Oak Park Public Library.

Treasurer: C. A. Larson, Chicago Public Library.

The December meeting of the Chicago Library Club was called to order at 8.15 p.m. on the 14th ult., the president, Miss Ahern, in the chair, and 30 members and friends in attendance.

It was moved to refer to the executive committee the subject of co-operating with the Municipal Museum in presenting the subject of libraries to audiences in South Park field houses.

A letter from the secretary of the A. L. A. was read, urging all librarians to work with their Congressmen against the proposed tariff on books imported by libraries.

The subject of the evening was then introduced by Mr. Leupp, of John Crerar Library, in a discussion of "Contact with the public." He urged the careful study by the loan clerk, not only of the resources of his own library, but also of all neighboring libraries. He should take all free government publications and should know where other publications (too expensive perhaps for his library to take) can be found. He should take great care in discovering exactly what material a reader wants. It was also suggested that friendly rivalry between neighboring libraries often proves a spur to more thorough work. Mr. Smith, of the Chicago Public Library, spoke of what his library tries to do for the public in aiding all who come and teaching them to use catalog and indexes.

Mr. Larson, of the reference department of the same library, divided attendants into three classes: 1, those who are attentive and courteous; 2, those who are attentive and not courteous; 3, those who are not attentive and not courteous; while his readers were classed as 1, those who know what they want; 2, those who have only a general idea of what they want; 3, those who do not know what they want and are not ready to be satisfied by any efforts in their behalf.

Miss Elliott corroborated Mr. Smith's statement that most of the friction between librarians and the public was caused by the adherence to necessary rules; that, while in a bank these are accepted by people as a matter of course, they are chafed under in a library. The necessity of working from the reader's point of view was emphasized by Miss Thayne, of Scoville Institute, while Miss Van Horn, of Lake Forest, questioned whether it is always wise to encourage reading, especially among women who neglect their daily

work for the sake of a very mediocre type of fiction. Miss Wright told of work with foreigners trying to educate themselves by means of the public library.

The difficulty experienced by the general public in using indexes and catalogs, and the value of the personal element were given by Miss Durkee and Miss Abbott, the latter adding that, while the attendant may offer better suggestions, it should be done as by one who handles so many books that she naturally knows her books well, but not as the advice of a person who knows the subject in hand better than does the enquiring reader.

A general discussion followed, led by Mr. Routzahn, of the Municipal Museum, who protested against the large element of institutionalism prevailing in so many libraries.

RENÉE B. STERN, *Secretary pro tem.*

EASTERN MAINE LIBRARY CLUB

President: Mrs. H. M. Estabrook, Orono.

Secretary-treasurer: J. H. Winchester, Stewart Free Library, Corinna.

The sixth annual meeting of the Eastern Maine Library Club was held in the hall of Foxcroft Academy, Foxcroft, on Thursday, Dec. 7, 1905. After formal opening by the president, and prayer by Rev. H. W. Norton, Dr. E. A. Thompson, of Dover, who gave the beautiful library building to that town, delivered an address of welcome. Response was made by Ralph K. Jones, librarian of the University of Maine.

The first paper read was by J. H. Winchester, on "Value of local history," dealing largely with the methods used in gathering local records and materials of history in the Stewart Free Library at Corinna. He said in conclusion: "After this collection is made it should be put in some form which will make it readily usable. The family genealogies should be arranged in alphabetical order. The inscriptions from the cemeteries should be arranged in the same manner, each one by themselves. Everything should be filed away in the same manner you would make your card catalog. If you can get them printed so much the better, but until you can get things in shape for a town history typewritten copies will answer every purpose. Supplements can be added to any department at any time."

The discussion was participated in by Mr. H. M. Estabrook, Mr. Jones, and Dr. Roberts, of Colby College. A round-table discussion followed for half an hour upon the following topics: How can the remote taxpayer be interested in the library and can he be accorded any special privileges? What are the best periodicals for an academy or high school? What per cent. of fiction should be added to the town library? What reference books should be included in a library of 3000 to 4000 volumes?

A memorial address upon the life and services of the late Leonard Dwight Carver,

state librarian, was given by Arthur J. Roberts, of Colby College, and at its close a committee was appointed to draft suitable resolutions.

Luncheon was served at the Blethen House, Dover, and many of the members visited the attractive little Dover Public Library. At the afternoon session the subject, "Co-operation of the public library with the schools," was opened by H. R. Williams, of the Foxcroft schools, and led to some general discussion. A. Gertrude Earl, pastor of the Dover Universalist Church, gave an address on "The value of the library to the community," and Mr. H. M. Estabrooke spoke on "The importance of Maine," urging librarians to maintain bureaus of information on the history, politics, industries and activities of their state, and to aid in the development of Maine bibliography. The committee on resolutions then submitted the following memorial resolutions, which were adopted:

"As members of the Eastern Maine Library Club we wish to record our profound sorrow at the death of the late Hon. Leonard Dwight Carver. We shall always cherish the memory of his friendly spirit, of his inspiring leadership, of his rare efficiency as state librarian, and of his enthusiastic devotion to the general library interests of the state.

"To the bereaved wife and daughter our hearts go out in tenderest sympathy. May they find solace in memories of the past and in faith that lays hold on the future,—even on eternal life."

A resolution was also adopted, recommending to the Governor that Ernest W. Emery, assistant state librarian, be appointed state librarian, as Mr. Carver's successor. After the usual formal expression of thanks for the cordial welcome and hospitality accorded, the meeting adjourned.

Library Schools and Training Classes

CARNEGIE LIBRARY OF PITTSBURGH TRAINING SCHOOL FOR CHILDREN'S LIBRARIANS

In November Miss Mary McDowell, head resident of the University of Chicago Settlement, Chicago, Ill., visited the school and told the students of the work of the Settlement in the stock yards district of Chicago. She dwelt particularly on the characteristics of the different nationalities with which the workers come in contact, and on the qualities essential to doing successful work among foreigners.

The month of December brought three regular visiting lecturers to the school. On December 4 and 5 Miss Lutie E. Stearns gave four inspiring talks. Her subjects were: "The library spirit," "The library beautiful," "The problem of the girl," and "The public library from the standpoint of the public." On December 14 and 15 Miss Mary Wright

Plummer, director of Pratt Institute Library School, gave two scholarly lectures on "The reading of poetry to children," and "The development of the public library." From December 11 to 21 Miss Marie L. Shedlock gave a series of ten lectures to the students.

One of the most interesting events in the history of the training school was the "Teachers' evening," held December 19 in Carnegie Music Hall. Invitations were sent to all the public and private schools of the city and the response from the teachers was very gratifying. The program included a lecture on "The art of story telling," by Miss Shedlock, several songs by Miss Christine Miller, of Pittsburgh, and the following stories told by Miss Shedlock: "The giant and the jack straws," "The wolf and the kids," "Hafiz, the stonecutter," and "The selfish giant."

The training school was most pleasantly remembered at Christmas time by Miss Hewins, who sent as a gift for the school reference library three old-time children's books: "Rollo's Museum," by Jacob Abbott; Berquin's "Children's friend," vol. 1, and "Merry's museum," vols. 1-4. This gift was especially appreciated by the school as coming from one who was a pioneer in library work with children, and who is always doing much for its development.

NEW YORK STATE LIBRARY SCHOOL

Mr. Frank P. Hill lectured before the school Dec. 14 and 15 on "The effect of library training," "Branch libraries," "Library administration."

Miss Mary E. Hawley, of the John Crerar Library, spent a few days at the school in November, and told the students of her experiences in European libraries and of her attendance upon the annual meeting of the Swiss Library Association, where she was the only woman present.

The junior class has organized with the following members as officers: Mr. Chalmers Hadley, president; Miss Janet Nunn, secretary and treasurer.

The examination in elementary classification was held on Dec. 21.

The members of Mr. Eastman's class in library buildings have visited and reported on several libraries in the vicinity of Albany.

Mrs. Fairchild's many friends will be glad to hear of her continued improvement.

Miss Bacon holds a senior seminar every Friday for the examination of new library material received by the state library, hearing of library news and discussion of practical questions of administration. The following subjects have been taken up:

- Oct. 13. Frank K. Walter, How far should a public library supply the needs of a college situated in its own town?
- Oct. 20. Miss Anne T. Eaton, Is a children's room desirable in a small library?

- Oct. 27. Miss Sophie K. Hiss and Miss Esther Nelson, How far should the public in a public library and the students in a college library have access to the shelves?
- Nov. 3. Miss Mabel E. Leonard, 'Do demands made upon our library (an imaginary one) require the opening of a newspaper room?
- Nov. 10. Francis L. D. Goodrich, Librarian asks for an appropriation of at least \$100 for buying ornamental objects to increase the attractiveness of the library.
- Nov. 17. Frank K. Walter, Francis L. D. Goodrich, Arthur T. Rider, Librarians for men. Discussion of editorial in *Independent* for June 15, 1905. Is the case truly stated? If so, what can be done to better the situation?
- Nov. 24. Miss Helen M. Thomas, Shall patrons be allowed to draw more than two books at once?
CORINNE BACON,
Instructor in charge of program.

UNIVERSITY OF ILLINOIS STATE LIBRARY SCHOOL

The university resumed work January 9, after a recess from December 22.

Miss Edna Lyman, of the Oak Park Public Library, gave three lectures on story telling, with illustrations, before the school, January 9-11, thus completing her course, which has been of great value to the students. The school has bought a collection of children's books, which it hopes to add to from time to time for the use of library students rather than for general circulation. The school will be benefited by the new provision for opening the university library on Friday and Saturday evenings, making it now open from 7.50 a.m. to 10 p.m. continuously six days a week.

The director of the library school has been granted four months leave of absence for general study and travel. During her absence Miss Mabel McIlvaine, of the Newberry Library, Chicago, and Miss Elizabeth Greene, B.L.S., '05, will be added to the faculty and staff. Miss McIlvaine has had 15 years' experience in library work, beginning under Dr. Poole. Her special experience fits her to teach book-making and the senior seminar, which will be devoted to cataloging problems and a cataloger's vocabulary of foreign terms. In the library she will strengthen the collection of political science continuations. Miss Greene will help in the reference department. Miss Simpson will teach advanced library economy. Miss Howe will have the library extension seminar.

From January to May Miss Frances Simpson will be acting director of the library school.

RECENT POSITIONS FILLED

- Lilian Arnold, '02, assistant organizer Indiana Library Commission.
- Mary Bevans, '04, librarian Rhinelander (Wis.) Public Library.
- Alice Bixby, '00, assistant Berkeley (Cal.) Public Library.
- Bertha Bond, '05, loan desk assistant, University of Illinois.
- Esther Braley, '03, librarian State Normal School, Kalamazoo, Mich.
- Helen V. Calhoun, '05, continuation assistant, University of Illinois.
- Fanny Duren, '03, substitute librarian, Eldora, Ia.
- Margaret Gramesley, '04, librarian LeMoyne Normal Institute, Memphis, Tenn.
- Edna Hopkins, '04, assistant Cincinnati University Library.
- Alice Matthews, '03, librarian South Dakota University Library, Vermillion, S. D.
- Emily Nichols, '05, assistant Armour Institute Library, Chicago.
- Ann S. Finkum, '05, librarian Marinette (Wis.) Public Library.
- Delia Sanford, '00, cataloger Wisconsin University Library, Madison.
- Lorena Webber, '05, librarian Iowa City (Ia.) Public Library.

Married

- Minnie Bridgman, '01, to L. M. Ingham, of Clinton, Ill., Oct. 25.
- Hazel Sloan, '07, to Philip G. Schoeder, of Helena, Mont., Nov. 15.
- Marietta Street, '03, to Hugh M. Price, of Paris, Tex., Dec. 28.

KATHARINE L. SHARP, *Director.*

Library Economy and History

GENERAL

The *A. L. A. Booklist* for December contains as additional features announcement of the appointment and purpose of the A. L. A. committee on publicity; bulletin no. 19 of the A. L. A. committee on book buying; and Miss Wilbur's monthly "index to reference lists published by libraries," previously published in the *Bulletin of Bibliography*.

The *Library Association Record* for November opens with the address of Mr. John Pink, librarian of the Cambridge Public Library, read before the Cambridge meeting of the L. A. U. K. and entitled "After fifty years, a retrospect." It is a review of a half century of library and literary history in Cambridge, Mr. Pink's connection with the public library dating from its organization in 1855. The rest of the number is almost wholly devoted to a summary report of the proceedings of the 28th annual meeting of the L. A. U. K. at Cambridge.

The *Zentralblatt für Bibliothekswesen*, December, 1905, cites a report by A. Aulard, in *La Révolution Française*, September, 1905, on changes introduced, or determined upon, in the Bibliothèque Nationale, Paris. They are: 1. The home circulation of duplicates. 2. The extension of hours of opening in the reading room. 3. Quicker service. No. 2 implies an extension of half-an-hour at certain times of the year, when daylight permits, there being no electric light. The wait for books is to be reduced from one hour to 15 or 20 minutes. Still another German library has moved, this time that of Heidelberg University, and again the details of moving are given in the *Zentralblatt*, to the possible profit of those contemplating a like "move." The full cost was 5000 marks, including expense of cleaning the books by means of a vacuum-cleaner. The work was well planned beforehand, and therefore easy to carry out.

LOCAL

Brooklyn (N. Y.) P. L. On Dec. 15 it was decided at a conference of Mayor McClellan, Martin W. Littleton, borough president of Brooklyn, and Michael J. Kennedy, park commissioner of Brooklyn, to approve the proposed Prospect Park plaza site for the main building of the Brooklyn Public Library. The formal resolution adopted was as follows:

Pursuant to the authority vested in us by virtue of Chapter 553 of the Laws of 1905, we hereby designate and set apart as a site for the Brooklyn Public Library that portion of the lands bounded by Eastern Parkway, Washington avenue, town of Flatbush and Flatbush avenue, lying between the Prospect Hill reservoir, the Eastern parkway, Flatbush avenue and Prospect Park plaza, Borough of Brooklyn, City of New York.

Dated, December 15, 1905.

GEO. B. MCCLELLAN, Mayor.

MARTIN W. LITTLETON,
President Borough of Brooklyn.

MICHAEL J. KENNEDY,
Commissioner of Parks, Borough of Brooklyn.

A statement was also given out by Mr. Littleton, with the approval of the other members, which says in part:

"The consideration of the site on the park plaza having been had by eminent and technical experts, their report was substantially a recommendation of the committee for the adoption of this park plaza site. These experts were Professor Hamlin, of Columbia University, selected by the library trustees; Frederick Law Olmsted, Jr., employed by the Brooklyn League, which is opposed to the site; and Messrs. Carrere & Hastings, employed by the committee, and it is remarkable that all three should have concurred in the general result."

At the December meeting of the directors, the president of the board was authorized to appoint a committee of seven to carry out the plans for the central building.

Camden (N. J.) F. P. L. William H. Ket-

ler, the librarian, sends further information regarding the Boys' Reading Fraternity, designed to encourage the reading of non-fiction books, and asks that librarians throughout the state co-operate with him in its extension. Although only one month old, he states that the association has had a marked effect upon the quantity of fiction read by the boys patronizing the Camden library. The fraternity, as already noted, is to be composed of "chapters," and Roosevelt Chapter, no. 1, of Camden, has a president, a vice-president, a secretary, an inside guard, an outside guard, a chaplain, and an executive board of five members. The president and vice-president are young men, while the secretary and the executive chairman and executive secretary are high school students. Roosevelt Chapter meets, in business session, once a month, and only members who display their membership cards to the guards are admitted. At this business meeting arrangements are made for an open meeting, or entertainment, one night a month, to which each member brings his father or next male relative. The boys themselves do the entertaining, and have displayed talent which, probably, would not have come to light but for the boys' ambition to display their abilities before the men. At the business meeting every boy is urged to "stand up and say something," even if it is only a question. The chapter has a few simple forms, one of them being the rising of the boys at two taps of the gavel and reciting their obligation in concert and with the right hand raised.

Clarinda (Ia.) F. P. L. The library was formally opened on the evening of Dec. 5, 1905. Nearly 400 persons have agreed to pay \$1 a year toward the maintenance fund, and the librarian has the aid of volunteer assistants. About \$2000 have been subscribed to the book fund, of which nearly \$1500 have been expended for books and \$60 for magazines and periodicals.

Covina (Cal.) Carnegie L. The library building was opened to the public on the evening of Dec. 4, 1905, when a large reception was held. It cost \$8000.

District of Columbia P. L., Washington. (8th rpt.—year ending June 30, 1905.) Added 11,322; total 73,045. Issued, home use, 353,493, of which 2684 were drawn from the Neighborhood House and 821 from the high schools, an increase of 75,308 vols. over the preceding year; "the percentage of fiction in the entire circulation dropped from 83.7, as reported in 1903-4, to 71.8." New cards issued, 10,614; total registration 38,779. Visitors to reference room, 74,296, to whom were issued 16,338 vols. not on the reference shelves.

An interesting and comprehensive report, showing growth in use and in activities.

There is opportunity for still larger development through branches in the schools, vacation school libraries and home libraries, and the utilization of like agencies. Urgent recommendation is made for increased funds for books and for assistants, erection of the Carnegie branches, and extension of the school circulation plan to reach police and fire stations, manufactories, institutions, etc. The estimates presented for the year 1905-6 call for appropriations of \$66,280 instead of the former \$39,120, the increases being mainly for salaries and additions to the force.

The marked decrease in fiction percentage of circulation has been brought about in part by the display of a proportion of books in other classes in the open shelf room. About two or three thousand non-fiction books are now displayed regularly, two or three classes being displayed for two or three months and then replaced by other classes. "It has been interesting to watch the increased circulation of the classes brought into the open-shelf room. History and travel were brought out about October 1, and the circulation of this group in October was almost double that of September. This increase kept up throughout the year, even though a selection only of books from this class was kept on open shelves after December. The bringing of the literature classes out caused the circulation in December to be more than three times what it was in September. Books on science and useful arts were brought out in January, and the circulation of these classes was at once more than double that of the previous month. The demand for these important classes has been so persistent that it seemed wise to leave them on the open shelves for a more extended period. This experience points to the need for a larger open-shelf room, in which a selection of from 15,000 to 20,000 of the best books in the library may be always available."

Home circulation of current periodicals, adopted in January, 1905, has proved popular, from one to ten copies of 15 magazines (75 copies in all) being taken for this purpose and kept in circulation four months. The duplicate pay collection also continues its popularity. No formal guarantee system is enforced for borrowers, the city directory being taken as main authority for a borrower's responsibility. The age limit has been reduced from 12 to 10 years, and Mr. Bowerman recommends that it be entirely removed, and that cards be issued to any child who can fill out and sign his application. In the children's room the circulation was 73,973, a gain of 25,675 over the previous year; of the fiction percentage of 67.38, 15 per cent. was fairy tales. In co-operation with the Audubon Society a series of four talks on birds was given in the lecture hall in April, and it is recommended that a series of Saturday lectures or talks on popular scientific subjects be arranged for the next season. "Most of

the work of the library with the public schools is in prospect, but there is every expectation of entering into the closest co-operative relations with the schools as fast as funds for necessary books and assistants will permit." A teachers' reference library is arranged in one of the study rooms, which is at all times open to teachers, and in which is shown also a fine selection of text books suited for use in the various grades, all of which have been contributed by publishers. The only branch in operation during the year was the Neighborhood House station, where the use of books showed improvement in quantity and quality.

Of books added, the majority are volumes in active demand for circulation. Expensive or highly specialized reference books are regarded as within the province of the Library of Congress or other reference libraries; but there is necessity for much duplication, especially of moderately expensive biographies and scientific books; the demand for technical books is also growing. "On January 1 the use of the ledger accession book was discontinued, and since that time the accessions register has been kept on order slips filed numerically. This change has greatly reduced the work of accessioning, since in the majority of cases the order slip does not have to be rewritten."

Much has been done to spread knowledge of the library by the issue of special lists and bulletins, and by newspaper articles and announcements of new books; as well as by special exhibitions, such as that of books suitable for Christmas gifts.

An apprentice course was begun in January, 1905, intended only for candidates seeking positions in the library, who are at least high-school graduates, who pass an examination conducted by the library, and who appear to have the requisite personal qualities. The plan adopted provides that all senior positions (those paying annual salaries of \$600 and upward) should, unless filled by promotion, be filled by candidates who are college and library school graduates; and that junior positions (under \$600), unless filled by promotion, should be filled by candidates who have served in this apprenticeship. Further details of the various departments are given in the appended reports of their respective heads.

Gloversville (N. Y.) F. L. The Carnegie library building was formally dedicated on the afternoon of Thursday, Dec. 14, 1905, when exercises were held at the First Congregational Church. The chief address was delivered by W. E. Park, for many years a leading clergyman of Gloversville, and other speakers included Rev. Dr. Cords, of the First Baptist Church, and William R. Eastman, state library inspector. A telegram of congratulation was read from Mr. Carnegie.

The new building, for which Mr. Carnegie gave \$50,000, was described and illustrated in these columns at the time the plans were accepted and construction work begun (L. J., 29:140-141).

Grand Rapids (Mich.) P. L. Formal ratification has been effected of the agreement between the library and the Historical Society of Grand Rapids, whereby the funds of the society as well as their books and other property are turned over to the library, the funds to be kept intact for the purchase of historical material relating to Michigan. These funds now amount to nearly \$1600, and are yielding an income of about \$90 a year, though for the present the expenditure from this income will probably not exceed \$50 a year.

Another incident of importance is the ratification of the contract between the library board and the board of education, whereby branch libraries will be gradually established in the public school buildings throughout the city. The school board will furnish and equip a large room, with an outside entrance in such of the buildings as may be agreed upon by the two boards; they will also furnish heat, light, and janitor service. The library will furnish the books, periodicals and the librarian, and keep the room open for library purposes not less than four hours each weekday, nor more than twelve hours, as may be determined upon. In a new school building which will be ready next September, the library will have a room equipped to seat from 75 to 100 readers, with tables specially adapted for children. In addition, the board of education gives the library the right to conduct a series of evening lectures in the school buildings at such times as may be agreed upon by the two boards. This plan, it is believed, will enable the library to extend its usefulness throughout the city at a minimum of expense. The library rooms will be equipped to shelve 2000 or 3000 volumes. It is the purpose of the library board to establish, if possible, one or two new branches in these school buildings each year until the city is well covered. There are now some 35 school buildings in the city and 30 of these are so located as to be convenient centers for branch libraries.

At a recent meeting of the city council, action was taken transferring to the library the copies not needed by the municipality—city officers, etc.—of the new city charter and all other municipal documents for exchange with other cities throughout the country. It is hoped to build up in this way a collection of municipal documents that will be of value and of interest both to city officials and to the public generally. This action practically makes the library the center for handling all city publications that go outside of the city. There are a large number of clubs, churches, and

other organizations that are studying municipal government and all its various problems, and the library authorities believe that a collection of first-hand sources will be of immense value to all persons interested in such things and in fostering a pride and interest in the city's progress and welfare.

Hatboro (Pa.) Union L. The 150th anniversary of the establishment of the library was observed on the afternoon of Dec. 14, when a large reception was held and historical and literary addresses were delivered. The library dates back to 1755, the first meeting having been held on July 19 of that year. The first annual meeting was held on Nov. 1, 1755. Many of the earlier purchases of books were made in London, and imported directly, and in 1768 the library contained 200 works in 461 volumes. In 1787 the library was incorporated. It then contained 620 volumes. A substantial library building, which it still occupies, was erected in 1849, the fund for its erection having been bequeathed by Nathan Holt of Horsham, who died during the previous year, leaving nearly \$6000 to the library.

Louisville (Ky.) F. P. L. The opening of the Portland branch in December marked the fifth branch or department to be opened during the year just closed. The order of the openings was as follows: Highland branch, in January; main building, in May; Colored branch, in September; children's department, in October; Portland branch, in December. A summary of the year's work shows \$15,000 worth of books purchased and over 16,000 vols. cataloged. There are 76,451 vols. in the library, and the circulation for the calendar year to Nov. 30, was 137,787.

At the Portland branch an experiment was tried, in throwing open the building, with its 14,000 volumes, to the public for inspection and the registration of prospective members a week before the books were ready for issue. This resulted in an advance registration of 325. The branch is open from 2 to 9 p.m.

The library has issued the Newark list of "A thousand of the best novels" as a special bulletin, at five cents a copy. It also published a list of books recommended for Christmas gifts, to supplement the exhibition of such books held in the children's department from Dec. 4 to 25.

Nashville (Tenn.) Carnegie L. A series of six free lectures has been arranged, to be given in January, February and March. It is also planned to make a story-hour a feature of the work with children, giving stories, and travel talks with stereopticon illustrations.

New Orleans (La.) P. L. At the November meeting of the directors it was announced that the first prize for the main Carnegie library building had been awarded to Deboill & Owen, of New Orleans. In the secondary competition for branch libraries the first prize

was awarded to Fauvrot & Livaudais, also of New Orleans. The terms of the competition limited the branch library plans to local architects, but the main building competition was not so restricted.

New York City. Hispanic Museum L. The beautiful museum and library building given to the Hispanic Society of New York by Archer M. Huntington is practically completed, and will, it is stated, be opened early in the new year. The building stands on the northern slope of Audubon Park, at 155th St. and Broadway; it has cost nearly half a million dollars, and the institution is endowed by Mr. Huntington with a fund of \$350,000. The purpose of the whole enterprise is to advance the study of Spanish language and literature, in which Mr. Huntington has long been an ardent student. The museum-library building is built of Indiana limestone, in a Roman classic design. It is 100 feet front and 70 feet in depth, and is approached by an imposing double flight of granite steps. The main floor is devoted to a great reading room, and to study alcoves. The whole building is as nearly fire-proof as possible. Its chief contents will, of course, be Mr. Huntington's remarkable and extensive collection of books, manuscripts, coins, medals, seals and pictures dealing with Spanish and Portuguese history and literature. The Hispanic Society was established by Mr. Huntington on July 3, 1904, and at that time about 40,000 volumes had been brought together. An account of the building and of its collections is given in the January number of *Appleton's Booklover's Magazine*.

New York P. L. At a meeting of the trustees held on Dec. 13, it was voted that beginning with the new year the hours of opening of the Astor Library should be extended until 9 p.m. instead of 6 p.m. as heretofore, and until 10 p.m. for reading room use in six of the circulating branches. Resolutions were also passed providing for Sunday opening of the six circulating branches. A report from the director, Dr. Billings, was read, showing that the increased cost of evening opening at the Astor would amount to \$8000 a year. The trustees voted to appropriate this sum, and to appropriate \$5000 a year for the extension of hours in the six branch reading rooms. In the official notice of the evening service at the Astor Library, the library authorities say:

"As it will be difficult, if not impossible, owing to the lighting arrangements, to find books not on the main floor, it would be best for readers to give notice during the day of what books they desire for evening use, so that these books may be found and made ready for them when they call. This notice may be given by filling out order slips in the usual way during the day, or by letter or postal." Notice of the extension of hours

at branches is as follows: "On and after Sunday, Jan. 7, 1906, the reading rooms in the following branch libraries will be open on Sunday afternoons from 2 to 6 p.m.: Chatham square branch, 33 East Broadway; Rivington street branch, 61 Rivington street; Tompkins square branch, 331 East Tenth street; Ottendorfer branch, 135 Second avenue; Yorkville branch, 222 East 79th street; 96th street branch, 112 East 96th street; Aguilar branch, 174 East 110th street; Mott Haven branch, 569 East 140th street; Jackson square branch, 251 West 13th street; Bloomingdale branch, 206 West 100th street; Harlem Library branch, 32 West 123d street.

"Since Tuesday, Dec. 26, reading rooms in the following circulation branches of the system have been open until 10 p.m. instead of 9 p.m., as follows: Rivington street branch, Ottendorfer branch, Tompkins square branch, Amsterdam avenue branch, 536 Amsterdam avenue; Yorkville branch, 222 East 79th street; Tremont branch, 1866 Washington avenue."

Owatonna (Minn.) P. L. A remarkable demonstration of public feeling was aroused recently by the action of the library board in regard to the election of a librarian. The term of the present librarian, Miss Maude Van Buren, expired at the close of the year, and at the December meeting of the board of trustees, on Dec. 6, Miss Daisy B. Sabin, of Davenport, Ia., was elected librarian by a vote of five to four, at a salary of \$60 a month, being \$10 a month less than had previously been paid. At the same time the salary of the assistant librarian was raised from \$35 to \$40 a month. The action of the board in not re-electing Miss Van Buren had been foreshadowed for several weeks previously, and aroused strong public disapproval. A petition signed by over 500 well known citizens was presented to the board, setting forth Miss Van Buren's effective services and the esteem with which she was regarded by users of the library, and urging that she be retained. At the board meeting this petition was read and ordered filed, and the election of Miss Sabin was carried through by a majority of one vote. As a result of this action there was promptly issued a call for a public mass meeting of protest, signed by 100 citizens. It read as follows:

Whereas, The action of a majority of the library board in discharging Miss Van Buren from the position of librarian, in which position, in our opinion, she has rendered such conspicuous service as has given our library management an enviable reputation known throughout the state, is unwarranted and unjustifiable on any grounds of either justice or public policy known to us, and

Whereas, No charges, so far as known to the general public, have been made reflecting upon her or her management of this important public institution, and,

Whereas, Her place has been filled by the election of a person unknown to this community and to the members of the library board, who voted for her without resorting to the usual precaution of having

her application referred to a committee for investigation, and this too notwithstanding a protest signed by over 500 of our citizens had been presented to the board praying for the retention of Miss Van Buren:

Therefore, we, the undersigned citizens of Owatonna, unite in inviting the members of the library board, and especially those members of said board who are responsible for this action to appear before a public meeting of our citizens at the Court House on Monday evening, Dec. 11, at 8 o'clock, there to make known the reasons for their action, to the end that the general public may be in possession of the facts and reasons upon which such action was based. We consider this due to the members of the board, whose course is now severely criticized, and to the public whose servants these members are.

The meeting, held at the time announced, was attended by an audience that taxed the capacity of the court house to the utmost. Hon. John L. Gibbs, ex-Lieutenant Governor, was elected chairman. Of the members of the library board only the four were present who had voted for Miss Van Buren's re-election, and in response to roll call by the chair each of the four stated briefly the reasons for his action. Hon. L. L. Wheelock, chairman of the library board said that he had voted for the re-election of the librarian, first because from his long service on the board he deemed her especially efficient; second, because of her high reputation as a librarian throughout the state; third, because over 500 citizens had petitioned for her re-election; fourth, because he did not know of any other candidate for the place until five minutes before the vote was taken.

An address was made by Hon. W. R. Kinyon, who recited the facts regarding the preparation and preservation of the petition, and regarding its reception by the board said in part: "It seems to me such an action was uncourteous, unkind and unfair. It certainly was unexpected that any man or men would treat neighbors and friends with such disrespect. This is a public library. It is our library. The directors are appointed to carry out the public wishes, not to enable them to avenge either real or fancied wrongs, if any such they have. We have respectfully requested them as our agents and servants to retain in office our present librarian. All the sentiment, so far as I know, that has been expressed among the people, was in favor of her retention. We asked nothing but that of right belonged to us. Our request has been unheeded and ignored. From this point, the question of who shall be librarian, to me at least, is a minor one. They have by their action thrust upon us another question of vastly more importance. That is, the question whether we have the right to petition our officers whom we have placed in charge of our public business, and express to them our desires and wishes. If we have this right, then it is the duty of the officers so petitioned to give to our requests full and careful consideration, else the right is useless. . . .

"I wish to state that the directors of our library board are all men whom I have known for years, have respected them and been glad to call them friends. I would not knowingly do injustice to any one of them. Their private life has been honorable, so far as I know, and I can hardly believe that they would after due consideration and careful thought insult and ignore their constituents. I shall at least solace myself with the thought that their action was the result of haste and without giving much thought to the results. But the fact still remains that in their official position the people feel that the majority of this board have ignored their request and misrepresented those they were appointed to serve. It seems to me that under the circumstances the greatest service they can do the people now is to resign."

After addresses by other speakers a committee on resolutions was appointed, which later presented a set of vigorous resolutions, setting forth the excellent work done by Miss Van Buren as librarian for the past three years, the expressed desire of the citizens for her retention, and the action taken by the library board, and requesting the library board "at once to call a special meeting for the purpose of rescinding their action." The resolutions were adopted and a general executive committee of 15 members was elected, with power to appoint other committees, to call other meetings, and to represent the citizens before meetings of the library board and before the city council and mayor.

On the following day a brief public statement was made by the five members of the library board concerned, asking "for a public investigation of the Owatonna Free Public Library by the proper authority, that the true state of affairs may be made known to the public." To this one of the members added a protest that the details of a vote by ballot should have been "made public by an indirect and unjust mode of proceeding."

The latest development in the situation was the withdrawal by Miss Sabin of her acceptance of the position to which she had been elected. This withdrawal was sent upon learning more fully of the local conditions, and as a result the position of librarian is now left vacant. Miss Van Buren is a graduate of the Pratt Institute Library School, class of 1902, and was elected president of the Minnesota State Library Association at its recent meeting in October, 1905.

Raleigh (N. C.) Olivia Raney L. (5th rpt. —year ending Nov. 30, 1905.) Added by purchase 264; total 7267. Issued, home use 28,315 (fict. 18,838; juv. fict. 5447), of which 21,186 were drawn by adults. Registration 3063. Receipts \$2801.65; expenses \$2685.96.

San Francisco (Cal.) Mercantile L. On Dec. 8 the question of continuing the library

or merging it with the Mechanics' Institute or Public libraries was submitted to ballot by the members. The result was in favor of consolidation with the Mechanics' Institute Library. Of the 620 members 346 voted, 231 favoring consolidation with the Mechanics' Institute, 128 favoring independent continuation, and 5 favoring consolidation with the Public Library. At a special meeting of the members of the Mechanics' Institute, held on Dec. 20, it was decided by a vote of 123 to 41 to consolidate with the Mercantile Library Association, merging with that corporation into a new organization which is to retain the name and constitution of the Mechanics' Institute, but of which the library shall be known and designated as the Mechanics' Mercantile Library. The action taken was in the shape of the adoption of the report of the special conference committee recommending the proposed consolidation.

By the terms of the agreement the Mercantile Library Association will be merged into the Mechanics' Institute. Its members will be awarded life membership, and will enjoy all the rights and privileges of the Mechanics' Institute. Its assets, consisting of \$26,000 in cash, real estate worth \$3,000, personal property valued at \$10,000, and 80,000 volumes, will be turned into the new corporation, which will assume its liabilities, at present nominal.

Immediately after the adjournment of the special meeting the board of trustees of the Institute, empowered to take all the necessary steps to perfect the consolidation of the two corporations, met in session. It was voted to immediately publish the required legal notice of intention of consolidation, to obtain from the Mercantile Library Association a verified statement of its financial condition and to then adopt the proper resolutions, already prepared, containing the consolidation agreement and ratified by the signatures of the president and secretary of each corporation and of three-fifths of the members of the boards of trustees.

Spokane (Wash.) P. L. The handsome Carnegie building was opened with formal exercises on the evening of Dec. 18, when addresses were made by the mayor, Mrs. Estelle Deffenbaugh, the librarian, and Charles Wesley Smith, librarian of the Seattle Public Library. The building, which cost \$85,000, is two-storied with a high basement and an entrance supported by Ionic columns. A marble-lined vestibule gives entrance to the delivery hall, extending up to the roof and lighted by skylight. At the rear is a two-storied stack room, one tier only being installed at present, with a capacity of 75,000 volumes. On this floor also are a women's reading room, reference room, study room, general reading room, librarian's office, and cataloging room. The second floor gives accommodations for the trustees' room and an

attractive children's room; and in the basement are newspaper room, rest room for the library staff, unassigned space, and the usual storage and heating space. Mr. Carnegie's original gift for the building was \$75,000, in March, 1903, to which he added \$10,000 more in the autumn of 1904.

University of California, Berkeley. Mr. F. J. Teggart, librarian of the Mechanics' Institute Library of San Francisco, has been appointed custodian of the H. H. Bancroft Library, recently acquired by the university, to act during the time the collection remains in San Francisco—perhaps for a year to come—and during its removal to Berkeley. Professor H. Morse Stephens, to whose enthusiasm and interest the purchase of the collection is mainly due, has been appointed by President Wheeler as "Bancroft librarian," in addition to his other college duties. He will take charge of the collection after its installation at Berkeley and for the next three or four years will probably devote his time very largely to supervising the organization of the collection, under trained assistants, and making it fully available for use.

Virginia State L., Richmond. The library school, operated under the auspices of the state, with free instruction to all Virginia applicants, has started its second year successfully. Necessarily the class is small, owing to the rules of the library restricting the membership to ten; the course covers a period of two years. During the coming Assembly, certificates of graduation will be authorized by the state, and the number to be enrolled in each class enlarged to 20. Aside from the heads of the various departments of the state library, who, under the ruling of the librarian, must be graduates with three years' experience, all appointments made will be from the library class.

The annual report of the state librarian for the year just ended shows 43,000 readers and 96,000 books issued to readers upon application. This is an increase of over one hundred per cent. over the previous year.

Thirty travelling library stations have been established from books donated by friends; and the coming Assembly will be asked to appropriate sufficient funds to establish three stations in each of the 100 counties. As the railroads and steamboat companies operating in Virginia have agreed to carry all travelling libraries free of cost, to and from the main office in Richmond, the cost of operating the system will be materially lessened.

Another feature of the library's work is the preparation of students for inter-collegiate debates, and the furnishing to any citizen of the state any authority needed to complete a special study, upon having his or her application countersigned by the superintendent of the public school of any county or state. Every school teacher in the state is also al-

lowed to use the books of the state library for home study.

Washington County F. L., Hagerstown, Md. (4th rpt.—year ending Oct. 1, 1905.) Added 1928; total 15,832. Issued, home use, from central lib., 60,317 (fict. 69 per cent.); county circulation 20,917, an increase of 5129 over the preceding year. Total registration 5976.

There are now 66 deposit stations established in the county, from which 14,962 vols. have been distributed with a circulation of 20,917. A "library wagon" was started on the work of distribution through the county in April; it has made 31 trips, covering an average of 30 miles a day, and has distributed 1008 books. "To be a success there can be no hurrying from house to house, but each family must be allowed ample time for selection. It was found that comparatively little use could be made of this method of reaching the country people through the three hot months of summer, for the farmers were too busy to devote much time to reading, but the spring and fall have been periods of activity. If we had the means at our command we could profitably keep a man busy with the wagon all the time. Three trips a week are absolutely necessary to cover the territory and more could be made to advantage."

A list of the books distributed from the library wagon during one day gives an idea of the general good quality of the literature read.

The children's room at the main library has had an attendance of 20,627 and a circulation of 16,546 volumes. The story-hour has been continued, a Christmas tree was a feature of Christmas week, and bulletins and pictures have been largely used to awaken interest in books. Three stereopticon lectures for children have been given. Graded lists of books have been sent to the county schools, and the demand for books has exceeded the supply.

"An offer has been made to supply each minister in the town and county with an author catalog of cards printed by the Library of Congress, embracing the books which a clergyman would use as tools of his trade. This would cover the recent books in the departments of religion, ethics, religious biography and certain lines of philosophy. It is proposed to send this catalog free to any clergyman who will deposit \$1 with the librarian, this sum to be used in mailing cards of future additions in these classes. Thus far, six clergymen have signified a desire to avail themselves of this offer."

Watertown, N. Y., Flower Memorial L. A department for the blind has been established, with a nucleus of 17 books in raised point type. If there proves to be any demand for these books it is proposed to add to the collection.

FOREIGN

Bohemia. Ceska Osveta, published at Novy Bydov by L. J. Zivny, and devoted to the promotion of public libraries and educational extension, opens its latest number (vol. 2, no. 3) with illustrations of the children's rooms of the Milwaukee and Los Angeles public libraries. Its contents include "Notes on literature for children," by H. Promyk; "Reading in the national schools," by V. Benes; "Some words about the relation and co-operation of the free library and the school," by J. Dont. The foreign subscription rate to the periodical is 5s. yearly.

Denmark, Library progress in. In November a library association for a Danish popular library was formed, through the efforts of Dr. A. S. Steenberg, of Horsens, who has done so much of the development of library interests in Denmark. State aid has also been granted to school libraries for children and teachers, and Dr. Steenberg has perfected plans for a national library exhibition, the first to be held in Denmark.

Gifts and Bequests

Andover, Mass. By the will of the late Mrs. Helen G. Coburn, of Boston, a bequest of \$25,000 is left to the town of Andover for a library and memorial hall.

Ballston Spa. On Dec. 29 the village authorities accepted the offer of Mrs. Helen M. Knickerbacker, of New York, and her son, William H. Knickerbacker, of Ballston Spa, to erect a public library building as a gift to the town. The building is to cost \$30,000, and the village is required to appropriate \$500 a year for its support. The donors also agree to endow the library with a sufficient sum for maintenance, in addition to the required appropriation.

Jamestown, N. Y. James Prendergast F. L. By the will of the late Eliah F. Hall, of Jamestown, a bequest of \$1000 in cash is left in trust to Miss Mary E. Hazeltine, librarian of the Prendergast Library, "to apply the same to the purchase and presentation of books to the Prendergast Free Library, of Jamestown, such books as she may think I would prefer for that purpose." Hr. Hall, who was a native of Jamestown, and had long practiced law in New York City, retired from professional life some years ago and returned to Jamestown, where he spent much of his time in the library. He was particularly interested in political science, and from time to time gave books for the development of this department. His trust fund will probably be devoted to the yearly addition of books in this class.

Wesleyan University L., Middletown, Ct. An important addition to the collection has been made by the acquisition of the library of

the late James Cooke Van Benschoten, for 39 years professor of Greek in the university. This collection, consisting of 3300 bound volumes and many pamphlets and numbers of periodicals, has been purchased by friends of the university at a cost of \$1500 and presented to the library. Its especial strength is in sets of classical periodicals, editions of the Greek writers, works on Greek art, and books dealing with the New Testament.

Carnegie library gifts

Abilene, Kan. Dec., \$10,000.

Muskogee, Indian Territory. Dec. 9, 1905, \$15,000.

Red Bluff, Cal. Dec. 1, 1905, \$10,000.

Sarnia (Ont., Canada) P. L. Dec. 5, 1905, \$5000 additional, making a total of \$20,000.

Practical Notes

CLASP FOR LOOSE-LEAF BINDERS. (Described in *Official Gazette* of U. S. Patent Office, November 28, 1905. 119:1107.) il.

CLOTH AS A BOOK-BINDING MATERIAL.—In the state library, where the chief object of binding is durability and preservation, we look along the shelves in the stack room and observe the lessons that time alone can teach. Upon our shelves this one lesson is clear, that no leather of recent manufacture except the most expensive morocco is fit for bookbinding. It is also apparent that even the poorest quality of binder's cloth will far outlast any but the most expensive leather; even a six-cent muslin will outlast the larger portion of all leather used in bookbinding. State documents bound in five-cent muslin twenty-five years ago are now in better condition and stronger than similar volumes bound in so-called sheep five years ago.

The state library has discontinued the use of leather entirely except in continuations of sets well advanced in leather and when leather is used in continuations we use only high-priced morocco. Except in these continuations, which are few, we use two grades of cloth, the heavier called duck or canvas, and the lighter quality commonly known as buckram, or art canvas, however these terms vary with the user. There is a yet lighter grade of goods commonly called art vellum, which we have used but little, yet I am sure it is much superior to leathers of medium price. The duck does not take type impressions in such a manner as to make clear titles, and when we use duck we use leather label for the title.

I am strongly of the opinion that libraries should speedily discontinue all leather bindings, and I trust the time may soon come when all the states and the national government may entirely quit the use of leather in bookbinding. The best quality of cloth is much cheaper than even the cheapest quality of leather. Such cloth as I have mentioned above, thirty-eight inches wide, costs but 20

cents per yard, while the same surface area of leather of the most worthless quality costs six times as much—*Monthly Bulletin, Indiana State Library, December, 1905.*

FILE BINDER FOR LOOSE SHEETS. (Described in *Official Gazette* of U. S. Patent Office, November 28, 1905, 119:997.) il.

Librarians

ANDERSON, Edwin Hatfield, who resigned the librarianship of the Carnegie Library of Pittsburgh on Dec. 1, 1904, to enter business life, was appointed director of the New York State Library by the Board of Regents, on Dec. 14, 1905, succeeding Melvil Dewey, whose resignation from that office went into effect Jan. 1, 1906. Mr. Anderson also assumes the position of director of the New York State Library School. A sketch of Mr. Anderson's library career appeared in these columns in January, 1905, and to it little need be added. A graduate of the New York State Library School, class of 1891, his ten years' work as head of the Pittsburgh Carnegie Library brought him into the front rank of the profession as a library administrator and organizer. He has been active in the state and national library associations, a leader at once progressive and conservative, and all concerned with library interests will rejoice that he has been induced to re-enter the library field in a post that offers such wide opportunity for usefulness.

BERRYMAN, John R., for 30 years librarian of the State Law Library, Madison, Wis., has resigned that position, in which he is succeeded by Gilson Glasier, of Milwaukee.

GILBERT, Frank B., of Albany, N. Y., was on Dec. 20, 1905, appointed law librarian of the New York State Library, succeeding the late Stephen B. Griswold. Mr. Gilbert is a graduate of Hamilton College, class of 1889, and was admitted to the bar in Stamford, New York, in 1891, where he continued in practice for three years. In 1894 he opened law offices in Albany in partnership with Robert C. Cumming, and in 1891 he was appointed to act as attorney for the preparation of bills for introduction into the legislature, an office which he has since held. During last year he had also a lectureship at the Albany Law School.

HEWINS, Miss Caroline M., librarian of the Hartford (Ct.) Public Library, will sail for Genoa on Jan. 13, going from there to Florence and some of the other Tuscan cities. She will return by the first of May.

KAULA, F. Edward, for the past three years assistant in the Library of Congress, has resigned that position to become cataloger and assistant manager of the Merwin-Clayton Sales Co., New York City.

RANKIN, George W., assistant librarian of the Fall River (Mass.) Public Library, was

on Dec. 9 elected librarian of that library, succeeding the late William R. Ballard. Mr. Rankin has been connected with the library since 1872, and early in 1873 became assistant in the cataloging department. He was appointed assistant librarian in 1874, having had entire charge of the catalog work, and during Mr. Ballard's illness he served as acting librarian.

RUSSELL, Miss Louise, librarian of the Carnegie Free Library, Alliance, Ohio, has resigned that position to join the staff of the Brooklyn (N. Y.) Public Library. On Jan. 1 Miss Harriet Goss, of Cleveland, was elected as her successor. Miss Goss was formerly connected with the Cleveland Public Library and with the indexing force of the H. W. Wilson Co.

SWEET, Miss Belle, University of Illinois Library School, class of '04, and librarian of the Clinton (Iowa) Public Library, has been appointed librarian of the University of Idaho, Moscow.

WRIGHT, Miss Ruth, formerly assistant in the Catalogue Division, Library of Congress, has been appointed assistant cataloger in the Michigan State Library.

WYER, James Ingersoll, Jr., librarian of the University of Nebraska, and secretary of the American Library Association, was on Dec. 20, 1905, appointed reference librarian of the New York State Library, succeeding Dunkin V. R. Johnston, resigned. He later received the additional appointment of vice-director of the New York State Library School. Mr. Wyer is a graduate of the University of Minnesota, and of the New York State Library School, class of 1898, and has had charge of the University of Nebraska Library since the autumn of 1898. He was elected secretary of the American Library Association by the executive board in December, 1902, being re-elected at the Niagara Falls Conference in 1903, and re-elected for a three-year term at the St. Louis Conference in 1904. In this position he has come into contact with the body of library workers throughout the country, and his efficient and painstaking work has been of great service to the A. L. A. and its members. He has been actively interested in library affairs in Nebraska, having served continuously as president of the state library commission, and having been president and a leading member of the state library association; and he is well known as a lecturer on bibliography and public documents. In 1905 he acted for four months as special organizer and advisory librarian for the Louisville (Ky.) Public Library, giving services of great value during a difficult period. His enthusiasm, energy, and perseverance have done much for the development of library interests in his own state, and beyond its borders.

Cataloging and Classification

YOUNG MEN'S CHRISTIAN ASSOCIATIONS. — As the 4th edition of Mr. Cutter's Rules enters Young Men's Christian Associations under their names and the A. L. A. Rules are to adopt the same plan, it would be desirable if different libraries which have already accepted this form or intend to do so, could arrive at a general agreement on arrangement of the great number of entries which are sure to accumulate under this heading. The Library of Congress having previously entered each local Y. M. C. A. branch under the name of the place is now about to change its entries in order to conform to the above mentioned rules. Theology and church history not having been recataloged, comparatively few entries are as yet represented in the new catalog. These have been arranged in the following tentative order:

I. Young Men's Christian Associations (to stand for the publications of the Young Men's Christian Associations of North America and other general publications which cannot be provided for under II.). Special subdivisions to be made for General Secretaries Conferences, International Committee, etc.

II. Local associations as follows:

Y. M. C. Associations,	<i>Ann Arbor, Mich.</i>
" " "	<i>Buffalo, N. Y.</i>
" " "	<i>Colgate University,</i>
	<i>Hamilton, N. Y.</i>
" " "	<i>Columbia University.</i>
" " "	<i>London.</i>
" " "	<i>Louisville, Ky.</i>
" " "	<i>New York (City).</i>
" " "	<i>New York (State).</i>
" " "	<i>South Carolina.</i>
	<i>etc., etc.</i>

Note.—Under each local association subdivisions are provided, *e. g.*:

Y. M. C. Association, <i>New York (City),</i>
<i>Army Committee.</i>
Y. M. C. Association, <i>New York (City),</i>
<i>Library Committee.</i>
Y. M. C. Association, <i>New York (City),</i>
<i>Railroad Branch.</i>

The use of the plural in all cases, the occasional omission of a part of the name, and a failure to group together all publications of a given department (Railroad, Student, Colored men's, etc.), general as well as local, is admittedly a somewhat arbitrary procedure. It had seemed to me, however, that the simpler arrangement which is thus attained would offset these shortcomings.

The undersigned is anxious to learn from librarians or catalogers who may have had occasion to take up this question whether the arrangement as outlined above is likely to prove satisfactory when applied to a large number of titles, or, whether a different arrangement has been applied with success to

a larger body of Y. M. C. A. literature. Any suggestions or criticisms which may be offered will be thankfully received.

J. C. M. HANSON,
Chief of Catalog Division,
Library of Congress.

BIBLIOTHÈQUE NATIONALE. Catalogue général des livres imprimés de la Bibliothèque Nationale. T. 23. Campbell-Caroz. Paris, 1905. 8°.

The BROOKLYN (N. Y.) P. L. *Bulletin* for December contains a list of books for the blind, classed under the different systems of line and point print.

INSTITUT INTERNATIONAL DE BIBLIOGRAPHIE. Manuel du repertoire bibliographique universel: Organisation—État des travaux—Règles—Classifications. O.I.I.(021). Brussels, 1905. 25½ cm. Publication no. 63.

A volume of about 2000 pages, incorporating the final revision (tables générales refondues) of the classification bibliographique décimale, which was originally issued in parts, 1899-1905, as Publication no. 25 of the Institut. Index alphabétique générale, 340 p. at end.

The JOLIET (Ill.) P. L. *Bulletin* for December contains a classed reference list of the library's "Illinois collection;" only 13 titles are included as Illinois fiction.

LEAGUE OF LIBRARY COMMISSIONS. Suggestive list of books for a small library, recommended by the League of Library Commissions; compiled by the Wisconsin Free Library Commission. Madison, Wis. Part I: Books for adults. June, 1905, 58 p. O.

This is a practical, helpful, and well arranged list, and should be valuable in all small libraries. It gives 1200 titles, books most desirable for first purchase being designated by an asterisk. The introduction by Miss Cornelia Marvin, the compiler of the list, gives clear, practical advice on selecting, ordering, receiving and caring for books, with suggestions on class numbers, use of printed catalog cards, periodical indexes, etc. The list is arranged according to the D. C., with class number and Library of Congress card number in the left-hand column, and price in right-hand column.

The MEDFORD (Mass.) P. L. *Bulletin* has issued a number dated February-September, 1905, containing a reading list on Spain, with special reference to Spanish art.

The OSTERHOUT F. L. (Wilkes-Barre, Pa.) *Bulletin* for December continues its classed reference list on Mohammedanism.

PRATT INSTITUTE F. L., Brooklyn, N. Y.,

Monthly bulletin, December, 1905: Christmas list. 20 p. D.

A classed list, issued in connection with the exhibition of Christmas books held at the library during December.

The ST. LOUIS (Mo.) P. L. *Monthly Bulletin* for January contains a short reading list on Germany.

The SALEM (Mass.) P. L. *Bulletin* for December devotes its special bulletin to "The Celtic revival."

The SEATTLE (Wash.) P. L. *Bulletin* for December contains an extended and interesting reading list on Christmas, prepared by Miss Mary Banks.

Bibliography

AMUSEMENTS. Chicago P. L. Books on indoor amusements. Chicago, November, 1905. 26 p. T.

A selected reading list.

BIOGRAPHY. District of Columbia P. L. Reference list no. 4: Interesting biographies; a brief list of books with annotations. Washington, D. C., December, 1905. 8 p. T.

Lists 57 volumes.

BOOK TRADE. Duff, E. Gordon. A century of the English book trade: short notices of all printers, stationers, bookbinders, and others connected with it from the issue of the first dated book in 1457 to the incorporation of the Company of Stationers in 1557. London, printed for the Bibliographical Society, by Blades, East & Blades, 1905. 26+200 p. O.

"List of the principal books quoted," p. xxxi-xxxv.

BOTANY. Czapek, F. Biochemie der pflanzen. 2. bd. Jena, 1905. 4°.

Bibliographical foot-notes.

BROCKHAUS PUBLICATIONS. F. A. Brockhaus, in Leipzig. Vollständiges verzeichnis der von der firma F. A. Brockhaus in Leipzig seit dem jahre 1873 bis zu ihrem hundertjährigen jubiläum in jahre 1905 verlegten werke. In alphabetischer folge mit biographischen und literarhistorischen notizen. Leipzig, 1905. vi, 459, [1] p. 23½ cm.

This continues the splendid catalog issued 1872-75, which covers the period 1805-72, the two volumes together forming a remarkably full record of a great body of German literature.

CAMBRIDGE, Mass. Cambridge P. L. Selected list of books, pamphlets, etc., relating to Cambridge. Cambridge, Mass., December, 1905. 32 p. S.

A classed author list; including also manuscripts (20 entries), and closing with "The Cambridge hymn" by Emma Endicott Marean.

CASCADE MOUNTAINS. Banks, Mary. Bibliography of the Cascade Mountains. (*In Mazama*, annual number, December, 1905, vol. 2, no. 4. Portland, Ore.)

Includes besides literature dealing with the Cascade range in general, that referring to individual peaks—Mt. Adams, Mt. Jefferson, Mt. Baker, Mt. Hood, Mt. Mazama and Crater Lake, Mt. Rainier, the last list including also titles of nine poems. In the editorial notes of this number readers of *Mazama* are asked to send additions to the bibliography from time to time, "as the literature of our snow-peaks grows."

CERVANTES. Henrich, Manuel. Iconografía de las ediciones del Quijote de Miguel de Cervantes Saavedra. Reproducción en facsimile de las portadas de 611 ediciones, con notas bibliográficas tomadas directamente de los respectivos ejemplares (del año 1605 al 1905). Reunido y ordenado cronológicamente por Manuel Henrich. Precedido de un homenaje á Cervantes, por los editores, Prólogo, por J. Givanel, Génesis del Quijote, por Martínez Ruiz (azorin). Barcelona, Henrich y cia, 1905. 3 v. port., 601 facsims. 26 cm.

Magnificent publication. Vol. 1 contains facsimiles of 233 Spanish and Catalan editions; vol. 2 (facsim. 234-396) French editions; vol. 3 (397-601) other foreign editions.

COPEPODA. Wilson, C. B. North American parasitic copepods belonging to the family *Caligidae*. Washington, Gov. Print. Office, 1905, 24½ cm. (Smithsonian Institution publication 1404.)

- PHYSICAL TRAINING. McCurdy, J. H. A bibliography of physical training. Springfield, Mass. Physical Directors' Society of the Y. M. C. A. of North America, 1905 [New York, G. E. Stechert]. 369 p. O. \$3 net.
Prefaced by a third edition revised and enlarged, of the "Classification for physical training," prepared by Dr. McCurdy and J. T. Bowne, of which the first edition was published separately in 1900 (L. J., 25:195). This is an extension and adaptation of the D. C., ingenious, and carefully worked out. The bibliography is arranged according to this classification and its preparation was the work of a committee of which Dr. McCurdy was chairman, appointed by the Physical Directors' Society of the Y. M. C. A. at the World's Fair meeting in St. Louis in 1904. It presents a large amount of material, but its practical usefulness would have been enhanced by an author index.
- PRESBYTERIANS. The Presbyterian movement in the reign of Queen Elizabeth as illustrated by the Minute book of the Dedham Classis, 1582-1589; ed. for the Royal Historical Society, from the ms. in the possession of J. F. Gurney, by R. G. Usher. London, 1905. li., 105 p. 22x17½ cm. [Royal Hist. Soc. Publications. Camden series. 3d series. vol. 8.]

UNITED STATES HISTORY. Writings on American history, 1903: a bibliography of books and articles on United States history published during the year 1903; with some memoranda on other portions of America. Prepared by A. C. McLaughlin, W. A. Slade, and E. D. Lewis. Washington, Carnegie Institution, 1905. xiv, 172 p. 26½ cm.

Continuation of Richardson and Morse's "Writings on American history," 1902 (reviewed in *L. J.*, 1904, p. 100-01, 436), which was the first serious effort toward the much-desired annual bibliography of Americana. This volume, while it owes much to its predecessor, nevertheless marks a distinct advance, both in scope and method. The compilers have confined themselves more strictly to the historical field, and excluded much of that useless material which overloaded the earlier work to no purpose. The 3591 entries are well classified, with occasional brief annotations and a full author and subject index.

WOMAN. List of works in the New York Public Library relating to woman. (*In* New York P. L. *Bulletin*, December, 1905. p. 528-584.)

Notes and Queries

EXHIBIT OF PRINTING.—The Society of Printers of Boston, devoted to the study and development of the art of printing, has prepared an exhibition illustrative of printing to be displayed in the Boston Public Library from Jan. 1 to Jan. 29. To explain this exhibition the society has compiled and published a handbook of about 48 pages, giving an interesting outline of the story of the printing art. A committee has also been appointed to consider the suggestion that from this exhibition there may be made a smaller one, so mounted as to be easily transported, which shall be lent to such libraries as wish to display it. Librarians who are interested and would like to do so, could probably obtain this exhibition, for little if any more than the cost of transportation, by writing at once to Mr. Henry L. Johnson, secretary of the Society of Printers, 4 Joy Street, Boston, Mass. J. C. DANA.

STATISTICS OF RE-BINDING.—Having for two years had care of the binder's work for a public library, I have gathered a few statistics in regard to books sent for their first re-binding, which may prove interesting to the readers of the *LIBRARY JOURNAL*. The records for juvenile books were taken from both fiction and non-fiction, for many juvenile books of non-fiction circulate as freely as fiction, especially among boys. The adult books were fiction alone. It should be said that the library in question is an open-shelf library, having always a large attendance of readers, so that the books, particularly the juvenile, receive quite a little wear in addition to their use while in circulation. My averages, obtained from one hundred representative books of each class, were as follows:

	Juvenile.	Adult.
Average times circulated before re-binding.....	13 47-100	24 36
Average purchase price per vol.....	75½c.	82 3-5c.

The cost of re-binding varied from about 35 cents to 50 cents per volume, according to size, even when a cheap half buffing binding was used.

Every librarian will add to this consideration of expense another item, that of the labor required to make books ready for the binder and to prepare them for circulation after their return. It is important also to note that the books most in demand are the ones which have most often to be withdrawn from circulation for re-binding.

What can be done to obviate such a condition? When I began to gather these statistics, we had six Henty books which had been in circulation for eight years and one for nine years without re-binding. Librarians can estimate how many times those Henty books must have circulated; book cards and dating slips do not last long enough to give definite data. They were bound by a well-known English binder. These books were about to be discarded, not because the binding was weak—it was as strong as ever—but because long use had made them absolutely unsanitary. Results like this show that books *can* be bound to last. I give these few notes with the hope that they may aid in arousing further discussion of this vital question. ANNIE M. THAYER.

BULLETIN ON BOOK BUYING.—The A. L. A. committee on book buying issues bulletin no. 19, dated November, in four-page postcard form; it also appears in the December *A. L. A. Booklist*. A request is made that libraries adding 50 to 200 volumes a year send to the committee the following statistics for the last library year; total volumes added, divided into, 1, new titles; 2, wornout and other replacements; 3, duplicates; also divide total into purchases and gifts and the former into domestic and imported. These facts will be used in a table in a future bulletin. An index to the bulletins, nos. 1-19, is given.

THE LIBRARY JOURNAL

VOL. 31

FEBRUARY, 1906

No. 2

ANNOUNCEMENT has been made of the general plans for the Narragansett Pier Conference next June, which are now in preliminary shape; and to this librarians planning for the summer's work of themselves or their assistants should give heed. The Narragansett meeting is likely to reach the high-water mark among A. L. A. conferences, for attendance and for activity. It has been planned to give the fullest possible representation to the varied interests of library workers, in allowing for ample section meetings, conferences of affiliated bodies, round table gatherings, and other special meetings; while keeping to broad subjects for its general program and providing but one general session for each day. That the perennial conference criticisms of overcrowded program, insufficient discussion and bewildering succession of meetings, will be found inapplicable at Narragansett is unlikely; but granting these disadvantages, which are inevitable in any body of a thousand people brought together for a week of professional business and debate, the fact remains that no librarian interested in developing his work to its highest efficiency can afford to miss the stimulus, the interest and the fellowship of an A. L. A. conference. Trustees especially should recognize this fact and should make possible a full representation of their libraries at this annual meeting. For the post-conference trip there has been planned a week's cruise through Long Island Sound and adjacent waters, touching at points of interest and giving to the visitors from distant states delightful glimpses of the Atlantic seaboard.

THE Tennessee Library Association, despite the vote of the interstate meeting at Atlanta, has decided to play a lone hand and proceed with the preparations for the organization of a Southern Library Association. A reason for this was found in the wording of the Atlanta resolution, that such an organization was inexpedient "for the present," which has been construed to mean that day or that week. Frankly, we regard this step as unfortunate, for two reasons. The first is that in no other part of the country has an organization on

sectional lines been made, and that throughout the country the best results have been had from vigorous state organizations co-operating with one another in interstate meetings. It is not true, however, that the Tennessee proposal is intended as antagonistic to the A. L. A., for the loyalty of its promoters toward the national organization cannot be questioned. The second reason is that this movement has apparently arisen in considerable measure from personal rivalry, and has introduced an element of dissension rather than of union into the Southern library field, most Southern librarians holding with Georgia, some few only with Tennessee, while a number have actually been repelled by what seems to them a personal conflict from the co-operation toward Southern development which should be expected from them. It would, we believe, be the part of wisdom to defer any further steps toward the organization of a Southern Library Association until after the meeting of the American Library Association in the South, which is almost sure to be brought about for 1907.

THE South has certainly accomplished a wonderful advance since the so-called Atlanta Library Congress of 1895 and the A. L. A. Conference at Atlanta in 1899, and its advance has been altogether in the right direction. The negro question is nowhere more difficult than in library relations; but in this field Southern libraries are working out a solution with much more satisfactory result than if there had been any organized attempt to influence Southern action as a whole. But that there is still much to be done is especially indicated in the relations of state libraries in the Southern states. In Virginia and one or two other states the state library has begun to assume the importance which it long ago achieved in such states as Massachusetts, New York, Iowa, and California; but for the most part the state libraries of the South are still in the dark ages. In some of them the state librarianship is still a political position, open to "beauty contests," while in Maryland an enterprising and ambitious state librarian has her hands tied by

the peculiar and, it is to be hoped, unique, provision in that state. The Maryland state constitution provides that "no appropriation shall be made by law to pay for any clerk or assistant to the librarian." Since the rebuilding of the historic capitol at Annapolis the Maryland State Library has been housed in spacious and suitable rooms in the Court of Appeals building close by, and an increasing use of the library is made by members of the legislature, state officers, and citizens of Annapolis. This ridiculous provision, however, absurdly limits the librarian, with the result that Maryland state documents are most difficult to obtain by exchange and that the library is in other ways held back from the large usefulness it might otherwise reach. Let us hope, in the interests of Maryland, that this hindrance to its library development may be removed.

A LETTER recently sent out to state librarians from the Democratic headquarters at Columbus, Ohio, is given elsewhere, as a valuable contribution to knowledge regarding the part often played by politics in library affairs. In the five questions ingenuously scheduled in this letter the writer has managed to depict an attitude of mind that has done more to retard the development of libraries — particularly state libraries — than almost any other factor in our public life. From the vantage point of all-embracing ignorance this investigator apparently seeks to prime himself for an attack upon an institution of whose work and usefulness he has evidently no conception; and it is easy to see him in the future standing forth as a champion of "library reforms." Perhaps the most interesting feature of this letter is the ingenuous inquiry, "If you were running it [the state library] yourself upon a financial basis what would you do with it?" — with its matter-of-fact implication that public office is a private graft, and that methods advantageous to private interest may be disregarded in the discharge of a public duty. It is possible that this letter indicates a movement for a partisan reorganization of the Ohio State Library, and if so its publication serves a double purpose, in making clear the unfitness of the agent employed.

It now seems probable that a solution of the deadlock between librarians and publishers on the question of the importation of copyright books may be reached on the lines of a happy suggestion by Mr. W. P. Cutter, made at the conference between representatives of the American Library Association and of the American Publishers' Copyright League last month. The publishers had proposed that importation by libraries should be permitted without regard to the consent of the copyright proprietor, only in the case of foreign editions containing material not included in the American reprint. But this was by no means a satisfactory concession. Mr. Cutter's proposal was that a copyrighted book by an author not of American residence or citizenship may be imported in foreign editions, which would permit the importation by librarians of an English edition of an English book or a German edition of a German book, but not of an English or German edition of an American book. This suggestion proved also satisfactory to the Authors' League, which holds that authors have a right to control their own markets, and therefore stands behind the publishers in this matter. On the other hand, as already pointed out, the librarians expressly state that they do not wish to interfere with authors' rights by importing unauthorized editions from which the author obtains no benefit. Another important point which is also conceded by the publishers was that brought up by Dr. Canfield, in respect to permitting the importation of libraries or collections bought *en bloc*, though containing copyright books, as for instance, the Dziatzko collection purchased last year by the University of Illinois. We present elsewhere articles stating the views of librarians on this important matter, as also the publishers' view, presented by Mr. G. H. Putnam, secretary of the American Publishers' Copyright League. The executive board of the A. L. A. in handling this matter has carried out the instructions given it at the Portland Conference, in protesting against the prohibitory measure first proposed and in making every effort to secure its modification. As a result successive modifications have been presented and discussed, and it is to be hoped that the proposed compromise may be effective.

HOW A SMALL LIBRARY SUPPLIES A LARGE NUMBER OF PEOPLE WITH BOOKS*

BY MARY L. TITCOMB, *Librarian of the Washington County Free Library, Hagerstown, Md.*

FIRST a word as to the location of the library here described and as to its constituents, to use the political phrase. Washington County, in Western Maryland, has an area of about 500 square miles, with a population of about 45,000 people, including the county seat, Hagerstown, where the library is located. The county is strictly agricultural in its pursuits — peaches, wheat, corn, oats, canteloupes and small fruits being the staple products. Many of the people are of Pennsylvania Dutch or German descent, the two sects of Dunkards and Mennonites being very numerous. Hagerstown, the county seat, is the natural center and is accessible with comparative ease from all parts of the county, as the turnpike roads enjoy the reputation of being the best in the United States, and the country, or dirt roads, as they are commonly called, are if not the best, certainly not the worst, to be found. Since the establishment of the library the trolley has come to our aid by penetrating many distant sections. The city itself is a place of much historic and literary interest dating from pre-revolutionary times. Harriet Martineau speaks of the old tavern in her *American travels* and Fanny Kemble found it as disagreeable as most of the places she visited while in this country. In truth it was once a most attractive little town and its streets have echoed to the tread of many of our famous statesmen, as all stages on the line of the old national turnpike stopped there over night on the way to the national capital. After the Civil War the place began to grow and finally the establishment of large manufacturing works changed it from its character of a country village to that of a country city, and it is now the third city in Maryland, Baltimore and Cumberland leading.

The Washington County Free Library, the second in size of the three free libraries in the state, owes its beginning and a portion of its support to a gift of \$50,000 from the late Mr. B. F. Newcomer, of Baltimore, Washington County having been his birthplace. Mr. Newcomer was unfamiliar with

the modern library movement, but he wanted to do something for the county as well as the city, and together with the gentlemen of the board of trustees, the plan of a library for the county was evolved, although in its inception no details of sending the books to the people were thought out; indeed, probably none would at that stage of proceedings have been thought necessary. But at all events the founders had the rather uncommon wisdom and commonsense to seize upon the idea that in a section where the county was the unit of government the library would properly be for that same unit. The people did not want a library at all, but finally a bill went through the legislature authorizing the appropriation of an annual sum for its support from both county and city.

In August, 1901, the library opened its doors with about 6000 volumes on the shelves, with the supposition that this number was enough to supply all wants for a long time. The people came to look at the building and stayed to register and go away with a book. Immediately, despite the fact that the library had been a most unpopular movement, we found ourselves confronted with a most pressing need for more books. When it is said that with our 6000 volumes on the shelves we circulated over 64,000 that first year in Hagerstown, it will be seen that in order to make our library for the county in reality as well as in name we needed more books first of all. Still, with the existing antagonism in the county it was imperative that we should at least make a beginning. When I speak of antagonism I mean that the country people, never having come in contact with a library, had no idea that it would ever affect them further than to raise the tax rate. They thought the professional class who lived in the city were the only people who would reap any benefit from it. In passing, it may also be said that in addition to antagonism we had also to contend with unconsciousness of our existence. After the lapse of a year even, it was possible to find individuals who had never heard of the library.

The county is divided into 26 voting dis-

* Part of address delivered before Pennsylvania Library Club, Philadelphia, Jan. 8, 1906.

tricts, and for the first year we turned our attention to these districts, planning to put a station in each. We found that very easy, almost too easy, considering the limited number of books at our command. Our plan had nothing original. It was simply the obvious one of deposit stations, consisting of a case similar to the usual travelling library case and holding about 50 volumes to be returned for renewal every 60 or 90 days, all expenses of transportation, etc., to be paid by the library. We have a blank requiring a certain number of signatures and guarantee of care, etc., but the filling of this is often more honored in the breach than in the observance. If we find that getting it filled is going to stop the putting the books at a certain place, we waive it. The object is to get the books into the country in what we judge to be suitable places and under suitable care, more often in the general store or post-office than anywhere else. We do not put the stations at a private house unless we can find no one interested in any public place.

During the first year we placed 23 deposit stations in as many voting districts. During the second year we added 15 to the number of our stations. Most of these stations were placed in smaller and more remote places than in the previous year. That second year we began to send out Sunday school collections to places in the county. We limit the Sunday school libraries to places where there is a church with no settled preaching, which maintains a Sunday school, or where, as is often the case, there is a neighborhood Sunday school carried on for six months of the year, at a season when the roads are good, and the people can get together comfortably. We make no effort to put Sunday school literature, so called, into these cases, which hold about 30 books and are really travelling libraries staying at one place for six months, and then being sent on to another. Our intention is to select books of some real literary merit and which shall have a certain ethical influence. At the present time we have twelve Sunday school collections travelling back and forth through the county.

During the third year of our existence we increased the number of deposit stations to 55, and at the present time we have 66 stations in as many places. By these deposit stations sufficient interest has been aroused

in two incorporated villages in the county to establish permanent reading rooms. The people have come together, organized and canvassed the town for subscriptions, hired rooms, and engaged some one to act as caretaker and librarian; and so in Boonsboro and Williamsport, places of about 800 and 1000 inhabitants respectively, we have rooms open every day to the public, with periodicals, etc., to make them attractive. With these reading rooms, our plan has been to buy immediately for them two or three hundred volumes which we send as a nucleus, and after that we have an exchange of about 40 volumes every ten days, the person who has charge sending back the books which in her judgment have been sufficiently read, or which perhaps she sees will not be read at all.

Of our 66 stations in the county, about 30 are off the line of railroad, trolley or stage, and after the first year of our existence it was found that the best way to get at these remote districts was to have our janitor make frequent trips into the country, taking with him cases of books to these stations and bringing back others to be exchanged for fresh ones. And this led to our library wagon, by far the most interesting feature of our county extension. Here let me say for the benefit of any librarian who is meditating book delivery by means of a wagon: first catch your janitor. Ours is a jewel. We are quite convinced that he can do more for the advancement of learning in the county than the whole board of trustees and the library staff combined. He is a native of the county, as a boy having witnessed John Brown's raid at Harper's Ferry, afterwards serving his time in the Civil War, and later on, after various occupations which gave him a wide knowledge of the people of the county, coming to us, and now the library has no more loyal or interested officer. When we found that we must send him out into the country, both for the placing of the stations and for the collecting and returning of many of them, we provided him with an understudy and sent him forth. In April, 1905, our wagon was completed, and since then he has made all the trips with that. I am often asked if I go into the county and visit the stations, or go out with the book wagon. No; for as long as I have some one to send, who is a native of the county, who knows all the people with all their prejudices

and customs, it is much better for me not to go. Walter H. Page, editor of the *World's Work*, and himself a Southerner, once told me that I need never expect to accomplish anything in a Southern community until I had found out when the baby had cut its last tooth; and this is just what our janitor does for us. He drives up to the farm house doors, through the country lanes, and talks things over slowly and quietly. In most cases he knows the character of the household to which he goes, knows whether the woman of the house is the person most likely to be interested, or whether the man is the person to whom to appeal.

The book wagon used in these trips is illustrated elsewhere. It is built with shelves on each side, with doors opening outward, very much after the fashion of the tin pedler's cart of early days. It will hold about 300 volumes, and in addition is so arranged that in the center may be carried six of the cases used at the stations. We paid \$175 for the wagon. It is arranged for one or two horses, but thus far we have found that two horses have been necessary for most of our trips. We do not own the horses, but depend upon the livery stable for them. In the busiest season with this work, namely, spring and fall, we have made on an average three trips a week, each trip covering about 30 miles. Sometimes our man goes off into the remoter portions of the county for three days, consuming one day going, one day distributing books and one for the return. We use the Browne charging system in the library, and when he delivers a book he pencils on the back of the book slip the name of the person borrowing it and the rural free delivery number or some other note which identifies the person in his mind. When he returns, the slips are sorted and then arranged by classes under a route heading, as Yarrowsburgh route, New Hope route, etc., with the date when the trip was made. These slips are then filed alphabetically by routes with the slips belonging to the books which are in circulation at the various stations. Our man takes with him also a blank in which he keeps requests for special books, and other memoranda.

Between April 1st last year, when our wagon was completed, and October 1st we sent out in this manner 1008 volumes. This covers

five months of time, but the work was really almost all accomplished in three and one-half or four months, for the summer months are periods of too much industrial activity in an agricultural section for the people to have much time for books. From the first, the people took to this innovation, it being an outward and visible sign that the library really did belong to them; but of course there are varied experiences. Great care is necessary in the selection of books for the wagon, and already I have learned to keep my finger on the intellectual pulse. It varies greatly in different parts of the county, but nowhere is one troubled by the demand for the "best seller" and in general the books selected from the shelves of the wagon are those of the greatest intrinsic worth.

For instance, the following is a typical list of books delivered in one day in the mountainous region near Hancock (in the most remote part of the county):

Kingsley, C.—The water of life.
Hopkins.—Political parties in the U. S.
Woods.—The poor in great cities
Matthews.—Familiar features of the roadside.
Waring.—Book of the farm.
Boland.—Handbook of invalid cooking.
Tunzelmann.—Wireless telegraphy.
Moore.—Accounting and business practice.
Johnston.—Chemistry of common life.
Wells.—City boys in the woods.
Alcott.—Garland for girls.
Alcott.—Little men.
Alcott.—Aunt Jo's scrap bag. (2 vols.)
Alden.—How Jimmy Brown found Europe.
Barr.—Bow of orange ribbon.
Barr.—Song of a single note.
Booth.—Lights of childhood.
Booth.—Sleepy time stories.
Bronte.—Jane Eyre.
Burnham.—A sane lunatic.
Chance.—Little folks of many lands.
Clifford.—Mrs. Keith's crime.
Connor.—Man from Glengarry.
Coolidge.—What Katy did. What Katy did at school.
What Katy did next. Clover. In the high valley.
Cooper.—The pioneers.
Crawford.—Saracinesca.
Dickens.—Bleak House.
Eggleston.—The faith doctor.
Eliot.—Felix Holt.
Gaskell.—Mary Barton.
Hawthorne.—Scarlet letter.
Holland.—The bay path.
Howells.—Indian summer.
Kavanagh.—Two lilies.
Kirby.—Aunt Maitha's corner cupboard.
Martin.—Tillie the Mennonite maid. (2 copies.)
Mason.—The truants.
Mathews.—Kitty's scrap book.
May.—Flaxy's Kittyteen.
Moore.—Shipmates in sunshine.
Mulock.—My mother and I.
Oliphant.—Neighbors on the green.
Otis.—Left behind or ten days a newsboy.
Porter.—Thaddeus of Warsaw.
Robinson.—Uncle Lisha's shop.
Scott.—Ivanhoe.
Sienkiewicz.—Children of the soil.
Van Dyke.—The ruling passion.
Wallace.—Ben Hur.
Wallace.—First Christmas tree.
Weyman.—Gentleman of France.

Whitney.—Homespun yarns.
 Yonge.—Chaplet of pearls.
 Yonge.—The cook and the captive.
 Stevenson.—From Saranac to Marquesas.
 Adams.—Law of civilization and decay.
 Diosy.—The new Far East.
 Pike.—Our little Korean cousin.
 Bacon.—Japanese girls and women. (2 copies.)
 Hearn.—Two years in the French West Indies.
 Parkman.—The Oregon trail.
 Roosevelt.—Thomas Hart Benton.
 Abbott.—Christopher Carson.
 Custer.—Tenting on the plains.
 Doubleday.—From cattle ranch to college.
 Parton.—Gen. Jackson.
 Morse.—Life of Lincoln. (2 vols.)
 Putnam.—Children's life of Lincoln.
 Tschudi.—Marie Antoinette.
 Latimer.—Talks with Napoleon at St. Helena.
 Murray.—Japan.
 Traill.—England, Egypt and the Soudan.
 Doyle.—The great Boer war.
 Sparks.—United States.
 Burgess.—Reconstruction.
 Browne.—Maryland.
 Drake.—Making of the Ohio valley states.
 Hulbert.—The Cumberland road.

This shows a total of 86 books delivered. Of this number, there are: one book of sermons; two of sociology (Hopkins's "Political parties in the U. S." and Wood's "Poor in great cities"); two in natural science; five in useful arts; 20 juveniles; 33 of fiction; nine of history; five of travel; and nine of biography. The books are almost without exception books of permanent value, and it is rather interesting to note that when it comes to history, biography and travel, the selections denote a reaching out to countries outside our own as well as the to-be-anticipated choice of those of local interest. In this latter class we note Sparks's "United States;" Burgess's "Reconstruction period;" Browne's "Maryland;" Drake's "Making of the Ohio valley states;" Hulbert's "The Cumberland road;" Parkman's "Oregon trail;" Custer's "Tenting on the plains;" Parton's "General Jackson;" two lives of Lincoln, and Abbott's "Christopher Carson." On the other side, we have Adams's "Law of civilization and decay" (rather a remarkable choice to be made by a farmer, off the line of either railroad, trolley or stage); Diosy's "New Far East;" two copies of Bacon's "Japanese girls and women;" Hearn's "Two years in the French West Indies;" a life of Marie Antoinette, Latimer's "Talks with Napoleon;" Murray's "Japan;" Traill's "England, Egypt, and the Soudan;" Doyle's "The great Boer war;" Stevenson's "From Saranac to Marquesas"—ten books that reach outside our own country as against fourteen which bear directly upon it. This is quite a proper proportion, and rather unusual in rural communities, for we often find

that the interest in books of travel and history is in proportion to the nearness of the subject to the locality.

All our mountaineers, however, are not as satisfactory. But the mountaineers near Hancock live in the region of public works, though not directly in their midst, and have done so since the early days of the country. For round the mountain below their homes ran the old "national pike," the regular route from the West to Washington; and the building of this road, and then later occasional glimpses of the stages plying back and forth gave them ideas of a world outside their own. Afterwards came the Chesapeake and Ohio Canal, with more opening of vistas. Even the sight of a canal boat on its way to Georgetown raised the question: "What, and where is Georgetown?" So we have in this section rather a rough class of people, but a people whose fathers and grandfathers have been in the habit of questioning, have had some interests outside their little world, and have transmitted a like habit of mind to the present generation. I believe that if we could follow the course of the establishment of public roadways, or public works of other kinds throughout the unsettled portions of the country, we should find that this was generally the effect upon the people.

Another division of our work has been that with the public schools in the county and city. This has gone rather slowly, but last year we circulated in the schools 1523 volumes, one-tenth of the entire number of books in the library. One feature of our picture work may be of interest. We found that the teachers were expected to give their pupils a certain amount of mythology, Greek and Roman, and to do this without a text-book. We have accordingly prepared a collection of mounted pictures on mythological subjects. On the back of the picture the mythological story is told; in some cases, questions as to the pictures are suggested, and any list of references which the library may contain, as poems, quotations, with a brief account of the artist or sculptor. These have proved exceedingly popular.

Connected with the library is a most satisfactory children's room, large and well lighted and attractively furnished, and, as in many other libraries, in this children's room lies

our hope for the improvement in the kind and quality of work we shall do in the future at the central library.

Perhaps it would be well to state just how many books we have in the library, and a little more statistically just what work it does. Beginning with 6000 books on our shelves, now, at the end of our fourth year, we have 16,000. Our circulation for the first year was in round numbers 64,000. This last year (1905) we circulated 82,000. This means a circulation to adults at the central library of 43,000, 16,000 to the children in the city, and 22,000 to the county by stations, Sunday

school collections and book wagon. This means that we turn over our stock of books (to use the commercial phrase) five times during the year, and that counting the population of the county at 45,000, that we send out two books to every man, woman and child. Our staff consists of librarian, children's librarian, two assistants and janitor. Besides this we have the fluctuating help to be obtained from an apprentice class varying in number from one to six. These figures seem to show conclusively the economy of reaching a large rural population by means of a central library with a system of branches.

AN INNOVATION IN LIBRARY MEETINGS

BY LUTIE E. STEARNS, *Library visitor, Wisconsin Free Library Commission*

FOR years past, the programs of our national and state library associations have been devoted almost exclusively to discussions by librarians and for librarians. The viewpoint has been in nearly every instance that of the librarian or trustee. Seldom, if ever, is the voice of the public heard or the library discussed from the standpoint of those who really own it. A departure from the usual association program was made at a recent district library meeting in Wisconsin. Only two papers during a three-session program were given by librarians, the rest of the time being devoted to reports by "laymen" on the various libraries represented in the district.

Some three months prior to the meeting, the writer visited the various towns in her capacity of program maker and sought out some interested citizen in each place to make a thorough and frank investigation of the local library as to the work it was doing, its opportunities, its needs, wherein it fell short and the remedies, and other points that might occur to the investigator. Twelve towns were thus visited, in every case, of course, with the knowledge and co-operation of the local board and librarian. No one was selected to make the report who had ever been connected with the library management in any way.

In one town, where it was known that the working people did not use the library to any extent, the president of the local labor union

was asked to make the report and to embody within it the reasons for the non-attendance of the laboring classes. This delegate's report on the labor situation in its relation to the library was found of great interest to the librarians, who promptly elected the worker to the office of president of the district library association. In explanation of the causes of absenteeism on the part of the working classes, their representative insisted that the public library did not need librarians of a new order or a different class of books to attract the working man; but that what was needed was "an awakened public conscience, a conscience so wide awake that it will touch wealth not only into building and equipping libraries, but into the purpose of affording the men wealth employs time to lay hold of the opportunity the building and equipment afford. It needs a public conscience that will help lift young men out of the erroneous impression that sport and frivolous indolence will do more to restore the exhausted physical condition than will a few hours with good books. It needs library spirit ripened in the public mind to the point of appreciation of the responsibility imposed on one branch for the well-being of every other by human society. Building libraries is a great work. Would it not be a greater to give working men such hours of toil that they would be able to spend a little time each day in se-

curing the benefits the library affords?" Interviews with over one hundred working men were epitomized as follows: "A man cannot work ten hours a day, attend to his duties as husband and father, study and read in the evening at the library, and keep himself in physical condition to hold his job. Logically, therefore, it follows that the men of wealth who conduct business and head the lists of contributors who pay for library buildings have shut against the working man the door of opportunity to enjoy what they have so generously provided, by their demand that he shall labor from seven o'clock in the morning until six o'clock at night."

A young Hollander, who reported for his town, made a plea for foreign books on library shelves. He stated that opposition to the library had disappeared and that the funds had been largely augmented since the introduction of foreign books for the adults who could not read English readily.

Another critic scored the city officials of his city for their parsimony toward the local library, citing the fact that the city expended \$36,000 a year for the salaries of teachers and \$720 a year as the total expenditure for a librarian and two assistants. The employment of a trained and more efficient librarian was urged. As an evidence of the spirit in which this report was received, it may be here stated that the librarian secured a written copy of the report and published it in the local paper to call attention to the need of more efficient service at the library!

An Englishman, the canon of an Episcopal cathedral, delivered a most delightful address on the shortcomings of the library in his present abode. He took issue with the appointment of library boards by mayors as provided for in the Wisconsin law and thought that better results could be obtained by self-perpetuating bodies. He deplored the tendency of modern librarians in filling the shelves with everything recent, believing that it would be better to wait awhile to see whether the books bear the test of time.

Another speaker believed that the average librarian failed to realize that in the public reading room there is a public convenience and a covert reformatory institution all in one, competing with the saloon, the dive, the dance hall, the gaming table, and every other resort of sin and solace in the modern catalog of

evil and frivolous tendencies. To enter upon this competition successfully, the speaker contended, there must be something more than mere books, magazines, chairs, lights, radiators, and tables. There must be an atmosphere of welcome, a homelike feeling that breathes freedom and fellowship for the men and boys without homes, or who having homes, yet lack a place for quiet, peaceful, and uninterrupted reading or study. While the atmosphere within the reading room should be refining and elevating, the speaker feared that there was great danger through rigidity of rules and a general air of stiffness and conventionality that those who are most in need of such opportunities are repelled and the room unconsciously reserved for those who need it least and use it little. The speaker would have one room in which the cigar was tolerated and which the working man might enter in the garments of his toil. "Did you ever hear," the speaker inquired, "of the proprietor of an amusement resort ringing a bell sharply at 9 o'clock and peremptorily inviting his customers to depart? Would you expect him to come around and turn off the light over a table the moment a customer left it? As he passes down among the card tables and you chance to catch his eye, would you expect his countenance to wear that 'how-long-are-you-going-to-stay' expression we sometimes see in the face of the public servant? He won't appear to notice whether you have your hat on; whether you have steered your umbrella into the proper receptacle; whether you have left your rubbers in the lobby; whether you are occupying more than one chair; whether you have had a clean shave, a clean collar, and a recent shine—in short, his whole attitude and action will speak a welcome when you come, a pleasure while you stay, and a God-speed when you go. Why should the corporation hiringling meet you with a protruding chin? Why should his attitude and the atmosphere that pervades his presence leave you under the impression that he owns the place? that such privileges as you exercise in his domain are by his grace and permission? Why should the schedule of opening and closing hours be arranged with a special view to the convenience of the servant instead of the public? The reply is that all employes have their regular hours—why should not the servant of the public have his?

The answer opens up the whole range of discussion between socialism and democracy. If it be true that selfishness is a universal human attribute; that it is impossible to get good service except it be for the selfish interest of the servant to render good service, then the keystone of socialism is wanting and democracy remains the only hope of society. It is submitted that the public library and reading room should be open during all those ordinary waking hours when the common people are off duty. It should be open evenings until 10 o'clock. It should be open Sundays and holidays, all day and all evening."

The next speaker insisted that "public libraries should be regarded as centers of influence rather than as institutional or functional. Their value should so far as possible be measured by the direction and force of this influence in preference to the number of books read and readers reached, or even the character of the books separate from this influence. Here is where the character of the librarians weigh, counting large in the scale. They are far more than clerks and recorders. To them statistics should be subordinate things. There is a just pride in good catalog work, clean and orderly rooms, fine reports, and large figures for readers and books read. But this pride should be wholly obscured by a pride in a right and wide influence on the public with whom they come in contact."

A summary of the reports given would show a demand for longer hours, the library made more a place of resort, and a lowering of the standard of literature in the average library. Two or three speakers insisted that if certain misguided borrowers wished to read Mary Jane Holmes' languishing tales, the library should provide them and then employ competent librarians to lead the "languishees" into higher fields—like unto the fisherman who uses various sorts of flies and even old red flannel, upon occasion, as bait.

Each talk or paper was followed by lively discussion and the sessions proved most interesting. Librarians returned to their respective haunts in thoughtful mood. The novelty of program brought out the largest attendance of members of the Fox River Valley Library Association ever recorded, and the plan is heartily recommended to jaded program-makers in search of something new and helpful.

LIBRARY LEGISLATION IN 1905

IN 1905 legislative sessions were held in 41 states and territories, of which 29 passed general laws directly affecting library interests. Almost uniformly the new laws aim to make more liberal provision for library work or to remove legal difficulties in the way of its extension. In only one case was there a decrease in the amount of money appropriated for library purposes, while in 19 cases increases were made. One new library commission was created and four others were enlarged either in function or scope. Provision for the founding and support of libraries was made more liberal in the case of seven states. Travelling library work was enlarged by increased appropriations in two states, and in one legal provision was made for the appointing of local boards to receive and administer such libraries. To provide better facilities for library education, one state established a permanent school of library science under the direction of the state commission, and another made legal provision for the conducting of library institutes. In some form or other the state library has received mention in the laws of nearly all the states and territories, and in 16 cases provision is made for enlarged work, additional functions, or improved equipment. School libraries also received much attention, especially in the South and newer West, where the public library is still in its infancy. In several states minute provision is made for the care and distribution of state documents, giving evidence of a widespread awakened sentiment on this subject. The act that makes the greatest innovation in library polity is that of Illinois, making provision for the compulsory establishment of a library pension fund in cities of a certain size. On the whole, the trend of library legislation during the year indicates that there is no cessation of public interest in the library movement, and that legislatures are almost uniformly disposed to help along the movement so far as lies in their power.

The following gives a summary of the more important acts of the year.

Library commissions. A new state commission is created in Oregon, composed of the Governor, the superintendent of public instruction, the president of the state university, the librarian of the Portland library, and one other person to be appointed by the Governor. The commission is to advise in all library matters, maintain a system of travelling libraries, publish lists and circulars, conduct a summer school of library instruction, and maintain a clearing house for periodicals. \$2000 is appropriated for the purposes of the commission. \$1200 of which is for salary of secretary. Michigan makes it the duty of the state commission to maintain library institutes, and makes a special appropriation for

that work. Wisconsin further enlarges the work of the commission by establishing a permanent school of library science under its care, and by making the secretary of the commission a member of the commission for supplying books and periodicals to the schools of the state.

Founding, government, and support.—Illinois and Kansas each provide that on petition of 50 legal voters, a vote must be taken on the subject of establishing and maintaining a public library. In Illinois, the act applies to all towns, villages or townships; in Kansas, to all cities. The maximum tax rate for such libraries is fixed at 2 mills on the dollar in Illinois; at 2 mills in cities of the first class in Kansas, at 3 mills in cities of the second and third class. Library boards in Illinois are to consist of six members, two going out of office each year.

Nebraska passes an act enabling cities of 100,000 population to establish and maintain libraries, art galleries and museums, provide grounds for buildings, and receive donations and bequests for the same. Wisconsin permits the establishment of public libraries and reading rooms in any city, village or town, repealing the law that limited this privilege to towns of over 1000 population. Tennessee provides that a city of 6000 or over may establish a free library and reading room, by vote of the mayor and city council. The former law limited this privilege to cities of 20,000 population or over. In New Jersey, common councils are authorized to appropriate \$1000 to establish or aid a public library or reading room in any city. Any borough, town, township or village, after majority vote in favor, may raise by taxation \$1000 annually for public library and reading room. In Pennsylvania, boroughs are authorized to contract for free use of non-sectarian public libraries, the amount to be appropriated for such a contract not to exceed a tax of one mill on the dollar. In Michigan, township and village boards are authorized to appoint provisional library boards to act during the interval before permanent boards are elected by the people. Permanent boards are to consist of six persons, two to be elected annually. Rules for the management of township and district libraries are to be prepared and printed by the superintendent of public instruction. In California a new law requires that boards of public libraries in municipalities must meet at least once a month. Connecticut provides that any town, borough or city may appropriate money for either a site or the maintenance of a free library, whether it be the property of a private corporation or of the municipality, such appropriation to be for a term not exceeding 10 years. Minnesota has raised the maximum tax for libraries, in villages or cities of less than 50,000 population, from $1\frac{1}{2}$ to 2 mills on the dollar. Contracts to loan books to any neighboring town, city

or village, regardless of county lines, are authorized.

Travelling libraries.—Wisconsin provides for the appointing of library boards to have the care of travelling libraries, belonging to the county or state systems, such boards to supersede the voluntary organizations which have heretofore received and cared for travelling libraries. They are to be appointed by the village or town trustees. Kansas authorizes its travelling library commission to appoint a secretary at a salary of \$1200 a year, and an assistant at \$600. Colorado increases its appropriation for travelling libraries from \$1000 a year to \$1500.

Library instruction.—A summer school for library study is established by Washington and put under the charge of the state commission. Michigan makes legal provision for the conducting of library institutes, and appropriates \$3000 for this work and the organizing of libraries. The summer school heretofore maintained by the Wisconsin Free Library Commission has been made into a permanent school of library science, an additional appropriation of \$3500 a year being made for this purpose.

State library.—Pennsylvania has set apart the "executive building" for the uses of the state library, to be occupied as soon as the new capitol shall be ready for government officers. The scope of the library is extended so as to include a museum illustrating the botany, natural history and geology of the state. \$20,000 is appropriated for the maintenance of this museum. The state librarian is to have charge of the editing and distributing of the state archives. The library is hereafter to be open from 9 a.m. to 9 p.m. instead of from 9 a.m. to 3 p.m. as before. Connecticut provides for the printing annually of 2500 copies of the state librarian's report, and requires that one original copy of all reports of legislative committee hearings transcribed by the stenographer for the use of the committee, shall be furnished to the state librarian. The Oregon State Library is placed under the exclusive control of justices of the supreme court. The librarian must reside at the seat of government and give a bond of \$1000. Montana permits books belonging to the historical and miscellaneous departments of the state library, other than reference books, to be loaned to citizens of the state, on suitable guarantee. South Dakota defines the state library as "consisting of the library of the state historical society, and the miscellaneous collection of books, papers and documents hitherto in the custody of the secretary of state, exclusive of the library of the supreme court." The secretary of the state historical society is made the state librarian. Nevada appropriates \$40,000 from the state library fund for the erection of a state library and supreme court building. Substantial increases in the appropriations for

state library equipment are shown by the states of Maine, Vermont, Massachusetts, Indiana, Minnesota, West Virginia and Georgia, and the territory of New Mexico. Increases in salary are made by Rhode Island, West Virginia, Missouri, Kansas and Oregon.

School libraries.—Connecticut provides that the state board of education may furnish books and apparatus for public schools at county temporary homes, and appropriate \$10 to each such school, for this purpose. Wisconsin makes provision for a mutual exchange of books between any public library and the school library of any town, village or city. The act also requires that hereafter books for school libraries shall be selected by county superintendents instead of town clerks. South Carolina provides that when \$10 shall be raised locally for establishing a public school library, or \$5 for the enlargement of such library, the state board shall in each case give a like sum for the same purpose; appropriations are limited to 25 schools per year in any one county. In Oregon, counties of 100,000 population are required to levy a tax of 10 cents for each child between 4 and 20 years, for school libraries, to be distributed to districts according to the number of school children. Books are to be bought from lists prepared by the state library commission, and loaned under their rules. County superintendents are to appoint librarians, and keep complete records of books bought and prices. Montana establishes a fund for books for school libraries, but provides that in districts other than cities, maintaining a free public library and having a population of 2000 or over, such library money may, in the discretion of the school trustees, be used for paying current expenses of the schools.

Documents.—Vermont requires the state librarian to distribute specified state documents to state normal schools, high schools and academies; to the clerk of each organized town; to each register of probate; to each supreme court and U. S. district judge; and to the libraries of the University of Vermont, Middlebury College, Norwich University and the Rutland Bar Association. Pennsylvania transfers the custody of public documents, except the pamphlet laws and the legislative handbook, from the secretary of the commonwealth to the state librarian, for such distribution as may be required by law. Indiana increases the number of copies of state publications that are to be delivered to the state librarian from 150 to 200. In Kansas, the state librarian is required to exchange state reports with other states, territories, societies and institutions. Washington provides that 300 copies of each volume of state reports be delivered to the state library for distribution, remainders to be kept by the library.

Miscellaneous.—In New Jersey, all books belonging to a city having a public library,

may be transferred to that library by the board having them in charge, all responsibility of such boards ceasing with the transfer. By special act, New York authorizes the board of estimate and apportionment of New York City to contract with the 3 public libraries of the city, binding the city to repair and make good any damage to library buildings erected by the Carnegie gift; the board is also authorized to provide at city expense an original stock of books for any such new library building where no stock of books exists. In Illinois, cities of 100,000 population are required to establish a pension fund, to which library employees may contribute each month for 10 years a percentage of their salaries, and receive benefits on and after their retirement at the age of 55 years, or, after 20 years of service; in the latter case, payment for 5 years will be sufficient. Illinois also increases its annual appropriation to the state historical library from \$3500 to \$5000, and gives \$2000 for expenses of the annual meeting of the state historical society. Indiana makes the wilful injuring of any public library property punishable by a fine of from \$10 to \$100. Wisconsin extends the operation of the free public lectures act, enabling boards of education to make appropriations for lectures to be given at public libraries. The appropriation for the legislative reference department of this state is increased from \$2500 to \$4500. Minnesota provides that deposits made with clerks of district courts as security for fees in any action pending, which shall not be repaid within three years after the action has terminated, shall become the property of the law library of the county, if there be one. Kansas appropriates \$500 for purchasing books for the library of the state penitentiary. California requires boards of trustees of public libraries to make annual reports to the legislative body of their municipality, and to send annually a copy of such reports to the state library.

ASA WYNKOOP, *New York State Library.*

ONTARIO LIBRARY ASSOCIATION

THE sixth annual meeting of the Ontario Library Association will be held in Toronto on Monday and Tuesday in Easter week, April 16 and 17, 1906. A program has been arranged to cover the more practical and timely subjects of interest to Canadian librarians. The question of library buildings will receive special attention and will be illustrated with views of the exterior and interior of many new buildings in the Province and numerous floor plans; these will be supplemented by views of well known and representative library buildings in the United States. A large attendance is hoped for. Later announcement and program will be sent out by the secretary, E. A. Hardy, Toronto.

PROPOSED PROHIBITION OF IMPORTATION OF COPYRIGHT BOOKS

As a result of the proposed revision and codification of the copyright law, undertaken last year at the suggestion of the Senate Committee under the auspices of the Librarian of Congress and the direct charge of the Register of Copyrights, the continuance of existing privileges of importation of copyright books for libraries is strongly opposed by the authors' and the publishers' copyright leagues and other interests concerned in copyright revision. In view of the importance of this matter, in its bearing both upon the libraries and upon copyright legislation, a presentation of the facts and of the arguments on both sides seems desirable.

This proposed codification of existing copyright legislation into a revised law, uniform with the copyright laws of other nations, and satisfactory to all the interests concerned, has been discussed in a series of conferences called by the Librarian of Congress. The American Library Association has been represented at these conferences by two delegates—Mr. Frank P. Hill, acting first as senior vice-president and later as president of the Association, and Mr. Arthur E. Bostwick, as chairman of the committee on book-buying. At the Portland Conference these delegates submitted a brief report (Proc., p. 164), stating that they had attended the conference held May 31 to June 2, 1905, and had protested against the adoption of an amendment prohibiting importation by libraries of foreign editions of copyrighted works without written consent of author or copyright proprietor; and referring the question to the Council for consideration and action. In accordance with this report the Council passed the following resolution:

"That the executive board be requested to take measures for the representation of the Association at future conferences on the revision of the copyright laws, and in behalf of the Association to protest against the inclusion in the copyright law of the provision prohibiting importation of copyrighted works into the United States without written consent of author or copyright proprietor, or to secure some modification of the same."

At its Lake Placid meeting in September, the executive board recommended its copyright delegates, after conference with representative members of the Association, to consider the advisability of a protest regarding the proposed copyright provisions, or their modification, and to take action accordingly in connection with the sessions of the Copyright conference. (L. J. Nov., 1905, p. 864.) A Council meeting for the further consideration of the matter was desired by the board in December, but it was found impracticable to obtain a quorum at that time, and the secretary of the Association sent to all members of Council a circular letter, asking recommenda-

tion or criticism in relation to the proposed amendment, and suggesting that a strenuous campaign be made by librarians protesting to their Congressmen against the prohibition of importation of books copyrighted in America without the consent in writing of the author or owner of the copyright.

As a result, the original amendment was withdrawn and a substitute was framed and presented by the publishers' league representatives. On Jan. 11, 1906, an informal conference was called by the executive board of the American Library Association, to give opportunity for discussion of the whole question by librarians and by representatives of the American Publishers' Copyright League. The substitute amendment was presented and discussed; and in its place a further amendment was proposed by Mr. W. P. Cutter, Forbes Librarian, Northampton, Mass. This was accepted by the publishers' representatives as a valuable suggestion, and was received with approval by the librarians present. It was transmitted to the officers of the publishers' league for framing in legal form and for later presentation as an amendment probably satisfactory to both sides.

The foregoing gives briefly the record of action and discussion on the measure so far. To bring out specifically the points at issue, we give also the text of the provisions of the present copyright law and of the Dingley tariff act of 1897, under which the free importation privilege obtains; the several amendments suggested; report of the informal A. L. A. conference on Jan. 11; a statement of the publishers' argument; and brief statements from several librarians of the library point of view.

THE EXISTING LAW AND SUBSTITUTES PROPOSED *Existing law*

The following provisions of the law of 1891 follow practically the act of 1870 as contained in the Revised Statutes of 1878, Section 4964:

"Every person who, after the recording of the title of any book and the depositing of two copies of such book as provided by this act, shall, contrary to the provisions of this act, within the term limited, and without the consent of the proprietor of the copyright first obtained in writing, signed in presence of two or more witnesses, print, publish, dramatize, translate, or import, or, knowing the same to be so printed, published, dramatized, translated, or imported, shall sell or expose to sale any copy of such book, shall forfeit every copy thereof to such proprietor, and shall also forfeit and pay such damages as may be recovered in a civil action by such proprietor in any court of competent jurisdiction."

The following provisions were added, *de novo*, in the act of 1891, in connection with the "manufacturing clause":

"During the existence of such copyright

the importation into the United States of any book, chromo, lithograph, or photograph, so copyrighted, or any edition or editions thereof, or any plates of the same not made from type set, negatives, or drawings on stone made within the limits of the United States, shall be, and is hereby prohibited, except in the cases specified in paragraphs 512 to 516, inclusive, in section two of the act entitled, an act to reduce the revenue and equalize the duties on imports and for other purposes, approved October 1, 1890; and except in the case of persons purchasing for use and not for sale, who import subject to the duty thereon, not more than two copies of such book at any one time; and, except in the case of newspapers and magazines, not containing in whole or in part matter copyrighted under the provisions of this act, unauthorized by the author, which are hereby exempted from prohibition of importation:

"Provided, nevertheless, That in the case of books of foreign languages, of which only translations in English are copyrighted, the prohibition of importation shall apply only to the translation of the same, and the importation of the books in the original language shall be permitted."

The paragraphs nos. 512 to 516, inclusive, of the tariff act approved October 1, 1890, became, by the amended tariff act approved July 24, 1897, paragraphs nos. 500 to 504, inclusive, of the free list, as follows:

"500. Books, engravings, photographs, etchings, bound or unbound, maps and charts imported by authority or for the use of the United States or for the use of the Library of Congress.

"501. Books, maps, music, engravings, photographs, etchings, bound or unbound, and charts, which shall have been printed more than twenty years at the date of importation, and all hydrographic charts, and publications issued for their subscribers or exchanges by scientific and literary associations or academies, or publications of individuals for gratuitous private circulation, and public documents issued by foreign Governments.

"502. Books and pamphlets printed exclusively in languages other than English; also books and music, in raised print, used exclusively by the blind.

"503. Books, maps, music, photographs, etchings, lithographic prints, and charts, specially imported, not more than two copies in any one invoice, in good faith, for the use or by order of any society or institution incorporated or established solely for religious, philosophical, educational, scientific, or literary purposes, or for the encouragement of the fine arts, or for the use or by order of any college, academy, school, or seminary of learning in the United States, or any state or public library, and not for sale, subject to such regulations as the Secretary of the Treasury shall prescribe.

"504. Books, libraries, usual and reasonable furniture, and similar household effects of persons or families from foreign countries, all the foregoing if actually used abroad by them not less than one year, and not intended for any other person or persons, nor for sale."

Substitute originally proposed

"But the privilege accorded to certain institutions under paragraph five hundred and fifteen of section two of said Act, to import free of duty not more than two copies of books, maps, lithographic prints, and charts, shall apply to the importation of books, maps, lithographic prints, and charts which have been copyrighted in the United States, only when the holders of the American copyrights thereof in writing consent to such importation; and except in the case of persons purchasing for use and not for sale, who import subject to the duty thereon and with the written consent of the holders of the American copyrights, not more than two copies of such book at any one time;"

Second substitute proposed

"The importation shall also be permitted as follows: Copies of an edition of a copyrighted book, which edition has been printed abroad with the authorization of the author or the proprietor.

"1. When imported by the authority of the United States, or for the use of the United States, or by or for the use of the Library of Congress.

"2. One copy of any such book imported at any one time, when so imported for use and not for sale, for the use of any college, university, public library, or educational society, which has been duly incorporated; but such privilege of importation for such incorporated society shall apply to the foreign edition of a book that has secured American copyright only in the case in which the American edition of such book does not contain the complete material, text, and illustrations, as printed in the authorized foreign edition of such book.

"3. When specially imported, not more than two copies in any one invoice, under the permission given in writing by the author or proprietor of the American copyright of such work.

"4. When such books form parts of libraries belonging to persons or families from foreign countries, if the copies have been actually used abroad by such persons and are not intended for sale in the United States.

"5. All class of works in raised print for the use of the blind."

Third substitute proposed

To section 2 of foregoing. In substance: Permitting importation for incorporated in-

stitutions of one copy of any copyright book not the work of an author of American residence or citizenship.

A. L. A. CONFERENCE WITH PUBLISHERS' LEAGUE

A meeting of the executive board of the American Library Association was held at the Mercantile Library in New York City on Jan. 11, 1906, to afford opportunity for discussion of the revision of the importation clause in the present copyright law, and to prepare a substitute clause which shall be acceptable to all interests concerned for the new codification of the copyright law. There were present at this conference for the executive board, Mr. Frank P. Hill, president, Dr. E. C. Richardson, Mr. G. M. Jones, Miss Caroline H. Garland, Miss Helen E. Haines, Mr. J. I. Wyer (acting as secretary); by invitation Messrs. A. E. Bostwick, H. C. Wellman, J. H. Canfield, W. C. Kimball, W. T. Peoples, W. P. Cutter, Miss I. E. Lord and Miss M. W. Plummer, librarians; and Messrs. George Haven Putnam, William Appleton and Charles Scribner, publishers.

President Hill opened the meeting by stating as the reason for its call the desire to reach a better understanding by both publishers and librarians as to the different points of view which are held regarding the desired exemption from importation duty of certain classes of books. He then called upon Mr. George Haven Putnam, who briefly sketched the history of copyright legislation in the United States, touching upon the existing differences between publishers and authors and librarians, and offered the following draft of a paragraph suggested for correction of the importation clause of the existing copyright statute.

"The importation shall be permitted as follows:

"Copies of an edition of a copyrighted book, which has been printed abroad with the authorization of the author or the proprietor.

"1. When imported by the authority of the United States, or for the use of the United States, or by or for the use of the Library of Congress.

"2. One copy of any such book imported at any time, when so imported for use and not for sale, for the use of any college, university, public library or educational society, which has been duly incorporated; but such privilege of importation for such incorporated society shall apply to the foreign edition of a book that has secured American copyright only in the case in which the American edition of such book does not contain the complete material, text, and illustrations, as printed in the authorized foreign edition of such book.

"3. When specially imported, not more than two copies in any one invoice, under the

permission given in writing by the author or proprietor of the American copyright of such work.

"4. When such books form parts of libraries belonging to persons or families from foreign countries, if the copies have been actually used abroad by such persons and are not intended for sale in the United States.

"5. All classes of works in raised print for the use of the blind."

In the following discussion, Mr. Putnam was questioned closely by Messrs. W. P. Cutter, Dr. J. H. Canfield and Dr. E. C. Richardson as to the exact bearing and the effect of this suggested clause upon the conditions now existing under the present law. Mr. Appleton was then called upon and stated that unless an agreement could be reached between librarians and publishers, which would secure to authors the right to control their market in every country without likelihood of ruinous importation of cheaper editions from other countries, it would be of little benefit to remodel the present copyright law. Upon invitation from the chair, Mr. Scribner called attention to the greatly increased importation by library associations and individuals in recent years under the duty free clause in the present law. Mr. Scribner also stated that librarians have not appreciated the provision that they were for use and not for sale and have sold wornout, surplus, or undesirable books, which in turn have found their way into the market, to the detriment of the authorized editions. In reply to a question from Dr. Canfield, Mr. Scribner further stated that the new law would prohibit the importation by libraries or individuals of either first or second hand copies of American books bearing the copyright notice of our government, whether purchased alone or in a library bought *en bloc*.

Invitation from the chair to librarians present resulted in the following expressions: Dr. Richardson assured the publishers that librarians were in sympathy with the contention of authors and publishers in this matter, and that the attitude of librarians is not that of asking privileges or concessions *de novo*, but simply to keep what we now have, and that the new provision requiring written permission of the author or proprietor of American copyrights and the knowledge as to whether a given book has been copyrighted for America would cause annoyance and loss specially to the larger libraries. Dr. Canfield was in cordial sympathy in making what order was possible from the present unsatisfactory condition of the copyright law and felt that publishers to make their position tenable should be able to show very clearly that importation of American copyrighted books by libraries to be placed before the public on library shelves is actually injurious to the American author. Mr. Putnam replied that no statistics on this point were available.

but that the American publishers who have business houses abroad know through business knowledge that thousands of dollars' worth of such books are brought in each year. Mr. Bostwick stated that the librarians were now making the three following concessions in this matter, which he thought were all the publishers could fairly ask:

1. Consenting to the reduction of copies from two to one.

2. Relinquishment of the right to import unauthorized editions.

3. The restriction of the importation privilege to incorporated institutions only.

Mr. W. P. Cutter offered the following suggested amendment to section 2 of the draft submitted by Mr. Putnam and given in full above: after the word "book" insert "not the work of an author of American residence or citizenship," stating that in his opinion this amendment would be satisfactory to American librarians. Mr. Scribner stated that Mr. Cutter's was the most interesting suggestion he had heard, and that speaking for authors and publishers, he would be glad to have it considered by counsel as to its legal possibility and as to whether it would be consistent with existing treaties, and that the authors and publishers would be prepared to report definitely on its satisfactoriness at the next copyright conference, which is planned to be held during January.

The meeting then adjourned.

J. I. WYER, *Secretary*.

THE PUBLISHERS' VIEW

The existing American copyright statute was put into shape (with the exception of certain amendments on matters not now in controversy), under the act of 1891. The bill, as framed and presented to Congress, was the result of a series of conferences and discussions which had extended over a term of five years. At these conferences were presented the views and suggestions of a number of the bodies interested in copyright law, or which were admitted to have some right to be heard in connection with the framing of the provisions of the new law.

The law that was finally enacted (late on the last night of the session), March 3, 1891, included one or two provisions interpolated at the very last moment, which provisions had not been considered at these conferences, and which, therefore, did not represent the consensus of opinion of those who were charged with the responsibility for the shaping of the law. Certain of these provisions were in fact entirely inconsistent with the general principles of copyright or with other provisions of the final statute.

The law makes provision (in line with the similar provision of all existing copyright acts), that during the existence of the copyright, the importation into the United States

of any book or any other article so copyrighted shall be and is prohibited.

Under a clause interpolated in the act, as above stated, during the night of March 3, 1891—a clause which had, therefore, not before been under consideration at any of the copyright conferences or before the committees of the House or of the Senate—it was provided that there should be an exception to this prohibition of the importation of copyrighted works "in the case of persons purchasing for use and not for sale, who import subject to the duty thereon, not more than two copies of such book at any one time."

There was a further exception permitting such importation of "not more than two copies at any one time," without duty, to societies, colleges, libraries, etc.

This provision not having been considered in connection with the main purpose of the statute, or with the other sections of the statute, was curiously ill-considered in its wording and has had results which were doubtless wider than were anticipated by the individuals who were responsible for its framing or by the legislator who took the responsibility of getting it inserted in the act. The law concedes, in form at least, to the producer of the article entitled to copyright, a control or "monopoly," during the term of copyright of all property rights in the article so produced, within the territory belonging to the United States. It is the purpose of the American law, as of all similar copyright laws, to grant to the producer an absolute control or "monopoly." There are various inconveniences connected with such "monopolies," whether these cover copyrighted articles or patented articles. The producer may be unduly exacting or unreasonable. He may fix a price upon his article which is higher than the would-be buyer finds convenient; he may connect with the arrangements for the sale of the production conditions which are onerous and unreasonable. Such possible inconveniences and disadvantages to the consumer or to the general public were taken into account in the first framing of copyright law. It has been assumed in all countries which have enacted patent laws or copyright laws that the advantages of encouraging invention on the one hand and the production of literature on the other, and the wisdom of securing for the inventors or the producers the full enjoyment of their productions, were considerations sufficiently important to offset the occasional disadvantage arising from the exactions or the stupidity of an unreasonable producer.

Under the existing copyright laws of Europe, the author is given full control of his property in all the states taking part in the Berne Convention, that is in what is practically the territory of Europe. He is placed in a position to make assignment of the prop-

erty existing under his copyrights to business representatives in the different states concerned. These assignments are protected under the copyright laws of each state and under the general copyright system of the Berne Convention, which is accepted as binding upon each state.

It was recognized by those who were responsible for framing the regulations of the Berne Convention that if an author were to secure the full advantage of his property rights, he must be protected in the exclusive control of each of the markets in which he is given rights. Any impairment of his power to sell or to assign the exclusive control of each individual market would lessen, of necessity, the business returns that he could secure from such market.

The carelessly worded section above referred to in the American law has the necessary result of impairing the property rights of authors, whether American or trans-Atlantic, and, therefore, of lessening the business returns that can be secured to them under such rights. While the law in one section gives an absolute control under the copyright, in this other section it concedes, practically without restriction, to societies or to individuals the right to import copies of copyrighted books. As a result of this slovenly legislation—legislation which is not paralleled in any other copyright statute in the world—the business of supplying the American market with foreign editions of books copyrighted in the United States has each year, since the enactment of the law of 1891, assumed larger proportions. The injustice thus caused to the producer, the author, and to his business representative, the publisher, is manifest.

The author, whether English or American, may make sale to the Australian market at the moderate price which Australia is prepared to pay, of the right to produce an Australian edition of the book. He has already made sale to an English publisher of the rights for Great Britain. He makes a third sale to the American publisher of the rights for the United States. Under the law as it stands, there is nothing to prevent the importation into this country of a low priced Australian edition, and every copy sold of such edition interferes with the returns belonging properly to the author for the sale of his authorized American edition. If the American publisher has made direct purchase of the copyright, thus standing in the position of the author, the value of that which he has purchased is interfered with to just the extent to which he is exposed to competition through the importation of copies of the book from Great Britain or copies from Australia. When the publisher finds that he has not secured from his purchase the control of the market, he is, of necessity, in connection with the purchase of a further similar book,

willing to pay, and in a position to pay, a smaller price than he would otherwise have paid. The author who has guaranteed under his contract the exclusive control of the American market is not placed in a position to carry out his own guaranty.

The business of agents working in London, Leipsic, and elsewhere in supplying the American market with copies of foreign editions of American copyrighted books is each year assuming larger proportions. It is the case that a large proportion of the more important works published each year are addressed more particularly to what the publishers call the library public. These are books which are too large in compass or too costly in price to meet the requirements of any large number of individual buyers. The American publishers look to the librarians, through the purchase of a substantial proportion of the editions of such books, to render the co-operation required to make their publication remunerative and to encourage the production of American editions of further similar books.

It is increasingly the case, however, that American buyers, whether individuals or libraries, secure either through the mails or in freight importations the copies required by them of this class of literature from trans-Atlantic editions. The American publisher, who has made payment for his American market, finds that the most valuable portion of this market is taken away from him.

The English author who has made sale to an American publisher of the American market has, of course, a direct business interest in securing for his assign the full control of such market. If he cannot do this, the price that can be paid to him (or to other authors for similar books) is, of necessity, lessened.

On the ground, therefore, as well of consistency in the law of copyright, of justice to authors, and of justice to the business interests of American citizens, it is claimed that this defective provision in the existing law should be amended. A bill for its amendment has in fact for two years or more been on the calendar. It is admitted that no obstacle ought to be placed in the way of the importation by a library or by a scholarly buyer in securing copies of a foreign edition, in the cases in which, on one ground or another, such edition may be more complete or more effective. It is pointed out, however, that under the ordinary routine of the book-importing business, there is no difficulty in arranging to make such importations with the consent of the owner (or the assign of the owner) of the American copyright. The publishers have a direct business interest in supplying all such requirements. This is the course taken in Great Britain, for instance, when on one ground or another it is desired to secure a Continental edition of a work that has been placed under British copyright.

The English librarian is, under the provisions of the British law, prevented from including in his purchases from Germany copies of Tauchnitz or Asher editions of English books; and he finds no difficulty in instructing his agent in Leipsic to exclude from his shipments all such editions.

No obstacles ought to be placed in the way of a resident returning to this country with a library which might include copies of foreign editions of an American copyright book. The bringing in of such a library under the heading of "personal effects," or the purchase by institutions in this market *en bloc* of libraries from Europe which might include copies of copyrighted books should always be made practicable.

It is contended, however, by the authors and by their business representatives, the publishers, as also by the lawyers who are interested in connection with the preparation of the revised statute in securing a consistent and equitable copyright law for the United States, that this ill-considered provision of the law of 1891, should, in the revision of the statute, be corrected so as to permit the importation of copyrighted books into the United States only under the authority of the owner of the copyright, as was the case prior to 1891 and as is the procedure under the copyright laws of England and of the Continent.

GEORGE HAVEN PUTNAM,
Secretary American Publishers'
Copyright League.

ACTION OF AUTHORS' COPYRIGHT LEAGUE

The Council of the American Copyright League has issued the following statement of the position of authors:

The American Copyright League, representing the authors of literary, dramatic, musical, artistic and cognate works, maintains that the copyright protection in the property created by such authors should justly and logically include the right to sell or control such works for any specified time or territory or under any specified conditions, either directly or through their assigns, publisher or publishers, and therefore the League holds that the author should be able to sell the American market, the English market, and any other markets separately, and to assure each market against importations from other markets of the work thus sold. It therefore maintains, as a matter of right and justice, that the importation of foreign editions should be prohibited, as is the case in other countries, except by consent of the author or copyright proprietor, but in view of existing law and conditions and especially of the inclusion in our copyright law of the manufacturing clause, it is prepared to recommend to authors the concession of general permission to import copies of authorized foreign editions under the circumstances scheduled as follows:

During the existence of the copyright in any work or of *ad interim* protection, any copies

produced without the authorization of the author or copyright proprietor or any copies of a periodical containing unauthorized reprint from any copyrighted work, should be considered fraudulent and illegal, and the importation of such fraudulent copies into the United States prohibited.

During the existence of the copyright in any book or of *ad interim* protection, the importation of copies of authorized foreign editions into the United States should be prohibited, except in the case of:

(a) Periodicals containing portions of such work printed by arrangement with the author;

(b) A work in a foreign language or languages other than English prior to the production of an edition in the original language in the United States under copyright protection;

(c) Books in raised characters for the use of the blind;

(d) A work of which the American edition is out of print, so long as this condition exists and it cannot be procured from the copyright proprietor or the American publisher;

(e) Copies imported by the authority and for the use of the United States Government or the Library of Congress;

(f) Single copies forming part of a library or collection purchased abroad in good faith for public use and not for sale or of household effects in use abroad for more than one year, or of personal baggage;

(g) Single copies imported from the country of original authorship, only by a public library or other incorporated educational or other institution for public culture;

(h) Single copies imported for use and not for sale on the written consent of the copyright proprietor; but copies imported as above may not lawfully be used in any way to violate the rights of the copyright proprietor or limit or annul the copyright protection provided by this act, and such unlawful use shall be deemed an infringement of copyright.

STATEMENTS FROM LIBRARIANS

Librarians should be the last to oppose the principles of copyright, or to do anything that would vitiate copyright or render it even partially or locally ineffective. But they do not believe that in advocating the retention of their present importation privileges they are doing this, any more than they would be opposing the principle of taxation if they should resist an attempt to repeal the law exempting them from the payment of taxes. It is right in a general way that every individual and every institution should bear a share of the expense of public administration; but it is often a matter of public policy to lift this burden from institutions that are doing a public service. In the same way, although we may accept the principle on which the copyright laws are based, we may still believe it to be public policy to exempt

from their operation institutions like public libraries and public schools, that are performing a service for the public. Even if the privileges now accorded to libraries were based on no other foundation than this, they would be amply justified, and any private interests with which they may interfere should give way to the public good just as such interests are obliged to do in the case of exemptions from taxation. But public libraries are more than institutions for doing a public service. They are, in addition, great advertisers of literature, and in this capacity they serve the business interests of author, publisher and bookseller to such a degree that these producers and distributors of literature should be glad to make concessions to them in every possible way. The library is a free distributor of sample books. Librarians believe that the great increase in the number of those who buy and read books, that has taken place in the past twenty years, has a causal relationship with this free distribution of samples. They believe that it would have almost paid the book trade to furnish them with these samples free during the twenty years of distribution; instead of which they have gladly purchased at a reasonable price.

The New York Public Library, for instance, gives out books for home use at about the rate of one every year for each inhabitant of the city. A large proportion of these are read by persons who would not have thought of purchasing the books that they take out. Large numbers of persons have an interest in literature newly aroused by such reading, and become purchasers of books. That an average of one book per year represents a satisfaction of the literary needs of New York is hard to believe. The books that we are circulating are practically samples, and we believe that they should be so treated.

It is true that the privileges accorded to a public institution may exceed the bounds of public policy. In the case of large educational institutions there are often emphatic protests against exemption from taxation. The recent unsuccessful effort of the city of New Haven to tax certain property of Yale University is a case in point. But we have seen no evidence that any such excessive privileges are or are likely to be accorded to the public library, and the burden of proof is certainly on the shoulders of those who assert the contrary.

The attitude here taken is one on which all librarians can unite, and I believe that those who object to our present importation privileges should also accept it. It is not necessary to insist here on the point of view held by many librarians that, although the author may properly be allowed to divide the field of trade and make his separate bargain in each division, the purchaser should be free to buy in whichever of these divisions suits

him best. This and similar claims are held by publishers to be in direct violation of the principles of copyright. They must, however, be reckoned with, for they are held honestly by numerous persons.

It is impossible, too, to overlook the fact that this subject of copyright appears to many librarians to be more or less closely bound up with that of book prices. Those interested on behalf of the book trade assert that there is no logical connection, and point out that overcharging on the part of an individual publisher or dealer may be adjusted through the usual channels of trade. Copyright, however, permits a division of the field of purchase, and in this case the provisions of the law make it impossible for the general public to escape an overcharge in one division by purchasing in another. Those who by special privilege may at present avail themselves of this method of adjusting prices are therefore scarcely to be blamed for regarding the withdrawal of the privilege as an effective bar to such adjustment.

Entirely apart, however, from all such ways of looking at the subject, all of us believe that the bounds of public policy are not exceeded by our present importation privileges.

Still, those of us who are interested in setting the copyright house in order and in the evolution of a systematic code from the present confused and contradictory body of law relating to the subject, and who realize that the question that touches us is but one of many that must be adjusted between conflicting interests, are unwilling that the whole scheme of reform should go by the board on account of refusal to compromise this one point. That it is possible to agree on a compromise to which both the book trade and the interests of education may give assent, we steadfastly believe. We are not anxious to import pirated editions. We are not anxious to take up the cudgels for the private owner who imports subject to duty, or for the casually organized ephemeral book club. We may even be willing to give up the privilege of importing foreign reprints of American books. But we do wish to be able to import the foreign books that we desire in their original editions, without being obliged to inquire whether or not the author or proprietor may or may not have secured American copyright. We should regard the withdrawal of this part of our privileges, as a measure, in the words of a recent resolution of the Western Massachusetts Library Club, to "diminish the resources" of libraries and "lessen their educational influence." But I see no reason why any change in the present law that will leave regular educational institutions secure in this privilege should not be accepted both by the majority of librarians and by those engaged in the production and sale of books.

ARTHUR E. BOSTWICK.

In "Copyright, its law and literature," Mr. R. R. Bowker defines copyright thus: "In its specific application it means the right to multiply copies of those products of the human brain known as literature and art."

Before 1836 an author could not secure a monopoly of this right in any country but his own, and consequently to protect his right it was necessary to prohibit importation of foreign editions. Otherwise the work might be printed abroad without paying a royalty, and imported and sold in competition with the copyrighted edition. (Thus importation was restricted in the statute of Queen Anne, the foundation of the modern copyright system. At the same time the interests of the public were guarded by a provision that if too high prices were charged, they might be ordered reduced.)

During the last half century the situation has changed. International copyright has spread throughout most of the civilized world. In so far as an author may now take out copyright in foreign countries, *the prohibition of importation is no longer necessary to secure to him absolute monopoly of "the right to multiply copies."*

Though the prohibition of importation is to this extent no longer requisite as a measure of abstract justice, it is doubtless *expedient* within certain limits. Thus the existing laws of the United States prohibit in general the importing of copyrighted articles, but make two notable exceptions. The first allows any person to import, subject to the duty, not more than two copies of a book at one time, for his own use and not for sale. The second permits public libraries and other educational institutions to import, duty free, copyrighted articles, not more than two copies in one invoice, for use and not for sale.

It has been proposed by bills previously introduced in Congress, and was suggested in connection with the present revision of the copyright law, to deprive libraries of this privilege, except after obtaining in writing the consent of the holders of the American copyrights (or in the few instances when the foreign edition differs in substance from the American). In other words it has been proposed practically to abolish the privilege altogether. For (1) the consent of the holders of the American copyrights would in all probability be withheld; and (2) even if it would be granted, the labor and delay of securing it in each instance would be prohibitive.

To restrict thus the privilege of importing would be a serious blow to the libraries of the country.

First, it would increase the cost of their books and so diminish their resources and educational influence. Already the cost to libraries of the better class of books has been greatly raised. A few years ago the publishers of the country formed an association which decreed that on new net publi-

cations no dealer should allow any library more than 10 per cent. discount, on pain of having his supply cut off. Since this action the cost of these books to libraries has been greatly advanced. A general advance of ten per cent., it has been asserted, was necessitated by greater cost of production. This may be true enough, but if the cost to the general public had been raised 10 per cent., the increase exacted at the same time from the free public libraries under the restrictions imposed by the American Publishers' Association would be 19 per cent.!* In other words, the libraries would be made to pay a proportionate increase nearly double that paid by the general public. But careful estimates give ground for believing that the cost to the public has advanced more than 10 per cent., and that the cost to libraries has advanced at least 30 per cent. The prohibition of importing copyrighted books would make still further inroads on the limited funds of the libraries, and would simply benefit publishers at the expense of tax-supported, educational institutions.

Secondly, to prohibit importation would cause endless annoyance and confusion, and would seriously hamper the means of learning and culture. Every time the librarian saw a review of an English book, every time scholarly readers asked him to import a foreign work, before ordering, he would have to make an investigation to discover, if he could, whether the work had been copyrighted in this country or was likely to be. Often to secure prompt delivery the order is now sent as soon as a foreign book is announced—sometimes long before publication. This would no longer be possible. The order would have to wait until the librarian could find out whether the work would be copyrighted here. Further, books which are unobtainable in America, because "out of print" or "out of stock," could not be imported (unless the librarian sought out the holder of the American copyright and could induce him to consent). Imagine the endless difficulty, labor, expense, and delay!

Frequently the libraries of deceased scholars and similar collections are purchased abroad in block by our libraries and colleges. Under the proposed law, as soon as such a collection reached an American port, all the books in it which had been copyrighted and published in this country would presumably be confiscated. The librarian would have one alternative. He might write to the proprietors of the American copyrights—perhaps a thousand of them—and beg their consent to importation. If they all consented graciously and promptly he might have the privilege of securing his books!

* The book formerly listed at \$1.50 was customarily sold to the general public, not at that price, but for about \$1.20, and to libraries for \$1.00. At a net price of \$1.32 the public would pay 10% increase, but the libraries would have to pay \$1.19 or 19% increase.

Copyright in the United States can be granted only under the power conferred by the Constitution. The purpose is there narrowly defined. Copyright may not be granted simply to benefit publishers, or authors, or as a measure of "business justice" *per se*. It may be granted for one end, and for one end only, and that is "To promote the progress of science and useful arts." It is scarcely conceivable, therefore, that if the mischievous effects are understood, Congress will ever impose any material restriction of the right to import copyrighted articles on the educational institutions of this country.

HILLER C. WELLMAN.

I suggest the following wording for insertion in the proposed copyright bill as being, to my mind, a fair compromise between the suggestions of the publishers and the opinions of the importing librarians:

"The importation of articles copyrighted in the United States is hereby prohibited, except that books, maps, music, engravings, etchings, lithographs, chromos, photographs, cuts, prints, and charts, bound or unbound, and not the work of an author, engraver, lithographer or photographer who is a citizen or resident of the United States, and which are printed abroad with the authorization of the owner of the American copyright or his assign, may be imported as follows, if imported in good faith, for use and not for sale:

"(1) When imported, not more than one copy in any one invoice, for the use or by the order of any incorporated society, or institution established solely for religious, philosophical, educational, scientific or literary purposes, or for the encouragement of the fine arts, or for the use of any incorporated college, academy, school, seminary, state or public library; or when forming a part of libraries purchased as a whole by such incorporated institutions; subject to such regulations as the Secretary of the Treasury shall prescribe;

"(2) When imported by the authority of or for the use of the United States, or for use of the Library of Congress;

"(3) When belonging to persons or families returning from foreign countries, provided the copies imported have been used abroad;

"(4) When imported, not to exceed two copies in any one invoice, by any person, provided that permission be given in writing by the owner of the copyright or his assign:

"(5) When printed in raised type, used exclusively by the blind."

I am, after mature consideration, opposed to any limitation of the permission given in the first exception above, except a provision that will limit the permission to books of which the author or proprietor is not a citizen or resident of the United States. The limitation suggested by the publishers

to books in a foreign edition when imported from the "country of origin," would make it possible for American publishers to print an American edition of a work by an English author before the foreign edition was printed, and thus prohibit the importation of the English edition when it appeared.

W. P. CUTTER.

My knowledge of the effort to curtail the free importation of books for public libraries is limited to the published announcement that the Copyright League and the Publishers' Association are planning to so amend the copyright law as to prohibit the free importation of any book copyrighted in the United States, without the written consent of the holder of the copyright.

I have been informed that the measure has not yet been actually introduced in Congress, and therefore its precise terms are not known. It seems to me that at this stage it cannot be discussed with understanding. On general principles, any legislation which would disturb the privilege of free importation hitherto enjoyed by libraries, is to be deprecated.

But perhaps the matter is not so serious as may at first thought appear. The cost of British publications has very materially advanced within the last year or two. The combination of British publishers is even more effective than that in this country, for it has not only advanced prices but allows no discount whatever. Books published both in England and America can be bought quite as cheaply at home as abroad, and therefore, the refusal of free importation is of little, if any, practical consequence.

Again, it is a question in my mind whether the restriction is not already in effect, without any amendment to the law. I notice that our London agent is getting into the habit of reporting certain titles in his orders, "American publication," and therefore does not fill the order. These orders are made up from publishers' lists, which are our main source of information. It often puzzles us to know who publish the books thus reported, since we do not find them in American lists. I have not corresponded with the London agent on the subject, but it is my belief that the English publisher, knowing that the book is, or is to be, published in America, refuses to sell it for exportation to this country. If this is the fact, no law restricting the importation is necessary. The publishers have the matter in their own hands.

I do not see that any position librarians can take will have much influence in the matter. The A. L. A. has for years been trying to secure some modification of the dictum of American publishers. So far nothing has resulted. The publishers stand together. The libraries may buy their books or let them alone. But the libraries must

have the books, and therefore they have the short end of the lever. The best that agitation can do is to arouse public sentiment. That may go some way toward easing the situation. The public has to pay more for its books than formerly, but it also has to pay more for almost everything else which it must have. The coal baron and the beef baron and the oil baron make the consumer squirm. But we have yet to find the way in which the squirmer can become the squirmee.

H. M. UTLEY.

It is hard to find polite and parliamentary language with which to characterize the proposed amendment to our tariff, which would forbid the importation of English books by public libraries. The requirement that the permission of holders of American copyrights must be obtained practically nullifies the permissive clause of the present law.

That requests of this kind would be all but universally refused, is made evident by the very proposal of the amendment. If publishers generally would grant requests for free importation, what is the object of the change? If the purpose be—and it evidently is—to prohibit the importation of English books by libraries, let the prohibition be positive, with no provisos or deceptive circumlocutions. Even if in some cases permission should be obtained, the delay involved would be a practical inhibition. Moreover, what library wants to be put in the attitude of constantly asking favors? Let the law be positive and of universal application one way or the other.

What argument can be advanced in favor of the measure? It is not a move forward, but backward, as must be any proposal to tax knowledge, to make the means and instruments of education more difficult to obtain. It is distinctly a levy on the book fund of every library in the country: it means that every library will have just so much less to offer its readers; and where the levy is lightest (in the smallest libraries) the injury is heaviest.

The United States conducts at considerable expense a Bureau of Education, whose chief function is to aid and stimulate local educational agencies throughout the country; and everybody believes the expenditure to be wise and fruitful. Would it not, then, be an absurd situation for the national legislature, when local communities, throughout the Union, are making great efforts to provide their citizens with the means of education through books to levy on the funds thus raised and seize a portion, be it 5 per cent, or 25 per cent.? And for what? Certainly not for any benefit to the local community. It raised the money to buy books and wants all its money to go for that purpose. Is the amount abstracted from the purchasing power of the local book fund to go to the national coffers? This

would certainly be a mean and sneaking way to collect federal revenue. But this forced contribution from meager book funds serves and is meant to serve no public purpose. Its obvious aim is simply to divert a portion of the book fund of every library in the country, large or small, university or public, to the pockets of a few publishers.

The proposal is distinctly reactionary and in opposition to that fundamental principle which has been the cornerstone of America's greatness; viz., that it is a primary duty of the state to provide every possible facility for the education of its citizens. The publishers who, in absolute selfishness, urge the amendment, would find that it would not result in so much profit to them as they now calculate, for it would drive libraries still more to the clearance, the auction and the second-hand catalog. It would cause much trouble and annoyance to library authorities and the public; but it would not bring corresponding gain to the publishers.

The question at issue is, briefly, this: Shall some thousands of dollars collected from the people of the United States every year go into the pockets of a few publishers; or shall this money be used, as intended by its givers, for increasing the stock of knowledge available to them and their children?*

Stanley Waterloo's amusing little story "An odd situation" cleverly presents the *reductio ad absurdum* of our tariff laws. This proposed amendment, this attempt to levy petty toll on the book funds of educational institutions of the country, furnishes what I call the *reductio ad minimas nugas*.

FREDERICK M. CRUNDEN.

The real question at issue and the only question at issue in the proposed amendment of the copyright law, as far as importations by libraries, etc., are concerned, is the preservation of all legal rights and equities to the author who has taken out a copyright in this country.

Such copyright evidently creates a monopoly, and is intended to create a monopoly, during the life of the privilege. It is entirely proper that the government should take all necessary steps to protect this monopoly.

The inquiry which librarians must make, and which all other interested people must make, is simply as to whether the proposed amendment creates unnecessary restrictions, is unduly burdensome, or in any way establishes conditions which may be avoided without infringing upon the right of the author.

I have not seen the latest draft of the proposed bill, but as far as I have listened to the discussions the purpose of the proposed amendment seems to be entirely just and proper. As to its necessity, that is as to

* It must not be forgotten that the books in question are, by an overwhelming preponderance, the books that are distinctly educative.

whether the author will suffer material loss if this amendment is not passed in this form, I must confess myself to be in some doubt. My very positive belief is that the public libraries directly benefit every publisher and every author through the educating and stimulating effect of these libraries upon the public mind. I can as soon believe that the public schools are injurious to publishers and authors as that the public libraries are.

JAMES H. CANFIELD.

The proposal that public libraries in the United States shall be deprived of their privilege of the importation of books free of duty, for such books as are copyrighted in the United States, is opposed to the interest of the large number of people who use the New York Public Library and its branches, and I sincerely hope it will not become a law.

J. S. BILLINGS.

The following resolutions on the subject have been passed by the Western Massachusetts Library Club:

"The Western Massachusetts Library Club has learned with deep apprehension of a proposed amendment to the copyright law which would deprive public libraries and other educational institutions of their privilege of importing copyrighted books, except after obtaining the written consent of the holders of the American copyrights. Such an amendment would in practice prohibit these imports altogether.

"When, in 1897, a clause of the proposed Dingley tariff law abolished the privilege of free importation by libraries and subjected such imports to a duty, so great a protest arose from all parts of the country that this illiberal provision was immediately defeated. The amendment now proposed would go much farther, and instead of merely taxing, would in effect prohibit the importation of copyrighted books by libraries altogether.

"It would, by increasing the cost of books to libraries, diminish their resources and lessen their educational influence.

"It would seriously hamper them in securing new books promptly.

"It would involve immense labor to ascertain in every instance, before ordering a book abroad, whether it had been or would be copyrighted here.

"It would largely prevent importing second-hand books or private collections for American institutions of learning.

"At a special meeting, the following resolution was unanimously adopted:

"Resolved, That the Western Massachusetts Library Club, representing the interests of forty-one public libraries, confidently believes that the existing law permitting the free importation of books, maps, music, photographs, etchings, lithographic prints, and

charts by libraries and other institutions of learning is a just and wise statute; and that any amendment prohibiting importation of such copyrighted articles, except after obtaining the consent of the holders of the American copyrights, would render nugatory the beneficent purpose of the said law, which is designed to increase the facilities of education and to advance learning in the United States.

"Voted, That the secretary send copies of the above to the Librarian of Congress, to the library representatives in the copyright conference, to libraries and colleges within the club's district, to other library associations, to the library journals, and later to the state's representatives in Congress.

"JAMES A. LOWELL, Secretary.

"SPRINGFIELD, MASS.
"January 20, 1906."

Similar resolutions have been passed by the board of directors of the Springfield (Mass.) City Library.

The St. Louis Public Library board, at a recent meeting, unanimously adopted the following resolution, which the secretary was instructed to send to the two senators and all the representatives in Congress for Missouri:

"Resolved, That the board is unanimously of the opinion that the existing law permitting the free importation of books, maps, lithographic prints and charts by libraries and other institutions of learning is a just and wise statute, and that the proposed amendment requiring consent of holders of American copyrights would render nugatory the beneficent purposes of the law, which is designed to encourage and increase the facilities for education in the United States."

The Detroit Public Library board also, on Jan. 18, passed a resolution extending its support to the American Library Association in opposition to the measure. *Public Libraries* for January considers the subject editorially as the "Next move in net price system," and says: "The gross injustice of such a measure is so plain that it is to be hoped its journey from life to death will be short and quick. Tax-supported institutions belong to all the people, and if a tax is placed on books imported for a public library it means that the people will be compelled to pay just that much more for their books, their library funds will fall that much shorter of their full purchasing power, and no one will be benefited thereby except the publisher in America."

A further memorandum draft, embodying the modifications suggested by Mr. Cutter, Dr. Canfield, and others, was later prepared by the publishers' league and presented for consideration to the A. L. A. executive board, with the approval of the A. L. A. copyright delegates, who recommend its acceptance.

AMERICAN LIBRARY INSTITUTE

THE American Library Institute has been organized, by the adoption of constitution and by-laws and election of 44 of the 100 fellows who are to make up its membership. The constitution is as follows:

A. L. I. CONSTITUTION

ADOPTED 1905

1. *Object.* The object of the American Library Institute shall be to provide for study and discussion of library problems by a representative body chosen from English speaking America, regardless of residence or official position.

2. *Fellows.* There shall be not to exceed 100 fellows, divided into 10 classes, of which the term of one class shall expire each year. By a vote of the Institute, or board, not to exceed half the vacancies may be left unfilled till an election is ordered.

3. *Corresponding and ex-officio members.* Recognized library thinkers and workers in other countries, whose co-operation is wished, may be elected corresponding members by unanimous vote of the board or three-fourths vote of the Institute. Their terms shall expire with the next revision of the list, which shall be made at least once in five years. All ex-presidents of the American Library Association, and, during their terms of office, members of its executive board and council shall have seats in all meetings of the Institute.

4. *Vacancies.* Vacancies may occur by end of term, death, or resignation, or without assignment of cause, by unanimous vote of the board, or by three-fourths vote of the Institute. All vacancies shall be filled for unexpired terms by written ballot. The Institute year shall be the calendar year.

5. *Board.* Programs, time and place of meetings, and other routine business shall be intrusted to an Institute board of five, one elected each year, to serve five years, by the same method and at the same time that fellows are elected. The Institute, by three-fourths vote, may take direct action, or revise the action of the board, or give it mandatory instructions.

6. *Officers.* The board shall nominate and the Institute elect by ballot, for a term of three years, a president as the representative head of both Institute and board; also a secretary, who, subject to the authority of president and board, shall perform the usual duties of both secretary and treasurer. If the president and secretary elected are not already members of the board, they shall become such *ex-officio*.

7. *Voting.* All formal votes of the Institute shall be by correspondence; and the required majority or three-fourths vote shall be of the entire number of fellows. On request of five fellows, any proposition shall be submitted to vote of the Institute with summaries of the arguments for and against. No conclusion shall be promulgated as an expression of the Institute till it has been so submitted.

8. *Elections.* Each November the Institute board shall ask from each fellow nominations for all vacancies to be filled. From these and its own suggestions the board shall submit to each fellow, on December 1, its recommendations, with summary of the reasons for each nomination. Before January 1 each fellow shall send to the secretary a strictly confidential written ballot for each place to be filled. Nominees having the largest vote shall be elected, provided each has the votes of not less than three-fourths of the Institute.

9. *Meetings.* The board shall call at least two meetings of the Institute annually.

10. *Amendments.* This constitution may be amended by three-fourths vote of all fellows, provided that the amendment in its final form has been sent to each fellow at least one month before its adoption.

11. *By-laws.* By-laws may be adopted or amended as provided for amendment of the constitution; but any by-law may be temporarily suspended by three-

fourths vote at any meeting at which not less than twenty fellows are present.

BY-LAWS

1. *Dues.* On accepting election each fellow shall pay in place of annual dues \$1 for each year of his term. There shall be no dues for *ex-officio* and corresponding members.

2. *Record of votes.* The secretary shall record the names of those present at each meeting; the number voting for and against any proposition; and, if requested by any member, the names of those so voting. Such record shall be sent to any fellow on his request.

Henry J. Carr, secretary of the American Library Institute, sends out circular announcement of the election of fellows already chosen, as follows:

"Following the 1905 meeting of the A. L. A. held at Portland, Oregon, and acting under the authority there granted, the 15 ex-presidents of that association have taken the necessary preliminary steps in the organization of the American Library Institute, including the adoption of a constitution and by-laws. Balloting by correspondence, also, the following named 44 persons have now been elected as fellows of said institute:

Ahern, Miss Mary Eileen, ed. *Public Libraries*, Library Bureau, Chicago, Ill.
 Andrews, Clement W., in John Crerar Library, Chicago, Ill.
 Bain, James, Jr., chief in Public Library, Toronto, Ont., Canada.
 Billings, John S., LL.D., director Public Library, New York, N. Y.
 Bostwick, Arthur E., department chief Public Library, New York, N. Y.
 Bowker, Richard R., publisher, 298 Broadway, New York, N. Y.
 Brett, William H., in Public Library, Cleveland, Ohio.
 Brigham, Johnson, in Iowa State Library, Des Moines, Iowa.
 Canfield, James H., LL.D., in Columbia University, New York, N. Y.
 Carr, Henry J., in Public Library, Scranton, Pa.
 Countryman, Miss Gratia A., in Public Library, Minneapolis, Minn.
 Crunden, Frederick M., LL.D., in Public Library, St. Louis, Mo.
 Dana, John Cotton, in Public Library, Newark, N. J.
 Dewey, Melvil, LL.D., ex-in, Albany, N. Y.
 Doren, Miss Electra C., director Library School, W. R. Univ., Cleveland, Ohio.
 Elmendorf, Henry L., supt Public Library, Buffalo, N. Y.
 Elmendorf, Mrs. Theresa H. (West), bibliographer Public Library, Buffalo, N. Y.
 Fletcher, William L., in Amherst College, Amherst, Mass.
 Foster, William E., in Public Library, Providence, R. I.
 Gould, Charles H., in McGill University, Montreal, P. Q., Canada.
 Green, Samuel S., in Public Library, Worcester, Mass.
 Haines, Miss Helen E., ed. *Library Journal*, 298 Broadway, New York, N. Y.
 Hewins, Miss Caroline M., in Public Library, Hartford, Conn.
 Hill, Frank P., in Public Library, Brooklyn, N. Y.
 Hodges, Nathaniel D. C., in Public Library, Cincinnati, Ohio.
 Hopkins, Anderson H., in Carnegie Library, Pittsburgh, Pa.
 Iles, George, author, Park Avenue Hotel, New York, N. Y.
 Kroeger, Miss Alice B., in and director Library School, Drexel Inst., Philadelphia, Pa.

Lane, William C., in Harvard University, Cambridge, Mass.
 Larned, Josephus N., ex-In 35 Johnson Park, Buffalo, N. Y.
 Little, George T., in Bowdoin College, Brunswick, Maine.
 Peoples, William T., in Mercantile Library, New York, N. Y.
 Plummer, Miss Mary W., director Pratt Inst. Library School, Brooklyn, N. Y.
 Putnam, Herbert, LL.D., in Library of Congress, Washington, D. C.
 Richardson, Ernest C., Ph.D., in Princeton University, Princeton, N. J.
 Sharp, Miss Katharine L., in and director Library School, Univ. of Illinois, Urbana, Ill.
 Solberg, Thorvald, register of copyrights, Washington, D. C.
 Soule, Charles C., publisher, 83-91 Francis St. Fenway, Boston, Mass.
 Stearns, Miss Lutie E., library visitor, F. L. Com., 547 Prospect Ave., Milwaukee, Wis.
 Thomson, John, in Free Library, Philadelphia, Pa.
 Thwaites, Reuben G., LL.D., supt and sec'y State Historical Society, Madison Wis.
 Utley, Henry M., in Public Library, Detroit, Mich.
 Wallace, Miss Anne, in Carnegie Library, Atlanta, Ga.
 Wellman, Hiller C., in City Library, Springfield, Mass.

"The institute board (to which is intrusted the affairs of the institute, pending a meeting of the latter, as provided in the constitution,) has directed that an additional number of fellows be elected, up to a total of 70, thus leaving 30 vacancies in the final fellowship of 100, to which the institute is limited."

New Zealand.....	6,000
	676,750.14
Totals.....	£139,249 \$2,199,695.14

The recorded totals comprise 106 gifts of library buildings (including 15 branches) to the United States and Canada; 54 increases to original gifts, United States and Canada; 37 gifts for library buildings (including 18 branches) to the United Kingdom and Ireland; 25 increases to original gifts, United Kingdom and Ireland; 1 gift to the West Indies; 2 gifts to New Zealand—making a total of 225 gifts for library buildings.

In addition, Mr. Carnegie's beneficence included to a very large degree gifts to the smaller colleges of the country, for buildings, equipment and endowment purposes, most of these being conditional upon the institutions raising an equal amount. Of these gifts the following were granted for library buildings:

COLLEGE LIBRARY BUILDINGS

Alabama Poly. Institute, Auburn, Ala.....	\$30,000

William and Mary College, Williamsburg, Va.....	20,000

"FOR INFORMATION ONLY."

THE following circular letter, sent out a few months ago to state librarians throughout the country, is instructive in its indication of a frequent attitude of the political mind toward the work and place of the state library:

"DEMOCRATIC STATE EXECUTIVE COMMITTEE.

"Headquarters: Nos. 408-417 New Hayden, E. Broad.

COLUMBUS, OHIO, Nov. 20, 1905.

"*State Librarian of ———.*

"DEAR SIR: What are your duties as state librarian?

"Is there any necessity for continuing this expense?

Are there any books in your state library that cannot be found in the ——— City Library, unless it is books of reference?

"If you were running it yourself upon a financial basis, what would you do with it?

"Who selects the books for said library?

"Has every state in the Union a state library?

"The above questions are written to every state librarian in the United States, with a request for a prompt reply.

"Yours respectfully,

"(Signed) H. G. DE WEESE."

CARNEGIE INSTITUTION GRANTS

IN the 1905 Yearbook of the Carnegie Institution there is a statement of the experience and probable future policy of the Institution in awarding small grants for minor undertakings, which is interesting in its possible bearing upon bibliographical enterprises. It concludes: "Summarily stated, the indications are that the policy of awarding numerous small grants to self-suggested investigators is destined to break down under the sheer weight of the importunities it entails; that the results to be expected from such grants are meager; and that the award of them, unless narrowly limited and carefully guarded, may work grave injury to educational institutions."

ATLANTIC CITY LIBRARY MEETING

THE tenth annual meeting of the New Jersey Library Association and the Pennsylvania Library Club will be held at Atlantic City, N. J., March 9-10, 1906.

There will be three business sessions, as follows: Friday, March 9, 8.30 p.m., at the Hotel Chelsea; Saturday, March 10, 11 a.m., probably at the Atlantic City Free Public Library; Saturday, March 10, 8.30 p.m., at the Hotel Chelsea. The first session will be held under the direction of the Pennsylvania Library Club, and the president, John W. Jordan, LL.D., librarian of the Historical Society of Pennsylvania, will preside; the second session will be held under the direction of the New Jersey Library Association, with the president, John Cotton Dana, librarian of the Newark Free Public Library, in the chair; the third session, at which Herbert Putnam, Librarian of Congress, will preside, will be given over to representatives of the A. L. A. and other visitors of distinction.

It is hoped that the members of the A. L. A. Council, the A. L. A. executive board, and the American Library Institute will arrange to hold meetings at the Hotel Chelsea at this time.

Railroad rates

New York to Atlantic City and return...\$4.75
Newark to Atlantic City and return...\$4.75
Philadelphia to Atlantic City and return...\$1.75
Excursion tickets good to return within 15 days.

For railroad tickets and schedules apply to any ticket agent of the Pennsylvania or Reading railroads.

Hotel arrangements

The headquarters will be at the Hotel Chelsea, at the ocean end of South Morris Avenue, Chelsea, Atlantic City. The following rates have been offered by this hotel:

One person in a room, without bath...\$3 per day
Two persons in a room, without

bath, each.....\$3 per day

One person in a room, with bath...\$4 per day

Two persons in a room, with bath,
each.....\$4 per day

The Hotel Gladstone, which is just across the street from the Hotel Chelsea, at Brighton Avenue and the boardwalk, Chelsea, offers the following rates:

One person in a room, without

bath.....\$2.50 per day

Two persons in a room, without

bath, each.....\$2.50 per day

One person in a room, with bath...\$3.50 per day

Two persons in a room, with bath,
each.....\$3.50 per day

Members and their friends who wish rooms reserved are requested to write direct to the hotel. Persons desiring to obtain special

rates for a week or longer are requested to correspond with the proprietor.

Members of other library clubs and friends in adjacent states are cordially invited to be present and to take part in the meeting.

JOHN COTTON DANA, *President, New Jersey Library Association.*

ELIZABETH HOWLAND WESSON, *Secretary, New Jersey Library Association.*

JOHN W. JORDAN, LL.D., *President, Pennsylvania Library Club.*

EDITH BRINKMANN, *Secretary, Pennsylvania Library Club.*

SUPERVISION OF LIBRARIES IN IOWA STATE INSTITUTIONS

FOR more than seven years the state institutions of Iowa, outside the educational institutions, have been under the management of a board of control of state institutions. There are 14 institutions under the supervision of this board, consisting of a reform school for boys, a reform school for girls, soldiers' orphans' home, four hospitals for the insane, three penitentiaries, a college for the blind, a school for the deaf, a soldiers' home and a hospital for inebriates. The people of Iowa have shown great interest in the high character of the work of this board of control, which consists of three members, and much progress has been made in the development and organization of these institutions during the period covered by the work of this board. Libraries have existed in a more or less unorganized condition in most of these institutions, but heretofore no systematic efforts have been made to place them on a modern basis. The library commission of Iowa has been greatly interested in some plan for developing these libraries and both the president and secretary of the commission have presented papers on the subject recently at quarterly meetings held by the board of control, which are attended by the superintendents or heads of all these state institutions. At the October, 1905, meeting, after a plan was outlined by the secretary of the commission for a systematic supervision of these libraries, it was unanimously voted to employ a supervising librarian who should have the general management of the institution libraries in all matters of organization and service, the selection of books, etc.

The board of control have selected for this position Miss Miriam E. Carey, librarian of the Burlington (Iowa) Public Library for the past six years. Miss Carey received her library training at the University of Illinois Library School, and previous to that time had had experience in teaching. By education and natural taste, as well as by travel and broad reading, Miss Carey is well fitted for this work.

No other state has heretofore undertaken the systematic development of libraries in state institutions under a skilled librarian, and it is hoped that Iowa, as a pioneer in this work, may offer a suggestive object lesson in a new and important line of library development.

ALICE S. TYLER,
Secretary Iowa Library Commission.

American Library Association

President: Frank P. Hill, Public Library, 26 Brevoort Place, Brooklyn, N. Y.

Secretary: J. I. Wyer, Jr., State Library, Albany, N. Y.

Treasurer: Gardner M. Jones, Public Library, Salem, Mass.

MEETING OF EXECUTIVE BOARD

A meeting of the executive board of the American Library Association was held at the office of the LIBRARY JOURNAL in New York City, on Jan. 11, 1906, at 11 a.m. The following members were present: Mr. Frank P. Hill, Miss Caroline H. Garland, Mr. G. M. Jones, Miss Helen E. Haines, Dr. E. C. Richardson, Mr. J. I. Wyer.

The minutes of the last meeting were upon motion omitted.

A. L. A. Booklist.—A communication from the treasurer and the Publishing Board was received asking for instructions in the matter of furnishing the *A. L. A. Booklist* to members in arrears with annual dues. The Publishing Board was directed to send the list to all full-paid members for any given calendar year until the conference held in the following year.

Kasaan, Alaska.—A communication was received from Gov. John G. Brady of Alaska, expressing his interest in preserving the totem poles in the village of Kasaan, and promising an early visit to the village to inform himself as to the wishes of the natives and the conditions there.

Index to fiction.—A communication was received from Mr. John Thomson asking why the co-operation of the Keystone State Library Association was not invited or considered by the executive board in the appointment of its committee on index to prose fiction. The secretary was instructed to reply to Mr. Thomson that a new committee was constituted without reference to the Keystone State Association because the first committee in making its report at Portland stated that offers of co-operation had been made to the Keystone State Association, which had declined to join in the proposed plan for ascertaining the extent and character of the demand for an index to fiction.

Library training.—A communication from Miss Plummer, chairman of the committee on library training, was received relative to the present status of that committee and of the

report made by the former committee to the Portland Conference. The secretary was directed to reply that the report of the committee on library training and the reports of all committees offered at Portland were accepted on presentation, if not specifically at the moment, then under blanket announcement from the chair that all reports meeting with no objection were accepted as read, and that the action of the executive board at Lake Placid in appointing a new committee on library training was based upon this acceptance of the previous report with its recommendations.

"A. L. A. catalog."—A communication was received from Rev. J. H. McMahon relative to the "A. L. A. catalog." The secretary was directed to reply that this letter will be brought to the attention of a committee to be appointed later to prepare a five-yearly supplement to the catalog.

Catalogue of Title Entries.—A recommendation was received from Mr. Thorvald Solberg asking for an expression of opinion from representative librarians as to the desirability of continuing the *Catalogue of Title Entries*, formerly published from the Copyright Office, and on motion the president was directed to appoint a committee to take testimony in this matter and to report its findings and recommendations to the executive board. This committee was immediately announced as follows: the secretary, Mr. George F. Bowerman, Mr. George T. Clark.

Initiation fee.—The matter of the advisability of establishing an initiation fee to be paid by all new members at the time of joining was discussed, and in the same connection, looking toward greater permanence of membership, the matter of an extra charge for rejoining the Association after membership has been allowed to lapse. Both these matters were referred to the treasurer with instructions to report at a later meeting.

Permanent headquarters.—The report of Mr. E. C. Hovey, chairman of ways and means committee, was presented and discussed by the board and Mr. R. R. Bowker, present by invitation, and representing the subcommittee on permanent headquarters. Mr. Hovey was continued as assistant secretary until March 31, at the salary of \$1500 per annum, to be paid jointly by the Publishing Board and A. L. A. treasury as may be arranged. It was further voted that in the opinion of the board it is inexpedient to establish permanent headquarters in New York City until the sum of \$5000 net, after Mr. Hovey's salary and travelling expenses were deducted, shall have been paid in to the treasury of the Association.

New members.—Twenty-six names on the list submitted by the treasurer were voted into membership in the Association.

J. I. WYER, JR., Secretary.

28TH GENERAL CONFERENCE, JUNE 29-JULY 6, 1906

PRELIMINARY ANNOUNCEMENT, FEBRUARY, 1906

The 28th general conference of the American Library Association will be held at Narragansett Pier, R. I., beginning June 29, 1906.

The following tentative outline of program has been prepared:

Friday, June 29.—

Afternoon.—Meetings of executive board, Council and committees.

Evening.—Informal reception.

Saturday, June 30.—

Afternoon.—1st general session: addresses; reports of officers and committees.

Evening.—National Association of State Libraries, 1st session; Catalog Section, 1st session; Round table meeting for small libraries.

Sunday, July 1.—

Free; informal evening session for readings and stereopticon views.

Monday, July 2.—

Morning.—Children's Librarians' Section, 1st session; Bibliographical Society of America.

Afternoon.—League of Library Commissions, 1st session; Trustees Section; College and Reference Section, 1st session.

Evening.—2d general session: Addresses on "The public library as a municipal institution;" reports of committees.

Tuesday, July 3.—Free for visit to Providence.

Wednesday, July 4.—

Morning.—National Association of State Libraries, 2d session; Catalog Section, 2d session.

Afternoon.—3d general session. Addresses; reports of committees.

Evening.—Free.

Thursday, July 5.—

Morning.—College and Reference Section, 2d session; Children's Librarians' Section, 2d session.

Afternoon.—4th general session. Papers on "Planning and construction of library buildings;" reports of committees.

Evening.—2d Round table meeting for small libraries; section or other meetings, as arranged.

Friday, July 5.—

Morning.—5th general session. Papers on "The library in relation to special classes of readers;" reports of committees; unfinished business.

Tuesday, July 3, has been fixed for Providence day. If practicable, a boat will be chartered for the day, leaving the Pier about 8.30 a.m., and returning some time during the

evening. The trip will include the sail up the bay, visits to the Public, State, Athenaeum, University, Historical, and John Carter Brown libraries, and a Rhode Island clam-bake at some shore resort on the return sail down the bay.

The active work of preparation for this conference has been begun by the various local committees appointed by the general committee of the Rhode Island Library Association. The Rhode Island libraries are thoroughly in earnest and intend to do all they can toward making the Narragansett Pier Conference the most successful in the history of the American Library Association.

Rhode Island is a state which offers much of interest to visitors. Narragansett Bay separates the state into two divisions. At the southern point of one is Newport, while directly opposite, an hour's sail distant, is Narragansett Pier. The long sand beach offers unexcelled bathing facilities, while excursions by trolley may be made to points of interest in the vicinity. The largest hotels, all very near together, offer suitable accommodations. There will be no one hotel designated as headquarters. If all who can will arrange to take a roommate there will be ample accommodations for what will undoubtedly be the largest conference in the history of the Association.

Hotel rates.

Special rates have been secured at the headquarters hotels as follows:

\$2.50 per day each, two in a room, double bed, or three in a room, double bed and cot; or \$16 each for a full week.

\$2.75 per day each, two in a room, single beds; or \$18 for a full week.

\$3.50 per day, one person, single room; or \$23 for a full week.

With bath, two in a room, each \$3.50 per day; \$23.50 per week.

With bath, single room, \$6 per day; \$40 per week.

All rooming will be done by an A. L. A. committee, and not by the hotels. A limited number can be accommodated at lower rates in smaller hotels and boarding houses not far distant. Even those who live near the place of meeting are strongly urged to room at the Pier during the conference, as it is not possible to get the full benefit of the convention if one returns home each night. *Rooms will be assigned in order of application*, and notification of assignment will be sent each applicant not later than June 1. For rooms, address American Library Association, Travel Committee, 10½ Beacon St., Boston, Mass.

Railroad rates, one fare and a third for the round trip, will be granted by the various passenger associations from whose territory twenty-five or more persons attend.

Post-conference trip.

The post-conference trip, *provided a sufficient number apply before March 1*, will be a cruise on Long Island Sound and waters adjacent thereto, it being the intention to visit, wind and wave being propitious, Nantucket, Block Island, New Bedford, several points on Long Island Sound and the Hudson River, the excursion consuming one week, for which the cost to each person will be \$35, including berth and meals. The committee must charter the boat at a very early day. The size of the party must be known at once, to the end that disappointments, such as a number of our members experienced in not being able to go to Alaska on the same boat with their friends, may be avoided. Success is dependent on immediate reply to the American Library Association, 10½ Beacon St., Boston, Mass.

J. I. WYER, JR., *Secretary.*

NAVAL AND MILITARY LIBRARIES.

At the meeting of the American Library Association to be held at Narragansett Pier, R. I., June 29-July 6, 1906, it is proposed to have a Round Table of those interested in naval and military libraries. A room will be provided for such a meeting, and a program will be printed in case it is found desirable to arrange a formal program. The purpose of the Round Table is to discuss those problems which are peculiar to military and naval libraries, and to arrange for co-operation between the libraries represented. The problem of the classification of naval and military books, aids to the use of technical periodical literature, the exchange of duplicates, and the lending of books among such libraries might profitably be discussed.

It is requested that all who are interested in the proposed meeting shall communicate with the undersigned, indicating the probability of their attendance at the meeting, and suggesting proper subjects for discussion.

FREDERICK CHARLES HICKS,
*Library U. S. Naval War College,
Newport, R. I.*

COMMITTEE ON LIBRARY ADMINISTRATION

The A. L. A. committee on library administration are to bring the matter of uniform library statistics again before the Association at its next meeting. Copies of forms of a library report as recommended in previous years are being sent to all established state library commissions for their further criticism and suggestion. If any library associations, librarians or trustees are interested to see these report blanks (already printed in the proceedings) or to send suggestions preliminary to report of next July, the committee will be pleased to hear from them. Address the chairman, W. R. Eastman, care of New York State Library, Albany, N. Y.

State Library Associations

CALIFORNIA LIBRARY ASSOCIATION

President: Joy Lichtenstein, Public Library, San Francisco.

Secretary: Miss Anna L. Sawyer, Public Library, San Francisco.

Treasurer: Miss Anna Fossler, Library University of California.

The winter meeting of the California Library Association opened at 9.30 a.m., Dec. 27, 1905, in the Unitarian Church, Berkeley, President Lichtenstein in the chair. It was held in connection with the annual meeting of the state teachers' association and was devoted to the subject of libraries and schools. About 200 were present. The first paper was presented by Mr. Cubberley, of the Department of Education, Stanford University. He emphasized four things that the state library can do for schools outside of large cities: 1, the state library should send a travelling library to each school in the state, and there should be co-operation in selection with the county superintendent; 2, the state library can collect and distribute pictures for loan collections to the schools for special work; 3, the state can collect lantern slides; 4, the state library can issue a series of bulletins for teachers on special subjects for supplemental reading.

The discussion was lead by Professor Ackerman, state superintendent of public instruction, Oregon. He said, in brief, "There are three classes of people we must care for: The child at home who has books and likes them; the street gamin who knows nothing about them; the child who is compelled to go to the country school for books."

D. H. White, county superintendent of Solano county, suggested that lists of books be sent to county schools; also that each district have a paid librarian to select, buy and care for the books in schools.

Mr. Greene, of Oakland, spoke for Mr. Gillis, the state librarian. He spoke of the law of 1903, which enables the state library to distribute books throughout the state, and said further that the state pays charges on all books it sends out. Mr. Bruncken added that it ought to be the business of everyone interested to talk with newly-elected members of the legislature and insist upon a liberal appropriation for school libraries.

Mrs. Whitbeck, librarian of the juvenile department, Berkeley Public Library, spoke of the methods of interesting a child in reading. She suggested the use of all helps, such as catalogs, annotated lists, etc.; also placing non-fiction books on upper shelves where they would first attract the eye of the child, and fiction on the lower shelves. She suggested book-mark lists, picture bulletins, and a shelf of books underneath the bulletin to

supplement it, and spoke of the story-hour and its good influence on children.

The next paper was by P. W. Kauffman, city superintendent of schools, of Pomona, and was read by Miss Prentiss. This subject was "Methods of attracting the teacher." The discussion was opened by Miss Schallanberger, of the state normal school, San Jose, who spoke of the collective method of dealing with children. She thought that if children like mechanical work more than books they should be allowed to carry out their ideas, but in such a way that the mechanical should lead up to the library. She laid stress on the value of discussion between teacher and pupils of the books read out of school, by the latter, and of the study of art and music.

Mr. Young, of the Lowell High School, thought it easier to get reading done in elementary schools, and spoke of what the Lowell Reading Club has accomplished. Professor Kellogg, of the Hamilton Grammar School, said that teachers should interest the pupils in good books and that the children should be given freedom in their choice of books; he thought auxiliary reading essential to train children in the use of books.

On Dec. 28 the meeting opened at 9.30 a.m., with President Lichtenstein in the chair.

After opening remarks by the president, Mr. F. F. Bunker, of the state normal school of San Francisco, read a paper on the subject, "Should the state texts be supplemented?" He said that there is a general feeling among teachers that they should use text-books only; but the new education is a desire to enrich the course of study by supplemental reading, by nature study excursions, etc. Mr. Furlong, of the state text-book committee, gave a report of the work of the commission.

Miss Coulter, county superintendent of Sonoma county, said: "Children should be allowed to use books they can understand—all texts need supplementing." Miss Prentiss, of the Pomona Public Library, thought that librarians have gone more than half way to meet and help teachers. Mr. Fairbanks, of Berkeley, said that all text-books are dry bones except when enriched by outside reading.

Open discussion followed and then a recess of ten minutes.

Mr. F. B. Cooper, superintendent of schools, Seattle, read a paper entitled: "Is there a need for instruction in library methods by normal schools and universities?" He advocated co-ordination. The discussion was lead by Dr. Jessie B. Allen, of the state normal school, Los Angeles. She said that the normal course is very full, and information as to library methods should be restricted.

Mr. J. C. Rowell, of the state university library, said: "All cultivated people should know books, and how to use them. Country

school teachers should have instruction in elementary library economy." He spoke of the summer session of the library school for teachers. Mr. L. D. Harvey, of Wisconsin, said: "We put libraries in the schools and they are not always used. Teachers do not realize the importance of a library. They need first to have a knowledge of books, and should be taught the efficient use of the library." A general discussion followed. Miss Smith, of Chico, spoke of the need of elementary library economy. Mr. Howard Swan, University of California, spoke of difficulties he had noted: "The great hiatus is in teaching the children the normal facts of life, those which give rise to idiom. Children should be allowed occasionally to suggest subjects of lessons. Stories of everyday life may be told by the children, and reduced to writing by the teacher."

The president made a few closing remarks on children's rooms.

On Dec. 29 the meeting was held in the Christian Church, Berkeley. The general subject was "Co-operation between teacher and librarian." The first paper was read by Miss Evangeline Adams of the Laguna Honda School, San Francisco, on the question, How may librarians best acquaint themselves with the needs of the schoolroom? She said, in part, that as San Francisco is about to erect a new library she would make some suggestions of helpfulness to the teachers. She cited what has been done by librarians in Eastern cities to help the schools. She suggested that when library books are sent out to schools, a library assistant should be sent to the schools to take statistics and to make and receive suggestions. She emphasized the need of developing the library habit. Teachers should know what the library contains, and children should be taught to use it. The library can prepare lists for teachers and can group books on certain subjects for use by the pupils. The discussion was opened by Mr. F. B. Graves of Alameda. He told what Alameda is doing for the teachers; also said there was no solution offered as to who should bear the responsibility for the books that are sent from the library to the school.

Miss Russ, of Pasadena, sent a paper which was read by Miss Sawyer on the subject, How teachers may make themselves familiar with the possibilities of the public library. First, by co-operation with the library; next, by using helps in the way of catalogs, book-lists, indexes, guides, etc. She spoke of old and new ideals and of the reason the public schools need a public library. She finished with a plea for more active work and interest on the part of the teacher. The discussion was led by Miss Weed, of the San Francisco Public Library, who said the fact ought to be emphasized that the child's choice of books is usually guided by the teacher. She ques-

tioned whether teachers take advantage of what is offered by the library. There are 1200 teachers in that city and only 100 have taken out cards at the public library.

Mr. Barker, of Eureka, advised teachers to study the literature of the subject in hand, and then to study the library; to use the A. L. A. index and other helpful lists. He then related experiences in Eureka. There are now six school libraries there, and they give out more books than the public library. Some country school boards turn over the business of buying the books to the publishers—the result is that the school library is not a good one. He made the following point emphatic—that a list of books made out by librarian and teacher should be incorporated in the course of study. He suggested that the teachers' association might bear the expense of such a list.

The next paper was read by Mr. G. T. Clark, of the San Francisco Public Library, on "Methods in school circulation of library books." He said in substance: "There are 3274 school districts in this state, and about 70 public libraries. The methods of school circulation must differ to suit local conditions. The system adapted to the needs of a town of 4000 will not suit a city of 400,000. Three methods have developed for the circulation of library books through the schools. The simplest is that by which the children are sent directly to the library with a list of books assigned by the teacher. The second method is that by which books are loaned to classes on teachers' cards. The third method is that of classroom libraries. Under this method the library has a school duplicate collection made up of books suitable for circulation in grades. Any of these methods demand continuous activity of school and library."

The discussion was opened by Mr. Mills-paugh, of the state normal school, Los Angeles. He attributed the success of different methods of circulating books in schools to the interest of the teacher, and said: "There are not libraries enough to supply the demands of school." Miss Smith, of Chico, thought the discussion had been limited to city schools. She thought a room should be set aside in every school for a reading room, where a miscellaneous collection of books, pictures, etc., would attract the children.

Mr. C. C. Hill, of Palo Alto, continued: "A large library may be ineffective through poor management, and a small library effective because of good management." He said also there should be more freedom in school and library administration. Let the schools use their influence to get more funds for the libraries. Mr. Greene followed and said: "To solve the question of co-operation there should be a large amount of money. Teachers should not be responsible for the library books used in their classes, and they should

report on the use of the books." Mr. Greene moved the appointment by the president of three teachers and three librarians to consult and report on the relations between libraries and schools. This was seconded. The president remarked that this meeting between librarians and teachers had been productive of good and that the relationship ought to be continued. He also suggested the possibility of bringing school libraries into use in small communities after school hours.

The following resolutions were adopted during the librarians-teachers' session on Dec. 29:

Resolved, "That this association appoint a joint committee of seven teachers and librarians to prepare a graded list of books for children, to be published at the expense of the California Teachers' Association, to be used throughout this state."

Resolved, "That the president appoint three librarians and three teachers to consult and report on the relations between libraries and schools."

Resolved, "That the California Library Association desires to express its pleasure on the opportunity of meeting the members of the California Teachers' Association and of exchanging views with regard to our common endeavor to advance intellectual, moral and social standards in this great state."

"It has been most clearly demonstrated that the lines of work of both library and school intimately interlace during the years of formal instruction, and that the library is prepared to develop and carry out later on the ideals of the school, and thus become a true 'people's university.'"

"The librarians wish to go on record as offering to teachers cordial and hearty support with all the means at their command. We earnestly hope that this series of union meetings, made so helpful and interesting by the co-operation of President James A. Barr, will be the forerunner to similar meetings held regularly at general sessions and county institutes of teachers."

"We seek results; and the best results, the fullest efficiency, of our work can be attained only by comparative discussion and mutual understanding of the aims and methods of school and library."

COLORADO LIBRARY ASSOCIATION

President: Alfred E. Whitaker, University of Colorado, Boulder.

Secretary: H. E. Richie, Public Library, Denver.

A meeting of the Colorado Library Association, held in the East Denver High School building, on the evening of Dec. 29, 1905, was devoted to the general subject, "The library in its relation to schools." The meeting was arranged especially so as to interest the teachers of the state, who had attended the convention of the teachers' association, which had closed its sessions the day before. About 50 teachers and librarians were present.

The first paper read was that of President Whitaker, on "The library and the schools." He brought out the points in favor of a close union between teachers and librarians, and asked that all teachers lend aid in making library work a success.

C. R. Dudley, librarian of the public library of Denver, told "How the teacher may aid the library." "The public schools are founded,

and in nearly every case, carried on upon the principle of true democracy. The same may be said of the library. As a recreation, the library needs no encouragement. What it does need is a stimulating toward the educational end. The teachers have the greatest opportunity in this direction, for they have the young child in their charge during the most impressionable time of his life. A few hints to the child and he will begin reading the right sort of literature, and in that manner will educate himself to a large extent." Mr. Dudley added that less than one-half the teachers of the city held cards in the public library.

Miss Lila Van, of the Denver Public Library, spoke on "What children read." She said that all children read for pleasure, not for education; that they take a dislike for books suggested to them for reading before they have ever seen their contents, and that they refuse to read anything which requires mental effort.

Mrs. Julia V. Welles told of the good accomplished during the past year by the travelling library. She called upon all the members of the library association, and all teachers in the state to lend support to the movement of the Colorado club women toward a widening of the field of the travelling library movement.

In a paper on "The library and the teacher," Dr. D. E. Phillips, of Denver University, said that he believed that all assistants in a library should have had a teacher's experience. He also suggested that a museum should be carried on in connection with every public library.

The matter of affiliating the library association with the teachers' association was referred to the executive committee of the former body.

DISTRICT OF COLUMBIA LIBRARY ASSOCIATION

President: George F. Bowerman, Public Library.

Secretary: Earl G. Swem, Library of Congress, Copyright Office.

Treasurer: Henry S. Parsons, Office of Documents.

The 90th regular meeting of the District of Columbia Library Association was held in the children's room of the Washington Public Library, on Wednesday evening, Jan. 10, 1906. After the reading and approval of the minutes of the preceding meeting, the president announced the election of the following new members: Miss Margaret McGuffey, secretary to the Librarian of Congress; Mr. F. B. Weeks, librarian of the Geological Survey; Miss Marjorie Warner, of the library of the Botany Division, Library of Congress; Mr. Martin A. Roberts, of the chief clerk's office, Library of Congress.

The president announced the selection, by the executive committee, of Mr. Henry S. Parsons, of the Office of Documents, for the office of treasurer, made vacant by the resignation of Mr. Wm. S. Burns, Jr. Upon motion of Mr. Flint the secretary was authorized to cast the ballot of the society for Mr. Parsons. The committee consisting of Mr. F. A. Crandall and Mr. H. S. Parsons appointed to audit the accounts of the outgoing treasurer reported that all accounts, and vouchers had been examined, and that the same were found correct.

The first paper of the regular program was a biographical sketch, presented by Prof. J. H. Gore of George Washington University, of Dr. Edward Farquhar, late assistant librarian of the Patent Office, and one of the founders of the D. C. Library Association. Dr. Farquhar was born in 1843 at Sandy Spring, Md. His early life was spent on the farm, and the few hours left unclaimed by the demands of farm work were devoted to study. He very early acquired the habits of thorough scholarship. In 1865 he came to Washington to accept a position in the library of the Patent Office. From the beginning of his residence in the city he was associated with the master scientific and literary minds of the capital. His learning was remarkable, in that he acquired it outside of the time devoted to his arduous routine work at the library of the Patent Office, and to his professorship at Columbian University. Additional remarks upon the character and attainments of Dr. Farquhar were made by Mr. Weston Flint and Miss Pollok.

Preceding the next speaker on the program, President Bowerman spoke of the plan that the executive committee hoped to carry out of having one paper at each meeting the coming year devoted to a description of one of the libraries of Washington. This series was introduced by the second paper of the evening, presented by Mr. F. B. Weeks, librarian of the Geological Survey. This was a description in very clear and full detail of the library of the Geological Survey. Mr. Weeks first outlined the history and work of the Geological Survey. The nucleus of the library, he said, was formed of the collection of state geological survey reports given by Major J. W. Powell. In 1882 there were approximately 400 volumes. To this was added a collection belonging to Dr. F. V. Hayden, and later the library of Mr. Robert Clark, consisting of early state geological reports. Other important additions have been the books purchased from the library of the Secretary of the Museum d'Histoire Naturelle, and those presented by Miss Frances Lea. Reference was made also to the growth of the library by means of exchange. Brief mention was made of the sets of the more important serials in the library. The amount

now annually appropriated by Congress for the purchase of books is \$2000. The library is intended mainly for the working force of the Geological Survey, now about 1000 in number, but it is not limited to their use. Between the hours of 9 and 4.30 p.m., the library is open to the use of all. There are in the library at present 60,000 books, approximately 80,000 pamphlets and 30,000 maps. The estimated cost of replacing the material is one million and a half dollars. The library is one of the most complete collections pertaining to geology. The library of the Museum of Comparative Zoology, and the library of the geological survey in London may be said to compare favorably with it. The paper was discussed by Mr. Hanson, Mr. Thompson, Miss Oberly, Prof. Gore, and Mr. Bowerman.

EARL G. SWEM, *Secretary.*

The report of the December meeting of the District of Columbia Library Association as published in the *LIBRARY JOURNAL* unintentionally conveyed the impression that the library of the Department of Agriculture practically consists of botanical works. As a matter of fact the number of books on botany in the department's collection is about 7350, less than a tenth of the whole number.

FREDERICK W. ASHLEY.

MASSACHUSETTS LIBRARY CLUB

President: Horace G. Wadlin, Boston Public Library.

Secretary: Miss Louisa M. Hooper, Public Library, Brookline.

Treasurer: Miss Mary E. Robbins, Simmons College, Boston.

A meeting of the Massachusetts Library Club was held in the lecture hall of the Boston Public Library, on Thursday, Jan. 11. As the meeting was nearly coincident with the 200th anniversary of Benjamin Franklin's birth, it was arranged to deal with the general subject of printing, both theoretically and practically in relation to library publicity. Mr. Wadlin, the president, occupied the chair and on the platform was a marble bust of Franklin.

William Dana Orcutt of the University Press, Cambridge, was the first speaker, on "Typographical evolution." His paper concerned itself largely with the influences which necessitated the so-called invention of printing, and traced the history and development of the art from Gutenberg to modern times. Considering present conditions and responsibilities he said that at no time in the history of typography has the desire for better things in the mechanical manufacture of books been more apparent than to-day. As the 17th century marked the decadence of the art, so does the 20th century show the highest point thus

far reached in the longing for what is best. While the old-time printer was hampered by the crudity of his materials, each printed volume nevertheless represented his own individuality throughout. This condition was contrasted with that of modern times, when the printer worked under the mentorship of the publisher, which resulted in the elimination of craftsmanship and left the volume composite instead of individual, thus subordinating the art of printing to commercial necessities. But of late there is a tendency to place manuscripts in the hands of reliable printers, to be planned throughout from cover to cover by one mind.

A paper prepared by D. Berkeley Updike, of the Merrymount Press, who was unavoidably absent, was read by Mr. Wadlin. It traced the beginning of modern books, laid stress upon the great advance that had been made in recent years, especially in the line of a revival of taste in the art of typography, and also considered some of the revivals of early times. The revival of the present day originated with William Morris, who, though not a great printer, was a great decorator, and who cannot be over-praised for the influence he exerted on the art of printing.

At the close of the session the members visited the fine exhibit displayed in the fine arts department of the library, which included Franklin books, autograph letters and portraits; materials, tools and processes of binding, lent by the Newark Free Public Library; and specimens of early and fine modern printing. The afternoon session was devoted to an address by Mr. John Cotton Dana, of the Newark Free Public Library, on "Making a library known." The discussion that followed was general and interesting.

MICHIGAN STATE LIBRARY ASSOCIATION INSTITUTE FOR LIBRARY WORKERS

The Michigan State Board of Library Commissioners, having decided to hold four library institutes this year, asked the assistance of the state library association in arranging and carrying out the work. The first institute was held in Hudson, Jan. 23 and 24. Miss Electra C. Doren, director of the Western Reserve University Library School, Cleveland, was the conductor, assisted by Miss Caroline Burnite, head of the children's department of the Public Library of Cleveland, together with some of the Michigan librarians.

The meetings were held in the public library, a \$10,000 Carnegie gift, dedicated in 1904, and a peculiarly handsome and convenient building in its general plan and in all of its appointments. Hudson is a town of 3000 inhabitants, and the library is a well-selected collection of 4000 volumes. The interest of the townsmen was shown in the good number who were in attendance at all of the

meetings, both the trustees and other leading men and women.

Ten Michigan libraries were represented at the institute by twenty people, as follows: Tecumseh, 2; Adrian, 2; Hillsdale, 1; Lansing State Library, 4; Lansing Public Library, 1; Battle Creek, 1; Grand Rapids, 2; Ann Arbor (University), 2; Ypsilanti (Normal College), 2; Hudson, 2.

Miss Walton, of the Normal College Library, presided at the meetings, which began promptly at 8.45 Tuesday morning, the first lecture being by Miss Doren on "Library institutes and library training." An institute was defined as differing from a library association in bringing together a smaller group, for the more intimate study of technical and practical subjects in library economy than is possible in the larger and less homogeneous body of the association. The association is general in character; the institute is specific. Library training means professional efficiency. This may be attained in a general way through library associations, professional reading and library visits, or it may be attained in a special way through library institutes, summer library schools, and professional schools where, through systematic work, under efficient instructors, together with the stimulus of association and the concentration of many minds on the same thing at the same time, efficient training may, *generally*, be more rapidly acquired than by the more general method. This Michigan institute is an endeavor to carry the methods of the schools to the individual worker, and is planned to treat a few subjects carefully and fully, with a syllabus and reading lists and samples of material in the hands of each person present, to serve as a basis of further and more detailed study and work.

Next followed an explanation of the methods in the Hudson library, most happily set forth by its librarian, Miss Havens. Open shelves, a dictionary catalog, a children's department were noted, and an inspection of the stacks followed.

The last lecture of the morning was on "Children's work," by Miss Burnite, who said the first question usually asked was—"Why have children's rooms?" to which the answer seemed so obvious that it was often quite lost because so simple—"That their reading may be supervised." A list of "Sixteen children's books which a librarian should know," was the outline which Miss Burnite used as the framework for a logical and philosophical treatment of the subject, so convincing and withal so alluring that all present felt new responsibilities, but with them new enthusiasm in this fundamental work. The sequence of the children's classics was discussed, beginning with Mother Goose for rhythm, through fables, fairy tales, mythology, history and biography, to the period when

the interests of boys and girls diverge—the one to the heroic, the other to the sympathetic. "The boy wants action and adventure; and the girl wants—she knows not what." A book must have quality, that is, character, atmosphere, be childlike in its interests, imaginative and humorous, which last often to the small child means the grotesque.

The afternoon session began with "Library organization," by Miss Doren, who defined organization as "arrangement, at the least expense of the elements of time, space, material and labor," and system as "automatic organization." Among essentials she classed records, dispatch, proper interior arrangements, and the ability to delegate work. The syllabus amplified details, and the lecture was further illustrated by ground plans of three small libraries and blanks for keeping the various records.

Miss Walton said her old library alphabet had been growing. It had formerly had but the three letters, A, B and C—"Accessibility, Bibliography and Cataloging." To the first she would add Adaptability, as we were learning so much that we must remember each could not use all and what would suit one library or clientèle would be unsuitable in another. Bibliography must be the "atmosphere" of the librarian, in its largest and smallest meaning, covering broad, catholic reading, with always an eye to the old amidst the floods of the new, which the trade lists would smother us with.

Miss Doren then took up the subject of "Library extension," or "what books to what people, which means good, interesting, true books to all people, whatever their condition."

The evening session was held in the Congregational church, where Mr. Koch, librarian of the University of Michigan, gave his stereopticon lecture on Carnegie libraries.

Wednesday morning's session was opened by Miss Doren's lecture on "Library accounts," and "Book selection and book buying." These subjects were all treated in technical detail, and were extremely clear and practical.

Miss Burnite continued her "Work for children." A printed reference sheet contained seven titles of lists of books for children, and the specific value of each was emphasized. The different editions of children's books were spoken of, and good, illustrated editions recommended. The arrangement of children's rooms was also discussed.

Miss Humphrey, of the Lansing Public Library, expounded "Loan systems," particularly the Browne and the modified Newark, with much illustrative material. This provoked the usual animated discussion.

The concluding lecture was on the Library of Congress and other printed cards, including those of the Departments of Agriculture and

Geological Survey, the John Crerar and the A. L. A. Illustrating by a small dictionary catalog containing samples of all, Mr. Koch explained some of the objections urged against their use and expressed his belief that the lack of uniformity was not felt by the general user, and that the cards were an economy of time and money to all who use them.

The meeting was adjourned at 12.30, with a rising vote of appreciation for the gracious hospitality of the citizens of Hudson.

NORTH DAKOTA LIBRARY ASSOCIATION

President: F. J. Thompson, Public Library, Fargo.

Secretary-treasurer: Miss Elizabeth Abbott, Public Library, Grand Forks.

The North Dakota Library Association was organized at an enthusiastic meeting of librarians and others interested, from various parts of that state, held at the Fargo Public Library building on the afternoon of Jan. 18. The meeting was presided over by F. J. Thompson, of the Fargo library, and papers were read by W. L. Stockwell, head of the state education department; Professor Max Batt of the North Dakota Agricultural College; and by Miss Elizabeth Abbott, of Grand Forks, on "Hints to librarians." It was generally felt that united effort should be made to develop public sentiment in favor of public libraries and to improve the library equipment of the state. Officers were elected as follows: President, F. J. Thompson, Fargo; vice-president, Miss McDonald, Valley City; secretary-treasurer, Miss Elizabeth Abbott, Grand Forks. These officers, with Mr. Stockwell and Dr. Batt, serve as executive committee. It was voted that the next meeting of the association be held in Fargo during the sessions of the state educational association, in December. Representatives attended the meeting from Grafton, Grand Forks, Fargo, Valley City, Mandan, Lakota, and Moorhead, and the public and educational libraries of the state were creditably represented.

TENNESSEE LIBRARY ASSOCIATION

President: G. H. Baskette, Nashville.

Secretary-treasurer: Miss Mary Hannah Johnson, Carnegie Library, Nashville.

The second annual meeting of the Tennessee Library Association was held in Nashville Wednesday and Thursday, Jan. 17 and 18, 1906. Sessions were held in the Carnegie Library building. The meeting opened with about 50 present. Governor Cox gave a most hearty welcome to all present and made a strong plea for libraries all over the state, for travelling libraries, and country school libraries. He said he was glad that the purpose of the Tennessee Library Association was educational, that they hoped to secure a state library commission and libraries in

schools all over the state, and that he pledged himself as governor of the state to the plan of securing a fund for the establishment of circulating libraries in the rural districts among the children as well as the grown folk.

Mayor Morris made a witty speech, welcoming the visitors to the city, and saying that he felt that the association, though a small body, was made up of quality, not quantity.

Mr. G. H. Baskette responded in behalf of the association, and said that the body of library workers was blazing the way and that the road was a bit hard now, but after awhile it would be smooth, for libraries were of as much educational value as the schools. He spoke briefly of the efforts the Tennessee association was making, and of its success. Miss Johnson, the secretary, read the minutes of last meeting.

Miss Jennie Lauderdale then read a paper on "How the library spirit may be advanced in the South." She said the activity of libraries was of almost national character and would be if the South was further aroused; the press, schools, and clubs should all be a propaganda for the library spirit. She elaborated on the progress made in the past six years, but said that the library spirit would not have more than a beginning until the library came to be recognized as a complement to the schools, and as an educational factor. This could be accomplished only in one way, and that was by the formation of an organization of Southern library workers to meet in conjunction with the Association of Colleges and Schools or with the Southern Educational Association, and be placed upon a basis of education with them.

The question of a Southern Library Association then came up for discussion. Miss Johnson then read the following resolutions, framed in December by the officers and executive committee of the Tennessee Library Association, regarding the organization of a Conference of Southern Librarians or a Southern Library Association:

"The resolutions suggesting the organization of a Southern Library Association, recently submitted by the officers and executive committee of the Tennessee Library Association, have elicited many favoring and even urgent responses from Southern librarians evincing the felt need of such an organization.

"With such encouraging sentiment supporting the suggestion, it is therefore proposed at the annual meeting of the Tennessee Library Association to be held in Nashville, Jan. 17-18, 1906, to form a conference composed of librarians and those interested in library work, who favor the movement, from the several southern states, this association of Southern librarians to be temporarily organized as the nucleus and basis of a permanent southern association, of which every librarian, library trustee, educator or other person interested in library development in the South shall be urged to become a member.

"It is proposed that this conference or association of Southern librarians, when constituted, shall issue or cause to be issued, if it be deemed advisable, a call for a general meeting of southern librarians

and library workers, to be held at some convenient time and place in 1906, for the purpose of effecting a permanent organization. The objects of the association are to be:

- "To secure a better co-operation in library work and effort in the South.
- "To foster helpful relations among state libraries, college libraries, public libraries and all other libraries.
- "To encourage the establishment of new libraries and the formation and introduction of traveling libraries.
- "To give counsel and encouragement to beginners in library work and those who labor under special difficulties.
- "To aid and strengthen state library association.
- "To promote the creation of state library commissions and to further needed library legislation.
- "To arouse and stimulate public sentiment in the South, and especially in destitute and indifferent communities, in favor of libraries and library extension.
- "To emphasize the library as an educational factor and to promote a helpful co-operation of libraries and schools. At the recent meeting of the Southern Educational Association held in Nashville a resolution was unanimously adopted recognizing the library as an educational force and recommending the formation of a Southern Library Association which would work in co-operation with the S. E. A. for educational advancement in the South.
- "To encourage southern membership in the American Library Association and to secure the fullest possible representation from every Southern state at the annual meeting of the A. L. A."

These resolutions were fully discussed by the members present. Mrs. Beard, wife of the chief justice of the state, was enthusiastic in their favor and made a strong speech favoring the Southern Library Association, and any movement which might help libraries in the South. Professor Wiley of Vanderbilt, Miss Vought of Knoxville, Miss Skeffington, and Miss Lauderdale all spoke of the value of the Southern Library Association. One feature of the discussion was that if it was necessary to have a Southern Educational Association it was also necessary to place libraries on an educational basis, and to have a Southern Library Association, and to hold a meeting of librarians yearly in conjunction with or at the same time as the Association of Colleges and Schools or the Southern Educational Association. This would place the library on equal footing with other educational bodies. It was cited that the Tennessee Library Association, which met at the same time as the Public School Officers' Association of Tennessee last year, had created such a library spirit among those educational men that they were going to present a bill for funds to send libraries to every school in every county in Tennessee. If one meeting with librarians could do that for library interests and create such a desire for libraries by the educators of the state, what might a meeting of librarians yearly with the Southern Educational Association do for the advancement of library interests in the state?

The resolution was, on motion of Miss Vought of Knoxville, approved by the Tennessee Library Association.

Miss Skeffington then offered the following resolution:

"Whereas this association endorses and approves the action of the officers and executive committee of the association in recommending the formation of a Southern Library Association, be it therefore:
Resolved, That the officers and the executive committee of this association be constituted a committee to prosecute the formation of a Southern Library Association (with the view of having the organization effected at the time and place of the meeting of the Southern Educational Association) in 1906. In this movement the co-operation of all educational associations and woman's clubs of the South is solicited."

This resolution was unanimously adopted.

The discussion of this subject at Atlanta was brought up and a "statement" was made by Mr. G. H. Baskette as to the value of a Southern Library Association and the purposes of such a conference. There being no further discussion of the subject the secretary read a number of letters congratulating the association on their program. Sarah Barnwell Elliott, John Trotwood Moore, Chancellor Kirkland, and many librarians, North and South, wrote pleasant congratulatory letters. A letter was read from Mrs. Ross of North Carolina, saying the A. L. A. had been invited to Asheville in 1907. Miss Johnson stated that if the A. L. A. did go to Asheville, or wherever it may go, the South should have a large attendance, and every state should send representatives.

The second session was held at 2 p.m. jointly with the Public Schools Officers' Association of Tennessee. This was a notable and very strong session, several hundred being present. The principal discussion was on "Library legislation." Miss Skeffington, state librarian, gave a forceful paper on what should be done in Tennessee in the way of library legislation. Professor Lyon of Murfreesboro made a strong plea for libraries in the public schools in the counties. Miss Johnson discussed these papers and moved that a committee be appointed from the Tennessee Library Association and one from the Public School Officers' Association to form a joint committee to frame bills to cover all library legislation needed in the state, these to be presented to the next legislature. The motion was unanimously carried. These two committees were appointed and are to have a conference at an early date.

Prof. P. P. Claxton, of the University of Tennessee, discussed the question freely and gave some valuable points as to library legislation in North Carolina. Professor Mynders, the state superintendent of public schools, gave an interesting and forceful talk.

Professor Weber, of the Nashville schools, spoke strongly of the advantage of a number of books placed in the public schools by the library. Professor Lumley read a paper on "What the teacher should read," as representing the Public Schools Officers' Association. Professor Moore, of Vanderbilt, read a paper

on the state historical society, saying that he was glad to place that institution before the educators and librarians of the state, as he felt that those bodies should feel interested in the history of the state.

The evening session at 8 o'clock was also a joint session of the two bodies, and was even more interesting and instructive than the afternoon session. Mr. Baskette presided, through the courtesy of the president of the Public Schools Officers' Association, Mr. Jester. The opening address was by Prof. S. A. Mynders, who made a strong plea for higher and better education; he said libraries could help more in this than anything of which he knew. The next paper, by Professor Claxton, was a plea for education, schools, libraries, ways, means, and everything pertaining to the betterment of the child and through the child the man. Professor Wiley then read a paper on the "Library as an educational force"—scholarly and full of strength.

Following these addresses was the discussion which was animated and most interesting. Professor Rose, Mr. Howell, and others taking part. Every one seemed to be much interested, and many said such an educational rally had not been held in Nashville for many years. All expressed themselves that the library would be the strongest educational factor possible in Tennessee in a few years, outside of the schools.

The meeting then adjourned until Thursday morning. Mr. John Trotwood Moore, a much-beloved author of Tennessee, was unable to be present. Miss Skeffington announced that the state library had been made a depository for the Library of Congress cards. Miss Johnson, secretary, read letters from friends in the North disapproving of the formation of a conference of librarians of the South, but the association had already passed the resolutions before mentioned, and while thanking those interested they felt that final action had been taken.

Mrs. James Bradford read a strong and forceful paper on "Art and the public library." Next came a paper by Miss Lizzie Bloomstein on "The travelling library and woman's clubs." Her paper was magnificent, and a most scholarly discussion of the subject. Miss Bloomstein is one of the educators of the South, holding the chair of history in Peabody College. Professor Rose discussed these papers; Mrs. W. D. Beard, Professor Wiley, Mrs. E. G. Buford, and a number of others joined in the discussion. Miss Sabra Vought, of Knoxville, read a paper, which was the most technical and helpful to the working librarian of any read. She discussed "Periodicals," which, she says, form a large part of the reference work of the library. This paper brought out much discussion by the librarians present.

The last session began at 2.30 p.m. There were a goodly number present, both of library

workers and those interested in library development. The principal work for the afternoon session was a "Children's round-table," conducted by Miss Florence Kellam, Carnegie Library of Nashville. Her paper was full and thoroughly reached the subject. Miss Collins, of the Jackson Library, and Mrs. Farabough, trustee of the Paris Library, discussed the question and read papers on the subject. This subject was discussed by a large number present, and many valuable points were brought out. There has been no discussion in the South on this subject which has created so much interest. A story-hour was told that afternoon, and hundreds of children had to be turned from the door, so eager were they to hear the story. The last paper was on cataloging and Library of Congress cards, by Miss Grace Gordon. She gave a bright and thoughtful paper and covered the subject well.

After a children's story-hour the association resumed business. Miss Lauderdale made a motion that a resolution be drawn up by the executive committee and presented to the Federation of Women's Clubs meeting at Nashville in May, asking them to favor the organization of a Southern Library Association; the motion was carried. On motion of Professor Wiley, it was decided that the Tennessee Library Association draw up a resolution to be presented to the next legislature indorsing Miss Skeffington's plan of loaning books out of the state library over the state to responsible people, schools, and clubs. Miss Bright spoke in behalf of the association, extending thanks to President Baskette for his services during the past year to library work.

The election of officers was next in order. With the exception of the third vice-president the officers were re-elected, as follows: G. H. Baskette, Nashville, president; first vice-president, Charles D. Johnston, Memphis; second vice-president, Miss Mary Skeffington, Nashville; third vice-president, Miss Sabra Vought, Knoxville; secretary-treasurer, Miss Mary Hannah Johnson, Nashville.

President Baskette appointed the same executive committee, except that he named Mrs. Farabough in Mr. Fisher's place, Mr. Fisher having resigned from his library board. Mr. Baskette appointed five members to meet with the committee from the Public Schools Officers' Association for the purpose of securing library legislation; the committee being as follows: Miss Mary Hannah Johnson, Miss Mary Skeffington, Prof. Edwin Wiley, Mr. Firman Smith, Mr. Charles D. Johnston.

Discussion then came up as to where the meeting should be held next year. It was decided in view of the fact that the legislature would be in session and that the library workers wanted some laws passed, that the meeting would be held again in Nashville, at the same time as the meeting of the Public Schools Officers' Association. It was marked with pride that delegates were sent, their expenses

being paid, from Paris, Jackson, Knoxville and Murfreesboro. Other delegates represented Memphis and Chattanooga.

MARY HANNAH JOHNSON, *Secretary*.

WASHINGTON LIBRARY ASSOCIATION

President: J. M. Hitt, state librarian, Olympia.

Secretary: Miss Mary Banks, Public Library, Seattle.

Treasurer: Mrs. Ella G. Warner, State Normal School, Ellensburg.

The second annual meeting of the Library Association of Washington was held in North Yakima, Dec. 27 and 28, 1905. The regular business session was called to order Wednesday morning, Dec. 27, by President Hitt, and reports of officers and of library progress during the year were read and accepted. California and Nebraska were holding meetings at the same time, so telegrams of greeting were sent to each.

The following program occupied the remainder of the sessions:

"Public libraries and allied agencies," by Mr. C. W. Smith, of Seattle Public Library.

"Relations of the library board to the library," by Mr. T. C. Elliott, of the Walla Walla Library board.

Discussion led by Principal Yerkes, of the Seattle Public Schools, on "How the school and library may help each other. This was followed by a talk on "Status of school libraries in the state of Washington," by Miss Mabel Reynolds, librarian of Cheney Normal School.

"How may state history be best conserved," by H. C. Coffman, librarian University of Washington.

Mrs. Dennis, of the Seattle Public Library, read a paper prepared by Miss Mary Banks, reference librarian of that library, on "Reference work in a small library."

"Cataloging in a small library," by Miss Pearl McDonnell, cataloger University of Washington Library.

Two excellent lectures were given, one by Mrs. Belle Stoutenborough of Seattle, on "Value of a public library," and the other, on "Books that have shaped our lives," by Rev. W. D. Simonds, of the Unitarian Church of Seattle.

The following officers were elected for the ensuing year: President, C. W. Smith, Public Library, Seattle; 1st vice-president, H. C. Coffman, University of Washington; 2d vice-president, T. C. Elliott, Public Library, Walla Walla; treasurer, Miss Josephine Holgate, State Library, Olympia; secretary, Miss Pearl McDonnell, University of Washington.

The association decided to meet the first week in July at the University of Washington at Seattle, during the session of the library summer school.

PEARL McDONNELL, *Secretary*.

Library Clubs

NEW YORK AND LONG ISLAND LIBRARY CLUBS

On the evening of January 11 the New York and Long Island Library Clubs held a joint meeting in the refectory of the General Theological Seminary, New York.

Mr. Kent, president of the New York Club, after welcoming most cordially the members of the Long Island club, spoke of the generosity of the General Theological Seminary in extending its hospitality so freely and the club's reluctance to trespass upon it too often. The frequent and often arduous labors necessitated by the lack of a permanent meeting place and the scarcity of available rooms, suitable and large enough to hold the usual gathering of about one hundred and fifty, he thought too great a burden for the officers of the club.

The first paper, by Mrs. A. H. Leypoldt of the *Publishers' Weekly*, on "Practical bibliography," was read by Miss Haines of the LIBRARY JOURNAL. The outline of her paper as given in the regular notices of the meeting (which owing to the printers' strike arrived in the middle of it) seems worth quoting in full for the benefit of those not fortunate enough to hear the whole:

"What 'bibliography' means to an uninitiated person; what 'practical' means after many years' experience in devising methods and means to save work and time and steer clear of unforeseen eventualities.

"In planning a practical bibliography thought must be given (1) to the constituency for whom it is made; (2) whether the work will be complete in itself, needing only additions from time to time, or whether the intrinsic character of the work will need entire remaking at intervals, no matter how well it may be done at first; (3) to financial discrimination. What will the plan cost? Is there more money available should the estimate fall short? If not, the plan must be remodelled to fit the means at the beginning, and not in the midst of execution, when remodelling will make work inconsistent and throw it out of perspective.

"Character of work, methods, and means decided, selection of help is to be considered. Advantages and disadvantages of untrained help. Typical characteristics of trained and untrained help. Great need of self confidence in the executive head, and great danger of waste of energy and time in a too ambitious pride to attain to the very best.

"Need of carefully weighing ways of saving labor. Nowhere can more work be wasted than in clever inventions for saving it. These inventions generally come from clever brains which have thought the subject out theoretically; they are all very clever, but practically they won't work. 'The operation was highly successful, but the patient is dead.' All

theorists regard practical execution as a mere detail.

"Brief review of the making of the 'American catalogues,' 'Annual American catalogues,' 'Trade-list annual index,' compilation, alphabeting, references, proof-reading.

"Mistakes most to be guarded against in rapid practical bibliography. Results, however good, always fall short of the maker's ideal."

The "practical bibliography" considered was, as will be seen from the outline, trade bibliographies, in the preparation of which the two factors chiefly necessary for success were said to be good health and knowledge of human nature, and for which as a rule timeliness is of more value than absolute accuracy.

Dr. E. C. Richardson, of Princeton, brought out another side of the subject, speaking of "Bibliography from the scholarly point of view" and emphasizing the likeness in attitude and aims between the collector of bibliographical data and the scientific searcher, and the value of the work to the scholar.

Mr. G. H. Baker, formerly of Columbia University, spoke on "Bibliography and the library," taking up both what the bibliographies do for the library—the practical value of trade bibliographies, and the value of special bibliographies in showing the library its weaknesses, sometimes its wealth, and what to purchase—and what the library can do for bibliography.

Mr. W. A. White, the well-known collector of Shakespeariana, in talking of "Bibliography from the point of view of the amateur," succeeded in imparting some of the fascination of the study of the "anatomy of the corporal body in which their [the books'] spirit is contained." He spoke of how curiously long printers were in learning the convenience of numbering pages, the many difficulties occasioned by the sins of the early collectors, and the great indebtedness of present-day collectors to the good work done by the Grolier Club.

Owing to the lateness of the hour the club could not reap in discussion the full advantage of the presence of members of the A. L. A. executive board and copyright conference, but enjoyed the pleasure of hearing briefly from Mr. Dewey, Mr. Growoll, Mr. Hopkins, Mr. Cutter, and Mr. Wyer. Mr. Dewey spoke of the practical value of the subject bibliographies as taking the place in book-land of the city directories; and Mr. Hopkins considered the exposing of the weakness of the library one of the strongest reasons for bibliographical work, as calling the attention of its supporters to its inadequacy.

After a few words from Mr. Huntington, president of the Long Island club, in which he said he felt sure on looking around the precincts that the meeting place had been selected to make those from the "city of

churches" feel at home, the formal part of the meeting was adjourned, to make way for that presided over by the hospitality committee.

ALICE WILDE,

Secretary New York Library Club.

A dinner for the speakers of the evening and visiting librarians was arranged by the committee on guests of the New York Library Club, before the joint meeting of the New York and Long Island clubs on Thursday evening, Jan. 11. The executive committees of both clubs were well represented at the dinner, the whole number present being 25. The guests were Mrs. A. H. Leyboldt, Mr. W. A. White, Mr. Geo. H. Baker, Dr. E. C. Richardson, Miss C. H. Garland, Mr. Dewey, Mr. A. Growoll, Mr. A. H. Hopkins, Mr. G. M. Jones, Mr. J. I. Wyer, Mr. W. P. Cutter and Mr. H. C. Wellman. The dinner was given at the Hotel Chelsea.

PENNSYLVANIA LIBRARY CLUB

President: John W. Jordan, LL.D., librarian, Historical Society of Pennsylvania, 1300 Locust St., Philadelphia.

Secretary: Miss Edith Brinkmann, H. Josephine Widener Branch, Free Library of Philadelphia, 1200 N. Broad St.

Treasurer: Miss Bertha S. Wetzell, Library Company of Philadelphia, Locust and Juniper streets.

The second regular meeting of the season of 1905-1906 was held on Monday, Jan. 8, 1906, at half-past three o'clock, at the Drexel Institute of Art, Science and Industry, Thirty-second and Chestnut streets. Upon motion, the reading of the minutes of the last meeting was omitted. The president, Dr. Jordan, introduced the speaker of the afternoon, Miss Mary L. Titcomb, librarian of the Washington County Free Library, Hagerstown, Md. Miss Titcomb spoke of "How a small library supplies a large community," with special reference to the work of the Washington County Free Library. As her paper is given elsewhere in this issue, no summary of it is necessary here.

At the conclusion of Miss Titcomb's talk, Dr. Jordan congratulated her upon the success of her work in a community which for general education and intelligence has ranked among the lowest of any surrounding so large a center as Hagerstown. Mr. Thomson moved that a sincere and hearty vote of thanks be given Miss Titcomb for her exceedingly interesting account of what could be accomplished under very discouraging circumstances. This was unanimously carried. Miss Kroeger, in the name of the directors of the Drexel Institute, extended to the club an invitation to visit the picture galleries, which had been opened for the occasion.

The meeting was then adjourned.

EDITH BRINKMANN, *Secretary.*

Library Schools and Training Classes

CARNEGIE LIBRARY OF PITTSBURGH: TRAINING SCHOOL FOR CHILDREN'S LIBRARIANS

The winter term of the school began Jan. 8. On Jan. 12 and 13 two lectures were given by Mr. Frank P. Hill, librarian of the Brooklyn Public Library, on "Organization of a large library system" and "Library buildings." The students also had the pleasure of meeting Mr. Hill socially in the evening of Jan. 12.

Jan. 16-18 Rev. H. Roswell Bates, head of Spring Street Neighborhood House, New York, gave three lectures on "Three things necessary to understand in order to help the degraded poor." These lectures were very well attended, invitations having been sent to a number of ministers, settlement workers, home library visitors and others who, it was thought, might be interested in the subject.

FORBES LIBRARY SUMMER SCHOOL

Beginning July 16, 1906, and continuing for five weeks, a summer course in library methods will be given at Forbes Library, Northampton, Mass., under the direction of W. P. Cutter, librarian of Forbes Library. The course will include book selection, book buying, accession work, cataloging, classification (both the Decimal and Expansive systems), shelf-listing, book binding, loan systems, desk work and reference work. It will consist of two hours lectures or recitations, and four hours practice for each of the first five week days. Saturday may be devoted to recreation, or visiting neighboring libraries.

The Forbes Library contains over 100,000 volumes, covering the whole field of literature, and is widely known for the practical character of its work. Within easy distance on the electric cars are four college libraries, and public libraries varying in size from 1000 to 200,000 volumes.

In addition to the regular instruction provided, lectures will be given from time to time by specialists in the library field. There will be no examination for admission; it is presupposed, however, that applicants will have at least the equivalent of a high school education. The course will be planned especially for librarians of small libraries and assistants in larger ones, who have no opportunity for systematic instruction in general library work.

Board may be obtained in Northampton at a cost of five to eight dollars per week. An arrangement will be made with some one or two houses near the library to give board to a number of pupils at about six dollars.

The fee for the course, including all materials used, and all expenses except trips to other libraries, has been fixed at \$25.

For further information, address W. P. Cutter, Forbes Library, Northampton, Mass.

NEW YORK STATE LIBRARY SCHOOL

Mr. E. H. Anderson, the new director of the New York State Library, is also serving as director of the library school and member of its faculty, from the 1st of January, 1906.

On Jan. 10 Mr. J. I. Wyer, Jr., was made vice-director, and for the present will divide his time between the library school and the reference department. He will give the regular course in reference work.

The summer school this year was to have been devoted entirely to the subject of "Book selection for public libraries," and in charge of Mrs. S. C. Fairchild. Owing to her illness and retirement from work, the summer session for 1906 will be omitted.

Prof. Liberty Hyde Bailey, director of the College of Agriculture at Cornell University, gave a talk before the school on Wednesday, Jan. 17, on "Value and selection of nature literature." Professor Bailey did not take up specific books, but discussed good, mediocre and poor nature literature considered from the view point of the real meaning and possibility of nature study.

Miss Jessie P. Boswell, who entered with the class of 1896, but was absent on account of illness most of last year, has resumed work with the class of 1907.

Miss Mary W. Plummer gave two lectures to the school on Jan. 26 and 27 on "Development of public libraries" and the "Reading of poetry to boys and girls."

The following extract from the minutes of the meeting of the regents of the University of the State of New York, held on Dec. 14, 1905, will be of interest to friends of the school:

"*Voted*, That the announcement be made that it is the purpose to maintain the library school permanently upon the highest practicable plan of efficiency and usefulness, and that for the time being the supervision of the library school be devolved upon the director of the state library, and that the kindly proffered services of Dr. Dewey be accepted for such temporary lecture or other work in the school as he may be able to give upon terms to be approved by the commissioner of education."

PRATT INSTITUTE LIBRARY SCHOOL

The second-term lectures have proved very valuable, the subjects chosen having a practical bearing on the students' future work, and being treated by lecturers speaking from first-hand knowledge. As far as possible effort is made to have the lectures by visiting librarians and others, non-technical and of the suggestive and inspiring kind, the feeling being that the regular school instruction supplies what is necessary in technical instruction. These lectures and the subsequent social gatherings to meet the lecturers over a cup of tea put variety also into the daily routine.

The annual business meeting and luncheon

of the Graduates' Association took place at the Chelsea, New York City, on Jan. 24, Miss Julia B. Anthony presiding. There were 64 to sit down at table, a majority remaining to the business meeting. Dr. Ernest C. Richardson, of Princeton University, was the invited guest, and made a few remarks most pertinent to the audience and the occasion.

A report was made by the committee on the Avery memorial, now about completed, and a biographical sketch of Mary L. Avery was read, which it is proposed to have printed and included, with a good photograph portrait, in the contents of the memorial book-case. A satisfactory book-plate has been secured, and the books are now ready for hall-use by this year's and future classes. The committee has worked devotedly and indefatigably throughout the year, and deserves much credit for the very attractive and useful result of its labors.

There has been great activity in graduate circles this winter, as shown by the following changes of position and new appointments:

Miss Florence Russell has resigned the reference librarianship at Trenton (N. J.) Public Library to accept the same position in the New Haven (Ct.) Public Library.

Miss Winifred Waddell resigned from the Brooklyn Public Library to become indexer for the American Bank Note Co. of New York.

Miss Sophia Hulsizer resigned from the Osterhout Free Library to take an assistant's position in the Hiram House Settlement Library, Cleveland.

Miss Anna G. Hubbard, on her return from a year abroad, was appointed librarian of the Broadway branch of the Cleveland Public Library.

Miss Susan R. Clendenin has been appointed to the librarianship of the Manual Training High School of Brooklyn.

Miss Kate Lewis is now assistant in the Eau Claire (Wis.) Public Library.

Miss Florence Hicks was recently appointed to the staff of the Cambridge (Mass.) Public Library.

Miss Mary Williams is assisting temporarily in the Los Angeles Public Library.

Miss Edith Steele has been made assistant-in-charge of the New Utrecht branch of the Brooklyn Public Library.

Mr. H. H. B. Meyer has been promoted to the position of chief of the periodical division in the Library of Congress.

The following marriages among graduates are reported:

Miss Bertha V. Stevens of the Cleveland Public Library, to Mr. Alexander McEwen of Cleveland.

Miss Lillian Pospishil, of the Cedar Rapids Public Library, to Mr. John Mokreijis, of New York.

Miss Edith Hill, of the Brooklyn Public Library, to Mr. Andrew Gleason, of Rochester, N. Y.

Miss Frances B. Hawley, of the Brooklyn Public Library, and Miss Mary F. Isom, librarian of the Portland (Ore.) Library Association, expect to sail for Europe in February and March respectively to remain during the summer.

WESTERN RESERVE UNIVERSITY LIBRARY SCHOOL

The opening of the Broadway branch of the Cleveland Public Library on Friday, Jan. 12, was an event of great interest to the library school. Last year's class had the privilege of seeing the opening of the St. Clair branch, and the present class will probably also witness the Miles Park branch entering its new building. No more forcible and practical illustration could be offered of the influence which the public library may exert, than the response of the community of the Broadway branch to its new opportunity—the registration of borrowers reaching 3000 the first six days. The new branches have especial interest to the library school student as affording in their widely different and individual plans various solutions of the same problem in the adaptation to particular building site and other conditions. Another field of study at once suggested by the harmony of the interiors is that of the decoration and furnishing, the color schemes employed, the use of beautiful woods in finishing and furniture in simple artistic lines, and, leading to the world of books through the imagination, the choice of pictures. The students appreciate their opportunity for observation and work in these inspiring surroundings and have enthusiastically taken up their evening practice work in the different branches. In connection with the opening, Mrs. Gudrun Thorne-Thomsen, of Chicago, was invited for two sessions with the children's librarians, enjoyed also by the library school. Her subjects were "Poetry for children," and "Dramatization of children's stories." On Saturday afternoon, the special occasion for the children, she delighted hundreds of them with her story-telling. Another event of special interest as the exposition of a work by its originator, was the lecture of Mr. Charles Birtwell, secretary of the Boston Children's Aid Society, on "Home libraries." In a free stereopticon lecture at the Woodland branch his subject was "The city's poor."

In the lecture course of the Western Reserve University two lectures have been given by Prof. J. Lawrence Laughlin on "Protectionism and reciprocity" and "Competition of America with Europe," and one by Prof. Benjamin P. Bourland on "Don Quixote."

In December Miss Lottie E. Stearns' visit to the school was especially noteworthy. The class responded heartily to Miss Stearns' presentation of "Some western phases of library work." Her other lectures were: "The library spirit;" "The library beautiful;" "The

public library from the standpoint of the public;" and "The short story in literature," the last being given at the Woodland branch library, followed by an informal reception.

Examinations at the close of the course have been held in the following subjects: Classification, Jan. 16; Order and accession work, serials and gifts, Jan. 24; Bindery records, book-numbers and shelf-listing, Jan. 26.

Library Economy and History

GENERAL

ACTES du Congrès International pour la Réproduction des Manuscrits, des Monnaies, et des Sceaux, tenu à Liège, les 21, 22 et 23 août 1905. Bruxelles, Misch & Thorn, 1905. xxviii+338 p. 8 fr. (Pub. de la *Revue des Bibliothèques et Archives* de Belgique.)

BOSTWICK, Arthur E. The library for the business man. (*In My Business Friend*, pub. by Miner Pub. Co., 337 Broadway, N. Y., Jan. p. 83-87.)

A simple, compact account of the regulations and equipment of the modern public library, especially the branches of a city system, which is regarded as "emphatically a business institution for business men." Illustrated with views of several branch buildings of the New York Public Library.

CARNEGIE L. OF PITTSBURGH *Monthly Bulletin* for December, 1905, contains lists and suggestions for "Story telling to children" that are most helpful and interesting. It is one of the most useful practical contributions yet made to this branch of library work, and should be almost equally suggestive to teachers in literature work with children.

DANA, J. C. Library printing. (*In The Printing Art*, Jan, 1906, p. 284-290.)

Presents the need of good taste and artistic work in the printing of library blanks, forms, labels, announcements, etc.; illustrated with samples of such forms, and of several book plate designs. "Librarians are guardians of books and printing. They should try to have all the print they issue, from the simplest blank to the most elaborate catalog so excellent of its kind that it will help by example to train all who see it in the appreciation of good design."

The *Dial* for Feb. 1 contains several articles of interest to librarians. "The library and the school" receives editorial consideration, with emphasis upon the importance of a liberal use of books in school work. Mr. Dewey contributes an article on "Field libraries," describing the value of travelling libraries and pleading for a development of "the itinerant prin-

ciple" in the equipment and maintenance of book wagons to be sent out in charge of "book missionaries;" and there is a communication on "Some bibliographic needs and possibilities," by Eugene Fairfield McPike.

HALL, G. Stanley. A central pedagogical library and museum for Massachusetts. (*In Pedagogical Seminary*, December, 1905. 12: 464-470.)

A plea for the establishment by endowment of a pedagogical library in Boston. Attention is called to the wholly inadequate first-hand literature on education and pedagogy in libraries, especially with reference to what is being done in France and Germany.

The *Library* for January, in addition to several interesting bibliographical papers, contains a series of articles on "The municipal librarian's aim in book buying," which treat the various sides of the subject in excellent and suggestive fashion. The questions on which the discussion is based are: 1, Does the educational usefulness which public libraries should possess constitute their whole legitimate scope? and, 2, Is it inconsistent with educational usefulness for a library to circulate silly novels? Answers in the affirmative are from Lord Avebury, Dr. Hodgkin, and Sidney Lee; in the negative, from Dr. W. M. Dixon, Passmore Edwards, and Sidney Webb; and for a middle course, from John Ballinger, Dr. Garnett and Mr. Faber.

The *Library Association Record* for January contains a paper entitled, "Professional education and registration, some suggestions," by W. R. B. Prideaux. This advocates the establishment of a professional register of librarians, based upon definite qualifications for registration, to be maintained by the Library Association and used to furnish information and as an "eligible list" for appointment to important positions. The paper was read at the November, 1905, meeting of the L. A. U. K., and the discussion evoked is summarized in this number; on the whole, it seems to have been adverse.

The *Library World* for January opens with a compact article on "School libraries," by James D. Stewart, giving brief suggestions and directions for the control, selection and administration of school collections. He recommends joint control by school and library authorities; work to be done by special assistant, male ("the lady school-library assistant should be avoided"); simplified D. C. arrangement; and a card charging system. There is a short article on "Progress of open access," noting the gradual adoption of the system, and pointing out that "there are two causes now operating which point to the speedy extinction of the mechanical indicator system in English libraries, and these are the

rapid advance of exact classification, and a great increase of stock, which render the indicator a cumbersome, unscientific and utterly hopeless device."

The "Literary year-book" for 1906 has, in addition to its regular list of libraries an interesting introduction (pt. 2, p. 551-562) on the library situation in England.

Public Libraries for January opens with extracts from an address by Dr. R. G. Thwaites on "The sphere of the library," which is set forth as public education, not only of the child, but of the adult. Miss Gratia Countryman has an article on "the library as a social center," urging a cordial welcome to all library users, and the doing away with all unnecessary restrictions. A "library reading course" is begun, the subject for the first month being "library activity in the United States with resultant organization.

RANKIN, Isaac Ogden. What the other half reads. (*In Interior*, Dec. 7, 1905. 36: 1593-1594.)

A discussion and description of the literature that is sold in cheap tobacco stores and some newstands—books and authors about which the average librarian never hears. Mr. Rankin closes his interesting article with the following: "Have these books, then, any claim to respect as literature? About as much, I am tempted to reply, as many modern stories which come cloth-bound from respectable publishers for the other reading public. But that is really no claim at all. It is the primitive mind, with its vivid and indiscriminating imagination, which alone is able to put life into these puppets and to thrill at this false or insipid sentiment. He who really loves these books gives evidence either of abiding in or relapse into the primitive ages of the childish mind. For the cultivated taste there is nothing here but a dearly-bought approach toward an understanding of the mental state of those whom we call 'the other half.' The sure result of any long indulgence in the books themselves would be a growing disgust or a creeping decadence."

LOCAL

Amsterdam (N. Y.) F. L. (Rpt.—year ending Dec. 31, 1905; in local press.) Added 1073; total 9366. Issued home use 50,753 (fict. 27,610, juv. 14,316); ref. use (estimated) 2000. New cards issued 663; totals cards 6151. Receipts \$5139.17; expenses \$4154.59.

There has been a considerable increase in the number of Sunday readers. Annotated lists of new books have appeared regularly during the year in a local Sunday newspaper.

Bangor (Me.) P. L. (23d rpt.—year ending Dec. 31, 1905; in local press.) Added 2421; total 59,333. Issued, home use 98,883 (fict. incl. juv. 75,816); reading room use

15,109. New registration 5779. Receipts \$11,227.94; expenses \$9987.27.

Extra help and more room (especially a children's room) are needed.

Binghamton (N. Y.) P. L. The library free lecture course for the season 1905-6 includes:

Meteorology. Three lectures, with stereopticon, by the U. S. weather observer stationed at Binghamton; with reading list.

The "air brake," for railroad men, by the chief air brake instructor of the Lackawanna Railroad Company; with reading list of technical books for railroad men and steam engineers.

"Applied electricity," with demonstrations, by the expert of the Binghamton Light, Heat & Power Company; with reading list.

"Books and reading."

Music. Lecture with illustrative songs.

A series, with stereopticon, on the Alps, Philippines, Paris, London, South America, each lecture accompanied by reading list of books the library has on the subject presented. These lectures have crowded the library assembly hall, in some instances many being turned away for lack of room.

A series of lecture demonstrations on cookery by an expert. Plain cookery for moderate incomes is demonstrated.

A historical society has been organized as a department of the library, with Mr. Seward, the librarian, as custodian. A large room on the second floor of the library building has been designated by the library trustees as the depository of the society. There are about 125 names on the charter roll and much valuable material, such as the original deeds of Broome county, old maps and records, will come into the custody of the society. A historical and art loan exhibit will be given by the society this season at its rooms in the library building.

Boston P. L. The 200th anniversary of Benjamin Franklin's birth was commemorated during January by means of an exhibition of portraits—largely steel engravings—of the great philosopher and diplomat, and also by means of a most interesting exhibition of samples of printing from the 15th century to the present time, illustrating the history and development of printing as an art. The exhibit was held in the art gallery on the third floor. In connection with it, a lecture on Franklin was given in the library lecture hall on the evening of Jan. 11, by Lindsay Swift, editor of the library publications.

Brooklyn Institute Museum L. The library has recently purchased nearly 300 pamphlets from the library of the late Mr. Frank Hamilton Cushing, the ethnologist, who died in 1900, and who was regarded as probably the foremost authority on the Indians of the Southwest.

Brooklyn (N. Y.) P. L. The first anniversary of the opening of the Williamsburgh branch of the library was observed on the evening of Jan. 30, with interesting public exercises. The rooms were decorated with flags, and the assembly hall was crowded. Thomas P. Peters, a member of the library board, acted as chairman, and addresses were made by Mr. Peters, Mr. Boody, Mr. McWilliams, and Mr. Hill, the librarian. During the year the library has risen from the ninth to the first place among the other branches in its record of circulation.

California State L. The board of state library trustees have appointed Miss Mabel Prentiss to carry on organizing and advisory work among the smaller communities and libraries of the state. Miss Bertha Kumli is also appointed to act as assistant in this work. This is an important forward step in the extension work of the state library, which is practically carrying on the development of library interests in the state, as is done in most cases by separately organized state library commissions.

Chicago, John Crerar L. The descriptive illustrated account of the library by C. W. Andrews prepared for the Chicago Library Club manual of "Libraries of Chicago," has been issued by the library as a 16-page "separate."

Cleveland (O.) P. L. The Broadway branch of the library was dedicated on the evening of Jan. 12. The audience was so large that after the auditorium had been filled to its utmost capacity an overflow meeting was organized in the upper hall, to which the speakers were escorted after the auditorium addresses were finished and where the program was repeated. The audience was cosmopolitan, and addresses were delivered in English, Polish, and Bohemian. Exercises for the children were held on the afternoon of Saturday, Jan. 13. There was an attendance of about 2000, and a program of music, story telling and a short address.

Columbus, Ga. A site for the proposed Carnegie library building has been decided upon, in Mott's Green, a location central and easily reached by the electric cars from the adjacent towns.

Dayton (O.) P. L. (45th rpt.—year ending Aug. 31, 1905.) Added 4533; total 64,074. Issued, home use 204,851 (fict. 60 per cent.) of which 107,274 were drawn from the main library; ref. use 87,804, of which 66,718 was from main library. New cards issued 3068; active card holders 10,401. Receipts, \$25,236.67; expenses, \$24,922.04 (salaries \$8361.16, books and periodicals \$4966.53, binding \$745.14, fuel and light \$1030.56, improvement and repairs \$6199.23, care of building \$1339.96, supplies and printing \$1028.47.)

This report covers five months of the administration of Miss Electra Doren, who resigned in February, 1905, to become dean of the Western Reserve University Library School, and seven months under Miss Linda Clatworthy, her successor. It is a compact effective record of steady growth, particularly in the reaching out of library agencies into varied sections and interests of the community. The circulation of books through the school rooms amounted to 37,370 v., and has become an important part of the library's work. Of this circulation, 24 per cent. was fiction. The books available for this school are not enough to supply the demand, though the collection is being increased as rapidly as possible. Much school reference work has been done, through the school library room of the main building, which is open after school hours for this purpose. In the summer this department—which then contains the entire school collection—is used as a reading room for children, parents or teachers. There are branch libraries in four schools, six deposit stations and one home library. The library reading circle for the blind has continued weekly readings on Tuesday evenings, with an average attendance of ten persons.

A course in library instruction to senior students in the city normal school has been carried out, including visits to the library by the class in groups of two each afternoon for practice in reference work with children, and a series of lectures given by the librarian, with practical problems. "As a result of the courses, the library had two trained substitutes prepared to do branch library work while waiting for teaching positions, and several interested helpers in the summer work with children. Most of the class have secured positions in the city or neighboring country schools, but have, we hope, gone into their work with better acquaintance with the library and a broader outlook upon books for children." A summary is given of the ways in which the library is proving "of service to the city," giving the percentage of juvenile circulation (42 per cent.), and a rough analysis of occupations of cardholders. There are several illustrations.

Harvard University L. (Rpt., 1904-05.) Added 28,782; total 700,342 v., 400,650 pm., of which 451,260 v. and 304,000 pm. are in the main library. Use of books in main lib., lent 65,506; recorded use in building 26,565; overnight use 14,268; Sunday users 4953. 450 cards of admission to the stacks were issued to 354 persons; "the number of students thus admitted is really more than we can find use for, and inconvenience frequently results."

Mr. Lane's report is most interesting in its description of important gifts and collections, methods of work in various departments, and its presentation of the ever increasing prob-

lems of overcrowded quarters and an insufficient staff, which cannot be increased for lack of working space. These problems have been fully set forth in previous reports, and have been considered at length by the college authorities, but they grow, of course, more formidable with every succeeding year. Continuance under present conditions now seems impossible, and as a temporary relief it is recommended that a 50-foot stack extension be erected, with the addition of a one-story or two-story section along the whole north side of the stack. This would give additional shelf room for about 150,000 volumes, and enlarge the delivery room and working space and provide for small study or reading rooms.

Gifts to the library have been varied and numerous, the most important being the gift of the library of Professor Charles Eliot Norton, presented through subscription of a few of his friends, and the establishment of the Norton Memorial Fund for the purchase of books. The Norton collection, though small, is rare and precious, falling mainly into two classes—examples of early typography and early woodcut engraving, mostly Italian; and books formerly belonging to or containing the autographs of eminent men, or important as rare first editions. About 600 volumes were received in May, and the greater part were placed in a case specially built for them, the entire collection to be kept together as a memorial collection. The incident was most gratifying evidence of the affection and admiration with which Professor Norton's long services to the university are regarded by his students, associates and friends. A new issue in the series of "Bibliographical contributions" records the library's collection of English and American chap books and broadside ballads, and will take its place as a permanent contribution of value to bibliography; the next volume in the series will be the catalog of the Molière collection.

Use of the library by the student body increases slowly but steadily. Interlibrary loans of 849 v. have been made to 70 different colleges, schools and public libraries, and 629 v. have been lent to Radcliffe College. It is interesting to note that the experiment in the direction of weeding out and storing away "dead" books, so strongly recommended by President Eliot a few years ago, has not proved satisfactory. Mr. Lane says: "The result of moving out the 10,600 old volumes is instructive. We selected for the transfer the group of books which we thought least likely to be picked out to be retained here, individual volumes and sets which previous experience showed might be wanted. Those sent away surely constituted a group of books as nearly 'dead' as any group of the same size that could have been selected. Yet we find that in the months of October and November alone, we have had to send over to Robinson Hall 71 times to meet the more pressing demands of readers."

The details of the work of the shelf and catalog departments, as submitted by their respective chiefs, touch on interesting points, and should be read in full. The practice adopted for record in the public catalog of "continuations" may be noted. In future reports of a certain institution will be recorded in the catalog by cards in this form:

"Cambridge (Mass.) Social Union

"Annual reports.

"Detailed statement not entered on these cards.
(Recorded on Continuation Cards.)"

"The record once made in this simple form is made once for all." The "continuation cards" referred to are kept on file at the desk of one of the staff, and on these full record of successive numbers is kept.

Homestead (Pa.) Carnegie L. (Rpt., 1905.) Added 3900; total 23,500. Issued 145,844, a gain of 10 per cent.; ref. use 70,770. There were 9000 pictures circulated. Re-registration, 3192; in addition there are 3470 scholars using books in the schools, but not registered, giving a total of 6668 readers. Of this total 505 are mill men.

The field reached by the library is the township, excepting Duquesne, and includes a population of 30,000. There are 14 study clubs, with a membership of 250. The library operates, as adjuncts, an athletic club and a music hall. The club had in 1905 3778 different members, and an attendance of 13,100 in gymnasium classes. There are 350 students in educational classes.

Laramie, Wyo. Albany County P. L. The Carnegie library building was formally dedicated on the evening of Jan. 23. It cost \$20,000, and receives an appropriation of \$2500 yearly by taxation through the board of county commissioners.

Library post bill. On Dec. 5, 1905, the bill to establish a library post, which has previously been before Congress, was reintroduced in the House of Representatives by Representative Lawrence, of Massachusetts. It provides that the postage on books transmitted between public libraries supported in whole or in part by taxation shall be one cent a pound.

Louisville (Ky.) F. P. L. (1st rpt.—year ending Aug. 31, 1905.) Total 70,369, of which 65,707 are in the main library. Issued, home use, main lib., 51,863 (fict. .836 per cent.); Highland branch (eight months) 17,842 (fict. .88 per cent.). Receipts \$74,537.91; expenses \$62,331.94 (salaries \$13,087.24, books and periodicals \$12,846.22; repairs, improvements, light, heat, etc., \$16,133.76.)

As this is the library's first report it is a review of organization and preparation rather than of routine work, and it gives evidence of much accomplished under difficult conditions. The trustees briefly note the course of events

since Mr. Carnegie's offer of \$250,000 was favorably recommended to the city council by the mayor in December, 1901, and urge that action be promptly taken in acceptance of Mr. Carnegie's second offer, in January, 1905, of \$200,000 for branch buildings. The report of the librarian, Mr. W. F. Yust, deals with the period of consolidation with the Polytechnic Society — which gave the library practically its present collection — the reorganization and alteration of the Polytechnic library rooms, and the development of the library in its various departments and in the branches opened or planned during the year. In addition, the year was marked by the reorganization of the first librarian, Mr. Hopkins, to accept the librarianship of the Carnegie Library of Pittsburgh, the appointment of Mr. Yust as his successor, and his prolonged illness, during which the library had for several months the special services and effective help of Mr. J. I. Wyer — so that it will be seen this period has been one of change and difficulty.

By its merger with the Polytechnic Society, in November, 1904, the library, which at that time owned a building site and several hundred books, entered into possession of a building, 60,000 volumes, and a considerable amount of paintings, statuary, and museum material. The old Polytechnic quarters were enlarged and altered, to provide for the various departments of a free public library, including delivery, reference and children's rooms, open shelves, study alcoves, and work rooms. The present shelf capacity is about 130,000 v. Conditions for appointment to the staff, schedule of hours, etc., were framed, and a staff of 32 persons was organized. Chief among the appointments were the selection of Miss Marilla Freeman, formerly librarian of the Davenport (Ia.) Public Library, as head of the reference department, and Miss Harriet Gooch, formerly of the Portland (Ore.) Library, as head of the cataloging department. In the appointment of assistants previous library training could not be insisted upon, and it is pointed out "that each department has thus far been practically a training school where the price of instruction is paid in diminished returns. A small amount of regular instruction will enable assistants in the course of time to acquire a great deal of technical knowledge and increase their efficiency; during the coming year an effort will be made to supply in a measure this pressing want."

The sum of \$15,000 was set aside for the purchase of books, and effort was made to round out the Polytechnic collection by adding current publications, and to begin the building up of a well-balanced reference collection. Many of the books in the old library had to be discarded or rebound, and the collection itself was an uneven one, strongest in history and biography, and weak in science and arts. It is desired to build up as complete a collec-

tion as possible of works relating to Louisville. In cataloging and classification there is an immense undertaking before the new library force. The 60,000 volumes of the Polytechnic collection had been arranged by an absolute fixed location system, all inadequately cataloged and many not cataloged at all, and this mass of material with the large accessions of new books confronted the head cataloger and her force of half a dozen girls, "four of whom had never before heard of a card catalog and only one of whom had even an hour's formal training for this most difficult and technical part of library work." Expedients had to be found whereby the collection could be made promptly available. "The old books have been arranged on the closed shelves in broad classes and under these alphabetized by authors in order to make them available for circulation. The absence of a shelf mark makes them difficult to find and frequently tries the patience of both readers and attendants." Miss Gooch's more detailed report of the work of her department is also given, as are separate reports of the other heads of departments.

The only branch opened during the period covered was the Highland branch, formerly the Highland Branch Free Library, which had been independently maintained for over three years. Plans were in progress, however, for the Colored branch and the Portland branch, both of which have already been noted in these columns. The report includes a number of illustrations and floor plans of the present library quarters.

At a meeting of the city council on Jan. 16, 1906, a resolution was passed requesting the library trustees to arrange for opening the library on Sundays from 2 to 9 p.m.

Nashville (Tenn.) Carnegie L. The series of story hours for children was begun early in January and has proved most interesting and successful. The first one was attended by over 100 children, accompanied by their mothers or sisters; it was devoted to recitations of "Uncle Remus" stories, by Mr. G. H. Baschette, president of the library board.

New Jersey State L. (Rpt.—year ending Oct. 31, 1905.) Added 347; total 71,057. The amount available for book purchase and binding was \$4500, including \$361.15 for books and pamphlets relating especially to New Jersey.

"The state library is now in better condition in every respect than at any time in its history. A new and complete manuscript catalog of the law library has been made, and the dictionary card catalog of the reference department is practically completed. The cost of binding and rebinding and repairing books during the year has been \$1178.95, to meet which a special appropriation of \$1000 was made by the legislature."

New Orleans (La.) P. L. Correction should be made of the statement regarding the architects' competitions for main and branch library buildings, given in January L. J. The main Carnegie building has been awarded to Diboll & Owen, of New Orleans, as stated, the three branch buildings being awarded to Favrot & Livaudois, Emile Weil, and Rathbone E. DeBuys, all of New Orleans. In this competition, for which no prize was offered, there were submitted seven plans from outside of New Orleans and seven local plans; nearly all the competitors consented to the exhibition of their plans. It is believed that the drawings for the main library will be completed by March 1, and it is hoped that the main building can be started within six weeks.

New York P. L. On Wednesday, Jan. 24, opening exercises were held for the 16th Carnegie branch library, established on Hudson street below Christopher street ferry, in the neighborhood of Hudson Park. This district has hitherto been without library facilities. The library is the 35th branch of the public library. The building is from designs by Carrere & Hastings. It has three stories and basement and stands on an irregularly-shaped lot 50 feet front by 100 feet in depth. The side abuts directly on the park, of which it commands a fine view, and there is a rear entrance on the park. It resembles the other Carnegie library buildings in the borough in having large arched openings on the main story. The front is plain and is of brick trimmed with Indiana limestone. The basement is occupied by a large assembly room and by space for storage with a boiler room and toilet rooms. The adult circulating room on the main floor is entered at the left of the front through an ornamental vestibule. The general reading room on the same floor, which is separate, is entered through the rear door opening on the park. On the second floor are the children's circulating and reading rooms. The third floor is occupied by the janitor's apartments, including five rooms and bath. There are also retiring rooms for the library staff, with facilities for preparing luncheon, and ample work rooms. The trim of the entire building is in light oak and the walls are painted in a creamy tint with a dark brown dado. It is furnished with two small elevators, one for the janitor's supplies, operated by hand, and the other for books, operated automatically by electricity. With this equipment, it cost about \$75,000 exclusive of the site, which was furnished by the city. The branch has on its shelves to start with about 11,000 volumes, to which current books will be added as they appear.

Newark (N. J.) F. P. L. The medical library planned by the Newark Medical Library Association and the Free Public Library has progressed sufficiently to justify the issuance of a bulletin announcement of its facilities.

An alcove at the east end of the reference room on the second floor of the library has been selected as the present location of the collection. It has been cleared of all books except the medical reference books now belonging to the library. To these will be added, as received, the books purchased by the library and the Medical Library Association or received as gifts. Thirty-five periodicals have been ordered and are being received and placed on shelves in the alcoves. A table for writing and other necessary furniture have also been placed there.

North Dakota Agricultural College, Fargo. The Carnegie Library at the Agricultural College, which has been in use since the first of the year, was formally dedicated Thursday evening, Jan. 18. The exercises, held in the college chapel, were attended by a large number, including many of those who had just formed the state library association. Dr. Batt, of the college, acting as master of ceremonies, presented to the new library, on behalf of the Edith Hill Girl's Club, a beautiful bust of Shakespeare, which was accepted by President Worst with the assurance to the club that their gift should ever have an honored place in the new building.

President Worst then continued with his address on the subject, "The history of our library." He naturally began with a statement regarding the life of the donor, Andrew Carnegie, and spoke of his humble start in life, of his eager interest in books, of his early determination to make good books available to every boy in his home city, Pittsburgh, and of the way in which his plan for library building had kept pace with his growing fortune. The story of how a rill from this great flood of beneficence was turned to the Agricultural College is a story of persistent effort. Four years ago an application was made and refused, on the ground that the college was a state institution and the Fargo Carnegie Library was available. But as the cramped condition of the college library and the impossibility of securing a suitable building from the state, at least for a long time, became increasingly apparent, new applications were made until at last an offer of \$15,000 was promised by Mr. Carnegie. To provide for the future growth of the library it was deemed wise to erect as large a building as the money would permit, the trustees agreeing to provide the heating, and leave, if necessary, some of the details of the lower rooms and book stacks incomplete. Upon this condition being represented to Mr. Carnegie, he generously increased his gift by \$3400, which provides for the complete equipment of the building.

Dr. Batt, after calling attention to the fact that it was President Worst whose persistence had secured Mr. Carnegie's attention and his gift, then introduced Dr. Dudley, of Fargo, who spoke on the subject, "The value of books as an educating force." Dr. Dudley spoke

upon his subject with great enthusiasm. Education is to be had from the ordinary experience of life and from the observation of nature. Yet the self-educated man, so called, has depended in great measure upon books. It is in books largely that the experience of man and the knowledge of nature become available. The man whose two hundredth anniversary has just been celebrated, Benjamin Franklin, is a striking example of a great self-educated man, educated apart from the schools, but not apart from books. With many an illustration, Dr. Dudley pressed his thought home upon an attentive audience and concluded by expressing the hope that a deeper sense of the value of a library to a community would soon find expression in Fargo and throughout the state in more liberal provisions, and by congratulating the Agricultural College upon the new splendid addition to its equipment.

Musical selections were rendered by the college orchestra and the college choral association, led by Dr. Putnam. At the conclusion of the program the audience moved over to the library, finding in every part, from the beautiful lighted dome to the well-arranged book cases around the walls complete justification for the enthusiasm of the dedication.

North Easton (Mass.) F. L. (Rpt., 1905; in local press.) Added 361; total 16,544. Issued, home use, 15,231, of which 4762 were juveniles (6670 fiction). Of the books circulated 1478 were issued through the five delivery stations and 1807 were drawn on class cards for school use. Nine collections of pictures have been displayed in the reading room.

Philadelphia F. L. The Philadelphia *North American* for Jan. 21, gives an illustrated account of the nine Carnegie branches now in course of erection, or for which sites have been chosen.

Richmond, Ind. Earlham College L. Several articles upon the library are given in *The Earlhamite*, the college paper, of Dec. 16, 1905. Although founded at the beginning of the school, in 1847, it was not until 1872 that a regular librarian was appointed. It now contains over 12,000 volumes, not including pamphlets and periodicals, and is classified according to the D. C. The card catalog includes all books in the college library and the libraries of the Ionian and Phoenix literary societies, and the seven departmental libraries. The yearly accessions amount to about 1000 v., and 75 periodicals are regularly received.

Rockport (Mass.) P. L. The Carnegie building was opened for public inspection on the evening of Jan. 24.

Rockville (Ct.) P. L. (Rpt., 1905; in local press.) Added 642; total 9345. Issued home use 33,019 (fict. 31 per cent., juv. fict. 23 per

cent), an increase of 1627 over the preceding year. New registration 361; total registration 2823.

San Francisco (Cal.) Mechanics' Institute L. The agreement for consolidation with the Mercantile Library Association was adopted in January by the board of trustees of the Mechanics' Institute. R. J. Taussig, president, and Joseph M. Cumming, secretary, were authorized to sign the agreement which had previously been signed by the Mercantile Library Association, and it only remains to complete the details and arrange for the transfer of the properties.

Seattle (Wash.) P. L. The library of James P. Kimball, a mining expert of New York City, consisting of about 6000 volumes devoted to geological, mining, and metallurgical subjects, has been purchased for the library for \$2500. The purchase has been under consideration for over six months. While the collection is now in the library's possession it will probably not be open to the public until the new building is opened next summer, as the present temporary building has not shelf room for it. The collection will be of great usefulness, as the subjects it covers are constantly studied and referred to in the reference department.

Spartansburg, S. C. Kennedy L. The Carnegie building of the Kennedy Library was formally opened on the morning of Jan. 15. The library has been maintained by the local Ladies' Library Association, to whose efforts public interest in it has been kept alive and strengthened. It was founded partly by the gift of the late Dr. Kennedy, whose widow gave the site upon which the new building stands. For the building Andrew Carnegie gave \$15,000. It cost nearly \$18,000, and is a two-storied brick and brownstone structure, approximately 80 x 60 feet in dimensions. The stack room has a capacity of from 15,000 to 20,000 v.

Troy (N. Y.) P. L. (Rpt., 1905; in local press.) Added 1679; total 38,697. Issued, home use 68,998. Registration 4377.

The year has been one of re-organization and many new activities. On the resignation of the former librarian, DeWitt Clinton, Miss Margaret Deming was elected to reorganize and modernize the library. On Aug. 14 she resigned, and on the 20th of that month was succeeded by Miss Mary L. Davis, the present librarian. A first step toward the open shelf system was taken in the display of a considerable collection of selected books in the delivery room, which has largely increased the circulation. Re-registration of borrowers was carried through, the Newark charging system installed, and reclassification and recataloging are well advanced. The equipment of the various departments has been improved, and the Children's Neighborhood Library, formerly

independently maintained, was removed to the library building in December and reorganized as the children's department of the library. The changes and improvements in the library service have met with most gratifying appreciation on the part of the public.

Recommendations are made for more shelving in the children's room, installation of a new loan desk, better lighting facilities, arrangement of reference and reading room in upper hall, and appointment of an extra cataloger. It is also suggested "that the trustees should consider the advisability of experimenting in the establishment of delivery stations in the outlying parts of the city."

University of Chicago. It was announced on Jan. 23 that the trustees of the university had started a movement to raise a large sum, probably \$1,000,000, by popular subscription for the erection on the university campus of a library building to be a memorial of the late President Harper. The announcement states that a special committee of five has been appointed "to take up the matter of a proper memorial of the late Dr. W. R. Harper, it having transpired that the long-cherished wish of President Harper was that in case a building should ever be erected to bear his name and be his resting place it should be a library;" and adds:

"The committee unanimously determined to recommend to the trustees that immediate efforts be made to secure funds for a memorial library building. They will ask the university senate to appoint a committee to co-operate in the undertaking. Also the alumni association will be requested to appoint a committee. At the earliest possible moment the public will be informed as to the sum required for the building.

"It is intended to make this the greatest monumental building of the university group, a building such as friends of Dr. Harper will recognize as a fitting memorial. Every friend of Dr. Harper, however much he can contribute, will be given an opportunity to assist."

Utica (N. Y.) Industrial L. League. At a meeting held on Jan. 18 the secretary of the league presented a report of the work accomplished since its organization in October, 1905. It was in part as follows:

"The Industrial Library League was organized on the evening of October 12 at the Public Library Building, at a meeting of about a dozen men, representing some of the leading industries in Utica. The object of the league is to promote the efficiency and usefulness of the Utica Public Library to the workers in the various industries in the city of Utica. The two methods of achieving the object are:

"1. By once annually soliciting subscriptions from various business corporations and business men in the city of Utica, the funds collected to be turned over to the trustees of the library, with suggestions as to how the money be

spent; 2, by causing from time to time to be communicated to the workers in the different industries such new advantages as the library shall be able to offer."

The executive committee, to which the active work was committed, began its work in November by appointing, in each of 44 industrial subdivisions, one person to act as chairman of a subcommittee in that industry. Each subcommittee chairman was interviewed by a member of the executive committee and asked to urge contributions from corporations and individuals in his own industry, and to make recommendations to the league of books and magazines that should, in his opinion, be contained in the library.

"The subscription books of the league have been open for a period of about ten weeks. Subscriptions have been received from 13 different industries and from a number of individuals connected with other industries. Written reports have been received from some twelve different industries."

"The executive committee presented a series of recommendations: 1, that the funds thus received be turned over to the library trustees; 2, that the trustees be asked to purchase the complete set of the "International library of technology," published for the International Correspondence Schools of Scranton, Pa.; 3, that the list of books recommended by the subcommittees be turned over to the library trustees with the request that the recommendations be followed so far as possible; 4, that, after purchasing all books recommended in these reports, the trustees spend any funds remaining for such books and periodicals as, in their opinion, would be of most use to the industrial workers of Utica; 5, that there be undertaken a collection of trade catalogs, to be kept conveniently near the other books purchased through the league.

"The work of the league has been conducted entirely by exceptionally busy men, no one of whom had been able to give the time to it he would have liked to give. It is the belief of the league, however, that we have made a substantial headway towards a more complete industrial library."

Waterloo (Ia.) P. L. The two Carnegie buildings, erected respectively for the east and west sides of the city, held an "open day" on Jan. 25, when they were for the first time open for public inspection. Both are modern, well arranged and fully equipped, and they were visited by about 3000 people. These two buildings stand for the solution of the bitter struggle between east and west side factions of the city as to which section should have the Carnegie library. So much feeling was aroused that at one time the failure of the whole project seemed likely, but it was finally decided to erect a building in each section, and to this end Mr. Carnegie increased his original gift, on condition that the maintenance fund be proportionately increased.

FOREIGN

BODLEIAN L. Staff-kalendar, 1906. Oxford, [1906.] unsp. T.

Contains a supplement, printed upside down, as last year. There is a little additional material, but otherwise the work is unchanged from the preceding issues.

Glasgow, Scott. Dennistoun District L. Dennistoun is the sixth and latest district to be provided with a public library. The new building, which was opened on Dec. 26, 1905, is a handsome structure, with accommodations for 20,000 v. It contains a general reading room (for 330 readers), ladies' reading room, and reading rooms for girls and boys, as well as the usual lending and reference departments. Its cost, exclusive of site, is estimated at a little over £7000.

Gifts and Bequests

Ashby (Mass.) P. L. By the will of the late Mrs. Mary R. Hall, of Keene, N. H., the library receives a bequest of \$3000.

Kennebunk, Me. George Parsons, of New York, will give to the village a library building, to cost \$15,000, the plans for which were recently accepted by the village library association.

New London (Ct.) P. L. By the will of the late Mrs. Henry Cecil Haven, of Boston and Stockbridge, the library is left a bequest of \$40,000, to be available on the death of her husband and her sister, Miss Mary Weymann.

Wofford College, Spartansburg, S. C. By the will of the late Miss Julia Smith, the college receives a legacy of \$10,000 for the erection of a library building, to be called the Whitefoord Smith Library.

Carnegie library gifts.

Brown University, Providence, R. I. At the Brown University alumni dinner in New York City on Jan. 19, President Faunce announced that a \$300,000 library building, to be known as the John Hay Library, was to be built by the university. The late secretary of state was the most distinguished of the university alumni, and this will be the first monument erected to him. The name was suggested personally by Andrew Carnegie, who has given \$150,000 toward the memorial, of which he has already paid one-half, the remaining \$150,000 to be raised by subscription.

East Orange, N. J. Dec. 23, 1905. \$20,000 for two branch libraries.

Findlay, O. Jan. 20. \$35,000.

Kearney, N. J., Jan. 23. \$25,000.

Practical Notes

BOOK FOR FILING PAPERS, etc. (Described in *Official Gazette* of the U. S. Patent Office, Dec. 5, 1905. p. 1400, no. 806:391.) il.

This device for filing papers, etc., has been assigned to National Cash Register Co., of Dayton, Ohio.

MARSDEN, Henry. On the premature decay of leather used in modern bookbinding. (*In International Bookbinder*, New York City, Oct., Nov., 1905. p. 321, 356.)

The writer is a practical bookbinder employed by the San Francisco Law Library, and his paper is a useful contribution to the subject. He reviews briefly the investigations and conclusions of Society of Arts committee, and then describes permanence or decay of bindings in various kinds and grades of leather which have come under his own observation.

MODERN BOOKBINDING. (A series of articles in the current numbers of the *Inland Printer*.)

The January number is no. 10 of this series and is devoted to blank-book binding. These articles are illustrated, and are helpful in showing the practical details of modern bookbinding.

SOCIETY OF PRINTERS, Boston. The development of printing as an art: a handbook of the exhibition in honor of the bi-centenary of Franklin's birth, held at the Boston Public Library, under the auspices of the Society of Printers. Boston, Jan. 1-29, 1906. Publications of the society, no. 2. [Boston, 1906.] 6+94 p.

In its descriptive text and general arrangement this handsome catalog furnishes an interesting outline of the history of the art of printing and the characteristics of leading presses. The exhibit was announced in Jan. L. J., p. 48.

Librarians

CRAWFORD, Miss Esther, formerly instructor in the Western Reserve University Library School, has been appointed assistant in the University of Nebraska Library, Lincoln, in charge of cataloging and classification.

DRESSER, Miss Annie Slosson, of the New York State Library School, 1904-5, has been appointed cataloger at the Van Wormer Hall Library, University of Cincinnati.

FLETCHER, Dr. Robert, for 30 years associate librarian of the Library of the Surgeon-General's Office, Washington, D. C., and the

compiler of its famous "Index-catalogue," was guest of honor on Jan. 11 at a dinner given in Washington by leading physicians and surgeons of the country, in recognition of his services to medical bibliography. A silver loving cup was presented to Dr. Fletcher, and his work both on the "Index-catalogue" and as editor of the *Index Medicus* was referred to in speeches by Dr. J. S. Billings, Dr. W. S. Thayer, Dr. W. D. McCaw, Dr. William Osler, and others.

HENDERSON, Miss Lucia Tiffany, assistant in the Buffalo (N. Y.) Public Library, was on Jan. 26 elected librarian of the James Prendergast Free Library, succeeding Miss Mary Emogene Hazeltine, resigned. Miss Henderson's home is in Jamestown, where her father is a well-known resident. She is a graduate of the Drexel Institute Library School, and has been connected with the Buffalo Public Library for about eight years. She assumes her new duties March 1.

JACOBUS, Miss Sarah M., who has been elected librarian of the Pomona (Cal.) Public Library, succeeding Miss Mabel Prentiss, was trained in Los Angeles, and was assistant cataloger there till September, 1901, when she took charge of and organized the library of the Kamehameha Manual School of Honolulu, Hawaii. She remained there four years, and also did work in the Honolulu subscription library. In October, 1905, she returned to the Los Angeles library, and in November became acting librarian at Pomona.

MCGONAGLE, Miss Elizabeth A., for 22 years an assistant in the Boston Athenæum, died Jan. 13, 1906.

MITCHELL, Miss S. Louise, of the New York State Library School, 1903-4, has been appointed librarian of the Central High School at Cleveland, O.

MONTGOMERY, Miss Florence Prichard, of the New York State Library School, 1904-5, has been appointed assistant cataloger at the Forbes Library, Northampton, Mass.

MOORE, Miss Annie Carroll, children's librarian of the Pratt Institute Free Library, Brooklyn, N. Y., has been appointed supervisor of children's work in the Circulation Department of the New York Public Library. Miss Moore is a graduate of the Pratt Institute Library School, class of 1896, and almost immediately after her graduation joined the staff of Pratt Institute Free Library, in charge of its children's room. This room she has made a model of its kind among libraries in the country. She was actively interested in the organization of the Children's Librarians Section of the A. L. A., of which she has served as chairman, has had charge of the instruction in children's work at the Pratt Institute Library School, and in her personal

work, as compiler of children's lists, writer, and lecturer, is recognized as a leader and authority in library work for children. The post for which she is now chosen is newly created, and offers opportunities for most interesting and valuable work.

PRENTISS, Miss Mabel E., librarian of the Pomona (Cal.) Public Library, has resigned to take a position on the staff of the California State Library as organizer. She is succeeded at Pomona by Miss Sarah M. Jacobus. Miss Prentiss was trained at the Los Angeles Public Library, acted as cataloger at Pasadena for a time, became acting librarian of Pomona, Oct. 21, 1901, and librarian March 1, 1902. Under her direction the library became a public one, and a Carnegie building that cost \$150,000 and is a model of beauty and convenience was erected. From May, 1904, to January, 1905, Miss Prentiss was at Albany, taking special work. Her peculiar fitness for the work of organization was recognized, and the newly created position was offered her by the state library authorities.

ROSE, Miss Grace Delphine, head of the public school work of the Buffalo (N. Y.) Public Library, was on Jan. 25 elected librarian of the Davenport (Ia.) Public Library, succeeding Miss Stella V. Seybold, resigned. Miss Rose is a graduate of the Drexel Institute Library School, class of 1898, and immediately on her graduation entered the Buffalo Public Library as cataloger. Since then she has acted as head of the open shelf department, and for the last two and a half years has been in charge of the library's school work. She has acted as secretary of the New York State Library Association and a member of its institute committee, and was in 1905 appointed a member of the A. L. A. committee on library training.

YUST-FRENCH. William F. Yust, librarian of the Louisville (Ky.) Public Library, and Miss Florence Hosmer French were married on Jan. 17, at the home of the bride's parents, Albany, N. Y.

Cataloging and Classification

FORM OF ENTRY FOR INSTITUTIONS, ASSOCIATIONS, ETC. — The following correspondence presents the practice of the Library of Congress regarding entry of institutions, universities, and similar bodies:

Dec. 13, 1905.

"Mr. J. C. M. Hanson, Catalog Division,
Library of Congress.

"DEAR SIR: There are some features in the cataloging of bodies, universities, etc., about which I am puzzled, in spite of the A. L. A. rules and frequent consultations of our depository catalog.

"For instance, the body known as Histori-

cal Society of Montana—should the heading be:

"Montana. Historical society (if a state society), and if not, a state society

"Montana Historical Society, or

"Historical society of Montana. Which?

"Am I right in using the form

"Columbia university (because *not* a state university) and Michigan. University (because it *is* the state university)?

"Are the headings under New York in the A. L. A. catalog, 1904, arranged as the Library of Congress would arrange them? Why is N. Y. (City) History separated by a column from N. Y. Charity organization society? It seems to me the latter should precede the former.

"Yours truly,

"JESSIE M. BOYD,

"Cataloger, Seattle Public Library,

"Seattle, Wash."

Reply.

DEC. 19, 1905.

"DEAR MADAM: According to the A. L. A. rules revised (not yet in print) the Historical Society of Montana, as well as other state historical and agricultural societies, whether supported by the state or not, are to be entered under the first word of the title not an article, with reference from the name of the state. The Library of Congress has not as yet seen its way clear to adopt this rule, state historical and agricultural societies, whether supported by the state or not, being still entered under the name of the state. If a change is decided upon a notice will be inserted in *Public Libraries* and the LIBRARY JOURNAL.

"As to form of heading, if the name of the Montana historical society had begun with the name of the state the Library of Congress heading would read:

"Montana historical society.

"If, on the other hand, the name is Historical society of Montana, the heading is printed:

"Montana. Historical society.

"The latter form is the correct one in this instance. A good illustration of this distinction is furnished by the

"Missouri historical society, *St. Louis*, and the

"Missouri. State historical society with headquarters at Columbia. The corporate name of the latter is State historical society of Missouri, that of the former is Missouri historical society.

"Practically the same principle governs in deciding on the form of heading for universities. Here we may for purposes of illustration note the following classes:

"I. American state universities to be entered under the names of the state, usually by transposition of part of the name, *e.g.*, University of California to take the form: California. University.

"II. (a) Other universities not having individual names to be entered under the name of the place where they are located, according to A. L. A. rule for institutions (establishments). Here again transposition of part of the name often becomes necessary, *e.g.*, University of Chicago to be entered as, Chicago. University; University of Oxford, as Oxford. University, etc.

"II. (b) *Exception.* Universities whose names begin with the name of an individual (often the founder) to be entered under the name, *e.g.*, Cornell university, Columbia university, Yale university. (No transposition.)

"The titles in the A. L. A. catalog of 1904, pt. II., New York, are arranged in the order which has been adopted in the dictionary catalog of the Library of Congress. When this catalog was printed in September, 1904, there was little time to discuss the question of arrangement. We were forced to arrange the titles as best we could while trying to rush the catalog through the press in less than one month. It is no doubt true that the order of arrangement found to be most suitable for a large reference library is not the most serviceable for the smaller library of a more popular character. In the former some classification of titles may seem imperative because of the large number and varied character of the works which fall under one heading; in the latter one series of titles in strict alphabetical sequence may be quite sufficient and, of course, much easier to consult.

"J. C. M. HANSON."

The Boston Book Co. *Bulletin of Bibliography* for January contains the useful list of "Abbreviations used in book catalogues," also issued in separate form; a continuation of George Watson Cole's "Bermuda in periodical literature;" and Miss Wilbur's "Quarterly index to library reference lists."

Boston P. L. Annual list of new and important books added; selected from the monthly bulletins, 1904-1905. Boston, Published by the trustees, 1906. 10+304 p. O.

The subject index appended to the biography division and the full author index to the whole list make this useful annual volume still more useful.

JAMES D. BROWN, of the Islington (London) Public Library, has prepared "a system of exact classification suitable for public libraries, technical and elementary schools and other educational purposes," which is announced for publication by the Library Supply Co., of London.

CHICAGO P. L. Special bulletin no. 6: Selected list of books for boys. Chicago, January, 1906. 32 p. O.

CORDOVA, Rudolph de. The catalogues of the library of the British Museum. (*In Macmillan's Magazine*, Dec., 1905. N. S. 1:121-132.)

An interesting account of the growth and development of the catalogs and of some of their deficiencies.

INDIANA STATE L. Books in embossed type. [Indianapolis, State Library,] January, 1906. 8 p. O.

An author list in one alphabet, giving about 225 titles. Prefaced by statement of regulations regarding issue of books for the blind.

—Catalog. Supplement, April 1, 1905. Indianapolis, 1905. 178 p. O.

A dictionary catalog, including a preponderance of analytical entries. Indiana fills 17 pages, many public documents, association reports, etc., being analyzed; there are 23 titles in Indiana fiction. Entries are given with considerable fullness, and the catalog represents a large amount of detail work, compactly presented.

KANSAS CITY (Mo.) P. L. *Quarterly* for January is mainly devoted to the literature of amusement with special reading lists on "Hunting and fishing" and "Sports and pastimes."

MEDLICOTT, Mary. Abbreviations used in book catalogues. Boston, Boston Book Co., 1906. 16 p. D. (*Bulletin of Bibliography* pamphlets, no. 15.) 15 c.

This list is compiled with additions from a list in L. J., v. 12, 1887; it is convenient and useful for catalogers.

OSTERHOUT (Wilkes-Barre, Pa.) F. L. *Bulletin* for January concludes the special reading list on Mohammedanism, and has a short list on Benjamin Franklin.

SALEM (Mass.) P. L. *Bulletin* for January has a reading list of "Books for business men."

U. S. SENATE L. Catalogue of the library of the United States Senate. Washington, Gov. Print. Off., 1906. 508 p. plan, 26cm.

Bibliography

AERONAUTICS. Subject list of works on aerial navigation and meteorology, in the library of the Patent Office. London, H. M. Stationery Off., 1905. 63+1 p. 16½cm., (Patent Office Library ser., no. 17. Bibliographical ser., no. 14.)

AGRICULTURE. Hall, A. D. The book of the Rothamsted experiments; issued with the authority of the Lawes Agricultural Trust

Committee. London, Murray, 1905. 2 p. l., [vii]-xl, 294 p., 1 l. 24½cm.

"References" at end of chapters.

ANONYMS AND PSEUDONYMS. Holzmann, M., and Bohatta, H. Deutsches anonymen-lexikon, 1501-1850. Bd. III: L-R. Weimar, Gesellschaft der bibliophilen, 1905. 2 p. l., 400 p. 23cm.

Vol. 1 appeared in 1902; vol. 2 in 1903.

ANTHROPOLOGY. International catalogue of scientific literature. 3d annual issue [1903]. P: Anthropology. London, 1905. 8+324 p. 8°.

ARCHAEOLOGY. Vedel, E. Oversigt over den danske literatur om Nordens forhistoriske arkaeologi. Kjobenhavn, G. E. C. Gad, 1905. 163 p. 1.50 kr.

ASTRONOMY. International catalogue of scientific literature. 4th annual issue [1904]. E: Astronomy. London, 1905. 8°.

BEST BOOKS. Catalogue raisonné of twentieth century literature. (*In Literary year-book*, 1906, supp. to pt. 1.)

A title list of the more important publications of 1901-1905, and of representative works of the majority of living English writers.

BOOK-PRICES. American book-prices current comp. from the auctioneers' catalogues by L. S. Livingston. v. 11, Sept. 1, 1904-Sept. 1, 1905. N. Y., Dodd, Mead & Co., 1905. xviii, 635 p. 22½cm.

The present and subsequent issues of the work will be modelled on Mr. Livingston's "Auction prices of books;" the necessity for condensation arising on account of the tremendous increase in the number of entries (over 75 per cent. in the last 10 years). But the omission of the subject index is a matter for serious regret; although seldom referred to it is a real help in time of need.

BOTANY. International catalogue of scientific literature. 3d annual issue [1903]. M: Botany. London, 1905. 8+909 p. 8°.

CAMBRIDGE PRESS. Roden, R. F. The Cambridge Press, 1638-1692: a history of the first printing press established in English America, together with a bibliographical list of the issues of the press. N. Y., Dodd, Mead & Co., 1905. 5 p. l., 7-193 p. 20cm., (Famous presses, v. 2.)

CARNEGIE INSTITUTION. Bibliography of publications relating to work accomplished by

SIMMS, W. G. Wegelin, O. A list of the separate writings of William Gilmore

Simms, of South Carolina, 1806-1870. N. Y., [Literary Collector Press,] 1906. 31 p. 23cm.

SOCIETIES. The "handbook of learned societies," in preparation at the Library of Congress, under the grants of the Carnegie Institution, is reported upon by Herbert Putnam in the Carnegie Institution year book, 1905. "Except for current notes of publications of foreign societies, the whole time of the office force has been devoted to preparing for the press the volume for North and South America;" this volume is now in press. "The completion of the editorial work for foreign societies and the printing of the remaining volumes will take about twelve months longer."

STATE PUBLICATIONS: a provisional list of the official publications of the several states of the United States from their organization; compiled under the editorial direction of R. R. Bowker. Part 3: Western states and territories: Minnesota, Iowa, Missouri, Kansas, Nebraska, So. Dakota, No. Dakota, Dakota Territory, Montana, Wyoming, Colorado, Utah, Nevada, Idaho, Washington, Oregon, California, Arizona, New Mexico, Oklahoma, Indian Territory, Alaska, Hawaii. New York, Office of the *Publishers' Weekly*, 1905. 2 + p. 287-605. O.

TRUST COMPANIES. Kirkbride, F. B., and Sterrett, J. E. The modern trust company, its functions and organization. N. Y., Macmillan, 1905. xi, 309 p. 23cm.

Bibliography: p. 291-295.

WILLOWS. Mott, W. W. Teratology in the flowers of two California willows. Berkeley, Cal., Univ. of California Press, [1906.] 181-226 p. O. (Univ. of Cal. publications, Botany.)

Bibliography (3 p.) of abnormal or irregular growths in willows.

WOMAN. [Ungherini, A.] Manuel de bibliographie biographique des femmes célèbres. Second et dernier supplément. Rome, Roux & Viarengo, 1905. xiii p. 1 l., 758 cols., 25cm.

Since the appearance of the first volume in 1893, this work has well earned a place for itself in the rank of important library reference books. A first supplement was issued in 1900 and the present supplement contains the final additions and corrections and a full general index.

Notes and Queries

ANNALS OF CONGRESS OFFERED TO LIBRARIES.

—The Plainfield (N. J.) Public Library has had offered it a complete set of the valuable *Annals of Congress*, 1789-1824, inclusive, in 42 volumes. As we already own this set, the donor is willing to give it to some other library not already possessing it. Please apply promptly to the librarian of the Public Library, Plainfield, N. J.

PREPARATION OF "LIBRARY NOTES" FOR NEWSPAPERS.—At the suggestion of the literary editor of the Newark *Evening News* the libraries of the state of New Jersey send each week to the Newark Free Public Library such items of news as they may have. These are typewritten and put in order by the Newark library and sent, on Saturday morning, to the *News* editorial rooms. They then appear Monday evening under the heading "Work of the libraries." The items are not entirely confined to information about New Jersey libraries. They sometimes include book lists and references to individual books. If librarians elsewhere who have not tried this plan wish to know about the details of the methods at Newark they should write to J. C. Dana, librarian of the Newark Free Public Library. Mr. Dana suggests that in every state similar "Library notes" be gathered and published in one or more of the leading newspapers.

THE GOVERNMENT LEATHER AND PAPER LABORATORY: SAMPLES OF LIBRARY BINDINGS DESIRED.—In view of the growing interest of librarians in the quality of paper and of bindings, it may be of interest to call attention to the work now being done by the Leather and Paper Laboratory of the Bureau of Chemistry, U. S. Department of Agriculture, on this subject.

One of the lines of work assigned to the Leather and Paper Laboratory is the investigation of paper and leather with a view of determining those factors which control the permanence and resistance to wear of the materials, and to express in some suitable way through chemical and physical examinations the comparative values of different papers and leathers.

In furtherance of this work we are anxious to secure from librarians samples of papers and leather bindings which have long withstood wear and tear and also of those which have deteriorated rapidly. Samples should consist of not less than 20 sheets of the paper and of all of the leather binding. The paper should not be rolled or folded, but forwarded to us flat. Each sample should be accompanied by a brief but complete history, giving the character of service and the library condition to which it was exposed, such as light, moisture, temperature, gas, etc., with an expression of opinion as to the most probable cause for deterioration or of resistance.

It is only by thus securing the co-operation of the librarians, publishers, manufacturers and chemists that these problems can be solved satisfactorily. We desire to secure this co-operation in obtaining samples with which to do our research work, the results of which when completed will be published for the information of all concerned.

H. W. WILEY, *Chief*.

INDEX TO REFERENCE LISTS IN BULLETIN OF BIBLIOGRAPHY.—Some misapprehension has been caused by the sentence in your January issue, page 35, about the *A. L. A. Booklist*, in which it is stated that the index to reference lists published by libraries, therein published, was *previously* published in the *Bulletin of Bibliography*. I wish you would kindly give space in your next issue to a notice that the *Bulletin of Bibliography* continues to publish the quarterly index to reference lists as it has done since 1899. The fact that the *A. L. A. Booklist* has now, with our permission, begun the publication of this list in monthly form, simply means that the list will appear quarterly in cumulated shape in the *Bulletin of Bibliography*. We have no intention of giving up the publication of a list that has from many sources been very much appreciated.—EDITOR THE BOSTON BOOK CO'S *Bulletin of Bibliography*.

CATALOG OF BISHOP JADE COLLECTION.—One of the most magnificent works ever published is the "Catalog and investigations in jade, published by Heber R. Bishop, New York, 1906," recently issued from the DeVinne Press. It consists of two folio volumes of 277 and 293 pages respectively, weighing 124 pounds; and presents a full descriptive historical and illustrated account of the collection of jades, presented to the New York Metropolitan Museum by the late Heber R. Bishop in May, 1902. The editor of the work is George F. Kunz, of Tiffany & Co., who has been engaged since 1886 in planning the text and illustrations; the edition is limited to 100 copies and cost over \$100,000. No copies are for sale, but the edition has been distributed, according to instructions left by Mr. Bishop, among kings, queens, art galleries, museums, and libraries in different part of the world. Among the American libraries included in the distribution are the Library of Congress (2 copies), National Museum, New York Public Library, Columbia University, Grolier Club, Boston Public Library, Harvard University, Philadelphia Free Library, Girard College, Enoch Pratt Free Library, Johns Hopkins University, Carnegie Library of Pittsburgh, John Crerar Library, New York State Library, Virginia State Library, the public libraries of St. Louis, St. Paul and Medford, Mass.; the libraries of Brooklyn Institute, Yale, Cornell, Princeton and McGill universities, and the universities of Toronto, California, and Montreal.

THE LIBRARY JOURNAL

VOL. 31

MARCH, 1906

No. 3

THE schedule of Mr. Carnegie's gifts in 1905 for library buildings given in the *LIBRARY JOURNAL* last month, and the comparative summary given in this issue, show that the Carnegie library gifts have reached the enormous total of over forty-three million dollars, last year's gifts reaching three and a quarter millions as against one and a half million in 1904. Even this aggregate would be exceeded if all the gifts indirectly for library purposes, as those through colleges, were taken into consideration, in which case the aggregation would probably be between forty-five and fifty million dollars. If to this amount were also to be added the gifts for cognate purposes—as the ten million dollars for the Carnegie Institution at Washington—the total would reach a sum altogether beyond precedent in any country or time. Mr. Carnegie's gifts have been for the benefit not only of the people in the country in which his own colossal fortune has been made and those of the country of his birth, but have, in fact, encircled the world, even to the "isles of the sea." But the most significant thing about this giving is not the fact of the gift in itself, but the tribute from the man of wealth to the book as the great means of human advancement, and the recognition of the library as a great factor in human progress.

MR. CARNEGIE'S path as a philanthropist has not been altogether one of roses. The persistent criticism upon his library giving has been that he gave only a building, requiring that a site should be provided and that an income representing a good percentage on his gift should be assured from year to year. From the tone of some of these criticisms it might be supposed that Mr. Carnegie was giving "half a loaf" or less from lack of generosity. The figures of his generous giving are sufficient disproof of this theory. Mr. Carnegie's evident purpose has been to avoid the mistakes of indiscriminate giving by making sure that his library gifts are placed only in communities which have a realizing sense of the value of a library and are therefore ready to provide for its permanent maintenance on an adequate basis. His plan re-

vealed the same foresight and prudence which were the mainspring of his colossal fortune. The latest attacks upon his methods have come from the controllers of New York and of Pittsburgh, the former of whom characterized the Carnegie gift to New York—of which the greater part of the five million dollars has already been paid out—as "a gold brick." This critic was quite mistaken in his hasty impression that the money actually paid out represented practically only the interest of what Mr. Carnegie had promised, and otherwise he spoke from insufficient knowledge. If a library is a good thing and the increasing circulation of books is a gain to a community, certainly Mr. Carnegie's benefactions have been most wise, for in the library systems of New York, inclusive of Brooklyn, the usefulness of library branches has practically doubled and trebled as each has been housed in a new Carnegie building. Whether it is worth while for communities to pay money for free public libraries is a question scarcely debatable in the *LIBRARY JOURNAL*, and we think the public is so fully certified in the belief that a free library is a good thing that the criticism upon Mr. Carnegie represents but a small proportion of public opinion, except from the Socialist side.

THE proposed library post, in the present aspect of the proposition, has received a serious adverse blow in a report from the Postmaster-General to the Senate committee, which definitely opposes the pending bill for fiscal and administrative reasons. The bill can only be saved, if at all, by strong representations from all over the country to members of Congress, and we give elsewhere the names of the members of the postal committees of both Houses. We doubt, however, if any pressure will induce Congress to put upon the Postoffice Department what it regards as an additional burden likely to increase the postal deficit. The estimate in the Department that it costs an average of from five to eight cents a pound for such matter is probably an over-statement, though the proposed one-cent rate is definitely below cost. It is perhaps desirable, therefore, in the real in-

terests of libraries, that the present bill, originally formulated by the New England Education League, should be replaced by a bill which is more likely to pass and which would especially meet the needs of libraries in rural communities. There is a fair question whether the postal service of large cities, involving carrier delivery by hand, can wisely be burdened with the delivery of books which might make every day in the year a "Christmas rush" for the unfortunate postman — who cannot take his wagon up the vertical railways of the "city blocks set on end," to use Archer's definition of the modern skyscraper. Moreover, it is comparatively easy for the city reader to reach the central library or his neighborhood branch. But the country library needs a means of reaching outlying districts, and under the present law rural free delivery carriers are prevented from carrying books except at full postal rates. A provision might be worked out, possibly with the approval of the Postoffice Department, which would add to the revenue rather than to the deficit of the Department by utilizing rural free delivery routes from the postoffice of origin, and giving a "full wagon" at a decreased rate but an increased total return. It might be well if the American Library Association at its ensuing meeting should reappoint a postal committee to frame a measure on a new basis which should not ask the Postoffice Department to do business below cost, but should work out a plan advantageous to the community without detriment to the postal revenues.

At the meeting of the Council of the American Library Association, just held at Atlantic City, report was made by the Executive Board of the action taken by the A. L. A. delegates to the copyright conference, and approved by the board, in securing modification of the proposed provisions regarding importation by libraries of copyright books. These modifications were practically as outlined in the last number of the *JOURNAL*, and represent a great advance over the previous substitutes proposed. While approved by majority vote of the Council, there was objection to them on the part of others, who strongly advocate a determined opposition to any abrogation of the wholesale privileges heretofore accorded.

The compromise measure, therefore, while it has received official endorsement of the American Library Association, cannot be regarded as unanimously approved by the body of A. L. A. members, and it is to be expected that many librarians, individually and through their trustees and their associations, will initiate a vigorous campaign to preserve the provisions of the present law. It must be said, however, that the work done by the A. L. A. delegates to the copyright conference has been valuable and effective, in the face of many difficulties, and that its results should not lightly be disregarded. This whole question of copyright revision is one of the broadest scope, involving multifarious complex details and opposing contentions, which cannot be settled without frequent compromise. Further sessions of the copyright conference have just been resumed, with the expectation of finishing at this time the framing of an acceptable draft bill. We trust that in the controversy between the librarians on the one side and the authors and publishers on the other the results already secured will not be overthrown and the enactment of a just and uniform copyright law prevented.

It is worth while to call the particular attention of librarians to the announcement made in the last number of the *JOURNAL*, of the analysis of quality and durability of paper and bindings, undertaken by the Leather and Paper Laboratory of the Bureau of Chemistry at Washington. This investigation is somewhat in line with the extremely valuable work done by the London Society of Arts in raising the standards of manufacture in bookbinding leathers — work which has already resulted in great improvement in English bindings. The Bureau of Chemistry asks librarians to furnish samples of leather and paper which have successfully withstood long wear or which have deteriorated rapidly, and to accompany such samples by careful statement of the conditions of use and care represented by each sample. Librarians should co-operate promptly and effectively in this work, in the hope that this investigation may be carried to a satisfactory conclusion and may result in as great practical benefit as has accrued from the similar enterprise undertaken in Great Britain.

THE LIBRARY IN THE COMMUNITY *

BY ERNEST C. RICHARDSON, *Librarian of Princeton University*

THE community in its plain everyday meaning is simply the inhabitants of any village, town, or city looked on as a whole. The community is a sort of a composite person made up of the sum total of all the individuals in it or rather of all citizens—those individuals who have common rights and interests and ideas; those who do not share those common interests being not parts of the community, but aliens or subjects. The characteristic of a true community is that any individual is just as much a part of it as any other, without distinction.

What is it then that makes a community? In brief it is the body of ideas that they have in common—common rights, common interests, common purposes. The ground of community is likemindedness. A society, says Professor Giddings, "is a number of likeminded individuals who know and enjoy their likemindedness, and are therefore able to work together for common ends" . . . "if the individuals of a population are very unlike in kind . . . their relations are antagonistic." The very word community suggests to us, therefore, the fact which lies at the basis of all modern social theory that likemindedness—the body of ideas held in common—is the secret of social order. The amount and quality of likemindedness, the number and importance of the ideas held in common, are not only the measure but the cause of all union, all power of united action, and all which distinguishes advanced social order from the incoherence of uncivilized conditions, the community from anarchy.

The stability of any community depends thus on the common ideas—the very community itself in fact thus depends, for the community is all its inhabitants looked at in respect of what they have in common, and the problem of the community is to increase the number and average value of the ideas thus held in common. It is the growth of this common body of ideas which gives a town, a state, or a nation its position in the civilized world relative to others. . . .

Turning now to the definition of the library as it is related to this theme: The library in a community is the sum total of all its libraries, public and private. It is a mistake to think of the library problem as one of the public library only; even the professional librarian of the public library must take account in adapting and adjusting the apparatus of the public library and in the service to readers, both on the spot and for home consumption, of the amount of co-operation that he has in the private libraries of his readers.

Still it is with the public libraries and libraries organized for the use of more than one family that we have from the library standpoint chiefly to do. The library from this standpoint consists of all those libraries in the community which are organized for corporate use—reading clubs, subscription libraries, libraries of Sunday schools, clubs, fraternal societies, apprentice, mercantile, ecclesiastical, medical, legal, and libraries of historical and learned societies generally, school, college, university, but most especially municipal, state or national libraries, *i.e.*, libraries organized for the whole community rather than for individuals or any class or classes, governed by the community rather than by a corporation, and supported by the community rather than by subscription or endowment. For, while all corporate libraries are, like private libraries, a part of the library in the community, it is the tax supported free public library of town or city which is the typical library in a community, the one which serves all classes and conditions of the community of every grade of mental ability with all classes of books suited to each grade of mental ability.

Turning now to the question what the library exists for, in the community, the answer is in broad terms the same for both private and public libraries. It exists as a part of the educational system of the community. Time was, or rather, there have been times, when primary education and, in fact, all education, corresponded to the private library. In families who could afford it there might or might not be education, and its quan-

* Read before New York Library Club.

tity or quality depended on the head of the individual family. This tended to produce great inequality of conditions, the most cultivated growing more cultivated still, the less cultivated less still and with great variety in individual education. This tended to reduce to the lowest terms the common stock of ideas and motives, the body of ideas held in common by all members of the community, and which alone, as has been said, is the foundation of an organic community as distinguished from a mob. With the introduction of a common school system all the individuals in a community began to be trained to a certain point on precisely the same patterns and to receive a nucleus of essential ideas absolutely common to every member of the community. By this means community life became possible on a scale never dreamed of before and its actual development has been the marvel of these communities which still lag behind in common school education.

Now the private library contributes only by accident to the community of idea; the professional, technical, or special library, too, is in the same way intended to increase the body of ideas common to a class—a community within the community—whether agricultural, artisan, or professional, and only accidentally contributes to the community. The task of the public library is on the other hand like that of the public school, first of all and most characteristically to increase the common body of ideas in the community.

The library like the school does this in two ways: directly, by instilling, like the common school, the same ideas in all directly; and secondly, like the higher schools, by equipping some specially adapted members with ideas which, through conversation, oratory, journals and social life, will be gradually incorporated with the common body of ideas. This second or indirect method in which schools or libraries act indirectly to increase the community ideas is one of great importance and too little realized.

It is an obvious fact that the most vivid and rapid growth in ideas is by personal interchange face to face of the two living persons, and the fact that this is going on all the time in a community is the justification for educating many members of a community to a higher point than the average member

cares to reach by systematic study. A community, with a great number of high school scholars in it, is not merely able to perform many special tasks of the community better and to provide material out of which a still more select body of professional men shall be raised up, who in turn will perform their task for the community better, but these high school graduates and all other members with larger number of ideas and better ones are at one point of contact or another constantly contributing in daily life to the rectification and enlargement of the ideas of those who have not carried education beyond the compulsory legal point at school.

So it is with the library. Its contribution to community ideas is not confined to its direct action, and this fact is what justifies the public expenditure for a public library in a community above the class of literature which every graduate of the public schools might profit by. It justifies it in fact even though the number of readers does not begin to approximate the total number of those of reading age in the community, for every one who can be induced to revise and enlarge his conception of anything, whether of farming or tool making, morals or beauty, politics or science, becomes thereby inevitably a rectifier and enlarger in his circle and in the widening waves from this circle. The ultimate good of the community as a whole is, therefore, promoted by every revised or enlarged idea set in motion. How far this shall be carried and whether every book which may inoculate the community with such an idea is suitable for a community library depends wholly on practical consideration of the wealth and ability of the community.

Yet when all has been said for the indirect factor, it remains true that the most characteristic function of the library in the community is that which corresponds to the common school education, *i.e.*, that which aims equally at every member of the community rather than that which provides for technical classes, whether artisans, physicians, journalists or others. It is, in short, popular reading, popular education, contributing to the community ideas directly, rather than to the ideas of any class or individual, however useful the special ideas of this class may prove to the community indirectly, which is the first task of the community library.

The library in the community exists, therefore, primarily to provide popular literature. The first test of fitness is soundness of idea, but second by only a short distance is popularity. Elevating taste is well enough, but the main thing is to get the same wholesome ideas into everybody. It is not to be denied that this often spells mediocrity and commonplace, but the secret of popularity is just this fact that the author rings the changes on what is familiar to all with just enough variety to enable it to be grasped by a pleasurable amount of attention—in short, what is not “over the heads” of the readers. It is that which reinforces what is more or less familiar and supplies added ideas in somewhat homeopathic doses, sugar coated, which contribute directly to community ideas. Read the popular stories trembling on the brink of the abyss to which the non-literary is relegated and you will find there the homely virtues, truth, patriotism, bravery, respect for woman, reiterated without one spark of new suggestion for any one who is highly educated, commonplace to a degree, but stuff of which to make a community indeed and of inestimable value for confirming the commonplace and educating those who are alien to these elementary things.

It sounds odd to say that the fundamental reason for the existence of the library in the community is to furnish commonplace literature, but it comes out at pretty nearly this point. Its fundamental duty is to furnish non-harmful literature that will be read by all. Books that will be read are not strictly commonplace—they are only commonplace to those to whom they are not interesting, and if they were commonplace to the readers they would not be read. These things work out their own salvation. If they are popular there is a reason for it, although the reason must be sought in folk psychology, and is out of the experience of the highly educated. It follows from this that as many copies each as will be used by the plain people of the most popular novels may be a proper and desirable investment for the community library, and even the chance of educating to better reading in this way is much better than dangling far over the heads of readers the lure of ineffable but incomprehensible beauties.

This does not, it must be repeated, deny the

importance of the indirect contribution of a library to the common body of ideas by providing those who will absorb better ideas with all the ideas that they can be induced to absorb. It does not deny either the value of furnishing technological books for the local trades or law or medical books for the professional men to enable these classes better to perform their task in a community. On the contrary, the community library properly serves every need of every man in the community in so far as the service of this man inures to the benefit of the community chiefly as distinguished from the self-interest of the man himself.

A public library exists not for the benefit that it will be to John Smith but for the benefit that the benefiting of John Smith will be to the community. It is because John Smith's improved education is of value to the community as a whole that public schools and public libraries supported by public funds are justified. It follows that if a book used by John Smith only will benefit the community more than another used by fifty other persons this book is more suitable for purchase by the public library than the much used book, for the measure of value of a given book to the community is not necessarily the number of persons by whom it is used, but the net product of value to the community. It is the same principle which justifies the public high schools and state universities. The College of the City of New York and the ever-teeming reading room at the Astor Library, for instance, are two of the most significant and directly valuable factors for American civilization and for the growth of American ideas that can be singled out. The importance of these to the community is out of proportion beyond their costs, and if the expense of the reference part of the New York Public Library were wholly borne by the community, it would be fully justified. It is, therefore, and must be, with this clear qualification that it is urged that the characteristic ground for the existence of the public library in the community is the direct increase of the common body of ideas, after the analogy of the free public schools through the grammar grades. It is the work of the circulating department, therefore, of the New York Public Library as distinguished from the reference,

or rather, perhaps, the work represented by the branch libraries as a whole in our cities and by the public libraries in the small towns as over against the large reference libraries, which is the characteristic work of community libraries.

The library in the community thus, private, corporate and public, exists for the education of the community, and the public or community library proper exists first of all for education in the common knowledge of the common branches, in other words in common ideas, which being translated in terms of the intellect spell common sense, when in terms of morals common honesty, and when looked at in the application to current problems in the community is to be recognized under the names of public sentiment or public opinion. Translated into its simplest terms thus a community library exists to enlarge the stock of common ideas and promote in this way the likemindedness of the community, or again to promote common sense, common honesty, common sentiment and common action.

The librarian facing this problem of the library in a community, considering both the community and the library's resources which may be applied to its education, is only at the beginning of his task when he has his building built and a stock of books well organized and ready for use. The real problem comes at this point in the question how to apply the instrument to the task—the library to the enlargement of the common ideas, the promotion of likemindedness in the community.

The ways in which he is to work may be generalized as twofold or as threefold, as co-operating with the schools and supplementing them, or as helping the school work, supplementing school work during the school age, and supplementing the work of the common schools when the limit of school age has been reached. It is a matter of universal acceptance at the present time that one of the most obvious and practical functions of the public library is to help the public school teachers in their task, and it is difficult to overrate the value to children of being sent to the libraries for supplementary reading and for the use of books of reference in the preparation of essays and of other exercises in language.

A still more important work of the library

in connection with the public schools relates not so much to helping of the teacher or the child in the essays and other tasks set by the teacher as in supplementing the work of the schools for children during the school age by supplying work for the overtime and over energy of the brighter mind. It is the nature of the common school work as it is of college education and all education in classes that the amount learned by a class is, roughly speaking, the amount which can be learned by the dullest-witted member who is allowed to keep a place in the class. The dullest members are, as the teacher says, holding the others back, and they must for this reason be weeded out now and then in order to allow the others to take a better pace; but this pace is always that of the slowest member, just as the progress of a fleet of war vessels is governed by that of the slowest ship. Therefore we strive after homogeneous classes and homogeneous fleets, but there is always, by the nature of things, an overplus of ability on the part of the majority of pupils, and it is this overplus for which the library provides. If, therefore, the public library fulfilled no other function in the community but to provide for this large amount of time and energy, by the nature of things not to be provided for in the school, it would justify a very ample community provision.

But the task of the library in the community is certainly far more than this. It is the life-long education of grown people. The library is the post-graduate school of the community. After the public school training is over the pupil, trained to the acquisition of ideas for six or seven years, is turned loose in a community to apply his tools for sixty or seventy years (for after all, what he gets at school is not so much ideas as tools for making ideas), and what is his raw material to work with? If there is no public library the graduate's material is confined to the books that he will purchase, and any one who has examined the collections in farming communities will believe that these depend largely on the book agents and their persuasive eloquence. It is thus of the most limited and curious composition, in the country, and in the cities it is likely to be limited (or perhaps as compared with the subscription books extended) to the newspaper.

To train a man for seven years to make shoes or machinery, and then turn him loose on the world without leather or iron to start with, is just what the community does in education when after a seven years' apprenticeship at books in order to learn how to add ideas scholars are turned loose on the community without a public library. Let them buy their raw material do you say? How many shoemakers or machinists do you think have the capital or constructive ability to buy materials and set up business for themselves? So it is of every common school graduate—only the few will find material and use his tools unless somebody furnishes capital, and it is for the community which has furnished the public schools to furnish the public library, otherwise tools will rust and ideas cease to be made.

It is not the purpose of this paper to go into the details of how a librarian shall fulfill his task either with the children or with grown readers. The task itself, as has been shown in the preceding considerations, is the enlargement of the common body of ideas in a community both by sowing wholesale and by working with individuals, supplementing deficiencies, prescribing specially for the defective classes in order to bring them up to the common standard, aiding those who are able to absorb ideas above the common, and all this for the sake of the common welfare. It is a task fitted to call forth enthusiasm and it is indeed a field which has called forth some of the finest enthusiasm of modern altruistic work, certainly of much aid within the profession. Say what we may of the love of books, the love of learning, the absolute madness which possesses men who search for the rare, the unique, the peculiar, and the highly adorned, there is no enthusiasm in the profession to be compared with that exercised in the public library for the education of the children and of the general community. Philanthropy and patriotism seem to unite in this to produce zeal, and it is probably fair to say that the greatest names in the American library profession are associated rather with the popular than the reference or still less the special library. Without discounting their work at Harvard University or at the Newberry it is the fact that the greatest work of

Mr. Winsor was in the Boston Public Library and of Mr. Poole in the Chicago Public Library. And if motive and altruistic zeal be analyzed still farther it becomes still more strong. The saying of the Sanskrit philosopher when he declares that "we are our thoughts, we are made up out of our thoughts," is one re-echoed by modern psychology and metaphysics. The body of our ideas is ourself, every change of the form or quality or number of our ideas is a change in personal character. The realization of this on the part of the librarian sets forth the very highest motive for work. Every idea imparted is a gift to a man, an enlargement of his being, a contribution to the wealth of the world; the librarian as a productive manufacturer of ideas is contributing to the wealth of his country and of the world concretely with every article manufactured, if so be it proves a useful and not harmful product. Every idea rectified is a rectification of character. Where then is there a greater possible appeal to the missionary spirit than this wholesale opportunity to build up human personalities?

The library in the community, from the librarian's standpoint is, therefore, an instrument for lifelong education of all the members of the community, an instrument for the development of a larger body of ideas of more complete likemindedness and thereby greater power of united action. This instrument the librarian is privileged to wield, and this privilege of forming human beings and influencing human society by shaping and increasing the body of ideas of each individual is at the same time his responsibility. The power of suggestion, the kindling of a multitude of well prepared ideas into immediate action by the quickening touch of a similar idea is the power which moves to all revolutionary if not to all evolutionary action. Imagine a community library containing only anarchistic literature on the one hand, and on the other one containing exclusively what we call sound American ideas. Figure the result on the community in a generation of said service in either case and you have the responsibility under which the librarian works in exercising his privilege of sowing and cultivating ideas in a community through the library.

THE ORGANIZATION OF A LIBRARY IN A SMALL TOWN: A PERSONAL EXPERIENCE

BY ELIZABETH D. RENNINGER, *Branch librarian, Brooklyn (N. Y.) Public Library*

THIS story of personal experience is offered not as a contribution to the technical literature of library organization, but as a simple chronicle of some of the processes and difficulties involved in starting a free public library in a small town—difficulties which probably form a part of the unwritten history of almost all libraries.

It was at a state meeting of librarians that the writer of this article learned that the small town of B—, in one of the Middle States, needed the services of an organizer for a prospective public library. This information was imparted by the newly elected librarian of the proposed library, and at her request, a correspondence with "the powers that be" was entered upon, the outcome of which was a request to undertake the work.

The proposed organization work was not to begin until January, but early in December the organizer spent a day in taking a survey of the field. It was found:

(1) That the library movement in the town had its origin in an agitation started by the Library Department of the local Civic Club, the duties of which were declared by the by-laws to be "to promote and encourage the interest in a public library; also to devise ways and means of earning money to establish the same." In furtherance of this purpose, it had been decided to give two entertainments a year, as a result of which there stood to the credit of the Library Department \$900. A legacy of \$100 left to the library by a friend made the available funds \$1000.

(2) Rooms had been rented, and a visit to them revealed additional wealth in the shape of four book-cases and a few less than one hundred books.

(3) Many of the members of the Library Department considered these assets too inadequate for a beginning and advocated delay in organization; but the majority had ruled that the work must begin not later than January of the ensuing year.

(4) Ideas as to the kind of library wanted

were very vague; but as near as could be ascertained the desire seemed to be for a little library of fiction to attract the mill girls. Before visiting, a set of questions had been formulated, which it was hoped might give some idea of the work done by the modern public library. They were as follows:

(1) Is it your desire to do the work of a regular village library?

(2) Will membership be at all restricted? If so, to what extent?

(3) Do you wish fiction to predominate in your selection of books?

(4) Do you expect to do reference work to any extent?

(5) Do you care to do any work with the schools?

(6) Do you expect to have a juvenile department?

(7) As you cannot make all departments equally strong, for what class of people do you wish to make the library most attractive and helpful?

(8) Do you wish to make any departments strong with a view to helping club workers?

A thorough discussion of these questions with the head of the Library Department resulted in the decision that an all-round library on a small scale would be most desirable. The organizer acquiesced, but was seized with a wild desire to be brought face to face with the parent trying to support a family of twelve, in luxury, on five hundred a year, in order, by comparison, to convince him of the perfect simplicity of his task. This consolation was denied, but the problem still remained. After considerable calculation and thinking, the idea suggested itself that possibly a "book reception" carefully planned and carried out might be a means of securing a creditable, all-round collection; and after outlining the scheme minutely, it was submitted to the head of the Library Department for consideration. The scheme provided for:

(1) An in-town and an out-of-town request book which should contain names and addresses, with price of book requested opposite each name. The preparation of these books

was to be the work of the Library Department, and they were to be ready by January.

(2) Slips containing author, title, publisher and price of books wanted; and the drafting of a circular to accompany the slips. This work was to be done by the organizer and was also to be ready by January.

The remainder of the work in connection with sending out the circulars was to be done by the Library Department in order to save expense, and was to be rushed right through without delay.

The scheme as outlined was presented to the Library Department, and it was voted to undertake it.

During December library supplies were decided upon, prices from local printers secured where possible, and orders placed both with them and with outside firms. This work was decidedly a task. The importance of choosing supplies upon a basis which would allow for growth, no matter how humble the beginning, was fully appreciated, and it was also desirable that in this as in other particulars the library might not be a blind leader of the blind, in view of its being visited and patterned after by neighboring towns when they decided to have libraries. In addition to the supplies, \$900 worth of books which were to form the nucleus of the library were selected, and hundreds of slips were prepared for the book reception work. It may be interesting to note how, without a library at command, this work was accomplished. The classed list of the "A. L. A. catalog" was used as a basis; this was carefully gone through and slips made for all books to be included, the slips being kept by classes. A file of the "500 best books for a village library" supplemented the A. L. A. list, bringing the books up to date. There were also used special lists such as the Buffalo Public Library fiction, school-room, and juvenile lists, the Pittsburgh lists, particularly the "100 interesting biographies"; the Pratt Institute lists; Miss Hewins' "Books for boys and girls," etc.; and the "United States catalog" for prices.

When the work of making slips was finished, a classed list, made up of the cream of the collection, was prepared, to be submitted to the book committee for purchase. Getting this list worked down to the money limit was an almost hopeless task. Finally it

was submitted, still too large, with instructions to the book dealer to purchase to the money limit, giving preference to certain of the more popular classes of books. The remainder of the slips were arranged in bundles, according to price, to be used for the book reception. By devoting the entire holiday season to this work, everything was finished in time.

According to the plan so carefully drafted when the organizer reached the town she was to find supplies and books on hand, in order that there might be no delay in getting to work. She was also to find the local part of the book reception work completed. What she actually did find was, a cold room with the steam pipes not even connected; the book order not yet sent off; the book reception work not in shape and no one doing anything; the out-of-town supplies the only ones on hand; the head of the Library Department out of town.

The first step, as it was bitterly cold weather, was to get some heat; the next, to have the local printers send in the balance of the supplies, and to interview a newspaper reporter. An appointment with the chairman of the book committee was also secured, and after some talk it was discovered that the reason the book order list had been held up was because it was not all fiction. The "why" of the list was carefully explained and at last, very reluctantly, the chairman agreed to send it off without any changes. The work of accessioning the books on hand was then begun, together with the revision and completion of the request books. In a few days the head of the Library Department returned, and then the local end of things began to move.

It soon became evident, however, that the library outlook was not altogether reassuring. Talk with the town-folk and with the club people seemed to indicate a state of things about as follows:

(1) As near as could be learned, there seemed scarcely a single individual interested in the library except in view of personal considerations.

(2) The movement was supposed to be in the hands of a clique and it was currently said that in consequence the majority of the people would have nothing to do with it.

(3) The men of the town had no faith in

the movement as being anything more than a fad which would run its course, and then die a natural death, just as other attempts at library founding had done; and they cited as an example the old library company to whose books the new library had just fallen heir.

(4) There was division in the Library Department of the club as to whether the time was opportune for a beginning, and it appeared that those who had voted to start work at once were the ones unwilling to do anything, now that the ball had been set rolling.

(5) Instead of the corps of enthusiastic workers the organizer had been led to expect, there was no one to do any work except the recently-appointed librarian and the organizer.

(6) And last, but by no means least, there were personal, class, church, and club jealousies and factions to be reckoned with, which it was readily to be seen would not simplify matters.

The more plainly the outlook revealed itself the more evident it became that the one hope for the library was to get the solid middle classes interested in it, and as a consequence, the book-reception idea was embraced with renewed zeal; for it was recognized that, independent of financial returns, the feeling of ownership which the giving of books would inspire would mean more to the real success of the library than any amount of money. It was also decided that the one way to win the public over to the library movement was to take it entirely into the confidence of the library workers through the local press.

As has been said, one of the first things done was to interview a newspaper reporter, and from this time on there were "Library notes" in the papers almost every day. At first, bits of library news, gifts, books received, etc., were chronicled; then longer articles were written with a view to working the public up to a point where it would understand what the aim of the modern public library is, its place in the scheme of public education, and its right to equal support with the public schools. Of all the varied incidents of this organization experience that of the "star" newspaper article was perhaps

most amusing. That it was a "star article" became known through the reporters who let us into the secret. Thinking it would be worth the trouble, statistics from all the neighboring libraries were secured, and with this material as a basis, an article entitled "Our library neighbors: the place our library will occupy among them" was written. In this article the population of the respective towns was stated, the number of volumes with which the libraries opened, their growth, average circulation, means of support, etc., were cited, and with this as a text the motive, "civic pride," was worked into a composition which it was thought ought to be quite effective. The writer of the article was particularly pleased with the title, and opened the *Morning Press* thinking how well it would look in print. But alas for human vanity! Under a different heading, with an introduction which informed the public that what followed was to be credited to the enterprising *Press* reporter, appeared the article, word for word. But the end was not yet, for when the *Daily* came out in the afternoon there was the article again, under still a different title, with another introduction in which the *Daily* reporter claimed the honor.

One month after the real work of organization had been taken up the library issued the following circular:

LIBRARY ROOMS OF THE B—— PUBLIC LIBRARY

"DEAR M——:

"You are perhaps aware that for some time past the Civic Club of this place has been working with the view of establishing in B—— a free public library to be used by the citizens of this and neighboring communities. The library will be entirely free to the citizens of B——, and its privileges may be enjoyed by people of the surrounding towns through the payment of a fee of one dollar per year.

"As a basis of organization, the Library Department has at its disposal a small, but valuable collection of books donated by the Century, the Ivy, and the Wednesday Clubs, and by people interested in the founding of a public library, the books belonging to the old Library Co., and \$1000 in cash—a sum altogether inadequate for meeting the expense of the necessary library supplies, library furnishings, cost of organizing and cataloging the library, and the purchase of a sufficient number of well-selected books to make the

collection one for which the citizens of B— need not blush.

"The library ought not to open with less than 3000 volumes, since 5000 volumes is considered a very humble beginning indeed for a public library of a town the size of B—; with the funds now at the disposal of the committee, however, it is very doubtful whether the library can open with 2000 volumes. It is necessary, therefore, that those for whose benefit the library is to be established show their interest and appreciation in so practical a way that not only a creditable library opening may be celebrated some time in March, but that the future support of the library may be also in a way provided for.

"In order that at the time of opening there may be a large collection of valuable books upon the shelves, the Library Board has decided to ask each citizen of B— to contribute a particular book desired for the library. Will you, therefore, show your interest and goodwill by presenting to the B— public library, *not later than February 22nd*, the book described on the enclosed slip? We designate a particular book and give data of the same, in order to avoid duplicates, to save trouble to our donors, and that we may provide material for a well-rounded, helpful library. If the book requested be too high or too low in price, we should be glad to substitute another which would make that item satisfactory.

"That the library may profit by the discount given on large book orders, it is requested that where possible the book asked for be ordered through the Library Department. A check mailed to the library, or the price of the book handed to one of the committee, will save the donor further trouble in the matter, and will mean additional revenue for the library. Each book received, and all checks will be acknowledged through the columns of the local press, each donor's name will appear upon the book-plate of the book presented, and an invitation to the library opening will be extended.

"The exact date of the library opening cannot at present be stated, but will be announced later in the daily papers. To this reception, not only donors who respond to this circular, but all those who have in any way contributed to the library will be invited. The library will be thrown open to its guests from 9 a.m. until 10 p.m. on reception day, its workings will be explained to those interested, and there will be music, addresses, and refreshments. The library committee would appreciate an immediate response to this circular, because they wish all books donated to be cataloged and on the shelves by reception day in order that the library may be thrown open for the circulation of books the day following the formal opening.

"In addition to the particular book requested, the library committee will gratefully

receive any other books suitable for the shelves of a public library; also current or back numbers of the standard magazines. A complete file of such bound periodicals as *Harper's*, *Century*, *Atlantic*, *Scientific American*, etc., is most desirable for the reference department. Search your garrets, therefore, for in them we think you have 'periodical riches' for the B— Public Library.

"We have asked you (1) to contribute a particular book, (2) any other books suitable for the shelves of a public library, (3) periodicals bound or unbound; we ask in conclusion: Can you not afford to endow the library or some particular department of it? The Wednesday Club has promised a yearly endowment of \$25 for the periodical department, an endowment of \$50 per year has been secured for the reference department, and also an endowment for the children's department has been promised. This is good, but we still need endowment for the maintenance of the library, and among others for the following departments: science, medicine, music, art, history, biography, travel, and to enable us to start foreign collections. Will you not think this matter over carefully, and decide upon the yearly endowment (however small) of some department of the library in which you are specially interested?

"In closing we ask you to remember that the library has been started for no one particular class of people, but for the citizens of B—; that as citizens of B— you should take pride in it and make it the best library in this section; and that a warm welcome will always await you at the library rooms."

The library was exceedingly generous in the number of circulars sent out to townspeople. The out-of-town list was also large. No one escaped from whom it was thought anything could be secured, and the sending of circulars went on continuously up to the time of opening in June. One of the most happy inspirations was that of including all the babies of the town, asking them to contribute the little Lang fairy books, or something equally attractive and inexpensive. Mothers who, up to this time, had held resolutely aloof from the library movement because they were not sufficiently recognized socially, because they had a grievance against some club or church member, or for some other equally weighty reason, succumbed to this form of persuasion, and contributed for themselves and babes. The different clubs and organizations were not let off so easily, expensive sets of books being suggested to them.

As returns from the circulars began com-

ing in there were most interesting times. The first contribution was a check from a near-by saloon-keeper. He had been asked for a \$1.50 book but sent a \$3 check and a letter wishing the library success. Many people brought their money or books to the library, and although the library workers were very busy, an effort was made to explain the library idea to each one in order to interest them still more. That experience of opening circular returns was unforgettable. There were so many surprises, and so many interesting letters, some of them very funny, some absurd, and a few pathetic in their simplicity and good-will. Often the money came from quite poor people who wanted their children to have a better chance than they had had, and who had denied themselves in some way in order to give the book.

During this period, a hard day's work at the library was generally followed by a busy evening. After dinner, the cash account was first straightened out, and then the list of the day's donors was prepared. When more money than had been asked for was given, additional slips had to be made in order to keep the money accounted for in books as well as in bank. Then "Library notes" were written. Each day press announcement was made of the sum total in cash and checks, a list of the day's donors, the number of books given, etc. It must be confessed that here the weaknesses of poor human nature were slightly taken advantage of. If to-day Mrs. W. gave a set of the American poets, that fact appeared so attractively in print, that to-morrow Mrs. Z. was moved to give something equally desirable. If the Knights of the Golden Eagle sent a check for \$10 and that fact was chronicled as the most generous check yet received, perhaps to-morrow the Masons would send a check for \$10.50.

As has been said, the voluntary workers who had been promised did not materialize. The library was fortunate, however, in securing the services of two most capable women who gave almost their entire time. The librarian, too, worked admirably under most discouraging circumstances. The public, naturally, could not understand why the library should not be opened at once, and it was no easy task to keep the people good-natured and generously inclined long enough

to allow the workers to get things in shape. It is unnecessary to inform librarians that the amount of work entailed in connection with the book reception alone, to say nothing of the task of creating, organizing, and cataloging the library, was not slight.

The problem of raising money sufficient to meet current expenses was a serious one, but the head of the Library Department solved it in a masterly way. With an empty treasury, there were payments to be met for rent, salaries, book cases, furniture, etc. It was almost literally an experience of being fed by the ravens, for though no money was in hand, yet every time a bill had to be met, somehow at the last minute the money was there. No one knew how often the head of the Library Department drew upon her own purse, but, above all, she understood how to get work out of her associates. From January until June the Library Department received through private and club donations, concerts, rummage sales, rubber sales, cake and pie sales, suppers, fairs, etc., almost \$300, which enabled them to turn the library over to the board of directors free of debt.

In the summer of the previous year the town had celebrated its centennial, and what is most unusual, a surplus remained when the expenses were settled. The club women had been largely instrumental in making the celebration a success, and now wanted the remaining funds for the library. There were, however, other aspirants for the privilege of spending this surplus, among them: the firemen who wanted it for a new building; prominent newspaper men who favored the printing of a book which should be a souvenir of the centennial; the City Fathers who were said to have set their hearts upon it, for a memorial in the shape of a "bust"—it was not specified whether the bust was to be of themselves, of the mayor, of the centennial itself, or some other variety. The library's chances among such powerful rivals were not particularly promising, but the ladies lobbied diligently, and as they hoped to some purpose. It had been decided to turn the library over at the opening to a board of directors, which the ladies at once proceeded to elect. Of the six men put upon the board, three had a vote as to the disposal of the centennial fund, and when the time came for

the question to be settled these three men awoke suddenly to a realization that it would be hardly possible for them as directors to vote against the library's formal petition for the money—a petition which one of them was asked to present formally to the financial committee of the city council. The library people were not hopeful, but on the evening of the council meeting they received the joyful news that the library had been awarded the entire sum of over \$1100. The money was so tied up that only the interest could be used for current expenses, but the principal might be used toward a library building or site. The most gratifying feature of the affair was its indication of confidence in the library as a permanent institution.

The library opening was finally set for June. An all-day reception was held, light refreshments were served, and the library was explained to those interested. The rooms looked most attractive, being decorated with palms and ferns. The reception closed at 5 p.m., but at eight in the evening a general mass meeting was held at the court house. The program included the transfer of the library management from the Library Department of the Civic Club to the board of directors, and addresses by prominent local speakers and the state librarian. After the mass meeting a reception was held at the library rooms for the speakers and the new board of directors. A guest book was one of the features of the day, and later it became a part of the local history collection.

The book reception netted the library about \$900 in cash and checks, and 1500 volumes, most of which were attractive books. The library opened, therefore, with almost 5000 volumes in sight. Among the donations in books were, from one friend a large number of important and handsomely bound government sets; from another a number of rare books for the local history collection, a library scrap book which contained clippings of all articles appearing in print about the library, a valuable collection of bound magazines, and several of the most important series of the state archives.

Although the library opened with assurance of nearly 5000 volumes, all of these were not cataloged, some were not even ordered, and as

the circular returns kept up even after the opening, considerable work remained to be done. There was no rush to register and it was only gradually that the circulation grew. A great deal of newspaper work was done, advertising particular classes of books, printing suggestive and helpful lists, etc. There were placed in the factories, mills, stores and railway stations posters advertising the library. Personal letters were sent to the normal and public school principals stating the ability and willingness of the library to co-operate with them, and effort was made to reach teachers individually. The different study club year-books were carefully gone through and lists prepared showing what the library had to offer in the way of books and periodicals upon each topic. The club people were amazed at what the library could do for them; and it was possible to do a great deal, because in ordering extra books all the programs had been gone through and material provided when necessary. In spite of all this, the growth in circulation was not rapid; it moved steadily along, growing day by day. Inside of a few months, however, the library was able to report a larger circulation proportionately than that of its nearest neighbor, with interest still increasing.

The work of creating and organizing the library occupied just one year. At the end of that time the library was completely cataloged, with the exception of the government documents, the work in good running order, and the helm in the hands of the librarian and an assistant. The work had been the hardest and most discouraging of any in the organizer's experience, and it is to be feared had she known its scope at the outset she might not have undertaken it. But the thought that long after any individual connected with it may be forgotten, the influence of a given work will go on broadening, strengthening and cheering the lives of hundreds of people whose environment naturally restricts their horizon, ought to be compensation sufficient for almost anything. The moral of this chronicle is that what this small town did, every small town could and ought to do; that the doing is well worth while; and that the state should lend a helping hand.

OPPORTUNITIES FOR BIBLIOGRAPHICAL WORK

Part of the address of William C. Lane, president Bibliographical Society of America, at the meeting of that society, Baltimore, Dec. 28, 1905.

WE must remember that the bibliographer may have one or more of several distinct interests. He may be a student of the history of the art and craft of bookmaking, bent on throwing light into obscure places and on unravelling knotty points connected with the early history of typography, interested in tracing the connections of successive presses and in studying the improvements made by successive printers through the ages, watching the alternate rise and fall of good taste and of artistic and mechanical excellence in book production—in short, a lover of the book as a book; he may or may not combine with this a love of books for what they contain and for what they have given to the world, but if he has not cultivated this side of his pursuit, he has missed the most humanizing aspect of his study and is the poorer as a man.

On the other hand, the bibliographer may be primarily a recorder of the production of books, either past or present. This work of recording he may do first of all as a statistician producing a mere list of titles, and when I say a mere list of titles, I do not mean to disparage his work. Such lists are essential preliminaries, and they require the exercise of infinite patience and accuracy. Or he may do his work of recording with the authority and grasp of a specialist in the department to which he devotes himself, and then he is called upon to exercise the higher qualities of discrimination, compact statement, clear arrangement, and strict subordination of the less to the more important. With these qualities at his command, he produces something more than a mere tool, he furnishes for other scholars in his own field a clue in a veritable labyrinth and a guide to an ever increasing mass of publication. Or finally, a bibliographer may busy himself, not with showing in what books certain facts or discussions are to be found, but in what libraries these books are to be found, a point of the first practical importance to the student.

Surely our society should include all these classes—the booklover, the recorder of titles, the competent guide, and the directory-maker, as I may call the last variety of bibliographer for lack of a better term. Each can broaden the view and improve the methods of work of the other if all are brought together in some sort of association.

So important and so varied are the bibliographical needs of the present day that we see many agencies already engaged in bibliographical undertakings, and it might be thought no place was to be found for a new body like our society. We must be careful not to duplicate and not to interfere with

work already well established. There are in the first place, certain great schemes already under way, conducted by bodies organized for the purpose—the International Catalogue of Scientific Literature inaugurated by the Royal Society, the Institut International at Bruxelles, the Concilium Bibliographicum of Zurich, and a number of other undertakings directed to the publication of bibliographical material in a single field.

The American Historical Association itself has a bibliographical committee, which published last year a preliminary report on material for European history in American libraries and is now preparing a check-list of historical periodicals and of printed collections of sources, showing in which libraries each set is to be found. Such work is of the highest practical service to the student, and similar work might well be undertaken by our society in other fields. For the support of costly bibliographical publications, if of broad usefulness, we can probably look more and more to the Carnegie Institution, which has already assumed the expense of publishing the *Index Medicus* and an annual bibliography of "Writings on American history," and we are hoping soon to hear that the same institution will take up the continuation of Sabin's "Dictionary of books relating to America."

The Publishing Board of the American Library Association has already printed several bibliographical works, and with the Carnegie Fund behind it, will be able to provide for many bibliographies of a popular type of a kind to be widely useful in public libraries. Numerous publishing societies and book-lovers' clubs issue choice reprints of scarce and out-of-the-way books; and publishers are beginning to find it profitable to make facsimiles or accurate reprints of those rare books which both libraries and private collectors regard as historically important.

Probably the Bibliographical Society, at least for the present and while it enjoys the use of only moderate means, cannot properly take up any of these forms of activity. It cannot carry the burden of elaborate publications which require a large investment of capital, it need not issue popular bibliographies designed primarily for public library use, it should not devote itself to reprinting rare books.

What is left in which it can render service? Three openings occur to me now, and others are likely to appear as we proceed. It can provide a medium for the publication of bibliographical articles of an historical or descriptive nature. A periodical devoted to bibliography may some day be possible; in the meantime it can publish in its Proceedings contributions of a bibliographical character.

There is at present no satisfactory record of current bibliographical work. A compre-

hensive, accurate, annotated and classified annual record of published bibliographies would be of the greatest service to all students; to produce and publish such a record, or to secure its publication by some competent hand, should, in my opinion, be one of the aims of this society.

A society can often accomplish what an individual cannot, because it can secure co-operation, the work of many individuals directed to a common end. In this way bibliographies of the directory type can be compiled, for which it is quite impossible for an individual working alone to secure the necessary information. A check-list of incunabula in American libraries, catalogs of mediæval manuscripts, of early newspapers, of special collections, of periodicals devoted to a special subject, and of various other specialties as represented in a large number of libraries, are all work that can be better done by a society than by an individual. Finally, if our work approves itself to scholars, if our undertakings are prudently entered upon and wisely conducted, if our standards are high, it may come to pass in time that the advice of this society, or of its board of officers, will be relied upon and our counsel sought by other societies and institutions in the direction of large bibliographical enterprises. For this, however, we cannot put forth our hands, we must wait until others require it and begin to look to us naturally for it. And that will depend upon the wisdom with which we make our plans now, and the thoroughness and discretion with which we carry them out.

THE PUBLIC LIBRARY'S AIM IN BOOKBUYING

THE series of short articles and expressions of opinion given in the last (January) number of *The Library* under the title, "The municipal librarian's aims in bookbuying," form a most interesting contribution to the long-vexed question, Shall public libraries provide ephemeral fiction? While this subject has been often discussed, it has a perennial timeliness and this latest presentation of its various aspects contains so much that is interesting that we give a full statement of the points brought out, and extracts from the chief opinions quoted.

The question is opened with an article setting forth "The educational ideal: the best and the best only," signed by "A municipal librarian." The writer points out that the object of the municipal library is to help to give a liberal education to the people, to make, in fact, not scholars, but intelligent citizens. The criticism, he says, is constantly expressed that public libraries employ public funds to circulate trashy fiction, and speaking on behalf of some hypothetical "well-informed outside critic" he asks what justification there is

for the circulation of the voluminous works of Miss Worboise, Mrs. Henry Wood, Miss Braddon, Guy Boothby, Mrs. Hungerford, Fergus Hume, Headon Hill, Florence Warden and their congeners? If it is answered that the readers who like these books contribute to the support of the libraries and are therefore entitled to have the books they like, the reply is, Then what becomes of the glorification of the public library as part of the national educational machinery? The writer continues:

"When driven into a corner by questions like these, shall we not do well to own that attempting too much is the most crying evil of public library administration? In the home reading department alone we fail in every single aim. In no way can we supply all the light literature on demand. In no way can we buy all the new books 'hot from the press,' nor provide a sufficient number of copies to satisfy all the readers who ask for them. In scarcely a single library is the collection of good 'live' general literature so strong as it should be. In scarcely any library, perhaps in none, is the technical collection complete to date, well arranged, properly cataloged and adequately advertised. The obvious remedy—and the only remedy within our power—is to impose some limits upon our activities. By ceasing to buy books hot from the press, by stocking the best fiction only, we should in quite a short time save enough money to make our collection of good general literature as strong as it ought to be. The demand for a standard book ought to be met with as near an approach to certainty as possible, and the money saved by ceasing to buy bad novels would be well spent on the purchase of additional copies of good ones, exactly in proportion to the demand. Probably, in a library issuing some five hundred volumes a day, only some £15 a year would be required to buy an additional copy of every really good book asked for when the existing copies were all in use, and the encouragement to readers would be immense.

"Economy in other directions, again, might well lead to the purchase of many more books of the class which fall below the dignity of standard works but provide a useful and, as far as they go, an adequate treatment of popular subjects—books of travel, small, well-illustrated biographies of great men, popular books of nature study, books on industries and inventions by competent writers, or on social questions and the home life of foreign countries.

"While the general library is strengthened in this way, by limiting the money spent on expensive and little-used books for the reference library, a good technical collection might be built up, and this again would prove a great attraction to the best class of readers.

"There is nothing new in the views here expressed, but amid the temptations to stray

into countless other paths we need daily to remind ourselves that a municipal library is a teaching institution, differing only from other schools in its more liberal curriculum. As a teaching institution our motto should be the best and the best only, but the best without stint, and we should exclude any recreative purpose which does not also make for education."

This statement of "A municipal librarian's" views is used as the text for the succeeding contributions. It is followed by "A plea for elasticity," in the nature of editorial commentary, which points out the pertinence of the inquiry proposed, and continues:

"The two questions which we would propound are: (1) Does the educational usefulness, which every one is agreed that municipal libraries should possess, constitute their whole legitimate scope? (2) Is it consistent with educational usefulness for a library to circulate silly novels? On each of these questions we find ourselves at issue with our contributor.

"As regards the first he appears to us to err from an excess of logic. Because the municipal library is the best of all adjuncts to the municipal schools, he would deny its right to any aims that are not directly educational, whereas in our view a municipal library has also a right to consider itself, within limits which the ratepayers in each district must determine for themselves, a co-operative book club. Undoubtedly in so doing it comes under the censure which made Count Tolstoi declare that there is no more real liberty in England than in Russia, because residents in some English seaside resorts are rated for the support of the municipal band, whose performances they detest. But in England we have a way of looking to general effects, and if the general effects are good we acquiesce in many things which are not strictly logical. The performances of the Christchurch band are believed to make the town more attractive to visitors, the visitors help the hotels and the lodging houses to pay a much larger share of the rates than would otherwise be possible, the burden on the private resident is thus lightened, and though part of this burden is for a band which he dislikes he is not really injured. . . .

"In the same way a popular municipal library by providing a fresh center of corporate life makes the whole district more attractive, even to the extent, it may be, of keeping up the value of house property, and thus indirectly benefits all the ratepayers. To what point the venture should be pushed each community must determine for itself; but the trend of politics is not in favor of the man who objects to joining the majority of his fellow citizens in any venture unless he sees that his own immediate share of the profit will be as great as that of the neediest of them.

"As regards the circulation of silly nov-

els two points may surely be made. In the first place there are low forms in schools as well as high ones; and secondly, there is no compulsory Education Act as applied to reading. If librarians want to educate their readers they must first get the readers and then educate them, and that only by gentle steps. 'The best books and the best only' has an exhilarating ring as a motto; but readers who will flock to read the best books are in little need of educating. The readers of penny novelettes are the lost sheep whom the librarian has to reclaim, and he will not reclaim them by an immediate course of George Meredith or even of Scott. Let him lead them gently on, as Mr. Crunden recommended in that remarkable series of articles on 'What one American library is doing' in our first volume. Let him paste in his worst novels the names of others that are a little better, and in these the names of others that are a little better still, and so conduct his sheep to whatever he may please to regard as the best pastures. Not all of them will follow his suggestions; only a few perhaps will be led from historical novels to histories, and from stories of mining life to mineralogy; but whatever movement there is will be in the right direction, and to tempt readers of the worst books to try others that are a little better is surely as educational a process as to supply the best books to those who are already educated enough to ask for them."

"Other opinions" follow, representing a number of distinguished contributors, who are fairly enough divided among those who believe only in the educational aspect of the library, those who advocate its recreational value, and those who favor a middle course. The following extracts fairly represent the different arguments:

Dr. Thomas Hodgkin, former president of the Library Association: "Without trying to strain the intellectual note too high, I think that libraries supported by a compulsory rate should have a high conception of duty, and should not waste their ratepayers' money and their readers' time by providing mere rubbish for their consumption.

"What I am going to say is thoroughly illogical, but I should greatly limit, without wholly excluding, the Worboise-Wood-Bradson class of fiction. It seems to me monstrous to think of buying the whole output of these authors, or half or a quarter of it. I would have one or two specimen volumes ('Aurora Floyd,' I suppose, for Miss Bradson, and 'East Lynne' for Mrs. H. Wood; I do not know the names of any of the other lady's novels), and I should stop there, saying virtually to my readers: 'Here is a specimen of the sort of fiction these ladies write. If you care for more of it, you can go to a circulating library or buy a cheap edition for yourself; we don't think it is good enough to load our shelves with it.'

"The argument of the pleader for elasticity does not convince me. I think there is a justification for the state taxing the well-to-do citizen to provide intellectual *food* for his poorer neighbor, but not to provide him with a pipe of intellectual opium."

Sidney Lee: "I do not think that public funds ought to be applied to the provision of such frivolous amusement as ephemeral fiction affords. Public taste in literature seems to me to be at the moment at a low eb. Municipal libraries constitute in my mind a public danger, if those who choose the books for them are content to echo the voice of the majority, or deem themselves under some obligation to satisfy the demands of prevailing ignorance rather than to seek to counteract or diminish it. No sensible man or woman can object to fiction of genuine literary excellence. But I believe that the municipal library will not prove of much service to the community unless the money available for the purchase of books be fairly evenly distributed over all departments of sound literary endeavor. The function of bookbuying for municipal libraries should be exercised solely by the fitly trained librarian. I think it would be a wise rule to buy no work of fiction until it had been published for at least a year. Every step taken to render the empty novel more difficult of access to the uneducated is as much to the public good as every step taken to make literature that has stood the test of time easier of access. The likelihood that a young uneducated reader who finds it at the outset easy to procure a worthless book, will be induced to improve his taste hereafter, is very small. For the municipal library to seek to compete with the popular circulating library is to pervert altogether the municipal library's just aim. If the tired clerk or typist cannot find recreation in reading books of some literary value, I judge it in their own interest best for them to give up reading altogether, and find recreation in some other way."

Sidney Webb: "The question with which *The Library* need concern itself is not whether public libraries have or have not the right to purvey recreative or amusing books at the expense of the rates. Why should not the citizens collectively provide themselves with recreative or amusing literature, if they choose, at whatever level of taste or culture they may have attained? It is not even 'municipal trading.' The use of the municipal organization to enable the citizens to supply themselves with novels — if they want novels — is exactly on a par with their use of it to provide themselves with art galleries, flat stone sidewalks, street-watering in dusty weather, swimming baths, open spaces or town halls. All these things (and everything else that the local or national government has ever provided) are objected to by one or other involuntary contributor to their cost. Every

one of them can be shown to be unnecessary to the existence of the state, for states have existed without them. The short answer to such objectors is that they prove too much; that their belated administrative nihilism necessarily condemns the very existence of public libraries as much without fiction as with fiction. There can be no more justification for compelling dissentient ratepayers to bear the cost of books of which this or that sententious critic approves as useful and desirable than of books of which such a critic disapproves. There is absolutely no argument, on grounds of economic or political science, why public libraries should not purvey recreative or amusing books, if the ratepayers so desire.

"The practical question is whether the librarians, and members of library committees, are doing all they can to make their institutions as useful to the community as possible. There is, of course, a demand for fiction. There would be a demand for the literature that contravenes Lord Campbell's Act, if librarians would consent to supply it. What the committees and librarians ought to do is to regard as their masters and rulers the citizens of the town, not in their capacity of borrowers of books, but in that of electors at the polls. The public library committee and its librarian ought, that is to say, to carry out fearlessly the trust that is imposed upon them; to do what they themselves think best for the community as a whole, subject only to securing the necessary public assent, as manifested at the annual election of town councillors.

"Now, there are various things which public libraries are not, as far as I know, usually doing, and to which I should like their attention directed. They would, in my judgment, be open to serious criticism if, merely pandering to the crowd of frivolous readers who are not their rulers, they were to purvey inferior fiction, to the detriment of their other functions. Are our public libraries, for instance, beyond reproach in the performance of their duty as centers for the collection of all local printed matter — not only books about the place and books printed in the place, but also pamphlets, reports, and publications of local societies, minutes of local governing bodies, documents connected with the local theater, prison, workhouse, churches and chapels, schools, bazaars, lectures, etc.? Has each of our public libraries chosen its own subject to specialize upon, taking care to be well provided and up-to-date in that subject?

"Are they doing everything that can be expected from them in the service of the local schools and colleges, the local continuation classes, the local University Extension courses, and any other lectures delivered in the place? Are they, each of them, the best source for information on the principal local industry?

"Public libraries must, in fact, choose what

position they will take up. They are quite within their rights, if the local electors will stand it, in becoming wholly or principally purveyors of fiction for frivolous readers. But if they do this—and in so far as they do this—to the neglect of more serious duties, they forfeit their claim to any higher position than would be filled by a municipal peep show."

John Ballinger: "The whole question turns largely upon what a public library is. If it is an adjunct to other educational institutions, and that only, then the scope is narrowed down to a fine point, and the plea for 'the best and the best only' may be realized. But would such a library justify its existence as a separate rate-supported institution, with a staff of trained officials? Would it not be better and cheaper to supply to each educational institution the books suited to its needs?"

"The basis of the public library is wider, and its aims higher. When the schools and colleges turn their students out into the world more or less equipped for the life before them, the schools and colleges have finished with them, and they are left to their own devices. They have all been taught to read, and to look to that as a road to acquiring knowledge and a means of recreation. A favored few have reached the higher planes, and may be left to indulge their cultivated tastes. But what of the many? They are of all grades. There are many stages of education, and many degrees of the human mind. Is the public library, supported by the contributions of all, to provide only for a class, and that class the favored few who need its supplies and assistance least?"

"I believe with all my heart that the habit of reading is a blessing. If a book enables a sufferer to forget pain, a tired worker his cares, or a woman her household worries, then it gives refreshment to soul and body, which is so much to the good. Why then trouble about the exact place on the literary plane of the book which refreshed the spirit? We do not condemn preachers who fail to reach the standard of Liddon or Spurgeon. No one inquires whether the visitors to a park admire only the choicest flowers. Nor do we hear objections to museums and art galleries because many of the visitors are mere idlers, and utterly fail to appreciate the higher scientific and artistic aims. For one serious student in the majority of museums a library can produce a hundred or more.

"I would gladly level up the standard of the books admitted to public libraries, if it could be done without loss of readers. To exclude what is pernicious is the most that can be attained under existing conditions, and I doubt whether the conditions are not become worse instead of better. The decline in the quality of the reading matter supplied by newspapers and magazines is considerable,

and has a very injurious effect upon the reading public.

"All these things must be taken into account in giving an opinion. There are so many stages in the work of a public library, from the humble but most useful provision of a branch reading room and library in a poor suburb up to the reference library. To despise any link weakens the whole chain. Let us ask ourselves what would happen to the readers of Mrs. Henry Wood's novels if these were withdrawn. Would they read George Meredith instead? . . ."

Dr. Richard Garnett: "If the questions propounded in 'A plea for elasticity' are to be understood and answered in their strict literal sense it seems impossible to return any but an affirmative reply to the first and a negative to the second. But questions and answers are subject to so many qualifications that a mere yes or no would be merely misleading. It is certainly the fact that a public library is as much an educational institution as a public school is. But it is equally the fact that recreation is an important though a subordinate part of education, and that both the school and the library must recognize it as such. The danger of taking too narrow a view of the functions of a library is shown by the decay of mechanics' institutes, due in great measure to their libraries and their arrangements in general being of too exclusively educational a character. The craving of human nature for amusement cannot be safely ignored. No one would object to a public library's possessing books on chess, cricket, and billiards; and it seems illogical to admit recreative books from which the reader may obtain a knowledge of games, and refuse books from which he may in some measure obtain a knowledge of life.

"This remark, however, concedes that in selecting novels for a public library some attention should be paid to their educational value. It is plainly incompatible with the functions of a library to circulate 'silly' novels. But the librarian's censorship should be exercised in no narrow or pedantic spirit. The works of the three authoresses first mentioned in 'A municipal librarian's' paper are by no means 'silly,' but are adapted with much skill to meet the taste of a large body of readers unable to appreciate fiction of a higher class, and are actually useful in so far as they depict phases of modern life with spirit and accuracy. It is doubtful whether as much can be said for the other writers mentioned; still they should not be condemned unheard, and it must be remembered that even a bad historical novel, or one whose scene is laid in a foreign country, may be of service by conveying information and stimulating curiosity.

"In fact, the evil is not so much that the public read too many novels as that they read too few other books. The issues of novels from free libraries are not excessive in them-

selves, but appear so from their disproportion to the issues of other classes of literature. If twice as many books of information were issued, the circulation of fiction would cease to excite remark. Even as things are, it is to be borne in mind that standard works, as respects lending out, are at a disadvantage with novels because so many are reserved for the reference library; and that the return and reissue of novels are rapid, while standard works are, or should be, retained a considerable time for careful reading. The librarian, therefore, who desires to disarm the adversaries of free libraries, and the opponents of increased rating provision for them, of what must be admitted to be a specious argument, should proceed rather by way of encouragement of good literature than by discouragement of the less valuable, though even this, within judicious and reasonable limits, may have its place. Much, as suggested by the writer of 'A plea for elasticity,' can be effected by the personal influence of the librarian. To the excellent suggestion that the inferior novel might be made a machine for pushing on the novel of a better class may be added that slips could be inserted directing the readers of serious novels such as 'Hypatia' or 'John Inglesant' to books illustrative of their subjects; also to biographies of the authors, and in the case of historical or topographical novels to lives of the principal characters, or accounts of the countries described. But the best way of all will be to elevate the status of the library by rendering it as far as possible part and parcel of the daily life of the community; associating it with public lectures, meetings, exhibitions, and all intellectual movements of non-political and unsectarian character, and especially cultivating intimate relations with that most useful agency, the National Home Reading Union.

"The actual discouragement of inferior fiction is a laudable undertaking, but requires caution and discrimination. A public institution must not run absolutely counter to public opinion, and it is to be feared that, while the readers of novels are much in earnest about getting them, the denouncers of fiction are frequently indifferent to all library questions, excepting the keeping down of the library rate. Deferring the purchase of new novels for a year or even longer is, unless public opinion be too adverse, an excellent measure. It allows the appetite for popular novelties to subside, it gives time to sift the wheat from the chaff, and relieves the finances of the library. The librarian also who is pressed to buy a second copy of a novel can always defend himself upon financial grounds, pointing out that within a few years this copy will be worth nothing to the library, and next to nothing elsewhere. It would be well if the library committee would allocate a definite sum to be spent annually in the purchase of fiction, and never exceeded, only this sum must not be adjusted according to the extent of the issues, but rather in the reverse ratio."

CARNEGIE LIBRARY GIFTS

In February L. J. lists were given showing the character and extent of Mr. Carnegie's gifts for library purposes during the year 1905. It may be interesting to compare these totals with similar figures for the year 1904, and to give also the total number and amount of recorded Carnegie library gifts, as shown by the statistics prepared by Mr. Horace White in January, 1905:*

GIFTS FOR LIBRARY PURPOSES, 1904 AND 1905.

1904.

78 buildings and branches, U. S. and Canada.....	\$900,000
39 increases to original gifts, U. S. and Canada.....	165,993
43 buildings and branches, England and Wales.....	£173,040
4 increases to original gifts, England and Wales.....	2,826
9 buildings, Scotland.....	13,700
3 increases to original gifts, Scotland.....	2,300
2 buildings, Ireland.....	4,750
3 buildings, New Zealand.....	6,250
	£202,856
15 library buildings for colleges, U. S. ..	383,868
	\$1,449,861

Total: 196 gifts for library buildings, equalling \$2,435,546.

1905.

1 building, West Indies.....	7,500
2 buildings, New Zealand.....	6,000
	£139,240
53 library buildings for colleges, U. S. ..	1,737,500
	\$3,260,545

Total: 278 gifts for library buildings, equalling \$3,937,251.

TOTAL RECORDED CARNEGIE LIBRARY GIFTS UP TO 1905 (from Mr. White's tables)

Library buildings in U. S.	779	\$29,094,080
" " " Porto Rico.....	1	100,000
" " " Canada.....	48	1,475,500
" " " Scotland.....	102	1,970,550
" " " England.....	317	5,938,610
" " " Ireland.....	35	598,000
" " " New Zealand.....	5	91,250
" " " Tasmania.....	1	35,250
" " " West Indies.....	1	22,000

Total: 1290 gifts for library buildings, equalling \$39,325,240.

As Mr. White's table includes the record of the year 1904, the total extent and amount of Mr. Carnegie's library giving up to January, 1906, is 1568 gifts for library buildings, representing the sum of \$43,262,491.

* See L. J., January, 1905, p. 23.

FREE MAIL TRANSMISSION OF LIBRARY BOOKS

It may be interesting, in view of the continued agitation for reduced library postage, to note the effect on methods of circulation of books for the blind, due to placing such books on the free mailing-list. Following is a table showing the circulation of books for the blind in the New York Public Library by months, with the number of packages sent by mail and express in each month:

	Total Circulation. (Books.)	Mail (Packages.)	Ex- press.
1905			
February	610	42	7
March.....	712	41	8
April.....	699	55	7
May.....	698	72	5
June.....	651	70	4
July.....	777	124	4
August.....	791	112	4
September.....	731	119	9
October.....	692	113	6
November.....	788	162	7
December.....	831	164	4
1906.			
January.....	758	122	6
	8738	1196	71

It will be noted that there has been a steady increase in the proportion of books circulated by mail, until in the month of January, 1906, it amounted to 16 per cent. The proportion is even greater than would appear from this, for renewals are counted in the circulation. For instance, of 427 volumes out on Feb. 21, 1906, 207, or nearly half, were renewals.

It should be noted also that the mail record is for *packages*, each of which may contain more than one book or magazine. Hereafter more exact record will be kept of mail orders by stamping the cards with the letter M in case of such orders. It appears probable, however, that of all the books for the blind that leave the library 30 to 50 per cent. now go by mail or express.

If all library books should be exempted from postage we may infer that of the 4,500,000 books circulated by this library, the same percentage, or say 1,500,000 to 2,000,000, would go through the mails, provided we were willing to send them. How large the proportion would be in case such books should merely be placed in the second class by the postal authorities it is of course impossible to say, but it seems fair to conclude that in case the library should be willing to establish a "mail-order" department a very large number of people would take advantage of it under these circumstances.

It might be to the library's advantage to circulate in this way, especially if all mail orders were handled at one point by a special force, which might greatly relieve the overpressure of circulation at the large branches. The necessary alterations and innovations in the handling of the circulation would be considerable. Looking at the matter from the

post-office standpoint, it is possible that the mails in a city like New York might be seriously overcrowded as a result of the adoption of such a system.

ARTHUR E. BOSTWICK.

"THE PSEUDONYMS" DISCUSS THE UNIVERSAL CATALOG

From Proceedings of the Pseudonyms, Library World, January

THE chairman objected to the labor imposed upon him of having to demolish the proposals which had been made from time to time for centralizing the work of cataloging and otherwise dealing with the World's Literature. He hinted that if the proposers of such wild schemes had taken the trouble, as he had done, to calculate the enormous cost of such a plan and its final usefulness, its impracticability would have struck them, as it had him, with the force of a well-directed sand-bag. Most of the proposals he had seen for central cataloging were based upon a very incorrect conception of the magnitude of the task. It was easy, for example, to talk glibly about the annual output of good books, and assume that such books alone were worth cataloging. A central cataloging bureau which was based upon the idea of *selection* from the publications of the world was bound to come to grief, because, unless universality could be aimed at, it would be impossible to satisfy enquirers. The existing books in the world, excluding mss., numbered about 30,000,000, and this total was now being added to at the rate of 500,000 items per annum. There were between 50,000 and 60,000 periodicals alone, and when one added official publications and music, with other more or less local matter, the total became so enormous that even half-a-million was a modest computation of the world's annual literary output.

Now, a cataloging bureau to be of any service must deal with past as well as present-day books. Assuming, therefore, that an adequate stock of cards must be kept for all kinds of demands, both current and future, we must print at least 1000 copies of every title, because, in many cases, over three copies will be required to adequately catalog a single book. This, to date, gives a total of 30,000,000,000 cards as a stock to start with! Now, imagine, this nice little stock stored in boxes 6x4x12 inches, properly guided. There would be 30,000,000 of these, occupying 15,000,000 lineal feet, or 2840 statute miles! Stocked in tiers eight feet high, or twenty-four boxes deep, this would occupy 118 statute miles, and would necessitate the use of a motor car, even if arranged in quarter-mile laps, to get from A to M! The same thing holds good as regards current books, allowing for a limited annual increment. Here,

again, 2500 lineal feet per annum is needed for storage, or very nearly half-a-mile, so that in a few years' time, even Strathmore or the Moor of Rannoch could not store the accumulations, unless they were kept in stacks a mile high! On the financial side the outlook was even worse:

30,000,000 boxes @ 1s. each.....£1,500,000
Racks to place them in @ 6d. a
foot run (8 feet high!)..... 15,576

30,000,000,000 cards @ 4s. per 1000.. 6,000,000
30,000,000 titles @ 6d. each..... 750,000

£8,265,576

The current literature scheme alone would cost about £2400 per annum, exclusive of rent, taxes, lighting, salaries, apparatus, etc. What the full scheme would cost annually over and above the original total of £8,265,576, only experience or Lucifer himself could tell. The rate of depletion by orders and subscribers would be paltry in comparison to the rate of accumulation, so that very little relief could be expected from such sources. In conclusion, Ossian pointed out that in his opinion the only solution of the difficulty as regards current books was for every publisher to see that each new book carried its own descriptive catalog entry, either on slips or cards, attached like fly leaves or end papers. The Library Association could draw up rules, and every author could describe his own book in accordance with them, and the rest of the business would be easy.

BILL FOR A LIBRARY POST

THE bill establishing a library post (H. R. 3125), which was re-introduced in Congress on December 5, 1905, provides that libraries supported wholly or in part by taxation or tax exemption shall be granted the second class postage rates of one cent a pound now granted to newspapers and magazines. Among the reasons advanced for the bill are the following:

1. The United States is behind foreign countries in book carriage by post. Germany, England, Switzerland and several other countries have much cheaper book post. Bermuda carries all library books post free.

2. It is economic. The experience of local and general express companies and of foreign postal systems shows cheap library postage would pay for itself. The natural zone or carriage for library books is very short.

3. The postal system grants low rates to private parties which it withholds from states, cities, towns and from the whole people. The best book, bought by taxation and by and for the people, costs eight cents a pound for mail carriage; the poorest magazine or paper, owned by private parties, goes at one cent a

pound. Free mail carriage is also granted to certain private publications.

4. The proposal to adjust the postal and library systems on a cheap but economic basis is believed to be the most important educational proposition at present before the people of the United States.

Resolutions or memorials favoring the passage of the bill should be sent to Congressmen or to the following members of the postal committees of both Houses:

Senator Boies Penrose, chairman of Committee on Post-Offices and Post Roads.

Representative Jesse Overstreet, chairman of Committee on Post-Offices and Post Roads.

Senator Redfield Proctor, Committee on Agriculture and Labor.

Senator J. H. Dolliver, Committee on Education and Labor.

Representative J. W. Wadsworth, Committee on Agriculture.

Representative G. N. Southwick, Committee on Education.

THE LIBRARY OF THE NEW YORK METROPOLITAN MUSEUM OF ART

THE NEW YORK METROPOLITAN MUSEUM OF ART issues a supplementary (March) number of its *Bulletin* chiefly devoted to the library of the Museum. The library, according to the historical sketch contributed by William Loring Andrews, had its beginnings soon after the removal to the building in Central Park in 1879, when a room was set apart for the purpose in the basement and \$250 was appropriated for the first year's support. An endowment of \$2000, later increased to \$5000, was soon after given to the library by Mr. Heber R. Bishop. In 1881 the trustees in their annual report referred to the need of an art library for the use of visitors and for reference purposes in the preparation of catalogs; at that time the library contained 447 books and pamphlets, and was "in daily need of encyclopedias, dictionaries, works on painting, history, sculpture, archaeology and art in general." Two years later an addition of \$2000 was made by Henry G. Marquand to the library endowment fund, from which an annual income of about \$1000 was derived, this income until the last two years having been the sole support of the library, except for a special appropriation of \$1,000 for binding made by the trustees in 1894. By 1885, however, the library contained about 1000 volumes, exclusive of the important collection of books and pamphlets relating to Benjamin Franklin, made by W. H. Huntington and presented to the museum by Hon. John Bigelow.

When the south wing of the museum building was completed in 1888 the library was installed in the room it still occupies, in the southeast corner of the extension. Later

gifts included a small collection of manuscripts and early printed books from Mrs. Lucy Drexel, and 460 art reference volumes from the collection of Edward C. Moore. At the present time the library has outgrown the capacity of its present quarters (10,000 volumes), and its books have overflowed into the adjacent board room of the trustees; the class of books of which it is chiefly composed are, of course, wasteful of space, as many of them run to folios and elephant and atlas folios in size; 93 magazines are currently received, including all the most important American and foreign serials dealing with art subjects. In the new wing for the museum, soon to be erected, provision will probably be made for adequate quarters for the library, permitting rapid growth, for the library funds have been materially increased by the Jacob S. Rogers bequest of two years ago, and it is proposed to build up the collection to greatly augmented strength and usefulness. This purpose is touched upon elsewhere in the *Bulletin*, where it is pointed out that "the addition of a well-selected reference library to an art museum insures a completeness which no available amount of objects or specimens could otherwise effect."

Sir Caspar Purdon Clarke, director of the museum, briefly notes the development of the two libraries of the South Kensington Museum, in London, which, he says, as the National Art Library and the Science Library have become two of the largest and most complete specialist libraries in the world. "The National Art Library contains over 200,000 works, 180,000 cataloged photographs and many thousands of prints and drawings, which are not exhibited in the museum galleries, but kept for reference purposes only. The indexing, with cross reference, of the collection of photographs has occupied a special staff of five people for over six years, the great importance of photographs for reference purposes having been fully acknowledged." He speaks strongly of the importance of a well-selected reference library as an adjunct to the museum, and adds: "Such a library must be distinctly specialist, its field strictly confined to the classes of objects within the scope of the museum, and rare works or early editions should show progress in the history of books, or of their illustrations or bindings. And such specimens should not be continually stored in the library, but placed on exhibition in one of the adjacent galleries, in order that visitors may see that in the production of a book the application of fine art is as important as in other art crafts. A library is now a recognized necessity in every national museum, and although the great capitals may already possess libraries thoroughly complete, it is very seldom that they are sufficiently near the museum to be of use to students and officials who, daily and hourly, require the books for reference purposes."

American Library Association

President: Frank P. Hill, Brooklyn Public Library, 26 Brevoort Place, Brooklyn, N. Y.

Secretary: J. I. Wyer, Jr., State Library, Albany, N. Y.

Treasurer: Gardner M. Jones, Public Library, Salem, Mass.

LIBRARIANS IN THE NORTHWEST

The committee in charge of the publication of the book of views recording the A. L. A. travels of 1905, "Librarians in the Northwest," state that they have been unavoidably delayed in collecting material. The railways, however, have been generous in lending cuts, and the book will contain many more illustrations and better ones than it could have had if time had not been taken to collect electrotypes.

State Library Commissions

MARYLAND STATE LIBRARY COMMISSIONS: B. C. Steiner, secretary, Enoch Pratt Free Library, Baltimore.

The commission issues its third annual report for the year ending Dec. 1, 1905. There has been no change in the membership, which comprises M. Bates Stephens, superintendent of public instruction; Mrs. Anne B. Jeffers, state librarian; Dr. B. C. Steiner, Mrs. John M. Carter, Mrs. M. A. Newell, Thomas B. Mackall, and DeCourcy W. Thom. There are 61 travelling libraries in operation, which were sent out 122 times; these have gone to 17 of the 23 counties of the state. Books for the blind also are sent from the Enoch Pratt Free Library to any blind person in the state, the commission holding itself responsible for the care and safe return of the books. "The first book drawn under this agreement was a copy of the Declaration of Independence, drawn by a man living in Bittering and used by him to read the Declaration at an Independence Day celebration on July 4;" during the remainder of the year 75 such books were circulated. The commission reports with approval the work done by its field secretary, Mr. Riggan Buckler, who for four months, from February through May, travelled through the state in the interests of the travelling libraries, visiting previous recipients of such libraries and gaining as well as imparting information regarding their use. He reported demand for more fiction and for books on mechanical subjects. It is hoped that this field secretary work may be again taken up, as soon as the commission's finances permit. The recommendation is also made that the commission be authorized to give books up to a certain value to communities establishing public libraries, as is done in Massachusetts. Mr. Thom, of the commission, has already offered to give personally 100 books to each

of four towns in Queen Anne's county, if they will establish public libraries. Appended to the report is a full descriptive list of Maryland libraries, arranged alphabetically by counties; list of travelling libraries circulated; and draft of a proposed library law for the state, amending previous acts.

OREGON STATE LIBRARY COMMISSION: Miss Cornelia Marvin, secretary, state capitol, Olympia.

A meeting of the commission was held on Feb. 19, when it was announced that a second gift of \$500 had been made by Mr. W. B. Ayer, of Portland, for the installation of an additional series of travelling libraries.

State Library Associations

CONNECTICUT LIBRARY ASSOCIATION

President: George S. Godard, state librarian, Hartford.

Secretary: Mrs. Belle H. Johnson, Public Library Committee, Hartford.

Treasurer: Miss Esther B. Owen, Public Library, Hartford.

The annual meeting of the association was held in the Curtis Memorial Library, Meriden, on Thursday, Feb. 15, with an attendance of about 50 persons. The address of welcome was delivered by Mr. A. B. Mather, chairman of the library directors. Officers were re-elected as follows: president, George S. Godard, state library, Hartford; vice-presidents, John C. Schwab, Yale University Library; Rev. William H. Holman, Southport; Walter Learned, New London; Dr. Charles W. Gaylord, Branford; Louise M. Carrington, Winsted; Frances B. Russell, Stratford; secretary, Mrs. Belle H. Johnson, Connecticut Public Library Committee, Hartford; treasurer, Miss Esther B. Owen, Public Library, Hartford.

A committee of three composed of Jonathan Trumbull of Norwich, Frank B. Gay of the Watkinson Library, and George S. Godard reported a resolution protesting against the proposed amendment to the copyright law which would prevent importation of copyright books by libraries.

Mr. Trumbull, in a paper on "Accessories," discussed conveniences and mechanical aids to library work. Mrs. Sara T. Kinney, state regent of the D. A. R., read a paper on "The possibility and need of reciprocal relations between patriotic societies, the D. A. R. especially, and public libraries." She dwelt especially on the wealth of valuable historical material hidden in country attics, and exhibited one treasure unearthed in such a place, the muster roll of Abiel Pease's Company, dated at New London in 1776, containing the names of 23 men hitherto unrecorded as Revolutionary soldiers. Mrs. Angeline Scott Donley, of South Norwalk, read a paper, giving an account of the work of the local D. A. R. chapter in establishing a reading room for

foreign citizens, principally Italians and Hungarians.

Miss Hadley, of Ansonia, reported on special work done by the D. A. R. of that city, and of Derby and Seymour. Her suggestions for future work were that local chapters should assist the librarians in preserving and arranging all local historical matter, that they should try to supply each library with a good working genealogical collection and that they should adapt the museum idea to library uses by bringing together books and the objects which make them seem real.

At the afternoon session Miss Theresa Hitchler, of the Brooklyn (N. Y.) Public Library, read a paper on the history of libraries and museums in New York in the past century.

An address by John R. Perkins, principal of the Danbury Normal School, on "The practicability of library training in normal schools," brought out discussion. The consensus of opinion was that some training in library methods and in use of reference books is desirable for normal students.

The meeting closed with an address by Miss Anna G. Rockwell, of New Britain, on "What's the use?" in which various phases of library activity were subjected to close examinations and judged by results, and current criticisms of public library methods were answered.

DISTRICT OF COLUMBIA LIBRARY ASSOCIATION

President: George F. Bowerman, Public Library.

Secretary: Earl G. Swem, Library of Copyright Office.

Treasurer: Henry S. Parsons, Office of Documents.

The 91st regular meeting of the association was held in the children's room, at the Public Library, at 8.15 p.m. on Feb. 15, the first vice-president, T. F. Cole, presiding. A communication was read from the New Jersey Library Association and the Pennsylvania Library Club, inviting the members of the District of Columbia Library Association to attend the ninth annual joint meeting at Atlantic City, N. J., March 9 and 10, 1906.

A recommendation of the executive committee in regard to a handbook of the libraries of the District of Columbia was presented. This recommendation was to the effect that the association undertake the compilation of such a handbook, that the task of securing contributions and seeing that the handbook is compiled within a reasonable period be entrusted to a committee consisting of the president of the association as chairman, *ex-officio*, and six other members to be appointed by him, and that definite arrangements as to the publication of the handbook be deferred until the material is well in hand. Mr. Hastings presented the reasons of the executive committee for making such a recommenda-

tion, and stated that after a conference with Mr. Putnam, Librarian of Congress, he was free to announce that if the handbook were compiled in a creditable manner the Library of Congress would render essential aid in its publication. Mr. Hanson called attention to the value of the first handbook issued by the association, and spoke of some of the difficulties in connection with the proposed compilation. The association voted to adopt the recommendation of the executive committee.

The papers of the evening were devoted to a description of the library and the publications of the Office of the Superintendent of Documents. Mr. F. A. Crandall, the first superintendent of documents, now in charge of the library connected with the office, described the formation and present condition of the library.

Miss Alice Fichtenkam, in charge of the catalog division of the Office of Superintendent of Documents, described briefly the following three publications of the office: the *Monthly Catalogue* of documents, the "Document index" of the reports and documents issued by Congress each session, and the "Document catalog," issued biennially, which contains all the publications of an entire Congress.

Mr. William L. Post, acting superintendent of documents, gave an account of the classification and indexing of the public documents library. The classification in use was devised especially for this library. The special lists or manuals intended to assist librarians in the use of public documents, now in course of preparation by the office, were fully described.

EARL G. SWEM, *Secretary*.

MICHIGAN LIBRARY ASSOCIATION

The second library institute was held in the Traverse City Public Library on Jan. 26 and 27, 1906.

After an inspection of the attractive \$20,000 Carnegie building, with its circular open-shelved stack room, followed by an interchange of greetings, Miss Doren of the Western Reserve Library School of Cleveland, conductor of the institute, and the other speakers and visitors, assembled in the auditorium in the basement of the building, where, at 9.20 a.m. the first session was called to order by the chairman, Mr. Theodore W. Koch, librarian of the University of Michigan and vice-president of the state association. In his opening remarks he emphasized the fact that informality should be the keynote of such meetings, and called attention to the mutual benefits arising from membership in the American and Michigan library associations.

Miss Doren then opened the institute with an able epitome of "Library institutes and library training." An explanation of the methods of the local library was given by Miss Helen Stout, the librarian, who traced its history from the township library days up to its removal into the present building last

March, described the charging system and spoke of the rules, resources, humors and tribulations of the library in a most interesting manner. One fact brought out was the generosity of circulation privileges which are extended to the summer resorts scattered for many miles about Grand Traverse Bay. Although the library owns but a comparatively few books the parable of the "loaves and fishes" seems to apply here.

Miss Caroline Burnite followed with her talk on "Work with children," emphasizing the necessity of careful supervision of their reading, and furnishing a list of "sixteen children's books a librarian should know." These titles furnished the center about which the parts of the lecture were grouped. Much discussion was aroused by this lecture. The interest in the meetings was evidenced by an increased attendance at the afternoon session, which was called to order at 2.40.

Miss Doren spoke of "Library organization in a practical way," furnishing complete outlines of plans and details, with blanks. Miss Humphrey, of the Lansing Public Library, closed the afternoon session with a talk on "Loan systems," furnishing outlines and various illustrative samples.

The evening session was devoted to Mr. Koch's lecture on Carnegie libraries. Saturday morning Miss Doren gave her work on "Library extension"—assistance to readers, to interested listeners, consisting not only of library workers, but teachers and superintendents of schools, club women and others. This was followed by her lecture on "Library accounts"—service, reports, time, schedules, all accurately and fully illustrated by outlines, blanks, etc., especially valuable to the librarians present. Miss Burnite gave a continuation of her "Work for children," which was succeeded by Miss Doren's talk on "Book-selection and book-buying."

The afternoon session, a most informal one, was opened with a discussion of "Library records," by Miss Humphrey, who described and illustrated the need of keeping (1) File of correspondence. (2) order-book and slips, (3) bill-book and bill copybook—if paid bills are not kept at the library—(4) accession book, and (5) shelf list. The use of (6) periodical record cards was also explained. After Mr. Ranck, president of the state association, took the chair, Miss Burnite, at the urgent request of all, read several poems from various sources, her reading illustrative of the possibilities of rhythm in children's verse. Miss Doren then gave a brief and most helpful talk to the librarians present, and expressed her heartiest appreciation of the courtesies extended by the library workers and other residents of Traverse City. Mr. Sprague, president of the library board, responded for Traverse City. Mr. Koch followed with an able talk on the library of Congress and other printed cards.

Mr. Ranck then closed the formal sessions

of the institute, which had been attended by representatives from the libraries and schools of Ann Arbor, East Jordan, Frankfort, Grand Rapids, Lansing, and Manistee.

The evening session was devoted chiefly to social pleasures. The audience assembled at 8.30, however, to listen to an address by Mr. Ranck, on "Interesting the public in libraries." He explained briefly the co-operation of the State Board of Library Commissioners, and the Michigan State Library Association in the institutes just held; traced the historical and general growth and extension of public libraries, emphasizing the fact that libraries stand for adult education—for a practical uplift in daily life; showed the importance of a wise selection of books; spoke of a wide range of methods which might be used in attracting the public to a library; and forcibly uttered the warning that results were the test of all work and that the library must "make good" to its patrons—by service rendered to them when they came to it, but most of all by becoming the greatest character builder in the town.

At the close of these remarks 100 invited guests sat down to a supper provided by the Woman's Club, at which there was an interesting program of speech making, humorous songs, and declamations.

RHODE ISLAND LIBRARY ASSOCIATION

President: H. L. Koopman, Brown University Library, Providence.

Secretary-treasurer: Herbert O. Brigham, state librarian, Providence.

The annual meeting of the association was held at the Olneyville Free Library on Monday, Jan. 29. The meeting was opened shortly before ten o'clock by the president, Mr. Koopman, and the secretary read the minutes of the last meeting. W. A. H. Grant, president of the trustees of the Olneyville library, delivered the address of welcome.

Hon. Walter E. Ranger, commissioner of public schools, spoke on "Library extension and the schools," pointing out that school and library have the same end in view, that of educating the public. "The school, however, is striving more for adult education than it used to. City after city has spent thousands and thousands of dollars for the education of adults. Formerly, the school confined itself to the education of children, and the old-fashioned library was devoted to the education of adults. To-day the school and library are together endeavoring to create a love of knowledge in both classes."

General Thomas W. Chase, of East Greenwich, told about the great good accomplished there by placing three well-educated women, all mothers of children, on a sort of auxiliary library committee. The result was that many excellent books were placed in the library for children's use.

Mrs. William M. Congdon, chairman of the travelling library committee, state federation

of women's clubs, described the work accomplished by the travelling libraries. A room has been secured in the Providence Public Library, where the headquarters of the travelling system are established; 21 of these libraries are in circulation at present, and 11 more will soon be ready to aid in carrying on the increasing work.

John F. Kelly, the librarian of the Carolina library, praised the work of the travelling libraries, and advocated that paid librarians be appointed in each county to promote the work.

Mrs. John F. Huntsman, president of the Rhode Island Women's Club, was the next speaker, her subject being "The library and the club woman." She spoke of the good accomplished by the women's clubs along educational and literary lines, and also mentioned the fact that an international women's club was in progress of formation, to which any woman of any nationality, who is interested in literature may belong.

The last two speakers, Miss Agnes C. Gormley, critic teacher at the Killingly Street School, and Mrs. Mary E. S. Root, children's librarian at the Providence Public Library, addressed the meeting on co-ordinate subjects, Miss Gormley's topic being, "Why schools need the library," and Mrs. Root's, "Why the libraries need the school."

At the close of the last address a general discussion followed.

Shortly after one o'clock the meeting adjourned for luncheon, which was served in a near-by hall.

At the afternoon session the plans for the American Library Association meeting to be held in June were presented by E. C. Hovey. There was also a general discussion of the travelling library system.

Election of officers resulted as follows: president, H. L. Koopman; first vice-president, W. C. Greene; second vice-president, Miss Ama H. Ward; secretary and treasurer, H. O. Brigham. The executive committee is to consist of the officers named and Mrs. M. E. S. Root, John F. Kelly and George U. Arnold.

Library Clubs

CHICAGO LIBRARY CLUB

President: Miss M. E. Ahern, *Public Libraries*, 156 Wabash avenue.

Secretary: Miss Evva L. Moore, Oak Park Public Library.

Treasurer: C. A. Larson, Chicago Public Library.

On the evening of Feb. 8 the Chicago Library Club held its monthly meeting at the Chicago Public Library. The general topic for discussion was the relation of the library and the school. The program was planned with the point in view of bringing before the club the school men of the city, to hear

what teachers thought the library could do for the public school.

After the preliminary business, the program opened with a paper on "Relations of library and school," read by Miss Harriet E. Peet, a leading member of the Chicago English Club. The paper gave a broad view of the subject, taking up the work generally and specifically as it is carried on in a few of our large cities, Buffalo, etc. It touched also upon the story-telling as developed in Pittsburgh, Brooklyn and elsewhere, and the circulation of pictures to school children from the library.

Mr. Kling, principal of the Webb School, told of the great poverty of books in the Chicago schools, bringing out quite forcibly the fact that the whole problem of books in the public schools has not been touched by our great city, and although Chicago may be said to lead the world in almost everything, it is undoubtedly far behind many small cities in the matter of aids to reading in the schools. The great and immediate need is class-room libraries of 50 books and a greater development and extension of the 70 public library substations.

Mr. Jackman, of the School of Education, was present and told of endeavors of the "Committee of 60" to develop nature study in the schools, and this work brought out the lack of books and the lack of knowledge of books on the part of the teacher.

In the discussion that followed, the teachers present spoke of how few books there were in the schools, of the great need of the children, how they bring to the schools their own personal books and change with each other. A number spoke of the small use made of the library by the children, not because they had no interest but because they had no knowledge of the privileges, and even if they had knowledge, the great distance would prevent their taking advantage of the opportunity.

The president said that the children need and want the books, the teachers need and want the books, and we must not keep quiet about the things we want. Miss Warren, of the School of Education, described the Buffalo system of public school libraries, where the library owns and supervises the school room libraries, while in New York the Board of Education owns the books and manages the system; the returns are likely to be larger in the case of the former method. Miss Warren thereupon moved that the chair appoint a committee of three to ask the proper library authorities of the Chicago Public Library if it is possible to open a children's room, properly equipped with books and furniture and a technical librarian in charge, and if it is not possible what are the obstacles in the way.

In the discussion that followed, Mr. Andrews, of the John Crerar Library, stated that the board of trustees of the Chicago Public

Library had two very good reasons for not carrying on and developing the work with the children in the schools and in the main library building itself, and these were lack of funds and the fact that they did not deem it wise to bring children into the downtown district. Further testimony proved that the children were already there but that there were no proper facilities for attending to their wants. Some one stated that the privilege the library now granted the schools was 30 or 40 books to a school building with the expense of delivery paid by the school. The motion passed.

Miss Hawley, of the John Crerar Library, then presented an informal paper, but one alive with interest, on her recent library experiences abroad. She touched upon the libraries of Worms, Strasburg, Freiburg, and Basle, and a library conference she attended.

EVVA L. MOORE, *Secretary*.

LONG ISLAND LIBRARY CLUB

President: Albert T. Huntington, Medical Society of County of Kings, 1313 Bedford avenue, Brooklyn.

Secretary: Miss M. S. Draper, Children's Museum Library, Brooklyn.

Treasurer: Miss J. F. Hume, Queens Borough Library, Long Island City.

The February meeting of the Long Island Library Club was held at the Pratt Institute Free Library on Thursday afternoon, Feb. 15, the president, Mr. Huntington, presiding.

Two names were proposed for membership in the club and unanimously accepted. The most important item of business was the consideration of the proposed consolidation of the New York and Long Island library clubs. The committee which was appointed to consider the consolidation of the two clubs reported that a meeting was held at the Astor Library building on Dec. 19, at which time 15 members were present. After a long discussion the following resolutions were passed:

"*Resolved*, That it is the opinion of this conference that the matter of the consolidation of the two clubs should be referred to the Long Island Library Club and the New York Library Club for consideration; and

"*Resolved*, That in the opinion of this conference, if the consolidation does not take place, it would be advisable for the clubs to hold two joint meetings during the next library year."

Therefore the executive committee of the Long Island Library Club "recommend that this report be accepted, placed on file, and the committee discharged with thanks.

"Having become cognizant of the fact that there is a strong sentiment on the part of some of the members of the club against any proposed consolidation with the New York Library Club, your executive committee further recommend that this matter be laid on the table without discussion."

The club then approved the recommenda-

tion of its executive committee by a formal vote.

A communication from the Western Massachusetts Library Club in regard to the proposed amendment to the copyright law was read by the secretary and the matter was referred to the executive committee for action.

The president announced that the resignation of Mr. Asa Don Dickinson as secretary of the club had been received with regret, and that the executive committee had appointed Miss Draper to fill the unexpired term.

The general subject as announced for discussion was "Co-operation in library publishing," and was introduced by Mr. J. I. Wyer, Jr., of the New York State Library, who told what has been done by various libraries and library commissions in the publication of lists and bulletins. Mention was made of the lists of children's books published co-operatively by the Cleveland and Pittsburgh libraries, the "Graded list for schools" prepared by the Pittsburgh library with the co-operation of teachers, the *Co-operative Bulletin*, published by the various libraries in Providence, and many others. In each case cited, though there was a saving of expense to the several libraries, the results were not entirely satisfactory. Some compromise is always necessary in order to accomplish the desired co-operation. The speaker suggested that the *A. L. A. Booklist* may be utilized to advantage as a channel through which printing may be done.

Mr. H. M. Lydenberg considered the subject from the standpoint of the "Typographical form of library publication," noting some of the requisites for good printing, the kinds of type used by different libraries, and the relative cost. He recommended that librarians should make a careful study of the matter, and decide what kind of type and paper are wanted, instead of leaving everything to the printer. He spoke particularly of the matter of cost, pointing out the great variations in estimates obtained from different printers in different cities, and thought that more familiarity with the subject by librarians was the first essential in securing good and seasonable work. Various technical characteristics of styles of type and typographical arrangement were noted and clearness and simplicity were regarded as chief necessities in good library printing. Too much ornament, rubrication, and elaborate or unusual typography savor of advertising though they often seem attractive to one unfamiliar with printing details. There is room for improvement in many bulletins and library publications, and a study of the subject will repay librarians.

In the general discussion that followed, many practical points were suggested by Miss Lord, Miss Haines, and Mr. Huntington.

The club then adjourned to the art room, where light refreshments were served.

PENNSYLVANIA LIBRARY CLUB

President: John W. Jordan, LL.D., librarian, Historical Society of Pennsylvania, 1300 Locust street.

Secretary: Miss Edith Brinkmann, H. Josephine Widener Branch, Free Library of Philadelphia, 1200 N. Broad street.

Treasurer: Miss Bertha S. Wetzell, Library Company of Philadelphia, Locust and Juniper streets.

The third meeting of the season of 1905-1906 was held on Tuesday evening, Feb. 13, 1906, at the Historical Society of Pennsylvania. The meeting was called to order at half-past eight o'clock by the president, Dr. Jordan, who introduced the speaker of the evening, Major William H. Lambert. The latter said that instead of speaking of "Lincoln as a letter writer," as announced in the notice of the meeting, he would read some of Lincoln's letters, since example is always more convincing than precept.

Major Lambert then read a number of letters selected from his private collection of Lincoln papers, beginning with one written by Lincoln to his first law partner, John T. Stuart, dated Vandalia, Feb. 14, 1839, and continuing with others written throughout his career, the last letter being one written by the President to Mrs. Bixby, of Boston, Mass., dated Nov. 21, 1864, and expressing his sympathy with her for the loss of her five sons in the Civil War. The letters showed a variety of phases of Lincoln's character: his desire for fair play in political contests; his impatience of helplessness and dependence on others as exhibited by his stepbrother and others; his sense of humor; his unflinching determination to adhere to what he thought the right attitude toward the preservation of the Union, and his deep feeling for those who had suffered loss by the war.

Eighteen of Lincoln's letters were read from the original manuscripts, some of which, so far as Major Lambert knows, have never appeared in print. Five others were read from print, among them the notable letter to Horace Greeley dated Washington, August 22, 1862, and one of Lincoln's so-called "paternal" letters, addressed to General Hooker January 26, 1863. Major Lambert read from the original manuscript also a letter written by Edwin Booth to Adam Badeau dated April 16, 1865, the day after Lincoln's death, in which the actor expresses the greatest horror and grief at the act of his brother Wilkes—"I was two days ago the happiest man alive . . . now what am I!" In conclusion Major Lambert read the memorable second inaugural address of President Lincoln.

Upon motion of Mr. Thomson, the club unanimously tendered Major Lambert a vote of thanks for the delightful evening for which it was indebted to him. The following business was then transacted:

A nominating committee composed of Dr. I. Minis Hays, Miss S. E. Goding, Miss E. R. Seligsberg, Miss C. B. Perkins, and Dr. Morris Jastrow, Jr., was appointed by the president to prepare a ballot for officers for 1906-1907, for election at the May meeting.

The president announced the arrangements for the 28th conference of the A. L. A., which is to be held at Narragansett Pier, June 29-July 13, 1906.

At the request of the president, Mr. Ashurst announced the arrangements for the tenth annual meeting of the New Jersey Library Association and the Pennsylvania Library Club, to be held at Atlantic City, March 9-10, 1906, together with the program so far as it is definitely known.

Upon motion, the meeting then adjourned, but many members lingered to inspect the attractive rooms of the completed portion of the new building of the Historical Society of Pennsylvania.

EDITH BRINKMANN, *Secretary*.

TWIN CITY LIBRARY CLUB

President: W. W. Folwell, State University Library, Minneapolis.

Secretary-treasurer: Miss Clara F. Baldwin, State Library Commission, St. Paul.

The Twin City Library Club, composed of librarians of St. Paul and Minneapolis, Minn., was organized on the evening of Feb. 5, at a meeting held in the capitol building at St. Paul. A similar organization with this name existed several years ago, but the present club is organized afresh, with the purpose of promoting acquaintance among the library workers of the two cities, and "to become familiar with the resources of the various libraries." There were 62 at the meeting, which opened with a dinner in the capitol café. Officers of the club were elected as follows: president, Dr. W. W. Folwell, state university; vice-president, John A. King, state library; secretary-treasurer, Miss Clara F. Baldwin, state library. Meetings are to be held on the first Monday of every month from October to June. The constitution also specifies that "the club may also undertake any work for the advancement of library interests in the Twin Cities, which may be deemed necessary."

After the dinner and transaction of the preliminary business the members adjourned to the supreme court room, where Justice C. L. Lewis gave an interesting talk, explaining the four La Farge paintings on the walls of the room. State Librarian King then read a paper descriptive of the scope and work of the state library, which now contains 55,600 volumes and adds about 2000 volumes annually. It is desired to make the library practically the central reference library of the state for material relating to Minnesota legislation and public affairs, and great advance has been made toward this end.

WESTERN MASSACHUSETTS LIBRARY CLUB

President: W. P. Cutter, Forbes Library, Northampton.

Secretary: James A. Lowell, City Library, Springfield.

Treasurer: Miss Martha Gere, Clarke Library, Northampton.

A meeting of the club was held on Feb. 22 in Pittsfield. The session was opened in the parish house of the First Congregational Church, with an address of welcome by W. H. Hawkins, of Pittsfield. Mr. Cutter, the president, then announced as the general theme of the meeting the topic, "How may we improve our service to the public?" Mr. Ballard, librarian of the Berkshire Athenæum, gave an outline of work done in his library in attempting to ascertain the kinds of books likely to be most useful to the men of the community. Sam Walter Foss, of the Somerville library, presented the more effective use of travelling libraries; and the question of getting books to remote parts of a town led to a lively discussion of the injustice to libraries of the present postal rates.

In the afternoon, discussion was opened by Hamilton S. Conant, general secretary of the Massachusetts Sunday School Association, who spoke on the relation of the library to the Sunday-school. He said that the constituency of Sunday-school teachers in the average city or town is about three times as large as the public school constituency of superintendents, principals and teachers. In view of this fact he urged upon librarians the necessity of furnishing proper study material for the use of both teachers and pupils. The work of the city library of Springfield along this line was presented by Mrs. Evelyn N. Cone, who spoke of the collection of books and pictures loaned to local Sunday-schools and of the efforts of the library management to draw the attention of Sunday-school teachers to publications designed to improve methods of teaching.

Two guests of the day were R. R. Bowker, editor of the *Publishers' Weekly* and the *LIBRARY JOURNAL*, and William R. Eastman, New York state inspector of public libraries. Mr. Bowker contributed an interesting statement of library activities in the town of Stockbridge, while Mr. Eastman followed with an account of the library group meetings of New York state. Ample opportunity was afterward offered to inspect the Berkshire Athenæum and the museum of natural history and art. The meeting was one of the most successful in the history of the club. Representatives were present from Amherst, Westfield, Monson, Stockbridge, South Hadley, East Longmeadow, Cheshire, Great Barrington, Holyoke, North Adams, Hinsdale, Waltham, Northampton and Dalton in Massachusetts; also from Hartford, Ct., Albany, N. Y., and Philadelphia, Pa.

Library Schools and Training Classes

CARNEGIE LIBRARY OF PITTSBURGH TRAINING SCHOOL FOR CHILDREN'S LIBRARIANS

The special lectures for February were as follows:

- Feb. 7. Caroline Burnite, supervisor of work with children, Public Library, Cleveland, Ohio.
 Work of the Cleveland Public Library with children.
 14. Arthur E. Bostwick, chief of circulation department, Public Library, New York.
 Work with children in the New York Public Library.
 15. Essentials in planning library buildings.
 23, 27. Frederic S. Webster, chief of the department of Zoological preparation, Carnegie Museum, Pittsburgh.
 Books on natural science for boys and girls. (2 lectures.)

DREXEL INSTITUTE LIBRARY SCHOOL

The lectures by outside librarians began in January with Miss Titcomb's talk to the class on the "Qualifications of a librarian." The class had previously attended the Pennsylvania Library Club meeting, where Miss Titcomb spoke of her work in Maryland. Dr. E. C. Richardson lectured on February 8, taking as his subject "The alphabetical subject-catalog." Miss Sarah C. N. Bogle, class of '04, who is organizing the library of Juniata College, on February 13 gave an account of her experiences. Miss Rosalie V. Halsey, class of '03, on March 1 gave a talk to the class on "Early children's books in America."

Graduate notes

Miss Lucia T. Henderson, class of '97, has been appointed librarian of the James Prendergast Free Library, Jamestown, N. Y.

Miss Grace D. Rose, class of '98, has been appointed librarian of the Public Library, Davenport, Iowa.

Miss Ora I. Smith, class of '03, has been appointed assistant in the Cossitt Library, Memphis, Tenn.

Miss Marie E. Binford, class of '03, who has been organizing libraries in Georgia, visited the school on February 9.

Miss Edith Fulton, class of '05, has joined the staff of the University of Pennsylvania.

Miss Helen D. Subers, class of '03, is substituting in the Public Library, Atlantic City, N. J.

Miss Fanny S. Mather, class of '01, who was for two years an instructor in the library school, was married at her home in Wells-

ville, N. Y., February 21, to Mr. Roland W. White, former instructor in the chemistry department of the Institute.

INDIANA SUMMER SCHOOL

The Indiana Public Library Commission will conduct its fifth annual summer course of library training at Winona Lake, Ind., July 9 to Aug. 17, 1906. Miss Anna R. Phelps, head instructor of the library school at Indianapolis, and of three former courses in the summer school, will continue in charge of the course, with assistant instructors in special subjects. Full information may be had on application to the secretary Public Library Commission, State House, Indianapolis.

NEW YORK STATE LIBRARY SCHOOL

The Division of Visual Instruction of the State Education Department has recently fitted up a room especially designed for lectures with lantern slide accompaniment. This room has been made available for library school lectures, the first of which will be that on presidents of the American Library Association, which was carefully prepared by Mrs. Fairchild, and is illustrated by a complete and very satisfactory set of lantern slide portraits of the presidents. This room will also be used by Mr. Eastman in his lectures on library buildings, where exterior and interior views, plans, etc., will be shown by means of slides.

The school has been favored during the past month by visits from the following outside librarians, who have in each case addressed the school on the subjects noted:

Mr. J. C. Dana gave three stimulating and suggestive talks on "What the library may do for the community;" "Publicity (relation of the library to the press);" "Japanese prints." The latter was illustrated by Mr. Dana's personal collection of prints.

Mr. S. B. Griswold, for 36 years law librarian of the New York State Library, gave two lectures on "Law libraries and law books in a public library."

Miss Mary L. Davis, librarian of the Troy Public Library, is giving a course of three lectures on "Maps, their importance and care." This is the first time that specific instruction in this important subject has ever been offered at the school. The lectures are accompanied by the illustrative use of the state library's rich collection of maps.

Mrs. Elizabeth C. Earl, of the Indiana Library Commission, and Miss Merica Hoagland, library organizer for that state, were visitors at the library school on Feb. 21 and 22. Miss Hoagland gave an interesting talk on "Library development in Indiana."

The following changes in the curriculum were voted by the faculty on March 1: The course in library indexing was transferred

from the junior to the senior year and the senior course in dictionary cataloging will be combined with the junior work in this subject.

PRATT INSTITUTE LIBRARY SCHOOL

The usual spring-vacation visits to libraries will take New Jersey and Pennsylvania for their field this year. Leaving Brooklyn on March 24, the school, accompanied for the day by Miss Rathbone, will visit Princeton University library, the Trenton Public library, and the New Jersey State library that day, arriving in Philadelphia that evening, where the director will meet the party on her return from Atlanta. The week will be spent in visiting Philadelphia and suburban libraries until Friday morning. The party will then return by way of Wilkes-Barré and Scranton, making a visit to the libraries of each place and arriving in Brooklyn March 31.

With the opening of the third term the general lecture course ceases, and the only lectures scheduled at present to be given by visiting lecturers will be the course on "Library buildings" by Mr. W. R. Eastman. These are scheduled for April 10, 11, and 12, and 17, 18, and 19 at four p.m. Notice will be sent of any other lectures that may be arranged for.

The visits to local libraries during the third term are not yet all planned, but invitations have been received and accepted from the Vassar College library and the three libraries of Yonkers, N. Y.

The students attended the meeting of the Long Island Library Club, held in the classrooms of the school February 15. Since then the great institute event of the year has taken place in the Neighborhood Fair on February 24. The library school booth was unusually attractive and a great deal of ingenuity and of artistic ability was shown in the things manufactured by home talent and offered for sale.

As an offset to the necessarily technical and utilitarian character of the work of the school-day, an evening for the reading of poetry has been established, all students of both classes who care especially for poetry being invited to the home of the director once in two weeks for a brief journey into the world of imagination.

MARY W. PLUMMER.

UNIVERSITY OF ILLINOIS STATE LIBRARY SCHOOL

Miss Josie B. Houchens, of New Orleans, B.L.S. 1905, is filling the position of reviser in the library school.

The course in bookmaking, given this year in Miss Sharp's absence by Miss Mabel McIlvaine, is meeting with much success, the weekly lecture being illustrated each time by lantern slides, and other illustrative material.

On Lincoln's birthday, Feb. 12, in connection with the university convocation, the library made an exhibit of portraits and other illustrations bearing on the life of Lincoln. This collection, which is a most interesting and varied one, is the property of H. W. Fay, of DeKalb, Ill., and consists of several thousand pictures. The collector accompanied the exhibit, which he installed and helped to display to several hundred students and visitors.

The library institute for Illinois librarians will be held this year at Mattoon, April 6 and 7. Miss Howe and Miss Price, of the library school faculty, assisted by two members of the senior class, will conduct the work.

Miss Frances Jenkins Olcott, director of the training school for children's librarians at Pittsburgh, visited the library school on Feb. 27, and gave a spirited and inspiring talk to the students and staff on the work among the children of Pittsburgh. In the afternoon Miss Simpson and Miss Olcott received the students at the home of the acting director, thus giving many students an opportunity of coming into personal touch with an enthusiastic worker among children.

FRANCES SIMPSON, *Acting Director*.

WISCONSIN LIBRARY SCHOOL

The library school to be conducted by the Wisconsin Free Library Commission, in place of the former summer library school course, will be opened at the beginning of the university year, Sept. 26, 1906. The entrance examinations will be held July 25. The establishment of this school has been made possible by the action of the legislature of Wisconsin, which in 1905 increased the appropriation to the Free Library Commission to provide for its support; by the generosity of Andrew Carnegie in enlarging his gift to the city of Madison for its new library building, which will provide it a permanent home; and by the promised co-operation of the University of Wisconsin and of the state and local libraries in Madison and its vicinity. While intended to train for service in libraries of all kinds, its primary purpose will be to equip students for the organization and administration of small libraries, and for allied general educational work. The school will have suitable quarters on the second floor of the new building of the Madison Free Public Library, comprising director's office, students' work room, two lecture rooms, a library, and a staff room. The working library of the commission including 2000 volumes of reference works, subject and trade bibliographies, library literature, catalogs, and technical books for every need, is shelved in the library of the school for the use of its students. The school has also a model library of children's books, col-

lections of printed blanks and forms illustrating different methods of administration, and library plans and reports. These collections will be increased from time to time as the library movement advances.

In addition to its own equipment the school has the co-operation of the libraries in Madison and throughout the state. The library of the State Historical Society, the library of the university, the Legislative Reference Library and the Public Library all offer distinctive opportunities for study and work, and negotiations are in progress whereby the public libraries of Appleton, Baraboo, Beloit, Madison, Menasha, Neenah, Oconomowoc, Oshkosh, Portage, and Watertown will serve as laboratories for the school. The University of Wisconsin also gives opportunity for special lectures, and for supplementary courses of study.

The course of instruction is for one year, and provides 38 weeks of actual curriculum work. It is composed of technical, literary, and practical subjects and problems. These subjects include cataloging, classification, library economy in its various details, administration, history of the library movement, reference work, public documents, and bibliography. Instruction is given in the form of lectures, followed by practice work under supervision, assigned reading, and discussion of both theory and practice. Apprentice work will be required of the students in designated libraries during the last ten weeks of the course, under the direct supervision of the local librarians and the oversight of the faculty of the school. Such libraries of the state as are in process of organization or re-organization will also be used as laboratories. Certificates will be granted to students who satisfactorily complete the full course.

The minimum preparation for admission is the same as that required by the University of Wisconsin for admission to its freshman class, provided the course taken in the preparatory school is such as would fit the applicant for library work. In addition, the faculty must be convinced that the candidates are personally fitted to undertake the work.

Students are admitted either by examination or by certificate from accredited high schools. It is desired that as many as possible should come to the school with actual library experience. But those candidates who offer no library experience must have had not less than one month's practical work in a designated library before the school opens on Sept. 26. Such apprentice work will be arranged by the director of the school for the students needing it.

The tuition fee for students from Wisconsin is \$50 for the course, \$25 payable at the opening of each semester. For students outside of Wisconsin the tuition fee is \$80 for the course, \$40 payable at the opening of

each semester. The average cost of textbooks and supplies for each student is \$20. The commission pays the travelling expenses for the required laboratory work.

Students desiring to enter the school should apply for application blanks to the Director of the Library School, Wisconsin Free Library Commission, Madison.

Reviews

JAMES, Montague Rhodes. A descriptive catalogue of the manuscripts in the library of Pembroke College, Cambridge, . . . with a hand list of the printed books to the year 1500, by Ellis H. Minns. Cambridge, University Press, 1905. xl, 314 p. 8vo. 10s. 6d. net.

—A descriptive catalogue of the Western manuscripts in the library of Christ's College, Cambridge. Cambridge, University Press, 1905. vi, 36 p. 8vo.

Dr. James continues to add to his remarkable series of catalogs of the western manuscripts in the possession of the various Cambridge libraries. To have compiled and published so formidable an array of catalogs of printed books in a single decade would have been a notable achievement. But to have made and published such a number of excellent catalogs of manuscripts with such full descriptions of their contents is a feat almost unparalleled in the annals of cataloging. To one who knows the labor and strain on eye and hand necessarily involved in the cataloging of any large number of mediæval manuscripts, Dr. James' results will seem little short of marvellous. It is to be hoped that he may go on to give us the catalogs of the manuscripts of the remaining colleges of his university.

The Pembroke College catalog is prefaced by an unusual number of tables, including a "list of donations" of manuscripts, "references to Leland's and Bale's lists," "Manuscripts entered in Thomas James' catalogue, now missing," "Matthew Wren's register of purchases of manuscripts," extracted from the college records, and lists of former owners and donors. Then follow the descriptions of 307 manuscripts, and finally, notes on certain others, mainly of a personal character. Dr. James' method of description is well known, and has already been noticed in this JOURNAL. Not only does he give a most careful collation of each manuscript, with the usual full information concerning its previous owners, style of writing, scribe or scribes, etc., but what is more uncommon, a complete list of the contents. Dr. James modestly says in his

preface that he does not undertake to identify each piece in the contents of the manuscripts, preferring to give merely a conspectus of the whole. Any other course would naturally render impossible the completion of his series of catalogs, for many long years, at least. But it should be said in all reason that his method makes a most excellent impression, and seems thoroughly practical and valuable. One cannot expect the cataloger to do everything for the scholar. Dr. James notes all miniatures, gives their subjects, when possible, and also mentions characteristic or interesting ornamentation. The work is a model of efficient and practical cataloging.

The Pembroke manuscripts are not particularly interesting to the classical scholar or to the historian. They contain rather more than the usual proportion of scholastic works of a theological cast, and also more English manuscripts of interest than the catalogs of most of the other Cambridge libraries show. But the palæographer will evidently find very much of interest and value. The facsimiles given show that fact without doubt. The list of incunabula exhibits 110 works and fragments, and is carefully made with references to Hain, Proctor, and Campbell. It is the work of Ellis H. Minns, librarian of the college.

The list of Christ's College manuscripts is very brief, numbering in fact only a dozen. Concerning these the compiler says: "There are in the first place two Greek manuscripts: an Evangelistarium and a copy of the Acts and Epistles, both of which have been collated by Scrivener. There is a good ordinary Latin Bible and an English New Testament. In liturgies a very fine, copious, and early book of hours (sadly mutilated) which was perhaps written in Oxfordshire. In mediæval theology (for of patristic there is nothing) we have the sentences and the *Historia Scholastica*, some English sermons, and a very remarkable commentary on the Psalter by the learned Franciscan Henry of Costessey (or Cossey, in Norfolk), who was Lecturer in Divinity to the Cambridge Franciscans and died in 1336 at Bury. This is the *unicum* of the library and I have given a rather copious account of it. A polychronicon and a late medical manuscript close the list."

The book is a companion volume in appearance to the others in Dr. James' series, and makes a brave show for its dozen manuscripts. These catalogs should inspire others to make and print catalogs of the manuscript treasures in their charge. Particularly in America do we need to be reminded to make available our smaller possessions by sedulously setting forth what we have in the best possible manner. Will no one do for our manuscripts what the Bibliographical Society of America proposes to do for our collections of incunabula?

WM. WARNER BISHOP.

Library Economy and History

GENERAL

BROWN, Kirk. Friends' libraries in Maryland. (*In Friends' Intelligencer*, Jan. 27, 1906. 63:52-53.)

This article is reprinted from the *Journal* of the Friends' Historical Society (London), of November, 1905, and gives a number of minutes from the records of Maryland Friends with reference to books and libraries for the meetings. These minutes are interesting contributions to the history of American libraries, in their quaint notes of the receipt and disposition of parcels of books sent from England "for the service of Friends." In 1799, at Baltimore monthly meeting it was decided "that a small, well-conducted library of Friends' books, and other religious tracts, might have a useful tendency," and in the next year such a library was opened in Baltimore, which is still doing good work and is the oldest circulating library in the city.

Ceska Osveta, the Bohemian library organ, contains in its February issue (v. 2, pt. 5) an illustrated article by L. J. Zivny on the Edinburgh Free Public Library; and "A librarian's notes about readers," by Josef Zima. L. J. Zivny's exposition of "Cataloging rules" is continued from the previous number; there is a department of notes on new books, and one of library notes, the latter including reports on the Bohemian School Museum at Prague, public education in Bohemia, the Cambridge meeting of the L. A. U. K. in 1905, and the free library and reading room at Vsoké Myto. There is a "card catalog supplement" in the form of two pages of titles of new Bohemian books, printed in catalog entry form on one side of the page, which may be cut out and pasted on catalog cards.

Folksbiblioteksbladet, published at Stockholm in the interest of Swedish public libraries, closed its third year with the quarterly number for December, 1905, and enters upon a new year with good prospects. Besides various notes and short articles on literary subjects, the December number contains an illustrated account of the Dicksonska Folksbiblioteket in Göteborg, portrait of the librarian of the Stockholm Arbetarebibliotek and statistics of that library's growth, an illustration of the Helsingfors Folkbibliotek, and local news and notes regarding libraries.

The *Library Association Record* for February, besides an interesting article on "The principles of cataloging," by E. Wyndham Hulmes, contains a short paper on "Library grouping" (i.e., uniformity of administration in libraries of similar size or character), by Lawrence Inkster.

In the *Library World* for February James Duff Brown reviews the characteristics and contrasts of "British colonial and American library legislation," in a compact and useful article. He points out the difference in basis of taxation in Great Britain and the United States—the latter producing much larger revenues and therefore resulting in more liberally supported public libraries. The work of the American state library commissions is regarded as an important influence on uniform library development.

MALTBY, Adelaide Bowles. The library's work with children. (*In Outlook*, Feb. 17, p. 360-364.)

Based mainly on the work of the Buffalo Public Library, but generally descriptive of modern methods and principles in the management of children's libraries.

Public Libraries for February contains short articles on "Classifying and cataloging public documents," by W. R. Reinick, "Proposed changes in the Japanese written language," by Dr. N. H. Kodama; and "Book selection and purchase for small libraries," by Mabel E. Prentiss. Mr. Dewey writes upon the "Origin of the A. L. A. motto" ("The best reading for the largest number at the least cost"), which he formulated between 1876 and 1878 as "a brief statement of what it was to which I was giving my life."

The VERMONT L. COMMISSION *Bulletin* for February contains J. C. Dana's suggestive and helpful address on "Making a library useful," delivered at the 10th anniversary of the Maclure Library, Pittsford, Vt., Dec. 6, 1905.

The *Zentralblatt*, in its February number, again devotes much space to the *Gesamtkatalog* (union catalog). Ch. W. Berghoeffer makes suggestions for the organization of the undertaking, the first being to the effect that a complete set of the Library of Congress cards be procured. Prussian estimates for the fiscal year 1906-07, it is noted, include a number of items for the libraries, "which must be thankfully received, even though in some points they hardly answer the desires cherished in library circles." The ministry of finance has "unfortunately again refused to make the salaries of librarians equal to those of *oberlehrer*" (Headmasters or school principals).

LOCAL

Auburn, N. Y. *Seymour L.* (Rpt.—year ending Jan. 5, 1906; in local press.) Added 1263; total 19,459. Issued home use 48,796, of which 12,069 were from the children's department (fict. 61 per cent). New registration 2382; total registration in force 3619.

There is a constantly growing use of the reference department and particularly of the Case library of electricity and chemistry. During the summer a list of the 195 books in the

latter collection was printed and distributed among electricians and factory workers, and it is believed that one of the most effective ways of increasing the use of the library would be by printing and distributing lists of the new books. "Throwing open the shelves completely to the public would undoubtedly both materially increase the circulation and also improve the character of it."

Boston (Mass.) *Athenæum L.* (Rpt., 1905.) Added 4091; total 222,093; spent for books, periodicals and newspapers \$7974.20, binding periodicals and unbound v. \$963.90, binding and repairing old books and newspapers \$1439.69. There are 803 shares in use, and 763 non-proprietors were privileged to use the library during the year. In the repair department 1282 v. were handled at an average cost of 35 c. apiece.

A bequest of \$10,000 was received from the late Charles A. Cummings "as a fund, the income to be expended in the purchase of architectural books and photographs." Appended to the report is a list of the permanent funds, and an interesting chronological record of "chief bequests and gifts to the Boston Athenæum."

Buffalo (N. Y.) *P. L.* (9th rpt., 1905.) Added 19,662; total 220,627 v., 14,355 pieces of sheet music, 20,501 pamphlets. Issued, home use 1,172,377, a daily average of 3806 (fict., incl. foreign and juv. fict., 641 per cent). New registration 10,468; total cards in force 59,781. Receipts \$87,628.69; expenses \$87,320.12 (salaries lib. employees \$40,387.93, salaries building employees \$5818.88, books \$14,366.57, periodicals \$1643.43, binding \$5928.92, fuel \$2208.74, light \$3178.20, delivery stations \$1226.06, branches \$308.57.)

As usual, compact and well arranged. The installation of the open shelf department in the old reference room has relieved the main reading room and been a decided advantage. In this department the fiction circulation has dropped 3676 and the circulation of more solid literature has increased 6223; the total number of books in this department is now 20,995. "The experiment, recorded as a temporary attraction last year, of a small detached case of extra attractive books which do not come under the head of fiction, proved to have so permanent an interest that, with a slight change of the character of its books for the two summer months, it has been continued throughout the year. The number of books shown each day has been about 50. A simple record of the books has been kept—of the books put out and their use—to insure intelligent variation of the shelves, and this record incidentally confirms our belief that the best advertising for a good book is to put the book itself where it will be specially noticed, and get into the hands of those who desire to examine it."

The work of the school department has been

hampered by reduced funds, which made it impossible to add to the number of schools taking class room libraries. "A total of 31,518 books, divided into 712 small libraries, has been sent out into 39 public grammar schools, and from these the count shows a circulation of 345,624 times. The entire collection devoted to school use numbers 35,976 books, including a sample copy of each book used, on exhibition in the teachers' room of the library, for the use of teachers, training school students, and parents. The class room libraries are each one a small, select collection, embodying an attempt to gratify the individual taste of the children. The library wishes to appeal to the individual child, and to do something to foster the child's ability to choose for himself, believing that what he chooses for himself is that which he grows by, or deteriorates under, all his life long." The teachers' reading room is increasingly used both by teachers and training school students.

There are 160 travelling libraries in use, containing 5661 v.; 31 are sent to fire houses, and 71 go to educational institutions of various kinds. The circulation statistics (9963) do not fairly represent the use of these books, which in most cases serve for reference rather than for home reading. The delivery stations are found to be "a difficult and proportionately expensive means of library communication at best," and branches or small depositories are regarded as preferable. Short individual reports are given for the five branches and depositories.

The faculties of the reference department have been greatly improved by transfer into the fine rooms on the second floor.

In the catalog department, 58,000 cards have been added to the dictionary catalog, about 8400 cards to the staff catalog, and about 1400 to the branch catalogs. "Out of this number, 17,535 are printed cards bought from the Library of Congress, at a cost of \$147.70. These are most excellent cards, and the library would be glad to use a greater proportion of those issued by the national library, if it were possible. The very small cost—much less than we can do the work for ourselves—and even more desirable work than ours, because they have much greater bibliographical facilities than we own, highly commends the work done by the government to assist libraries throughout the country."

During the year there have been 17 resignations from the staff, and Mr. Elmendorf points out the need of showing appreciation of good work by salary increases; "at the present salaries paid it is difficult to hold our best workers, as their work is recognized in other places, which are willing to pay more."

Chattanooga (Tenn.) P. L. Beginning March 1, the library has adopted Sunday opening during from 2 to 5 in the afternoon.

Chicago Hist. Soc. L. (Rpt.—year ending Nov. 21, 1905.) Records 423 readers, who filed applications for 1154 v., and a total of 1345 visitors; no statistics of accessions are given. There were 2739 v. cataloged. A special exhibition was held in connection with the meeting of the American Historical Association, in December, 1904, when a loan collection of historical material from the Louisiana Purchase Exposition was displayed.

During the year the library acquired an important collection of 206 manuscripts, mounted in two folio volumes, bearing upon the French regime in the Mississippi valley. These are described at some length by Miss McIlvaine, who also records other gifts and purchases of special interest.

Chicago, John Crerar L. Arrangements have been completed for the transfer of the medical department of The Newberry Library, including, with the permission of Dr. Senn, the Senn collection on medical history, to the ownership and management of the John Crerar Library. This has been done partly because the natural relations of these books to the chosen field of the John Crerar Library and the lack of such relation to that of the Newberry Library make the transfer in many ways mutually advantageous, and partly because the medical profession of the city has urged strongly the desirability of a more central location. Unfortunately, however, the collection cannot be accommodated in the temporary quarters of the John Crerar Library, so that it will remain in its present location until the permanent building is completed.

Cornell University L., Ithaca, N. Y. (Rpt.—year ending June 30, 1905.) Added 25,492, 1500 pm.; total 311,897 v., 48,000 pm. Issued, home use 21,762, inter-lib. loans 148, reading room use 71,285. There are 13,341 v. on open shelves in the reading and seminary rooms, of whose use no account is kept, and 12,203 v. are deposited in various department and laboratory collections. There were 1445 registered users of the library (for home use) during the year.

Of the accessions for the year "no less than 17,517 v. (including the Icelandic and Petrarch collections, estimated at 12,000 v., bequeathed by Willard Fiske), or more than two-thirds, were gifts."

Mr. Harris describes at some length his work in Italy, in superintending the transfer to Ithaca of the famous collections bequeathed to the university by the late Professor Fiske. It had been feared that the Italian government might interpose objections to the exportation of these collections, but after much discussion and negotiation an agreement was reached, permitting the exportation of the two collections intact, upon payment of a moderate tax upon the incunabula and manuscripts. "In recognition of this courtesy on the

part of the Italian government authorities, the university granted the Laurentian Library of Florence the privilege of borrowing books from these collections, under regulations agreed upon by the librarians, the Laurentian and Cornell libraries." The books were received in this country by the end of March, 1905, and the task of arrangement was at once begun by W. W. Ellis of the library staff, for the Petrarch collection, and by Halldor Hermannsson, who in accordance with Mr. Fiske's instructions, has been placed in charge of the Icelandic collection.

Of the two collections that have so enriched the university library, Mr. Harris says: "The formation of the Icelandic collection was the work of a lifetime, for its beginning was made by Mr. Fiske when a student in the University of Upsala, more than fifty years ago, and so long ago as 1859 it was reputed to be the richest collection of Icelandic literature and history then to be found in America. Largely increased by the purchase of later years, it now numbers about 8500 volumes and includes all the works on the scattered remains of runic literature and on Scandinavian mythology, all the annals, travels, natural histories, ecclesiastical writings, biographies and bibliographies, which can, in any way, throw light on the history, topography, commerce, language, and letters of Iceland. It lacks very few of the editions and translations of the sagas, the ancient laws, the Eddas and the skaldic lays, and very few of the treatises which illustrate them; it lacks still fewer of the strictly linguistic works relating to either the Old-Icelandic or the New-Icelandic. It has every one of the impressions of the Icelandic Bible or of its parts. Its series of Icelandic periodicals—whether printed in the island itself, in Denmark, or in Canada—is absolutely complete; and all but complete is its series of laws and ordinances, regulating the island's affairs, promulgated by either the Danish or Icelandic authorities. Of the geographical descriptions of Iceland—from the earliest dubious notices of Thule to the recent reports of Thoroddsen—scarcely one is wanting, each and every published voyage being present, not only in its various original editions, but in all its translations. It includes not only nearly every important production of the Icelandic press during the last fifty years, but also a great number of ephemeral publications, such as broadsides, placards, funeral inscriptions, prospectuses, and circulars, and not a few engravings and photographs of Icelandic persons and places.

"The Petrarch collection, numbering some 3500 volumes, is of more recent origin, dating only from 1880, but in its own field it is fully as rich and complete as the older collection. Besides a number of early illuminated manuscripts of Petrarch's writings, it contains, beginning with the rare first edition of the *Rime* printed at Venice in 1470, a nearly com-

plete series of all the various editions of Petrarch's works and their numerous translations, including several manuscript translations of the story of Griselda into Icelandic, which under other circumstances might have been considered part of the Icelandic collection. It is especially rich in works concerning Petrarch's part in the Revival of Learning, and a large section of the collection is devoted to works concerning Petrarch's friends and contemporaries, such as Boccaccio, the Emperor Charles iv., and Cola di Rienzo. Almost every printed biography of Petrarch and of Laura is present and the iconography of Petrarch and Laura is richly represented by numerous reproductions of portraits, and of views of Avignon, Vaucluse, Arezzo, and other places associated with Petrarch. With the Dante and Rhæto-Romanic collections previously presented by Mr. Fiske, the library now possesses a remarkable group of four special collections, each in its way unsurpassed by any in this country, forming an enduring monument of the bibliographical skill and knowledge of their collector."

Detroit (Mich.) P. L. (41st rpt., 1905.) Added 13,000; total 208,838. Issued, home use 674,964; lib. use 925,258; new cards issued 10,057; total valid cards, 41,841. Receipts \$99,676.39 (balance, \$30,366.33); expenses \$72,139.64 (salaries \$29,325.09, salaries janitors \$4655.50, books \$14,430.17, periodicals \$2082.81, binding and repair \$5571.93.)

Mr. Utley presents with urgency the need of a new building, referring to the continued failure of the city authorities to accept the conditions of Mr. Carnegie's offer of money for the purpose, made five years ago.

During the year a plan was developed for the maintenance of a system of travelling libraries to be sent among the various factories of the city, and the brief experience already had in this direction has been encouraging. Reference is made to the increased price of books, and to the unsuccessful efforts of libraries "to get away from the exactions of publishers and booksellers."

In the children's room story hours have been successfully conducted, the only criticism to be made being that these occasions interrupt the business of the room for half an hour on busy Saturday afternoons. A suitable auditorium would be a most useful adjunct to the library, and it is pointed out that such a room has been provided for each new branch library building. The reports upon the various branches are somewhat detailed, and Mr. Utley says that "continued experience with branch libraries is more and more convincing of their importance and value."

Fulton (N. Y.) P. L. The Carnegie library building was opened with formal exercises on the evening of Feb. 23. It cost \$15,000. The

library was chartered in 1895, and now contains about 5000 v.

Goshen (Ind.) P. L. (3d rpt.—year ending Jan. 31, 1905; in local press.) Added 786; total 6037. Issued, home use 29,616. New registration 499; total registration 3326.

Grand Rapids (Minn.) P. L. The Carnegie library building was opened on Feb. 10; it cost \$14,000.

Haverhill (Mass.) P. L. The exhibition of bookbinding prepared some time ago by the Newark Free Public Library was on exhibition at the library during the early part of February. As bookbinding is now included in the studies at the Haverhill public schools invitations were sent to all teachers, urging them to visit the exhibit with their classes.

Illinois, Libraries of. The University of Illinois announces that it has in its possession a manuscript "History of the libraries of Illinois," prepared by Katharine L. Sharp, director of the university library school. This is regarded as a valuable contribution to library and state history, and it is proposed to publish it as a volume of from 500 to 600 pages, if the publication expense may be in part covered by a guarantee fund. Circulars have therefore been issued asking for library subscriptions (\$2 unbound, \$2.25 in half morocco) to be paid for on delivery, and it is hoped that the publication of the work may be ensured in this way.

Los Angeles, Cal. The long deferred public investigation into the dismissal of Miss Mary L. Jones from the position of librarian of the Public Library, in June, 1905, was begun on Jan. 24 by the city council. Eight successive sessions of the investigation were held, from Jan. 30 to Feb. 21, the decision of the city council on Feb. 21 being that it would refuse to confirm the mayor's dismissal from office of the five directors responsible for Miss Jones' removal. During the investigation testimony was given by the mayor, the library directors, Miss Jones, Mr. Lummis (the present librarian), Dr. C. J. K. Jones, and other members of the library staff. The testimony tended to show the existence of strained personal relations between Miss Jones and several of the directors, and an apparent acceptance by the mayor of these directors' representations regarding the librarian's dismissal, with a later reversal of his attitude when public protest had been made in the matter.

The *Los Angeles Express* says: "The library dispute has extended over nine months. The investigation by the council after numerous postponements was finally begun Jan. 24. Mayor McAleer was the first to be placed on the stand, an hour later to leave the courtroom with the assertion that the whole thing was a deal to discredit him politically. Much of the evidence submitted has been contradictory of that which he gave, and the library

directors in every way have sought to show the mayor to be equally responsible with them. Nine sessions have been held by the council, and a large amount of testimony often irrelevant and immaterial has been submitted. The transcript of evidence will make a volume of between 800 and 900 typewritten pages. The stenographer's bill for services will exceed \$600."

Los Angeles (Cal.) P. L. (17th rpt.—year ending Nov. 30, 1905.) Added 14,076; total 123,146. Issued, home use, 841,067, of which 432,000 were issued from the main library, 180,800 from the 10 branches, and 228,259 from the schools (fict. 301,951; juv. fict. 123,494, magazines 65,592.) New registration 11,201 (men 4370); total registration 30,407. Receipts \$71,662.99; expenses \$56,069.57 (salaries \$31,289.48, books \$8299.37, binding \$4848.66, periodicals \$2098.16, rent \$1611, printing \$1721.65.)

Owing to the late unpleasantness caused by the dismissal of the former librarian, Miss Mary L. Jones, the Los Angeles Library has recently acquired notoriety in library circles, and its directors are probably justified in their conviction, expressed in this report, that "the great company of librarians, library employees and bookmen throughout the United States, will this year read the annual report of the Los Angeles Public Library with unusual interest." Indeed, the report deserves to be read in full, as no summary can fully convey its characteristics. It shows originality and energy, strong prejudice and abounding self-satisfaction, and its style may fairly be termed cyclonic. Possibly its most remarkable feature is that the report signed by the directors is practically identical in style and phraseology with the report signed by the librarian, and contrasts interestingly with the directors' report of a year ago. Both directors and librarian express themselves as more than gratified by the recent administrative changes.

Of Mr. Lummis the directors say: "He is an author of national reputation; an internationally recognized authority on the history of California and Spanish America; a person to whom encyclopædias, reviews, magazines, book publishers and scientists alike turn for the authoritative word on California, and its tributary territory, and whose name is in all recent encyclopædias; a man of ripe experience as editor, explorer, author, critic of literature and history, historian, lexicographer, organizer and director of several important public utilities; a scholar and yet a practical leader. He was not the product of a library training school, such as graduates half a dozen young women annually in this institution. Neither were the greatest librarians this country has yet produced—like Justin Winsor and Dr. Poole. But his education in books and men, his common-sense, determination and poise, and his well-known faculty for 'getting things done,' were believed to be far

more important. The staff already included nearly three score training-school graduates to do the routine. The vital point, in our estimation, was to have the routine properly directed."

Of Dr. C. J. K. Jones, his recently appointed director of research, Mr. Lummis says: "More vital than all is the personal guidance by which without going through a reasoned catalog or consulting the fly-leaves of each volume, the man or woman who wishes to know what is the most reliable up-to-date 'source' on Nineveh, or Manchuria, or the cottony cushion scale, or the Higher Criticism, shall find safe and prompt guidance. If there are special providences, that was one which enabled this library to secure Dr. C. J. K. Jones, A.M., as director of its newly created department of reading, study and research, where his profound erudition and ripe judgment are alike at the service of the school teacher, and readers who care to formulate a course of reading by something more than whim; students in international law, in biblical, classical, and American archæology, in creeds, and in philosophies, in the natural and applied sciences; the intelligent agriculturist who wishes the best guidance as to the peculiar conditions in California, where an unprecedented number of men are drawing their living from the soil in an environment totally different from that in which any of them ever farmed before; and so on. A living encyclopædia and guide in the reference department may or may not be an invention of this library; but of its utility there can be no question. The greatest libraries have the same thing in effect, if not in nominal office. This library has never had it before. In co-operation with the invaluable principal of the reference department, Dr. Jones will make that department a new and a living creature."

Any library receiving providential aid in making appointments to its staff should gladly defray the extra cost that special providences sometimes entail, and it is to be observed that the Los Angeles salary list shows an increase of \$6900 for the year ("\$1200 more for the librarian, and \$1500 for the new director of reading, study and research, and \$4200 additional salaries for attendants"), while the amount spent for books has fallen from the \$15,967.60 of the previous report, to not quite \$8300.

Reforms and changes undertaken or planned in the library's administration may be briefly enumerated as:

"Serious and strenuous upbuilding" of the reference department. Lists in the various branches of knowledge have been made, and "are now being experted by competent authorities;" "expert lists of books" have been ordered; a "reasoned catalog" has been instituted and is now in process of construction, critical appraisements from the leading re-

views of the world being inserted in the books themselves; Dr. C. J. K. Jones has been appointed; a Western history-material department has been established, to contain newspaper articles relating to California and the Southwest, clipped, condensed, classified into books, and indexed, and to include also "the biographical data and the portrait of every important man and woman in the history of California up to date, gathered from them alive when possible, gathered about them dead when no better can be done;" effort is being made to increase and re-catalog the collection of Americana, to exert greater scrutiny over fiction bought and more economy in buying it, and to prepare and distribute lists of the extensive photograph collection.

In administrative routine, previous methods of keeping statistics are said to have been "conflicting and without system," and a uniform system of making reports has been ordered; rotation of service in different departments has been stopped and permanent assistants have been assigned to the departments instead; daily half hour lectures to the staff are given by the principal of the reference department and it is intended to continue and enlarge this feature so that it may lead to "the continuous education and development of this library staff"—quite aside from "the technical kindergarten" conducted for many years for apprentice training; the system of salaries has been revised, the graded yearly increases abolished, and "having raised all salaries to a living basis the board has decided that further increase shall be given only for approved and special merit;" a new classification of the staff has been adopted, with minimum salaries of \$16 to \$40 a month for boy pages and \$35 to \$60 for the lowest graded assistants; standards of admission to the training class have been raised and a physical examination added to the requirements; the Decimal classification has been investigated and found undesirable, and its adaptation to the needs of the library is to be carried on, such adaptation having long ago been begun "by such members of this staff as are competent to make systems instead of blindly following them."

The ten branches now in operation are regarded as more than are needed for the population, and it is proposed to reduce hours of opening at the branches in proportion to their average monthly circulation and to discontinue any branch whose average monthly circulation falls under 500. A new system for branches is recommended, providing for a small permanent nucleus at each branch, and the use of travelling libraries sent in cases in rotation to each branch for a term of two weeks each.

For the whole library a standard form of inventory has been prescribed, and a strict inventory ordered, which it is recommended should be made annually. The abolition of the present school department is recommended, with a proposal for a conference be-

tween the board of education and library authorities "to determine whether some rational arrangement can be devised." Other changes relate to stamping books by a "library brand burned in the top of the volume;" reduction of number of periodicals bound each year; the undertaking of a "Dictionary of Western place-names," to be prepared and published by the library; and installation of new and hygienic chairs, of water coolers, and the mimeograph. The customary list of donations and exchanges is not given, as "25 per cent. of the total content of the annual report need not be, as heretofore, devoted to linear report of each free or ten-cent imprint received by this library."

Mr. Lummis treats at more or less length all the subjects summarized above; his comments, while suggestive and practical, are frequently marked by slurs cast upon the previous administrations.

In addition, the report ranges lightly over many general themes. Custom has not yet staled the infinite variety of Mr. Lummis' library opinions, and they are distinctly unfavorable to anything that savors of the name of Dewey. He adds to the gayety of nations by a two-page analysis of the Decimal classification, designed to show its unfitness in subject groupings; of the "A. L. A. catalog" he says, "if its general content is as worthless as its departments on California, Arizona and New Mexico, it should be kept only in our case of curios;" and he pays his respects to the form of spelling followed by the American Library Association "after a lonely fashion of its own."

In language inspired by appreciative study of this report, Mr. Lummis seems to be the sort of person who is calculated to make things hum.

Madison (Minn.) P. L. The opening of the Carnegie building was celebrated on Monday evening, Jan. 22, when exercises were held in the town hall before an audience of 600 people. On the following day the library was open for use, and over 150 books were issued. During the first week 606 books were drawn, of which 249 were children's books and about 145 non-fiction. The building, which cost \$8000, is admirably located on the main street opposite the city hall and auditorium. On either side of the entrance are the reading-rooms, well provided with newspapers and periodicals and made attractive by a brick fire-place and cosy corner, and green shaded lights on the reading tables. Opposite the entrance is the book-room with shelving around the walls under the high windows. On either side of the book-room are the reference room and librarian's room. In the high basement, a rest room for farmers' wives will soon be opened.

Marion (Ind.) P. L. On Feb. 28 the library opened its second annual art loan exhibi-

tion, which was continued until March 13. Besides paintings the exhibition included pottery, wrought metal, Indian and other curios.

Milwaukee (Wis.) P. L. (28th rpt.—year ending Oct. 1, 1905.) Added 9001; total 163,612. Issued, home use 680,022 (fict. 36.1 per cent.; juv. fict. 32.4 per cent.) New cards issued 13,855; cards in use 29,400.

New York City. Strong criticism of the city expenditure entailed by Mr. Carnegie's gift of library buildings was made in a public speech on Feb. 12 by Controller Herman A. Metz, who characterized Mr. Carnegie's library giving as "gold brick philanthropy." In explanation of his attitude Mr. Metz made through his secretary on Feb. 13 this statement: "There is a general impression that when Mr. Carnegie offered to give \$5,700,000 and the offer was accepted, that the city received the money. That is not the case. The city never got a dollar, and Mr. Carnegie alone knows where the money is. It is certain none of the principal has been spent. An average of three libraries or library buildings a year have been erected. For each of them Mr. Carnegie gives \$80,000 toward the construction of the building. The city has to buy the site, and sometimes the site costs \$150,000, then there are architects to be paid, books to be bought, with furniture, and the library as a whole maintained. Now, if the entire amount of \$5,700,000 had been handed over to the city, a fund could be created by reinvesting the full interest, which would help maintain the libraries and relieve the city of a burden."

New York Mercantile L. (85th rpt.—year ending Dec. 31, 1905.) Added 6397; total 235,947. Issued, home use 110,090 (Eng. fict. 66.22 per cent); ref. use 8018. Membership 4446, of which number 1701 are members of the Clinton Hall Association and thus entitled to use the library. Receipts \$32,100.08; expenses \$29,091.23 (salaries \$9047.92, books \$7839.54, periodicals \$618.06, binding \$403.30, catalog \$412.56, delivery service \$3019.45.)

The delivery service, by wagon and messengers, at members' residences amounted to 34,310 v.; by mail and express 4543 v. were sent to members.

New York P. L. Statistics for the reference and circulation departments for the calendar year 1905, are given in the library's January *Bulletin* as follows:

Reference department: Added, 56,374 v., 108,811 pm., of which 14,355 v. and 31,947 pm. were gifts. Cataloged, 37,016 v., 40,112 pm.; total cards written 92,316. Total no. readers, 201,227; 677,946 v. were consulted by 160,172 desk applicants, exclusive of use of free reference shelves. "There are now on the shelves of the Astor and Lenox branches available for readers 685,428 v. and 270,612 pm. These with the 543,955 v. in the circulation depart-

ment, give a total of 1,499,995 pieces in the whole system."

Circulation department (35 branches): Issued for home use 4,116,750 v.; 463,246 readers consulted books from the shelves; total no. readers 594,119. 108,314 v. were accessioned, giving a total of 543,955 on the shelves. Circulation branches have increased from 28 on Jan. 1, 1905, to 35 on Jan. 1, 1906, seven having been established or opened during the year as follows: 67th street branch, on Jan. 20; Port Richmond, March 18; Mott Haven, March 31; Kingsbridge, May 19; 135th street, July 14; Tremont, July 22; 96th St., September 22.

Norfolk (Va.) P. L. (Rpt., 1905; in local press.) Added 1742; total 13,132, of which 5749 are fiction. Issued, home use 97,750; reading room use 1769 (fict. 88,416.) In the children's department 2646 v. were drawn for home use, and 784 for reading room use. No account of use of reference books is kept. New registration 3457; total registration 6407 (children's registration 396.) Receipts \$5632.56; expenses \$5583.23 (salaries \$2783.50, books \$1115.25, building account \$1405.75, binding \$216.45, periodicals \$183.75, heating \$108.75, electric light \$123.27.)

More books are greatly needed to meet the demand caused by the change of the library to a free public institution. Mr. Sergeant, the librarian, says that the library is reaching every section of the city, and that registration continues to increase at about the rate of 200 per month. He calls attention to the extent and richness of the library's newspaper collection, which includes about 307 volumes, running from 1802 to the present time.

North Dakota, Libraries in. At the recent organization meeting of the North Dakota Library Association, a brief review of the libraries of the state was given by Walter L. Stockwell, state superintendent of public instruction. He said in part:

"There are four cities of this state which have been provided with buildings by Mr. Carnegie: Fargo, Grand Forks, Valley City, and Grafton. The women's clubs in the various communities of this state have established and are fostering a number of libraries, among them, Wahpeton, Devil's Lake, Cando, Langdon, and Lakota. There are libraries at Ellendale, Mandan, Jamestown, Carrington, Casselton, Park River, and a number of other towns maintain some sort of public library. In connection with the department of public instruction we are carrying on library work of considerable importance. We have had for the last eight years a system of travelling libraries designed particularly for public schools in districts which are not able to equip libraries for themselves. We now have upwards of 175 travelling libraries, and expect within two

months to add to that number at least 25 new travelling libraries. These libraries are selected with the utmost care. They contain from 40 to 60 volumes each, and are paid for by state appropriation. All that is necessary for any school or school district to do is to send application to our department, guarantee the freight and safe return, and they receive these books, which may be returned to our office, or to the county superintendent. This has proven, especially in the last two or three years, to be of great benefit, and the demand which has been made upon our department for these travelling libraries has been greater than we could supply." It is proposed to publish the transactions of the North Dakota Library Association meeting, and to include therein a statistical report on the libraries of the state.

Owatonna (Minn.) P. L. The contest between a majority of the library board and the citizens, regarding the continuance in office of the librarian, Miss Maude Van Buren, has been closed by the success of the directors in their refusal to re-elect Miss Van Buren. The situation was fully reported in January L. J. (p. 39), up to the withdrawal of the librarian first elected to succeed Miss Van Buren. At the January meeting of the board, the five opposing directors were conspicuous by their absence, so that no business could be transacted. The president and secretary of the board held that Miss Van Buren's election the previous year was for no definite period, and that she should hold the position until a successor should be elected. At their urgent request, Miss Van Buren continued in office through January. The opposing directors, however, secured an injunction upon the city treasurer, preventing Miss Van Buren from drawing salary after Jan. 1, 1906, in view of her not having been re-elected by the board. The February meeting of the board was attended by a large number of citizens, who made earnest protest against Miss Van Buren's displacement; a formal application for re-election was also presented by Miss Van Buren, at the request of the citizens' committee. The petitions were of no avail, however, and the directors, by vote of five to four, refused to re-elect Miss Van Buren, and then elected Miss Josephine Morton, former assistant librarian, to serve as librarian at \$50 a month, and Miss Leila Gausewitz as assistant librarian, at \$30 a month. Miss Gausewitz has had no previous library experience. The Minnesota State Library Commission *Bulletin* says: "By this action the board has effected a saving of \$25 per month in the salary list. As the finances of the library are in excellent condition, there was no necessity for this economy, and the board can give no good reason for thus defying the expressed wish of the public whom they represent."

Miss Van Buren has accepted the position

of head cataloger in the library of the University of Iowa. Before her departure from Owatonna, a public reception was given in her honor, on the evening of Feb. 15. It was planned and carried out by the five women's clubs of the city, and was attended by several hundred persons. A feature of the reception was the presentation to Miss Van Buren of a gold watch, the gift of the citizens of Owatonna, in public appreciation of her services. The senior class of the high school also presented her with an engraved souvenir spoon.

Pittsburgh (Pa.) Carnegie L. In submitting estimates recommended for city expenditures for 1906 City Controller John B. Larkin, on Jan. 30 strongly objected to any increase in the library appropriation, which the directors had asked should be raised to \$250,000, or \$68,000 more than previously. Instead of any increase, Mr. Larkin recommended that the annual appropriation be withdrawn altogether and that the library be so reorganized as to form an annex to the technical school, with an annual allowance of \$50,000. He said: "The library has, after 10 years of open house, an appropriation from the city of more than \$1,100,000; has 194,000 volumes on its shelves and a pay roll as long as the moral law. Last year, out of \$158,000 given it by the city, it allotted \$30,000 for books, \$52,000 for care of the library and \$40,000 for care of building, or \$122,000 to care for and circulate 194,000 volumes, or 63 cents a volume. As the library stands now, it certainly has outlived its usefulness and outgrown in its demands any fair measure of help this city could be expected to give. Its endowment by private subscription is the only other alternative."

A statement in refutation of Mr. Larkin's attack was immediately issued by the library board, pointing out that the city appropriations defrays not only cost of the entire library administration, but also a considerable amount of the building maintenance cost of the departments of art and science of the Carnegie institute. Statistics of the use of the library were given, to prove that the statement that it has outlived its usefulness "is absolutely without foundation." In his final estimates, the controller receded in a degree from his first radical intentions, and recommended that the library appropriation be made \$125,000, or \$33,000 less than that of the previous year. The city council, on Feb. 26, acted on the appropriations ordinance, and granted the library \$200,000.

St. Louis (Mo.) Mercantile L. (60th rpt., 1905.) Added 5014; total 128,053. Issued 123,922 (fict. incl. juv. .676 per cent); attendance 196,486. New members 668; total membership 3774.

A special membership fee of \$2 a year for teachers has been granted and in consequence 205 teachers have become members. The total circulation of the year exceeds by 5674

that for 1903, which was the largest previously recorded in the history of the library.

Savannah (Ga.) P. L. (3rd rpt., 1905; in local press.) Added 613; total not stated. Issued, home use 66,294 (fict. 60,382). No. visitors 11,852; no. borrowers, "over 6000."

"There appears to have been during the year a very marked increase of interest on the part of the public, not only in the public library of this city, but throughout the South."

Scranton (Pa.) P. L. (15th rpt., 1905.) Added 3387; total 51,765 (35,383 for circulation, 16,382 for reference). Issued, home use 121,608; lib. use 5406 (fict. 50.76 per cent.; juv. fict. 17.22 per cent.). New registration 4001; cards in force 8378. Receipts \$15,599.76; expenses \$14,723.85 (salaries \$6521.50, books \$2261.12, binding \$615.83, periodicals \$351, insurance \$567, heating \$636.96, lighting \$549.39, stationery and printing \$369.06). "Bookbinding done for the library in 1905 included 764 volumes newly bound, and 1093 volumes rebound or reset in original covers. The binding of magazine volumes has of necessity been again almost entirely neglected, because of inadequate appropriations." The use of the young people's department of 3300 v. has considerably increased, the total circulation being 20,936.

U. S. Geological Survey L., Washington, D. C. (Rpt., 1904-5.) Added 2661; total 58,681; 1800 v. were bound during the year.

"The work of cataloging the publications of the state geological surveys was continued. All of the eastern and southern states, except New York and Pennsylvania, are completed and also a portion of the central western states. The work of cataloging the sections of petrology, mineralogy, and crystallography is completed. By arrangement with the Librarian of Congress, these cards were sent to him to be printed, and printed cards are now available for all the state surveys cataloged and also for the greater part of the books on petrology and mineralogy. The monographs, bulletins, water-supply papers, and professional papers of the Survey have all been cataloged, and printed cards are now available. The result of this work of co-operation with the Library of Congress is that all the prominent geologic publications are cataloged, and printed cards are available for the use of all libraries and individuals within a very short time after the publications are placed in circulation."

Warren (O.) P. L. The new Carnegie library building was opened on the afternoon of Feb. 3.

Yonkers, N. Y. Woman's Institute L. Recent lectures and exhibits have been given at the library, including an address on "Book plates," by David McNeely Stauffer, on Feb. 8, illustrated by a large loan collection of book plates.

FOREIGN

Aberdeen (Scotl.) P. L. (21st rpt.—year ending Sept. 30, 1905.) Added, lending dept. 1254; total 32,945. Added, ref. dept. 983; total 31,106. Issued, home use 336,780, a gain of 48,213 over the previous year (fict. 56 per cent.); ref. issue 23,423. No. borrowers 12,131.

This is the library's "majority" report—the 21st since its beginning in 1884—and also the record of "by far the most successful year" in its history. The increase in use has been very large, and in all its departments the library appears to be carrying on active and vigorous work. The extension scheme, entered upon five years ago, has been completed, and the last portions of this scheme—the new central reading room and the extended reference department, were made available to the public in May. The scheme now embraces four branch reading rooms for different districts, enlarged and improved central reading and reference facilities, and delivery stations at three of the branch reading rooms. "The funds available consisted of Mr. Carnegie's very generous donation of £10,500 and a sum of £1224 saved from revenue during the last three or four years, making, in all, £11,724. The cost of the scheme, when the accounts are finally paid off—certain sundries have yet to be dealt with—is estimated at £12,298, leaving a deficit of £574, on which the library is now paying interest."

University of St. Andrews L., Scotland. (Rpt.—year ending Sept. 30, 1905; in university library *Bulletin*, Jan., 1906.) Added 1795; expended for books £1004 18s. 5½d. Issued for home use to students, members of the faculty and others, 6206 v. to 371 readers.

Shelf room in the library itself has been exhausted, and it was necessary to use for this purpose the quarters previously given to the library store, and to transfer to offices in an adjacent college building the platforms, benches and other furniture formerly used in the store. About 180 lineal feet of shelving was installed and filled with books transferred from the north wall of the reading room gallery. "These tentative expedients for increased book accommodation cost more than they are really worth, inasmuch as they lead to great dislocation in the arrangement of the library without relieving the congestion where relief is most needed."

Gifts and Bequests

Clinton, Ill. On Jan. 31, Vespasian Warner, of Bloomington, Ill., offered to give \$10,000 for a public library building to his native town of Clinton, provided the town will furnish a site and agree to support the library.

Hardwick (Vt.) P. L. By the will of the late Mrs. Judevine, of Hardwick, the li-

brary is made residuary legatee of her estate, estimated at \$10,000. The legacy is to be used as an endowment fund for purchase of books and running expenses.

Iowa State College, Ames. The economic library of the late George N. Catt, of New York City, has been presented to the college library by Mrs. Catt. It contains about 500 v.

Janesville (Wis.) P. L. By the will of the late Stanley Smith of Janesville, the library receives a bequest of \$500.

Carnegie library gifts.

Deep River, Ct. Feb. 13. \$5000.

Madison, S. D. Jan. 25. \$10,000.

Martinsville, Ind. Feb. 16. \$12,500.

Pallas, Ia. \$10,000.

South McAlester, I. T. Feb. 9. \$15,000.

Swarthmore (Pa.) College L. Feb. 4. \$50,000, on condition that an equal sum is raised for endowment.

Practical Notes

BATTERSHALL, Fletcher. Bookbinding for bibliophiles: being notes on the technical features of the well-bound book for the aid of connoisseurs; with a sketch of gold tooling, ancient and modern. Greenwich, Ct., Literary Collector Press, 1905. 9+132 p. il. sq. O. \$2.50.

Appeals to the collector and booklover. Gives facts about mending and repairing leather joints and sewing, edges and edge gilding, choice of leathers, head bands and covering, etc.

BOOKBINDERS' GAUGE. (Described in *Official Gazette* of the U. S. Patent Office, Jan. 9, 1906. 120:393.) il.

Eight claims are allowed for this patent.

BOOK SUPPORT. (Described in *Official Gazette* of the U. S. Patent Office, Jan. 9, 1906. 120:347.) il.

A stall-like arrangement suspended from the top of a shelf to hold the book in place.

CARD INDEX DRAWER. (Described in *Official Gazette* of the U. S. Patent Office, Jan. 9, 1906. 120:347.) il.

Eight claims are allowed for this patent.

SUBSTITUTE FOR THE CARD INDEX. (In *American Machinist*, Jan. 11, 1906. 29:58.)

A device on somewhat the plan of the loose leaf ledger put up in book form for the equivalent of 1000 cards, thus making it easy to be carried about.

Librarians

EDMOND, John Philip, librarian of the Society of Writers to Her Majesty's Signet, Edinburgh, and one of the foremost bibliographers of Great Britain, died in Edinburgh on Jan. 30 last, aged 55. Mr. Edmond was born and educated in Aberdeen and was for many years engaged in the bookbinding and publishing business there. In 1889 he was appointed assistant librarian at Sion College, and in 1891 became librarian to the Earl of Crawford, whose collection is famous among the great private libraries of the United Kingdom. This post he held until his appointment to the Signet Library in 1904. Mr. Edmond's bibliographical attainments first won recognition by his work on "The Aberdeen printers," 1884-8, and later, in 1890, by his association with the notable "Annals of Scottish printing," of which he was the general editor. During his connection with the Earl of Crawford's library at Haigh Hall, he prepared some of the most valuable issues in the important series of "Bibliotheca Lindesiana," among them the "Catalogue of Chinese books and manuscripts" (1895), "Catalogue of English broadsides, 1505-1897" (1898), "Catalogue of English newspapers, 1641-66" (1901), and "Catalogue of a collection of 1500 tracts by Martin Luther and his contemporaries, 1511-98" (1903). His work was of special value in its presentation of new material and of the results of extended original research. He had been since 1882 a life member of the Library Association of the United Kingdom, and was deeply interested in its work and a familiar figure at its meetings; and was at the time of his death president of the Edinburgh Bibliographical Society.

ELY, Miss Sarah E., the first librarian of the Holyoke (Mass.) Public Library, died at her home in Holyoke on Feb. 7. Miss Ely was born in Holyoke, Oct. 31, 1840, was a graduate of Mount Holyoke College, and when the library was established in 1870 was appointed librarian, a position she held until about five years ago.

EMERY, Ernest W., assistant librarian of the Maine State Library, was on Feb. 23 appointed state librarian of Maine, succeeding the late Col. L. D. Carver. Mr. Emery has been connected with the state library for 15 years, and his appointment has been received with general satisfaction by the librarians of the state. He has been actively interested in the library work of the state, and is at present secretary of the Maine Library Association.

GOODRICH, Francis L. D., of the New York State Library School, class of 1906, has been appointed assistant in the catalog department of the New York State Library.

HARRON, Mrs. Julia Scofield, of the New York State Library School, class of 1905, has been appointed assistant in selection and an-

notation of books at the New York State Library.

HARTWIG, Otto. "Aus dem leben eines deutschen bibliothekars: erinnerungen und biographische aufsätze von Otto Hartwig" (Marburg, N. G. Elwert, 1906, 387 p. with portrait) is reviewed by A. Hortschansky in the February number of the *Zentralblatt für Bibliothekswesen*. The thousand and one details which make up a librarian's life hardly form promising material for a biography, and the best portrayal of Hartwig's individuality is to be found perhaps in these selections from his own writings. These are divided into three groups: 1, contributions to the story of Hartwig's life; 2, biographical sketches; 3, contributions to the history of Kurhessen. The reviewer deplores the absence of the reminiscences of his youth in which Hartwig often indulged in the last years of his life, "spoken essays of a peculiar charm," and adds that editor and publisher are to be thanked for this noteworthy addition to the small number of works on librarians. F. W.

HUNT, Edward Browne, chief cataloger of the Boston Public Library, died suddenly of heart disease on the evening of Feb. 9, while on a train from Boston to Dedham, Mass. Mr. Hunt was the son of Oliver and Alice Brown Hunt, and was born in South Sudbury, Mass., Feb. 19, 1855. He was a graduate of the Boston Latin School and also of Harvard College, class of 1878. After graduation, he acted for some time as private tutor in Philadelphia and Washington, and later accepted a position as assistant at the Boston Public Library. For the past 23 years he had been a member of the library staff, and for many years had been head of the catalog department. Mr. Hunt had decided literary and musical attainments, was an ex-president of the Papyrus Club and a member of the St. Botolph and Signet clubs; he had been for the past five years a member of the American Library Association. His home was in Dedham.

JEWETT, Dr. Walter K., of the New York State Library School, class of 1905, has been appointed senior assistant at the John Crerar Library, Chicago.

NERNEY, Miss May C., of the New York State Library School, class of 1906, has been appointed secretary to Mr. Edwin H. Anderson, director of the New York State Library. Since 1903 Miss Nerney has been at the head of the history section of the state library.

SELDEN, Miss Elizabeth, who has been for eight years assistant librarian of the Duluth (Minn.) Public Library, has resigned that position to accept one on the staff of the Brooklyn (N. Y.) Public Library.

STODDARD, Miss Florence Louise, formerly assistant in the Essex Institute Library, Salem, Mass., has been elected librarian of the South Norwalk (Ct.) Public Library.

WARD, Harry L. S., long connected with the manuscripts department of the British Museum, died in London on Jan. 28, in his 81st year. Mr. Ward was an accomplished scholar, best known by his "Catalogue of romances," which recorded for the first time the contents of the manuscript romance collections in the British Museum; he had completed also for the museum a "Catalogue of Icelandic manuscripts," which is still unpublished.

Cataloging and Classification

CLASSIFICATION OF LAW.—Since the publication in 1894 of the University of California classification of books, many of the subject divisions have been modified, extended, or very fully differentiated. The following classification of law, a subject which few librarians will care to tackle, is believed to be a satisfactory, workable one for a large general or university library. Special attention has been given to the number of books published on any subject, which are likely to be in an American library, and the notation is adjusted thereto.

The BODLEIAN L. "Supplement to the staff-kalendar," somewhat extended in its 1906 issue, contains many interesting notes on rules and processes in force in that library in handling various classes of material. These include rules for stamping and foliating mss.; a scheme for calendaring charters, with miscellaneous rules for the calendarer; and a careful "Scheme for the new catalog of Laudian Greek mss.," followed by expository notes which bring out the importance of detailed record of style, illumination, line-endings, etc., in scientific cataloging, as "the surest road to sound induction and literary discovery." The "rules for the author catalogs of printed books and printed music," heretofore out of print, are also given in revised form. The "supplement" is well worth the careful attention of catalogers, despite its meticulous precision in registering non-essential details; it is proposed to revise and enlarge it yearly "until it becomes as far as possible a complete directory to the practice of the library"—a plan that might usefully be adopted by other large libraries.

BRITISH MUSEUM LIBRARY AND ITS CATALOGUE. (*In Edinburgh Review*, January, 1906, p. 117-136.)

An extremely interesting contribution to library literature. Reviews briefly but graphically the history of the building up of the museum collection, and the successive stages of its catalogs, printed and manuscript, from the two folio volumes of 1787 to the present series of 930 volumes, and then passes on to a critical consideration of the

catalog, its characteristics and defects. The chief points criticised are the pedantic precision in entry of well known writers (as Voltaire under Arouet, Montesquieu under Secondat, Fénelon under Salignac, etc.); the various forms of entry for different classes of anonymous works; continued anonymous record of anonymously published works after authorship is established; inconsistencies and difficulties entailed by the class divisions "Academies" and "Periodicals;" and insufficient record of contents or titles of volumes in composite sets (as Percy Society publications, which are entered only as "Percy Society. Early English poetry, ballads, and popular literature of the Middle Ages; edited from original manuscripts and scarce publications. 31 vols. Lond., 1842"). In conclusion, plea is made for the publication of a revised edition of the hand list of bibliographies, of which the last issue appeared 16 years ago; continuation of the subject-index of modern additions; and a revised enlarged catalog of the maps, plans and charts. The enumeration of the volumes of the catalog required for each letter of the alphabet will be of interest to those planning the allotment of space to numbers for the various letters of the alphabet, as these come into service of the library catalog. Incidentally reference is made to the hopeless condition of the binding work at the library. It is stated that the binding of most foreign current periodicals is at least six years behindhand, and some of them are said to be as much as 18 years behindhand. Another point referred to is that the trustees of the museum cannot reject any printed matter sent to the museum or dispose of any duplicates. As a result there is an accumulation of time-tables and all kinds of literature relating to pills and quack medicines, simply because the authorities are not permitted to use any discretion in the matter. The article evinces thorough technical knowledge, and sincere appreciation of the library's place and service in the world of scholarship.

CHICAGO P. L. Bulletin no. 73; Accessions from Dec. 1., 1905, to Feb. 1, 1906. 16 p. O.

— Special bulletin no. 6: selected list of books for boys. Chicago, January, 1906. 32 p. O.

A classed author list of books suitable for boys from 12 to 18 years of age.

CONNECTICUT P. L. COMMITTEE. Monthly book list, December, 1905. [Hartford, Ct., Feb. 17, 1906.] 22 p. O. (Book list ser. 12; library notes ser. 9.)

Besides the classed list of recommended books, contains annotated reading list on Japan and Russia.

HULME, E. Wyndham. The principles of cataloging. (*In Library Association Record*, February, p. 31-45.)

In three sections covering, 1, Indication of

"A natural and convenient frontier line between the author and subject catalog when these catalogs are published in separate sections;" 2, Classification of subject matter in subject catalogs; 3, Criticism of the Anglo-American code of cataloging rules. In section 1 Mr. Wyndham's contention is that works *about* an author, corporate body or institution should be indicated by reference or added entry under the main entry for such author, body or institution, in accord with the plan adopted by the British Museum and other catalogs for "Shakespeare," "Dante," etc., which is practically a combination of author entry with subordinated subject entry; this would result in having many sections of the classed catalog, simply referenced out to the author catalog. Section 2 touches briefly upon the difficulties of synonymous or partially synonymous class headings, and warns against acceptance of Cutter's subject rules as a sound basis for classification in the subject catalog. Section 3 reviews varying practice in author entry under pseudonym, family name, etc., and presents rules suggested as substitutes for those given in the provisional code of the international catalog rules committee (L. A. U. K. and A. L. A.)

The NEW YORK P. L. *Bulletin* for January, besides its elaborate bibliography of Franklin, prints an interesting selection of "Letters of Benjamin Franklin on public affairs, 1773-1787," from the manuscripts in the library's collection.

NOTTINGHAM (*Eng.*) F. P. Ls., Central Lending L. Second supplementary author-list of fiction, poetry and the drama, 1900-1906. Nottingham [1906]. 32 p. O.

A title-a-line author list, two columns to a page; pseudonymous entries are in italics, and anonymous works appear in A under "Anonymous." There is brief indication of sequels and of date or subject of historical novels. There is a large representation of low-grade fiction—*Family Story-teller* series, Hume, Boothby, Corelli, Florence Warden, "John Strange Winter," "Rita," Col. Richard Henry Savage, etc.

PLAINFIELD (*N. J.*) P. L. Supplement to class list no. 1: English prose fiction added. November, 1900-December, 1905. [Plainfield] 1906. 24 p. nar. S.

The ST. JOSEPH (*Mo.*) F. P. L. *Bulletin* for February contains a short reading list on "Railroad rate legislation."

The SEATTLE (*Wash.*) P. L. *Bulletin* for February contains a reference list on "Operas," covering besides the general subject Gounod and "Faust," Puccini and "La bohème," Verdi and "Rigoletto," and Wagner and "Lohengrin" and "Tannhäuser."

UNIVERSITY CLUB L. *New York City*. Selected list of books added, 1905. New York

City, 1906. 40 p. T. (Lib. bulletin, no. 9.) A classed list, annotated.

WORCESTER (*Mass.*) F. P. L. Finding list of music. Worcester, Mass., February, 1906. 92 p. O.

A fairly close classification, based on the Dewey system, "of all material in this library under any section of music." Critical works following the works themselves, thus mixing music and music-literature, is not, perhaps, the best arrangement in a public library finding list. The collection of music-literature, though not very modern, includes standard books, and is confined almost entirely to publications in English. It is strongest in biography, but unfortunately biographical analytics are made only for the "great masters." The library is weak on the music side, especially in instrumental, chamber, and orchestral music. Of the "classics" in all forms only the best known works appear. Under "scores" (presumably light operas) on p. 29, are entered "I pagliacci" and "Cavalleria rusticana!" There are about 1200 entries (including analytics), with no bibliographical details except dates of publication, shelf-numbers, and occasional contents-notes. Books in the 1904 "A. L. A. catalog" are indicated.

Bibliography

AMERICAN HISTORY. Wells, P. P. Books on American history published in 1904: annual supplement to Larned's "Literature of American history." (*In A. L. A. Booklist*, v. 2, no. 2. February, 1906. p. 40-59.)

Carefully selected and annotated; the supplements for 1902 and 1903 were issued in pamphlet form by A. L. A. Publishing Board as "Annotated titles of books on English and American history."

CANARY ISLANDS. Maffiote, L. Los periódicos de las islas Canarias; apuntes para un catálogo. I: 1758-1876. Madrid, Alonso, 1905. 170 p. 8°.

CHILD LABOR. Spargo, J. The bitter cry of the children, with an introduction by R. Hunter. N. Y., Macmillan, 1906. xxiii. 337 p. 20cm.
Notes and authorities: p. 307-323.

CHILD STUDY. Rowe, S. H. The physical nature of the child, and how to study it. N. Y., Macmillan, 1906. xvi, 211 p. 19½cm. Bibliography: p. 188-200.

ENTOMOLOGY. Literature of forest entomology. (*In* N. Y. State Museum. Memoir 8, p. 12-13. Albany, 1905.)

13 titles from 1857 to 1903, chiefly in N. Y. state and government publications.

FILARIA LOA. Annotated bibliography of *Filaria loa* (*In Journal of Infectious Diseases*, March 2, 1906. 3:77-90.)

Appendix to article by H. B. Ward: "Studies on human parasites in North America. I. *Filaria loa*."

FRANCE. *History*. Répertoire méthodique de l'histoire moderne et contemporaine de la France; rédigé sous la direction de G. Brière et P. Caron. 6. année: 1903. Paris, Cornély, 1906. xxxiv, 361 p. 8°.

FRANKLIN, Benjamin. List of works in the New York Public Library by or relating to Benjamin Franklin. (*In New York Public Library Bulletin*, January, 1906, p. 29-83.)

A notable contribution to Franklin bibliography, covering Bibliography, Manuscripts, Works by Franklin, Works about Franklin, Works printed by Franklin, Portraits, etc., of Franklin. The list of portraits is elaborate, recording 307 numbered entries and followed by a double-column index of painters or engravers.

FRENCH LITERATURE. Catalogue général de la librairie française. T. 16 (Table des matières des t. 14 et 15, 1891-1899.) 2. fasc.: Clubs-Kystes. Paris, Nilsson, 1905. p. 241-532. 8°.

FRENCH POETRY. Lachèvre, Frédéric. Bibliographie des recueils collectifs de poésies publiés de 1597 à 1700. t. 4, Supplément (Additions, corrections, tables générales). Paris, Leclerc, 1905. 8+335 p. 8°.

GEOGRAPHY. International catalogue of scientific literature. 4th annual issue [1904] J: Geography, mathematical and physical. London, 1905. 8°.

GEOPHYSICS. Bibliography of geophysics, in preparation by F. B. Weeks, under grant of the Carnegie Institution, is reported upon in Carnegie Institution year book, 1905. "The work has been conducted by Mr. Weeks for a period of seven months, April 1 to Oct. 1. The references are being brought together under the following general heads, leaving the minor subject heads to be determined after all of the literature has been examined: General works and text books; bibliography; periodicals, cosmical physics, divided into earth-moon system, meteorites, origin, constitution; origin of earth, divided into nebular and other hypotheses; movement of earth in space; rotation of earth in space; terrestrial magnetism; electric earth currents; auroras; earth's interior, divided into magmas, rocks, igneous rocks, and vulcanism; lithosphere, divided into origin, etc., and diastrophism; metamorphic rocks; sedimentary rocks; ore deposits; earthquakes, atmos-

phere; hydrosphere; climatology; glaciology; geologic processes; physiography; ocean topography; and geologic history."

GREEK PAPYRI. Hohlwein, Nicolas. La papyrologie grecque; bibliographie raisonnée (ouvrages publiés avant le 1. janvier 1905). Louvain, Ch. Peeters, 1905. 178 p.

HAGUE. Marle, R. van. Bibliographie van 'sGravenhage. 'sGravenhage, W. P. van Stockum, 1905. viii, 50 p. 8°.

HEAT. Subject list of works on heat and heat-engines (excluding marine engineering), in the library of the Patent Office. London, H. M. Stationery Off., 1905. 199, [1] p. 16cm., (Patent Office Library ser., no. 16; Bibliographical ser., no. 13.)

HEREDITY. Woods, F. A. Mental and moral heredity in royalty. N. Y., Holt, 1906. 8°. Bibliography: p. 308-312.

HOSPITALS. Girard, W. P. Bibliography of hospital sanitation and architecture. (*In American Architect and Building News*, January 6, 1906. 89:6-7.)

Arranged under: English and American books; German books; Reports, articles and pamphlets—German, English. Titles are arranged according to year of publication.

HURON RIVER VALLEY. Transeau, E. N. The bogs and bog flora of the Huron River Valley. (*In Botanical Gazette*, January, 1906. 41:17-42.)

Followed by a bibliography of 61 titles.

IMMIGRATION. Hall, P. F. Immigration and its effects upon the United States. N. Y., Holt, 1906. 8°.

Bibliography: p. 369-374.

INCOME TAX. Meyer, H. Die einkommensteuerprojekte in Frankreich bis 1887. Berlin, Heymann, 1905. xii, 190 p. 23cm. Contains bibliographical references.

MANUSCRIPTS. Madrasah College Library, Calcutta. Catalogue of the Arabic and Persian manuscripts in the library of the Calcutta Madrasah; by Kamálu'd-dīn Ahmad and 'Abdu'l-Muqtadir; with introd. by E. D. Ross. Published by order of the government of Bengal. Calcutta, Bengal Secretariat Book Depot, 1905. 1 p. l., iv, 38, 115 p. 24cm.

MATHEMATICS. International catalogue of scientific literature. 4th annual issue [1904] A: Mathematics. London, 1905. 8°.

MEDICINE. New York State L. Bulletin 99,

Additions 6: Medical serials; with bibliography of cerebro-spinal meningitis; comp. by Ada Bunnell, medical librarian. Albany, 1905. p. 410-448. O.

In three sections: 1, Periodicals; 2, Society transactions and reports; 3, Public health reports and vital statistics.

MENINGITIS. Bunnell, Ada. Bibliography of cerebro-spinal meningitis. (*In* New York State L. Bulletin 99, Additions 6: Medical serials [etc.]. Albany, 1905.)

In two divisions: List of articles in the New York State Medical Library, January, 1895-September, 1905: List of articles not in the New York State Library, January, 1904-September, 1905.

MUSIC. Villanis, L. A. Piccola guida alla bibliografia musicale. Torino, fratelli Bocca, 1906. 63 p. 16°.

PHILOSOPHY. Rand, B. History of philosophy: a selection of standard works in the English language. (*In* Boston Public Library *Bulletin*, February, 1906. p. 55-65.)

An excellent compact and practical bibliography, in two divisions: Histories, and Philosophers. In the second part entries are alphabetic under philosophers' names, giving first original works and then biographical or other works about the philosopher or his system, alphabetically arranged by author. Publishers, dates and prices are given.

PRINTING. Boston Public Library. A list of books on the history and art of printing and some related subjects in the Public Library of the city of Boston and the libraries of Harvard College and the Boston Athenæum; published in commemoration of the 200th anniversary of the birth of Benjamin Franklin. Boston, Public Library, 1906. 2 p. l., 38 p., 1 l. 25½cm.

—Nijhoff, W. Bibliographie de la typographie néerlandaise des années 1500 à 1540. Livre 13-15. La Haye, Nijhoff, 1905.

—Watkins, George Thomas. Bibliography of printing in America; books, pamphlets and some articles in magazines relating to the history of printing in the new world; with notes. Boston, published by the compiler, 1906. 32 p. O. \$1. [300 copies.]

The compiler, in a short preface, says: "I trust that those who make use of this little book, the first of its kind, will pardon all omissions and commissions. The work was undertaken because of my love of the subject.

I am a printer on one of the Boston morning newspapers and what spare time I have had during the last several years has been spent in gathering the following titles. A good number of the books described are in my own collection, but the majority of the titles were taken from books on printing in the Boston Public Library." Works relating to Franklin have been left out, on account of their inclusion in the various Franklin bibliographies and catalogs. The bibliography is in one author-alphabet, with frequent annotations; it is creditable in material and appearance, though often untechnical and inconsistent in method.

RHETORIC AND COMPOSITION. Text-books in rhetoric and composition: report of standing committee on aids in teaching English of New England Association of Teachers of English. (*In* *School Review*, January, 1906. 14:1-33.)

More than one-third of this report is given up to two annotated lists of text-books; one for elementary schools of 23 titles, and the other for secondary schools with 27 titles. The annotations are very comprehensive.

TUBERCULOSIS. Ruck, Carl von. Immunization of tuberculosis, with special reference to the methods of Prof. Von Behring. (*In* *Medical Record*, January 20, 1906. 69: 85-91.)

Followed by a bibliography of 78 titles.

WOMEN. ST. JOSEPH (Mo.) FREE PUBLIC LIBRARY. List no. 6: Women and home: children, cooking, house decoration, house management, servants, sick room, sewing, women and girls. St. Joseph, Mo., February, 1906. 8 p. Tt.

WORKINGMEN'S INSURANCE. Delcourt, R. Les résultats de l'assurance contre les accidents du travail. Paris, Rousseaux, 1905. 8°.

Bibliographie: p. 375-384.

WRITING. Chamberlain, Edward F. Acquisition of written language by primitive peoples. (*In* *American Journal of Psychology*, January, 1906. 17:69-80.)

Treats of the psychology of language learning on the part of North American Indians, and is followed by an annotated bibliography of 21 titles.

ZOOLOGY. International catalogue of scientific literature. 3d annual issue [1903] N: Zoölogy. pt. 3: Subject catalogue: Vertebrata. London, 1905. 8°.

BALLADE OF BIBLIOGRAPHY

Suppose in Roorbach you should look
For what you can't in Kelly find,
And then you do not tree the book,
Why pick up Lowndes and go it blind;
Throughout the Ref. Cat. you may wind,
Perhaps the Trade List cuts the knot;
Go home to dinner; when you've dined,
Try Petzholdt, Stein and Watt!

But if you've searched in every nook
And then if Lorenz proves unkind,
While e'en Brunet your cause forsook,
Till o'er Vicair you've loud repined,—
Cheer up! call Kayser to your mind,
Don't touch Georg, you'll curse your lot,
And if you tear the leaves you're fined,—
Try Petzholdt, Stein and Watt!

If Heinsius has by hook or crook
Your faith in Hinrichs undermined,
Your goose will Salvá surely cook;
A course through Hoepli then is lined,
Haym and Hidalgo are designed
To fool you then if Bruun does not,—
Antonio Vetus be maligne,—
Try Petzholdt, Stein and Watt!

Envoy

Halvorsen, you're not fit to bind!
Pinto de Mattos, you're all rot!
Get wise, the Nordisk Bog's declined—
Try Petzholdt, Stein and Watt!

E. L. P.

Notes and Queries

ELSON'S "UNITED STATES."—The text of "The new illustrated history of the United States," by Henry W. Elson, now being advertised by the Review of Reviews Co., appears to be the same as that of Elson's "History of the United States of America," Macmillan, 1904. The plates are different, but the pages sent are quite easily verified, the text being the same.

NELLIE J. COMPTON,

Acting librarian, University of Nebraska.

AMERICAN IMPRISONED SAILORS IN JAPAN.—Can any of the librarians in the United States give any instances of narratives in print of American sailors, or whalers, shipwrecked on the coasts of Japan, and kept as prisoners by the Japanese, before Commodore Perry's arrival in 1853, followed by the treaty of 1854?

It is believed that from 1815 to 1853 many scores of our countrymen saw the interior of Japan involuntarily. Whether in Hawaii or in the old United States territory, there must be, I imagine, manuscript or printed accounts of these waifs, and of some of their own obscure narratives, time, place, etc. I should be glad to know.

WM. ELLIOT GRIFFIS,

Author of "The Mikado's empire," "Japan: in history, folk-lore," etc., Ithaca, N. Y.

MATERIAL ON LIBRARY BUILDINGS WANTED.—

The undersigned is making a study of library architecture, with special reference to buildings of \$75,000 or under, and will be under many obligations to librarians of buildings coming within that figure, who will send plans and views of their buildings at an early date.

ALBERT REED,

Librarian, Public Library, El Paso, Tex.

LITERATURE ON ADVERTISING.—In the *National Advertiser* for Dec. 16, 1905, appeared an article entitled "A lack in libraries," calling attention to the fact that books on advertising are not sufficiently represented in public library collections. "There are now at least 50 good books on live subjects relating to the art and the science of advertising." This subject, it is pointed out, "is so large now, and there are so many people interested in learning something about every phase of the science, that it is surprising that more attention has not been paid to it by libraries." . . . "We can conceive of no library—even of those devoted to the literature concerning a particular business, such as insurance libraries—which would find it inconsistent with their policy to incorporate some works on this important and fascinating subject. There are a large number of reading-rooms in the country connected with clubs, chambers of commerce, young men's and young women's Christian associations and young men's Hebrew associations, etc., which are not complete until they have some standard work on advertising for easy reference."

THE BEGINNING OF THE LIBRARY OF CONGRESS.—Mr. William Garrott Brown's recently published life of Oliver Ellsworth contains a paragraph which forms an interesting addition to the first chapter of Mr. Johnston's "History of the Library of Congress." It is on pages 97-98, and reads as follows:

"A few days later [on 23 Jan., 1783], with Hamilton and Madison, he reported in favor of a treaty of amity and commerce with the Netherlands. In this report . . . there was enclosed the treaty itself and a series of forms and blanks for the various interchanges of officials and of courtesies which it called for. 'Both the committee and Congress,' Madison remarks, 'were exceedingly chagrined at the extreme incorrectness of these national acts.' The debate that followed led to a motion for the purchase of a few books of reference for use of Congress, and that motion was, no doubt, the beginning of the history of the libraries of Congress and the department of state. But it was not the actual beginning of those libraries. Not even 'a few hundred pounds' could be spared for such a purpose."

Madison's account of the debate on the question [Writings, ed. Hunt, 1: 318-19], to which Mr. Brown refers, is exceedingly interesting; but is too long to be reprinted here.

A. C. TILTON,

Wisconsin State Historical Society.

THE LIBRARY JOURNAL

VOL. 31

APRIL, 1906

No. 4

THIS annual School Number of the JOURNAL is devoted, as usual, to the presentation of ways and means by which public libraries and public schools are working in common in the cause of good reading. Mr. Clark's brief statement of the three methods chiefly in vogue gives a fair idea of the machinery by which co-operation between libraries and schools is carried on in this country. There is a fourth method, which has been adopted in Great Britain to some extent, which seems to promise almost better results—the establishing of a joint "library-school" commission or board to control the school work of the libraries, and the providing for the maintenance of this work from a special "library-school" fund. It is evident that the relations of library and school on what may be called the mechanical side need to be more carefully worked out than has yet been done; but it is evident also that the uneven and inadequate methods now in vogue have resulted within a very few years in an enormously increased and improved use of books by children and teachers in the routine of school work. One of the most significant indications of the growing importance of the library in school work is seen in the various efforts made to instruct teachers and children in the use of books. Nothing probably would be more effective in improving public taste in reading than the regular instruction of teachers in the use of books, so that they in turn might give to their pupils something more than a mechanical ability to read and a perfunctory acquaintance with selections from school classics. The instruction recently begun at the Dayton Public Library and undertaken in varying degrees by other libraries, is a step in a direction that means a great deal to both the school and the library. It should not be long before systematic instruction in the first principles of library use, and particularly in the choice of books for children, is a part of training in normal schools. In simpler form such instruction would be of the utmost value in high schools and in grammar schools—not touching minute or technical details, but giving a clear working knowledge of how to use books, how to handle them, and where to look for the information that books can impart.

It is a pleasure to note the proposed organization of a national association of French librarians, and the issue of the first number of a French periodical devoted to library interests. These steps, if followed out as effectively as now seems likely, should mean organized library advance for almost the only leading country of the world that has not yet fallen in line with the modern library movement. In Great Britain formal organization of librarians followed closely upon the beginnings of the American Library Association in this country; Germany, Italy, Austria have followed suit in later years; even in Australia a brave, though unsuccessful, attempt toward such organization has been made; but France, so progressive in all educational thought and activity has so far remained untouched by this spirit of associated library effort. This is the more surprising, as France has long been a centre for bibliographical enterprises and her librarians are famous for their contributions to scholarship and to the materials of research. Public library development, however, in the more popular sense of the term—the building up of public libraries as institutions for the use of the whole people and not peculiarly for scholars—has been limited very largely to the work of the Société Franklin and similar societies or religious bodies, and it is to the awakening of public sentiment favorable to this development that the French librarians have particularly to address themselves. The circular announcement of the proposed library association outlines also various means by which the efficiency of French libraries may be strengthened. Particularly interesting is the suggestion that the proposed association should undertake to revive and continue the index to French periodicals, initiated by M. Jordell—a project that would be extremely useful not only to the libraries of France but to all users of bibliographical tools.

SINCE the library conference at Atlantic City the third series of sessions of the copyright conference has been held in the office of the Librarian of Congress at Washington, with the result that the concessions desired

by the great body of librarians, as represented by the delegates of the American Library Association with the approval of the Executive Board, as well as by a divided vote in Council, have been fully adopted as a part of the proposed code. In fact, the latest form of the draft goes somewhat farther, and instead of confining importations to books from the country of origin, excludes only those of American authorship. Under this latest scheme, therefore, a book of English or German authorship can be imported by libraries from any country. In the case of books by American authors, these may be imported when out of print in this country, but not otherwise. Thus the only modifications from the law of 1891 with which libraries are concerned are the limiting of the privilege of importation to one copy instead of two copies at one time; the proviso that importations without the consent of the copyright proprietor must be by official or incorporated institutions; and the prohibition of the importation of foreign editions of American authors, unless home editions are out of print. Certainly, this leaves little to be excepted to, unless a librarian is prepared to go to the length of disregarding authors' rights altogether; and after the corporate action of the American Library Association the movement originated by Mr. W. P. Cutter in starting what should more accurately be called a Library Anti-Copyright League in protest against the proposed revision, seems particularly *mal apropos*. It would be unfortunate should any considerable number of librarians seem to be put in opposition to the progress of this country toward recognizing as fully as other countries the rights of authors. —

JOSEPH SABIN began in 1851 the collection of titles for his "Bibliotheca Americana," or "dictionary of books relating to America," of which the first part was issued in 1867 and the first volume completed in 1868. Its early crudities were mitigated in the later volumes by the co-operation of Mr. C. A. Cutter, and in later years, especially after Mr. Sabin's death, Mr. Wilberforce Eames struggled manfully to complete the unfinished *magnum opus*, carrying it through the Smiths so far as the redoubtable John, whose bibliographical perplexities seem to have given a quietus to the undertaking. It has long been matter of re-

gret that the work stopped here, and it is good news therefore that the Carnegie Institution of Washington has in plan the completion of the enterprise, which, complemented by Charles Evans' creditable though not comprehensive "chronological dictionary" of books printed in the United States — his "American bibliography" — will furnish material for later bibliographical scholars.

AMONG the many gems of humorous literature that from time to time have sparkled in the gloomy depths of the *Congressional Record*, there have been few that equal the recent debate, therein chronicled, upon the Library of Congress, its scope and its functions. The debate over the items of the library appropriation recommended for the next fiscal year gave opportunity for this instructive exposition of guiding principles in library administration. Architecturally, says the statesman from Iowa, the Library of Congress is all very well; he views it with approval and delight. But it is the administration, as developed by the present librarian, that grieves and outrages him. Why should this library contain, and particularly desire, old and musty tomes which have been reprinted over and over again, when it could much more cheaply provide fresh modern copies, clean and attractive to handle? Are there any so-called students so foolish that in pursuing Shakespearean studies they would actually prefer an old dog-eared volume of "one of the original books of Shakespeare" to "a clean one in modern print?" Perish the thought! Another legislator views with distrust the practice of distributing printed catalog cards to subscribing libraries through the country. He sees in this the first step toward the disintegration of the library's entire collection; for, he logically inquires, if you begin with distributing card indexes, does it not follow that you will go on to distribute the books themselves, and then what becomes of your library? It should be added that these remarkable arguments were met in a manner that relieves the body of their hearers from the imputation of like opinions, and that as a whole the debate shows how assured a place in public appreciation and respect the Library of Congress has made for itself during Mr. Putnam's administration.

METHODS OF SCHOOL CIRCULATION OF LIBRARY BOOKS *

BY GEORGE T. CLARK, *Librarian of San Francisco (Cal.) Public Library*

THUS far three methods have been developed for the circulation of library books through the medium of the schools. Library books used simply for reference purposes either in the classroom or at the library I do not regard as within the scope of this paper. The method having the merit of greatest simplicity is that by which the pupils are sent directly to the library. The teacher assigns a list of books, some or all of which it is desired that the pupils shall read within an allotted time. This method is well adapted to those places where the library is accessible to all children. It is used to a certain extent even in a city as large as San Francisco, where through the medium of branches the library covers, though inadequately, a large territory. Notwithstanding these agencies, however, there are many children too remote from all library facilities for this method to be effective. Another drawback is the unfortunate psychologic phenomenon of all wanting to read the same book at the same time, and it is rare that the book fund will permit, even if it were judicious so to do (where the demand is not likely to be lasting), the wholesale duplication necessary to provide copies enough to meet the demand for a given book at a given time. One of the strongest arguments in favor of this practice of sending the pupils directly to the library is the development of the so-called library habit, which, once acquired, will be of lasting benefit. In view of the large number of young people whose school training does not pass beyond the grammar grades, too much stress cannot be laid upon the importance of educating them in the use of books, so that the power to avail themselves of library resources shall be at their command, and shall be utilized when they shall have passed forever from the sphere of the schoolroom. It may be urged that this method by which books pass directly from the library shelves to the pupils' hands does not lie within the province of school circulation, but inasmuch as the circulation is the

result of the teacher's direction, the method properly deserves consideration under this head.

The second method is that by which books are lent to classes on teachers' cards. In San Francisco it is the practice to issue to teachers who desire them library cards good for one year. The cards are kept on file at the library and show simply the names of those teachers having an account on which books may be drawn for classroom use. The library provides a blank form of requisition on which the teacher may send for any books desired. The books are looked up. Those available are checked off on the list and with it are returned to the teacher after having been charged to his or her account. They may be kept for two weeks and are subject to renewal. The practice of granting special privileges of this character to teachers is almost universal, few or many restrictions in matters of detail being imposed, according to the influences potent in shaping the administration of the respective libraries.

This method answers very well where a few books are wanted now and then for collateral reading in the study of particular topics. The resources of the library can readily be made equal to any such demands, even though, as has been our experience, different schools pursuing similar studies request the same books at the same time. As the demand is recurrent, the same books being desired year after year, the library has added sufficient copies to meet all requests. But the effort on the part of some of the grade teachers to use this same method to get enough library books to distribute among their pupils for home reading has not been so successful. The difficulties in the way are several. In the first place, the books desired are usually those suggested by the course of study for home reading for cultural purposes. They are usually books for which there is a very considerable demand at the library at all times. Therefore, unless a special collection is set apart for school use there is no certainty that any considerable number of those

*Read before the California Library Association, Dec. 28, 1905.

sent for by the teachers will be available when wanted.

Again the matter of transportation is something of a burden even to enthusiastic teachers, and the fact that the books must be returned to the library at the end of four weeks does not allow sufficient time for all of the members of the class to have read them. Furthermore, the frequent transfer of books between the library and the schoolroom, in places where the method is used to any great extent, entails endless bookkeeping to keep the accounts straight. The books must be charged when they leave the library and discharged when they come back, and when they are returned on the instalment plan the malady is even more aggravated.

To obviate these difficulties a third method has found favor in many places. It is that of classroom libraries. Under this system the library has what it terms a "school duplicate collection" made up of those books suitable for circulation in the grades. Copies of the same books may be in the general collection of the library for circulation on demand, but the school duplicates are set apart exclusively for circulation through the classroom. These books are made up into lots of from 40 to 50 each, adapted to the requirements of the different grades for which they are intended. In some places there is no distinction made in the grades which shall be supplied with books, all from the kindergarten to the high school being equally favored; but many libraries omit the third and lower grades.

This system of circulating library books through the public schools has been extensively used in a certain large eastern city, and frequently described. In conversation with the librarian of that city I inquired whether he had met with any reluctance on the part of some of the schools to undertake the care and circulation of these classroom libraries. He replied in the negative, explaining that when the library first undertook this method of circulation its funds permitted the purchase of books enough to supply only about one-seventh of the schools in the city. In consultation with the principals this fact was made clear to them, and in consequence competition to be included in the favored seventh was very keen.

The books are packed in boxes or cabinets which may be used to shelve the books while they remain at the school. At the beginning of each term they are distributed to the schools or classes desiring them. In the matter of transportation the practice varies. In some places the board of education permits the use of the department wagons for that purpose, while in others the expense is borne by the library. The rule seems to be for the library to stand the expense if it has to, but to get the service from the board of education if it can. Accompanying the books are blanks by means of which, with very little effort, a complete record of the use of the books may be kept. To prevent unnecessary loss of books it is necessary for the names of the pupils borrowing them to be recorded, together with the dates when taken and returned. This may be done by the teacher in person or some responsible member of the class. The record is desired on the part of the library also for statistical purposes for reasons analogous to those which impel schools to keep accurate attendance registers. Once a month a library assistant visits the school, foots up the circulation records, looks over the books, withdraws any that may need binding or repairs, and in general looks out for the welfare of the collection. At the end of the term the entire collection is returned to the library. In the circulation of a large number of books in this manner some are necessarily lost, in some instances through accident or mishap, and in others through the attractiveness of the books. It is customary to give the principals discretion in the matter of enforcing the payment for accidentally lost or damaged books. As to the unaccounted-for books—in some instances, as for example in the city of Boston, the school department assumes the responsibility, while in others the library stands the loss.

It will be observed that by this system the objections noted to the method of issuing books on the teachers' cards are largely overcome. By having a special collection for school use and apportioning the books at the beginning of each term, there is no liability to disappointment by failure to get desired books. The transportation problem is cared for. There is no worrying about getting the books back on time, for they do not have

to be gathered up every four weeks and returned to the library. The classroom is designed to be large enough to furnish a suitable book for every one in the class. Hence there is no difficulty in finding enough to go around. In cases where teachers desire more latitude in the selection of books they are usually permitted to exchange any which they do not wish to retain; or, simultaneously with the classroom libraries they may also have the privilege of the teachers' cards, which enables them to get books desired for special occasions or special topics.

In behalf of the classroom library system it should be urged that it brings the public library in touch with many who otherwise might never see its books. Furthermore, the books presumably have been carefully selected after consultation between teacher and librarian, and are therefore books which it is eminently desirable to place before the children. As one prominent educator has remarked, "the children are exposed to the books." On the other hand, the pupil does not come into

as intimate relation with the public library as in the method first described.

In brief outline these are the three methods most frequently employed for the school circulation of library books. By the first the pupil goes to the library; by the second books are taken to the schools on teachers' cards; while the third method is the distribution of classroom libraries for periods of three months or longer. The second method is adapted for special purposes, as when certain books are wanted from the library to enlarge the opportunities for the study of given topics. But as a means for bringing the children in touch with good books which shall quicken the desire to read and develop a taste for the best literature, we must resort to the other methods, either or both, according to circumstances. Either the pupils must go to the library, or a small section of the library must be taken to the schoolroom. There is a definite end to be accomplished, and its accomplishment requires the united activity and effort of the school and the library.

IS THERE A NEED FOR INSTRUCTION IN LIBRARY METHODS BY THE NORMAL SCHOOLS AND UNIVERSITIES? *

BY FRANK B. COOPER, *City Superintendent of Schools, Seattle, Washington*

THE library has an educational function quite as clear, if not so definitely exercised, as any of the formal educational institutions, and it has relations to all of them very clear and very close. It is no longer considered merely a depository and treasury of books, but a great silent university whose departments are as numerous as the various knowledges which the world has so far learned. It is not a mere aggregation of volumes, but a well organized agency of civilization. It has developed relations and facilities which require more than a mere acquaintance with books on the part of the user to get the most out of it in the least time.

The library is dependent for its efficiency upon the devotion of its administrators upon the one hand and upon the library sense and dexterity of its patrons upon the other. To

increase the number and variety of its patrons is one aim, to make them wise and skilful in its use is another not less important. It is carried to the doors of the people by the delivery station and branch library. It is finding the people, and now the people must be taught to find it, by learning how to use it advantageously. For in order that the library may enter into fullest service of the people, whose servant it is, the people must know how to use it. Emerson years ago urged the appointment in every college library of a professor of books who should teach students how to make advantageous use of it, and today there are in every library those who are assistants of the people to library use, in order that the people may be helped to know what to read, how to find what to read and how to read it. But far more important than assistance to adults is the training of the coming men and women, the people of the next

* Read before the California Library Association, Dec. 28, 1905.

generation, while they are still in school, so that under competent direction they shall early learn of the library and to value it; learn to love books and to have the habit of quest among books, and what is not less important, be put in the way of knowing where to look, how to look, and how to get what they may require of books.

This feature of the preparation of the library field is most interesting and vital. It is interesting because the response of children is so hearty and because that responsiveness promises so much for an improved library patronage; it is vital because the future efficiency of the library depends upon how boys and girls are taught to regard and use it.

Teachers, accustomed to think of text-book instruction as the primary and sufficient instrument of education, may have esteemed too lightly the value of less formal and obtrusive agents of instruction, and so they have not generally appreciated the advantage to their work and to their pupils of the wise use of library facilities. They, however, generally recognize the value to pupils of an acquisition of a taste for good reading, and of the benefits arising from coming in contact with good books, and in many instances such recognition on the part of the teachers, joined to an active desire to have it realized, has been helpful in the establishment of many school libraries and in securing a working relation with the public libraries.

It has not, however, fully dawned upon either teachers or public that the library as now constituted is an important feature of a child's environment, particularly of the school-child's environment; that being a part of his surroundings, it is something for him to know and something for him to master, in so far as he is able to master it. It belongs to him, and he must enter into possession of it, else some one has blundered. Formerly, it was the library that blundered, for the doors swung hard, the shelves were railed off and high, and the librarian grew stern when children came about; but now the doors swing easily inward or stand invitingly open, the shelves are free and the librarian's face is wreathed in smiling welcomes for all children. The next step is for teachers to see in the library a source of nutrition in the process of education, to recognize that children need to know more about the library and its contents, and

that they should be educated as to its productive use.

It is an indispensable equipment of the teacher, if he is to induce a taste for literature in children, that he shall himself know and love literature. His normal school or university training will have been incomplete if he has not drawn from his course in them something of the power and charm of books and an intimate knowledge of some of the best. But it is scarcely sufficient for him, either as man or teacher, if he is to receive largely as one and give largely as the other merely to have acquaintance with books. He must be prepared to put books under tribute and make them respond readily to his needs. This power is needed by him not only as a student, but also as a teacher, so that he may be ready and economical in preparation of his material for teaching. But his function as a teacher is further greatly increased in its scope and operation if he so instructs his pupils that they also through his instruction are put in command of books and library use.

It is not argued that a teacher's efficiency will be correspondingly increased by having technical knowledge of library economy, such as the professional librarian requires, but it is contended that a knowledge of the broader features of modern library methods and some experience under the training of an expert librarian will make a decided contribution to his skill as a guide of youth in things really worth knowing and doing. The initial establishment of vital relations between children and the public library must be made before they leave the public school, hence the further necessity for teachers with the librarian spirit who have something of the training of a librarian.

To make a practical test of this question, I recently addressed a letter to the 22 teachers of English and history in the Seattle high school, asking the following question: "Do you think that familiarity with the aims, organization and methods of the library, and of the measures used to make it a vital educational instrument constitutes a desirable element in a teacher's equipment?" and requested them to give a reason for the answer made. Twenty of the 22 are college bred, two are normal trained. Seventeen of the 22 replied with an unqualified affirmative, five answering in qualified terms. The same letter

also drew a positive affirmative from the principal of the high school and the supervisor of the primary school. I give a few of the representative answers:

"Familiarity with the aims and measures used to make the library a vital educational instrument would certainly be helpful to teacher and pupil."

"There is a familiarity with books, indexes, cyclopædias, etc., that goes a long way to assist teachers and pupils to find material wanted with least loss of time. Familiarity with Poole's index is indispensable where periodical literature is to be used. This familiarity, it seems to me, can only be acquired by contact with books themselves. I do not know whether a library course would help or not. If so, I would answer your question—yes. I doubt the value of any study of organization, methods of classification or cataloging further than enough to enable one to use the library intelligently."

"While I recognize the need of a broad training for teachers, I am not ready to say that I consider all stated in your question a part of the necessary equipment. In fact, while a general knowledge of the 'aims' and methods of making a library a vital educational instrument is desirable, I feel that the time spent on 'methods' of classification and cataloging can be spent with more profit on the elementary principles of our language and on the inspirational work of the study of literature itself."

"There is no doubt that a knowledge of library methods of classification and cataloging is not only desirable in a teacher's equipment, but also almost necessary. Without it one wastes a lot of time in a strange library. One gradually acquires that knowledge from experience, but we would arrive at it more quickly if such a course was offered in college."

"Yes, the pupils do not know how to use a library, hence we have to teach them, and we need to know."

"I taught in one institution where every student had to take what was known as the library course during his first term, whether he entered as a freshman or a senior. The course of study consisted of practical lectures given by the librarian to the students in the library, and illustrated in detail as to the use of the library. At the end of the course each student was given a personal and practical examination in the use of the library to prove that he knew how to make use of it with promptness and accuracy. This system was a great help to every department and I believe saved a great deal of time."

"I should consider such knowledge very desirable. It would save much time for both student and teacher, enabling the teacher when referring to a book to tell the student exactly where it is to be found, and just what part of it is valuable for the work in hand."

Readiness in the use of library material needs to be learned by all students and by many teachers."

"Yes, the library is the English teacher's laboratory. If she is not familiar with its aims, organization and measures to make the library a vital educational instrument, she is as helpless as would be a science teacher of twenty years ago in a modern laboratory."

"I think so. I did some work, helping catalog the books of the Y. M. C. A. It gave me an added interest in the books; it gave me a power with the books I did not have before. All books are more or less 'padded,' i.e., made up of what other books contain. In classifying one learns to see correlations and know better how to guide a pupil in his search for what is essential only."

"I think it most desirable. It is valuable for the teacher to know merely the names of books and their authority. It gives a teacher a grasp of lines other than his own. It makes the teacher a more competent guide to the student's reading. This knowledge on the part of the teacher economizes the student's time and energy."

This from the supervisor of primary teachers:

"I believe there is need for instruction in library methods, not alone by normal schools and universities, but by the high schools. I do not mean by this a course in technical library economy (this should be reserved for those specializing in this line), but a course covering those phases of the work that will help in the use of a public library, and the organization of a private one. A teacher's interest in and knowledge of the library should be developed systematically before she enters a normal or university, because I believe that familiarity with the sources of knowledge is quite as important these days as the possession of knowledge itself. In addition to such general work necessary to the understanding of any library, student teachers should be made familiar with books adapted to children of the special age they expect to teach."

"I believe the teacher's course should include instruction in the comparative value of dictionaries, indexes, cyclopædias and handbooks; also instruction designed to give knowledge of book reviews and magazines."

This testimony on the part of actively engaged teachers as to the desirability of a knowledge of library methods on the part of teachers is an indication of a need, provision for which should be made by the authority which is interested alike in the library and the school and responsible for the efficient discharge of their functions. To prepare teachers, and to render them as highly serviceable as training can make them is the

business of the normal school and college. To make teachers masters of subjects is highly essential, but it is also essential, only in less degree, that they shall be prepared while in training to make effective use of books, the instruments of knowledge. This can be done by affording in connection with the college or normal school a course consisting of instruction in library methods and practice in the library. This course should involve instruction in: 1, The history and organization of libraries, including library diffusion movements; 2, Bibliography; 3, Classifying and cataloging; 4, The character of reference books and how to use them; 5, The source of book supply and how to get and select books; 6, How to care for books; 7, The public library in the service of the school.

This last division should include information as to the establishment of relations between the library and school, and should emphasize the importance of having pupils get into direct touch with the library, so that the library habit will be started early. The relative value of the school library and library branch

at the school should be considered, for it is important that the local facility afforded should not displace the privilege and opportunity of the parent or public library. It is important that children should go to the big libraries, find their place there, becoming familiar with its opportunities, and imbibe its cultivating influences.

Some such course covering the ground indicated, taking from three to six months for its completion, will give breadth and reach to the teacher's work, and satisfaction and confidence in her performance, which will more than offset the loss of an equal number of hours that might have been spent in some other way upon some other subject.

Finally, the maintenance of such brief courses in normal schools and universities will increase the value of the normal school and university library, and what is also highly important, will result in closer union between the public school and public library, and be productive of a better understanding and real sympathy in aims and action between librarians and teachers.

A LIBRARY COURSE GIVEN TO CITY NORMAL SCHOOL STUDENTS

By LINDA M. CLATWORTHY, *Librarian Public Library and Museum, Dayton, Ohio*

THIS account of the way the Dayton Public Library is working out a library course in the local normal school of the city does not proclaim finished or satisfactory work, but is merely a record of experiments, adjustments and results. If it proves of some assistance to other librarians, public or normal school, who are contemplating such courses, it will serve its purpose.

Two years ago we were drawn very close to the students then at the normal school by means of visits exchanged and a round table meeting on children's books held at the library once a week during the summer vacation. The reading and discussion of children's books was much enjoyed by the students, and we received many fresh criticisms upon our books which were equally helpful to the library. The impulse of that summer's interests shared together has been felt ever since. Four of those young women are with us now as librarians in the small branches in

school buildings, but that is another phase of the matter under discussion, and comes properly under a history of our branch library development.

In 1905 the first regular library courses were given, this time at the library and as a part of the senior class work of the normal school.

Course in children's reference work

From January to the middle of March the class came to the library in groups of two or three each afternoon, ostensibly for practice in doing reference work for school children in the school library reference room. Actually, however, there was soon discovered such absolute ignorance of how to find books for themselves that this anticipated reference practice developed into a simple course of instruction. Although all of these 21 girls were recent graduates of the high school, their experience in that school had led them to look

upon the library merely as a place in which to ask questions or find books reserved for them, with little sense of the orderly arrangement of books and indexes, by which they could find information for themselves. Such teachers, without library training somewhere in their school course, were not on their way to very effective knowledge of the resources and use of the library, either for themselves or to impart to their pupils.

This course consequently included some simple first directions about the arrangement of the library, with special attention to the resources of the juvenile and school libraries for answering children's reference questions, and some notice of adult reference books adaptable to this use. Simple problems were given after the explanation of each step. At the end of the course a test was given covering the general classes of the Decimal Classification, shelf numbers for a few subjects of special school interest, the location in the library and description of certain reference books, the general arrangement of catalogs, and the selection of a few references to books showing where material might be found on a given school reference question. Each student gave to this course two hours at a time, two days a week for five weeks, 20 hours in all, and received individual attention.

Course in the use of the library

In April there followed what was to have been the first technical course in the general use of the library, such as would appeal to any student who had previously used the library for herself without making a study of it sufficiently to be independent or to explain it to others. The class came in a body for this course, which consisted of six lectures with problems, as follows:

Lecture 1—Books as tools.

“ 2—Arrangement of books in libraries.

“ 3—The making of the card catalog.

“ 4—Some reference books and how to answer questions with them.

“ 5—How to prepare a bibliography.

“ 6—Guidance of children's reading, illustrative material, etc.

A syllabus outlining the lecture for note-taking was given each student.

Lecture 1, on “Books as tools,” was designed to give (1) a clear conception of the

individuality of a book in quoting it as authority and of its construction in consulting it for reference, and (2) to suggest a basis for critical discrimination of the contents of books in selecting one among many for reference use. Under (1) was explained the literary makeup, as title pages (author, editor, date, edition, etc.), preface, contents, index, footnotes, bibliographies and appendices; and mechanical makeup, including type, paper, illustrations, maps, etc. Under (2) were considered the bases of critical judgment, as author, scope, treatment, point of view, literary style and appeal. The problem following this was to go to the shelves and look over several books found on a certain subject, briefly describe the difference in their contribution to the topic in hand and finally select the best book for the purpose desired.

Lecture 2, on “The arrangement of books in the library,” was planned as an explanation of the Dewey Classification, as the system used in the local library and also in most other public libraries with which the students would come in contact. Its scheme of arrangement and notation were briefly outlined, and the class was asked to memorize the numbers of certain subjects which would be constantly used by teachers. The call number on the books was explained as a symbol directing to their location. The way then naturally led to the catalog as being the index of the book collection, as the classification was merely its table of contents.

Lecture 3 was designed to explain the mechanism of the catalog for student use. The author card, as the unit of the catalog, was described upon the blackboard and its contents explained as expressing the facts about the literary and mechanical makeup of the book noticed in Lecture 1. A book was cataloged before the class, showing the way in which the subject material is sifted out once for all and put in shape for future reference in the catalog. This lecture was accompanied by an outline on “How to use the catalog,” showing what kind of entries may be expected for a book, how to select the right subject entry, the value and use of cross references, the extent of analytical material, alphabetizing, subject subdivisions, special cards, etc.

Lecture 4, upon “Reference books,” de-

scribed the scope and arrangement of typical works in the adult collection, with problems in answering given questions.

Lecture 5 was upon the preparation and form of a bibliography, and the problem was to prepare brief reading lists for children on certain school topics assigned, using reference books, catalogs and magazine indexes, and referring to adult and children's books. Some of the subjects were Bees, Trees, Russia, Battleships, King Arthur and his knights, etc. The material was to be examined personally and the list was briefly annotated.

The course closed with an exposition of the methods used by libraries to call attention of the children to good books, such as reading aloud and story telling; an exhibit of picture bulletins and book lists, and a visit to the museum, where the custodian showed curios and specimens which could be used to illustrate class work.

Thus, from January to May of their senior year these normal school students were brought to the public library at intervals for instruction and practice in its use, both for their own and their pupils' needs. They also learned of their library privileges, both as special students and as teachers, including the school room libraries. No time was given for direct acquaintance with children's books, the emphasis this year being upon the reference use of the library. During the summer, however, and far into the next year, several offered their services as substitutes at the library and for giving talks to the children during the period of the vacation reading room. The school library books, forming the vacation reading room, were open to their free use, and they were cordially invited to read and enjoy. This they did to a considerable extent.

Looking back upon the experiments of the past two years with our normal school, we feel that at one time or another these teachers have touched all the points of library contact needed under the local conditions here. Administrative problems, for those in charge of rural school libraries, are beyond the responsibility of a city library. The best distribution of the course in the school system, however, is still to be effected, as well as the improvement of details of the course. The general technical course on the use of the library should eventually be pushed back into

the first years of the high school, where pupils begin to use outside authorities in their lessons. Until this can be accomplished, we are to put the technical course into the first instead of the second normal school year, thus introducing the students to the library at the beginning of their normal school study. This course should be followed throughout the year by at least weekly visits to the library in preparation of lessons. Thus would be brought about some of the "living in the library atmosphere," which is so desirable, making the public library a real laboratory for the normal school. No matter how good a library the city normal school may have, the public library, with its larger resources and children's books, should be constantly used. A teacher's reference collection could be gathered to attract the teachers, containing not simply books on pedagogy and text books, but some of the best illustrative material for story telling and lesson presentation, along with good editions of some of the best representative children's books.

During the senior year when the class is largely out in practice work in the schools, the practice at the library should tend toward reference work with the children as they come from the schools, together with a survey of the resources of the library for children's reference. This will not only tend to lead them to send their own pupils to the library later for information, but will enable them to direct the children more intelligently to books and to plan their reference work more in harmony with the library.

The culmination of the normal school library course should be the acquaintance with children's books. The school use of books for information and reference having now been made clear, books as tools should be forgotten and a course of pure delight and inspiration should be offered in the literature of childhood. The course we are offering this year includes talks upon the various classes of children's books followed by reading at home and discussion in class of type books as follows: 1, Books for the very youngest children, including picture books and Mother Goose; 2, Classic myths and legends; 3, Fables and folk-lore fairy tales; 4, Modern fairy tales, wonder tales and nonsense; 5, Poetry for children; 6, Adaptations of literary classics; 7 and 8, Fiction; 9, History, hero

tales, travel stories, biography; 10, Nature books, science, industries. The books are taken home by the students for reading, if possible to children, and evaluation. The discussion in class includes reports and comments on this reading. In this way each teacher will become acquainted with about 160 of the most fascinating children's books.

The possible influence of the teacher in inculcating the reading habit and starting the child along the right lines of reading is very great. Yet without some knowledge and taste in children's books the teacher has sometimes been a hindrance rather than a help in the ideals the library strives for. Such poverty of suggestion has led many teachers to send children to the library for adult stories or poor children's books, such as "Graustark" or the "Elsie" books; and when "teacher says it's good to read" it is very difficult to persuade a child to take something else from the library shelves.

Our course, we hope and have reason to believe from recent experience, will assist the teachers to become efficient helpers of the library in recommending the best books to the children as well as in selecting books for their class room libraries. A few of the teachers so instructed are already coming into the city schools and some fill positions in the country schools around us. Many have expressed their appreciation of the library's efforts.

I hope to see the day when our schools will all include something in their curricula on the use of books and libraries. We have begun by introducing a course into the normal school, the vital point of contact with the grade schools and the children, but eventually the course should be distributed throughout the school system and most of the instruction should be given by the schools rather than by the library. A library thoroughly classified and cataloged and with shelves all open to the public, offers the advantages of a private library to every person who knows of its privileges. Study will not be so apt to stop with graduation from school if one is graduated into such a library with the ability to use it. And since, unfortunately, out of the children who enter our first grades only one in ten keeps on through high school, the lower down in the school system this connection with the library is made the better.

THE PRINCETON PRECEPTORIAL SYSTEM AND THE UNIVERSITY LIBRARY*

THE wide publicity given in the press during the past winter to what it called the Princeton "preceptorial system" seems to indicate that the experiment being made at that university is one of the most interesting in the history of American education. For a detailed explanation of the system I would refer to articles that have appeared in the magazines,** and for present purposes shall only indicate its aims and method sufficiently to make intelligible what I have to say about the relation of the system to the library.

"The preceptorial system," says President Wilson, "is meant to import into the great university the methods and personal contact between teacher and pupil which are characteristic of the small college, and so gain the advantage of both. . . . It is meant also to change the methods of the student's own work; to make a reading man of him instead of a mere pupil receiving instruction. The method . . . is to give a man subjects to read up, and to supply him with advice and assistance in his reading—advisors who will be practically accessible at all times, and who will be guides to the best reading and to the best method of reading."†

You will at once perceive that the two foundation stones supporting this system are the quality of the preceptors, and the nature of the reading as supplied by the resources of the university library. Out of the happy-go-lucky undergraduate the preceptor is to make a reading man, and the library presumably is to supply the reading matter.

Before the beginning of first term last September we therefore laid our simple plans to meet the extra burden which we realized the library would have to bear. Requests were sent to each member of the faculty, preceptors included, for lists of required and collateral reading for the first term courses, and blank forms were issued with the requests on which the lists were to be written. Returns were obtained from 23 courses and were filed at the delivery desk, the books thus listed, some 800-900 in number, being immediately withdrawn from circulation and reserved. They are allowed out of the building for over-night borrowing only; and for their use in the reading room during the day, as also for their over-

night use, charge slips differing in color from our regular white slips have to be signed by the borrower. These colored slips are preserved at the desk, and those signed during first term form the basis of some statistics which I shall give you later.

Of the 1279 undergraduates at Princeton this year 1053 came under preceptors, students taking the civil engineering course not being included in the system. Of these 1053, 710 belonged to the purely academic department, being candidates for the B.A. degree, and the remaining 343 to the semi-academic department, if I may so call it, being candidates for the B.S. or Litt.B. degrees.

It was apparent that the library would not have sufficient copies of certain required and collateral books to meet the demands of some of the larger classes, and the question of duplicates was thus immediately forced to an issue, resulting in a special appropriation for the purchase of duplicates for preceptorial work. By careful adjustment and by centralizing the duplicates already in the library we have contrived to get through the first term with a remarkably small accession of fresh duplicates. The largest number purchased was only eight, the average only two. The total number of volumes purchased on this account was 179. The number of purchases for second term will be much larger. The average cost of these 176 volumes was \$2.67. These purchases, however, did not constitute the sole additional expense. I have taken no account of extra desk assistants taken on in the shape of three student helpers, two for four hours each daily, and one for two hours four days of the week. The situation at the desk has moreover practically monopolized my own time and attention, especially since in the midst of our busy season a neighboring library very inconsiderately relieved us of our most valuable regular desk assistant.

The high average cost of the 179 duplicates is an indication that the class of books used by the preceptors was rather different from that of the ordinary text-book. A large majority of the books might be classed as literature—books you would not be surprised to find in the library of a cultured man or woman of reading habit.

Some of these books are rather solid mental pabulum, several are decidedly popular in tone, but most of them are good reading in themselves; scarcely any could be classed merely as text-books. And on the whole they have been pretty well read by our undergraduates during first term; quizzes have been passed and reports have been written on such volumes or selections as preceptors assigned. The circulation of the 800-900 reserved books amounted to roughly 7000 (6812) during the four months of first term. Or, in other words, every book was called for nine times, or each of the 1053 "preceptees" read more than $1\frac{1}{2}$ volumes each

month. I should remind you here that this circulation is entirely distinct from the general circulation, the parallel record of which I shall refer to presently. It is also entirely distinct from the consultatory use of the 25,000 volumes on open shelves in our reference or reading room, and finally it is distinct from the use of the 25,000 volumes and 24,000 dissertations in our nine seminar and five departmental libraries. The reserved book circulation of 7000 in four months was made up in the following percentages: English, 29; History, politics and economics, 17; French and German, 14.2; Jurisprudence, Roman and international law, 9.3; Classics, 9.1; Philosophy, psychology and ethics, 7.3; Art, 5.6; Geology, 4.6; Bible, 3.8. The prominence of English is not to be wondered at, but is rather a cause for satisfaction, and that historical and economic reading should hold second place is also to be expected. History and politics ran even and quite some distance ahead of economics. I was unable to differentiate between these three departments exactly, because they frequently used the same books, which was also true of the reading in international law and jurisprudence. German ran a shade ahead of French, but Latin and Greek showed a difference of 8 to 1 in favor of the former, due to the small number of men taking or electing Greek as compared with those taking or electing Latin. The 3.8 for Bible is noteworthy as showing that the serious study of biblical history and literature still occupies a respectable position in the Princeton curriculum.

In spite of the drain on the leisure of the undergraduate, and one might say in spite of the surfeit of compulsory reading, the general circulation during this period has been only five per cent. less than that of last year for the same period; while the circulation of overnight books—chiefly books of reference—is over three per cent. larger, the most significant increase being in the historical sections where the circulation jumped to three times last year's figures. Comparing the combined general and overnight circulation for the same period in the two years I find them almost identical, 12,049 to 12,053 in this year's favor. Fiction showed some curious fluctuations. During October it held its own, but in November and December it fell decidedly below its normal. We attributed this to the probability that the preceptorial system allowed no time for light reading. But during January, when men were either cramming for examinations, or resting from them, fiction not only recovered its popularity, but actually surpassed its figures of last year by two per cent. Here I think you have an excellent example of the recreative value of novel reading, or perhaps only a retaliatory reaction against the strenuous reading of the preceptorial system.

Such in brief from the point of view of the

library's experience have been the practical workings of the preceptorial system during its first trial. In undergraduate disguise the horse has been led to water and made to drink. Whether he will be made a drinking horse is another question. A reading man is not made in a term, and the system itself is perhaps not quite in good running order, but the effect on the campus can, I think, be noticed. Already complaints have arisen at some of the upper class clubs that too much "shop" is being talked at table. I overheard a couple of freshmen discussing on the street the merits of Francis Bacon's style—a subject in which freshmen are not ordinarily supposed to display keen interest. The library has become one of the most frequented resorts on the campus, and it is a common thing to hear men declare in language more picturesque than elegant that they are too busy to do this, that, or the other thing. The effect of being compelled to read by a certain date a certain number of pages or volumes and to discuss the reading with specially trained and sympathetic preceptors is bound to tell in the long run, bound to widen the reader's horizon, bound to give him new points of view, bound to kindle some latent spark of interest or even enthusiasm. I suspect that four years hence the present freshmen will be far better read, and really better educated—certainly better informed—seniors than the present graduating class; and after all, as the *Daily Princetonian* conceded recently in an editorial, "one goes to college for an education."

VARNUM LANSING COLLINS,
Princeton University Library.

SCHOOL WORK OF THE DISTRICT OF COLUMBIA PUBLIC LIBRARY

EVEN if co-operation on the part of libraries with schools were not the order of the day, the librarian of the Public Library of the District of Columbia would be led to such a course by the act of Congress creating this library, which says that it shall be "a supplement of the public educational system of said district." As agents in that co-operation I found here a flourishing children's room in operation and the 10-book privilege for teachers already in the rules. However, the 10-book privilege was almost entirely unused. The children's room was rarely visited by teachers in the search of advice on the reading of their children and little use was made of the library by teachers for reference in professional subjects. In the latter particular it would at first seem that there is little need for the library to offer such facilities, inasmuch as the Board of Education has a pedagogical library for teachers, who also have access to the library of the United States Bureau of

Education; but as both of those libraries are closed at 4.30 p.m. there is still work for the Public Library.

As in many other cases of co-operation on the part of libraries with schools, this library has done most of the co-operating. Measures taken to that end have been the establishment of a teachers' reference library, open daily, including Sundays, until 10 p.m., the publication of a monthly educational bulletin, the giving of talks by the librarian and the children's librarian to schools and classes, and the constant urging of greater use of the 10-book privilege. The library is looking forward to a general plan for the circulation of books through the schools, but lack of funds has as yet prevented doing more than the sending of small groups of books in bulk to the various high schools.

On the second floor of our building we have fitted up a study room as a teachers' reference library. First we bought books contained in a list prepared by a committee of the teachers, including encyclopedias, dictionaries, books on psychology, pedagogy, etc. Then we sent out circular letters to various publishers having educational lists. In response we received as gifts more than a thousand volumes of textbooks and some general publications. These are all kept for reference. It is thought that the displaying of them here will be of value to publishers as well as to teachers by suggesting desirable text-books to teachers. In this room are also kept bound sets of educational periodicals and about 20 current pedagogical magazines. More recently we have also shelved in the room the circulating books in the class education (IK). As this room is not under the supervision of a library attendant we require that teachers shall secure a 10-book privilege card and show it to gain access to the room. In addition to its use for study purposes, this room is offered as a meeting place for teachers' clubs and committees and is often so occupied.

The monthly educational bulletin is printed by the mimeograph process on ordinary 8 x 10 paper in an edition of 225, one copy for each public and private school, and copies for directors of special work. These bulletins are mailed to the private schools, but are distributed to the public schools through the supervisors. They are designed for posting on the bulletin boards of each school. They consist mainly of current pedagogical accessions, educational articles in current periodicals (other than professional journals), together with notes and announcements. The character of these announcements is sufficiently indicated by the following extracts:

"Teachers are invited to send their pupils to the reference or children's room of the Public Library to look up material for compositions, debates, etc., and library assistants will give all possible help in finding such material. In order to enable the library best to

help the pupils, teachers should give the librarian a few days' notice in writing of assigned subjects or books, the probable number of pupils who will use the library, and the length of time the topics will be subjects of study. Material will then be looked up and books will be reserved for use only at the library. Without such notice and reservation the first few pupils will draw out for home use practically all the library's resources on a given topic, thus causing disappointment to those who come later. Your co-operation is earnestly requested."

"Attention is again called to Article 17 of the library rules, which permits teachers to draw 10 books at one time on educational topics. This rule is interpreted so as to permit teachers to take out books for class room use or for lending to pupils. The library has recently bought nearly \$1000 worth of children's books in anticipation of greater use by teachers of their 10-book privilege. These books have been chosen from the enclosed list, 'A children's library.' The library has a limited number of these catalogs to distribute among teachers on application from principals."

The children's library catalog referred to is the one prepared by Misses Prentice and Power, of Cleveland. The library secured 2000 copies of this and has adopted it, temporarily at least, for school work.

In the present school year 373 teachers have secured 10-book cards. This is about one-fifth of the public and private schools teachers of the district. With a system of branches this proportion could of course be greatly increased.

GEORGE F. BOWERMAN.

SYSTEMATIC INSTRUCTION IN THE USE OF THE LIBRARY AT GRAND RAPIDS, MICH.

ONE of the most interesting phases of library development in Grand Rapids is the work done with the schools, both public and private.

About a year and a half ago it was deemed wise to bring the children, by classes, to the library for systematic instruction in its use. Not a few were found unfamiliar with the location of the building, and many of those who came failed to use the catalog intelligently, and were equally deficient as to the classification and arrangement of the books on the shelves.

The children are brought, by their teachers, to the library in the morning, coming directly to the children's room. Here their attention is called to the bulletin board and its use. Magazines, picture-books, and dictionaries found on the tables are mentioned; also the location and names of the different reference books. Next come the books that circulate.

By this time the sharp eyes have noted the guide cards or "helpers," as the children like to call them, and their use is explained. The story books occupy the three lower shelves, and, as the classification is somewhat simpler than that of the non-fiction books, those are taken first. The pupils learn the name and meaning of the number at the left of the point (class number), also the name and meaning of the number at the right of the point (shelf number). Very soon they are ready to tell that the story books are arranged on the shelf according to class and shelf number, and alphabetically according to the first letter of the author's last name. The non-fiction books are placed on the top shelf, it being well to have those meet the eye first. Now the pupils are ready to tell that the class number is different and that the books are arranged according to subject. This, and something of the contents of a few books—enough to create a desire for further reading—being explained, we go to the catalog. Title cards for the stories are shown, then come the author and subject cards. At this point different subjects are given to look up, teaching just enough of the imprint to enable the pupils to read a catalog card intelligently. Now the pupils are sent to the shelves to locate books on various subjects. This being finished, they are ready for a tour of the building.

The trip calls for almost as much attention on the part of the pupils as the work done in the children's room. The different styles of architecture, and the beautifully colored marbles are noted, and the uses of the different rooms explained. The stack room fills many of them with a feeling of awe. "So many books in one place!" is often heard. The glass floors in the stacks are a source of wonder and amazement. One class in particular were so afraid the glass would break that they went about on tiptoe. The electric motor which runs the book elevator so pleases the boys that I am always sure of a large circulation of books on electricity after one of these visits. When we reach the floor where the public documents are kept nearly all of the boys and a few of the girls want to stop and look at the Patent Office reports. They have never seen books quite so "fat," as one of the boys said. If any pupil happens to know a person who has obtained a patent we stop and look it up. Almost always they want to come back and look "just once more."

The beautiful reference room, having a style of architecture all its own, claims the attention of the class as soon as they enter. The magnificent fire-place recalls to the younger pupils that season of the year when stockings are hung and little ones are put to bed early in the evening. Many of the older boys and girls are able to name the kind of wood used in the furniture and to recognize the Renaissance style in the ceiling. Here the classes are taught the location of indexes, diction-

aries, encyclopædias, art books, books on architecture, design, and furniture. The beautiful collection of different woods is also shown. It often happens that the teacher has given them special subjects to look up, and they do so now. This finishes the actual instruction given to all the grades from the fourth to the eighth, inclusive, and takes about two hours' time every other day during the week. This year 2693 pupils have been taught at the library building and 4486 have been instructed in the use of library books at the schools, both public and private, making a total of 7279 instructed from the grade schools.

The same instruction, not quite so elementary, has been given to all the students in the high schools by the different departmental heads.

As to the results of these visits—I notice a better spirit among the children. The fear of coming has been removed. A low tone of voice is soon acquired, and the younger children no longer feel impelled to run on the stairs and slide on the marble floors. The catalog is no longer a "sealed book," and every table, chair, and book shelf has a meaning, and the saying is verified, that knowing how to *find* things is next best to *knowing* things.

MAY G. QUIGLEY,
Children's librarian.

LIBRARY AND SCHOOL WORK IN NEWARK, N. J.

THE Newark schools are constantly urged to use the Public Library. The responses have been very encouraging, and so have made possible the work which the library does in co-operation with them.

That the schools may not forget the readiness of the library to serve them, constant reminders are issued and an effort made to keep up a never-ceasing communication with them. Lists are sent, visits made to the schools, exhibitions held which fall in line with the school work and notices of these exhibits put in the hands of the principals and teachers. The daily paper in its school column includes "library and school" news.

Fortunately for the Newark library it has happened that several school supervisors, while waiting for quarters in the city hall, have had offices in the library. This means that many teachers are daily coming into the library building. The children's room which, though a separate department of the library, works closely with the school-libraries department, is conveniently located in the front of the building, and it is a very easy matter for the teachers as they pass back and forth to step into this room.

Each month two brief bulletins, including not more than 8 or 10 items, are mimeographed for the schools; one including new

books and magazine articles of general interest; the other, more specifically pedagogical, including new books on education and articles selected from educational magazines with which the library reading room is well supplied. These bulletins are mailed to the principal and vice-principal of each school, and are posted by them in school bulletin boards. Copies are also mailed to certain teachers.

For the high school branch of the library a special educational bulletin is made bearing more closely on methods in upper and college preparatory grades. Special pains are taken to include in this bulletin references to the best articles which appear in the magazines for which that branch of the library has subscriptions.

These lists and bulletins are primarily, of course, for the use of the teachers in their work.

The plan which has succeeded better than any other in interesting the children in books and in encouraging the reading habit outside of school hours has been the placing of libraries in the school rooms. Over 200 of these libraries are now in school rooms, scattered all over the city. Many more school rooms would have the libraries had the supply of books not fallen short of the demand.

Requests for these libraries come voluntarily from the teachers themselves without any influence being brought to bear on the part of the school authorities. Printed lists of "Books for boys and girls" are given to the teachers; in one of these a teacher checks her choice of books, and a library of from 25 to 50 volumes is made up for her use accordingly. A teacher may indicate the class of books which she wishes or she may leave the selection entirely to the person in charge of the work at the library, giving simply the grade of her class. In any case the teacher has the choice of books in her own hands, and she may follow her own taste. Books which in this way appeal to her own interest are surely more readily adapted by her to the peculiar needs of the children in her charge.

The selection of books varies greatly with the individual tastes of the teachers. Some teachers prefer to use the libraries to supplement text-books with good reading in travel, history, biography, natural science and so on, following closely the course of study laid out. Others say, "We have enough of routine reading in our class work. Let us have in our library a majority of good story books, some poetry, some historical tales, a little of other subjects, that we may have real recreation when lessons are over." The usual library has stories, history, science in reasonable proportion.

Some of the teachers in parts of the city more remote from the library, its branches and deposit stations, asked to have books for the parents in their school rooms. With such libraries are sent lists of the books included

in each case, and these lists the children take home and from them the parents make their selection. The children then become messengers for their parents, carrying the books back and forth. So large a proportion of the parents in Newark are of foreign birth that in some localities the children's books are more acceptable than the adult books, and here regular school room libraries serve a double purpose. Doubtless many people who would not otherwise use the library do so in this way.

In two school buildings, instead of several school room libraries, regular deposit stations have been placed. In one case the principal is in charge and has the books in his office. This is a school which has evening sessions, so that the library is open for the use of the school and neighborhood during both day and evening.

An assistant from the library who has the school work in charge makes constant visits to the schools having libraries, answers inquiries, changes the books if necessary, talks to the children, keeping constantly before them the fact that the library in the school represents only a small part of the public library of the city. The use of the main library is also encouraged at the school by keeping the teachers and principals supplied with application blanks, which, with the signature of teacher or principal, entitle children to library cards.

Classes are invited to come to the library, where they are shown how the books are arranged on the shelves, and how the catalog may help them to find special books or subjects in which they may be interested.

Pictures are lent as freely as books. These are for the most part clippings from books and magazines and cover a great variety of subjects. If a teacher wishes to exhibit in her school room pictures on special subjects these are mounted and prepared for her. Each teacher has in her hands a list of the subjects which the pictures cover. Frequently when several classes are studying the same subject a special exhibit of pictures is made at the main library, where books on the same subject are also reserved.

Besides the books and pictures, teachers borrow from the library sets of mimeographed poems to be used in the class rooms. This plan was started about two years ago, when 200 copies of each of six poems were printed for the library on heavy manila paper, placed in manila envelopes and lent. Suggestions for other poems began to come in, and the list of poems has been enlarged until it now includes 60 titles. Several hundred copies of each poem are mimeographed and lent, usually in sets of 50. Teachers are asked to suggest new titles which they would use.

Some schools have asked the library for current periodicals, and for these schools

magazine interchanges have been started, a separate group of magazines for each school. A suggested list of magazines is submitted and the teachers make the selection themselves. The largest school has about 10 magazines on its list, four pedagogical, some dealing with current events and world news, some of a general nature. The magazines are sent directly to the schools from the subscription agent. As soon as a magazine comes, the person in charge tips on the front cover a list of the teachers who have said they wished to read the magazine regularly. The magazine is then dated, started on its way, and each teacher, when the time limit is up, dates and passes on the magazine to the next on the list.

So generous has been the response of the teachers to these attempts on the part of the library to meet their needs that the school libraries department is hoping for even better equipment than it now has to do justice to the growing demands upon it.

MARJARY L. GILSON,

Chief of School Libraries Department.

SUGGESTIONS ON FORMING A PROFESSIONAL LIBRARY FOR TEACHERS

From remarks by Dr. Colin A. Scott, before Massachusetts Library Club

A PROFESSIONAL library for teachers ought, in the first place, to include a good reference library. For this purpose it must be well equipped with the best books of the strictly professional order, those that deal with the management of the schoolroom, the conduct of recitations, promotions, examinations, timetable and program making, the grades, the theory of punishment and rewards, and other discipline. Here the principal care should be that of selection. The number of books on these subjects is endless, and for the most part they are all alike and represent an intolerable deal of sack. Books on the organization of schools and their supervision are rarer. School superintendency is a recent development, and we have very little relating directly to it. School reports issued by superintendents are often burdened with financial details which seem to bury the few ideas they sometimes contain. A mere collection of such reports would hardly serve as ballast, but they would be of value if a card catalog could be made from them that would show where the ideas were to be found.

Neither the books on the internal management of schoolrooms or their superintendency can serve really scholarly purposes if they are confined to American or even English origin. Means of comparison with actual conditions in other civilized countries is absolutely necessary. These foreign books and reports should not be kept by themselves, even

though they may be consulted less frequently, but should mingle on terms of equality. At present there is not sufficient protection against either the optimist or the pessimist who has been abroad and comes back to tell us just how it is done in Germany or France.

Besides strictly professional material, a reference library should be richly supplied with books on child study, psychology and sociology. While it is impossible to expect even the best equipped teacher, as such, to be either a complete psychologist or sociologist, yet, since the teacher is constantly dealing with individual minds and in a social environment, these subjects are as important to him as are physiology and biology to the practical physician. Child study, psychology and sociology give facts and pictures showing what psychic life has actually accomplished. To know these facts is a necessary condition for any free work. Without them, or without a special genius, a teacher is very likely to be a mere repeater, mechanically carrying out commands which he does not understand.

Enough of biology and enough of the history of civilization, philosophy and ethics to give a matrix for the sciences already mentioned might safely be admitted without going outside of the field of a professional pedagogical library. It is quite plain that not all the various arts and sciences which are taught have a place here. To admit them would yield a universal library. It is not the mere learning which is to be transmitted, but the tools which are necessary to the art of teaching which should be the proper care of such a social library. Even philosophy, perhaps most of all philosophy, should be made to keep a judicious distance.

Besides the higher class books, a good reference library ought to be supplied with practically all the new text-books for usual school purposes that appear in this country. At present grade teachers who are looking for new supplementary readers, new arithmetics, grammars, etc., are accustomed to depend on the book publishing firms for their information. These firms sometimes provide sitting rooms or little libraries where teachers can look over samples of their stock. How much better it would be if the teacher, instead of going from one firm to another until he is tired or hooked, could go to a library where, for example, on one shelf he could see together all the readers, supplementary and otherwise, for a single grade, published during the course of the year. The shelves below might contain a similar collection for the previous half dozen years. If this were done for every grade and subject, it would not only be of immediate assistance to the teacher, but the results of such a direct comparison ought to have a beneficial effect on the character of the text-books published. Here again comparison with foreign text-books of the same

order ought to be facilitated by placing typical English, French and German text-books on the same shelves as those of American origin. A mere glance at the character of, say the American geographical text in comparison with that of Germany, supplies food for thought which (despite the magnificent illustrations) is not wholly in favor of the American article.

Such a collection of text-books partakes slightly of the museum character, and the present tendency in this direction could well be pushed much further in the case of a special pedagogical library. Such a library ought to be a medium of exchange for teachers' ideas. It ought to be provided with photographs, specimens of work done by children, with written and printed descriptions of both typical and experimental pedagogical work which is being carried on throughout the country, and particularly in the immediate locality of the library. If these exhibits were selected by a group of expert teachers and a judicious librarian, they could easily be developed to a high grade, corresponding to the exhibits of painting and sculpture, which interest not only professionals, but also to a lesser degree the larger public. If there is anything that the teaching profession needs, it is some such outlet as this. At present pedagogical efforts of a high degree of artistic excellence are buried, and sometimes hermetically sealed by the indifference and the jealousies of fellow teachers. Much visiting of the school by parents or other members of the community interested in education is liable to defeat its own ends, just as in watching a painter at work one is not very likely to learn much of his secret, or even to see what he is really doing. An intelligible account of what the teacher is trying to do, backed up by actual evidence of results, is more satisfactory in itself, and would make any future visit to the school much more instructive to the observer.

Besides its functions as a reference library and place of exhibition, such an institution as we are discussing cannot get on without a circulating department. Even the best purely reference library is liable to become rather dead. Few people are found at work within its walls. Books are like red blood cells. They need to be taken to the organ which is using them. Circulation, too, helps to advertise the institution in the most natural way. The actual consumption of goods is carried on at all points of the community, instead of being confined to one building. The advantages of these uses are consequently seen and imitated by others, who had not previously been interested. For a state library, a circulating department which loaned out sets of 25 or 50 books in different localities, or an extensive and less costly parcel post system, would meet the difficulties of distance.

HOW MAY A TEACHER LEAD CHILDREN TO READ GOOD BOOKS?

P. W. Kauffman, Superintendent of Schools, Pomona, Cal. at California Library Association.

ASSUMING that good books are available—an assumption which often does violence to the facts—the question is, “How can the teacher get the pupils to read them?”

(a) She may read some of the books to the school. If she be a good reader, she may at least imitate the poor hunter who aims at a whole flock of birds hoping to bring some of them down. If she be a poor reader, which, pity 'tis, is too often true, then she may hope to have as great results as when the mountain groaned and a mouse came forth.

(b) She may make a list of good books and recommend her pupils to read them. In this way she may minister to the needs of those who have already formed a taste for books. But she will not make a great success of inducing children who have been brought up on the deadening effect of “school reading” to form this taste for good books. The children reason, and reason rightly, that if the books which she recommends do not fit into their lives any better than those which she compels them to read at school, then they will have as little to do with them as possible.

(c) She may, with all the helps she can get, make a list of sane and wholesome books and say to her children, “We will read some of these books and others equally as good for our school reading. You are permitted to select from this long list any book which interests you, or bring any book outside of this list for my approval, and then you may read the book at school and at home until you have finished it, when you may select another.” This is the plan which we have been trying in a modest way for the last eight or ten years to work out in our schools. The results as a whole have been more than satisfactory. We use the plan for a part of the time in the fourth grade (a part of the time being necessary to complete the state fourth reader). We use the plan during the whole of the time of the fifth year; that is, the pupils have no regular reading book during the fifth year. We use the plan for a part of the time in the sixth year, and we are now planning to use the plan once a week in the English of the seventh and eighth years. The results are that the teacher has almost entire control of the reading of her pupils; that the pupils take great interest in their reading; that they read from 10 to 40 books—good literature—a year; that they are held responsible for every book they read, a part of it being read orally to the teacher and most of the remainder being reproduced in the language of the pupil; that their oral language is greatly improved and their other studies supported by their extensive reading; that many pupils who never dreamed that there was anything they wanted in books be-

come the most interested in the reading; that many who have an absolute poverty of books at home have the way opened to the riches of a library; that the pupils become far more intelligent; that their reading influences their moral conduct; that they get better companions in their books than they do in their associates; that it keeps some of them at home nights who would otherwise be on the streets; that in addition to books which the pupils buy or get in exchange with other pupils and from the school library, our pupils read about one book per month from the public library for every child of school age in the city; and that the character of the books read has been improved in a very marked degree.

A CHILDREN'S ROOM OF THE PITTSBURGH CARNEGIE LIBRARY

THE East Liberty branch of the Carnegie Library of Pittsburgh was opened Oct. 10, 1905 (L. J., November, 1905, p. 891). The children's room, as shown in the illustration elsewhere, is the largest children's room in the system of six branch libraries. It measures 40 x 50 feet floor space and is fitted up with polished dark oak shelving and furniture, including low round tables, a window seat, a recessed wash bowl, bulletin boards, magazine and picture-book racks. The floor is covered with rubber tiling, practically noiseless, which together with the round tables has reduced the difficulty of discipline to a minimum. The walls are tinted a soft buff, making a harmonious whole, pleasing to the eye.

This room is open after school hours until nine o'clock in the evening, and is filled daily with all classes and conditions of children. The illustration represents the appearance of the room on an average weekday afternoon, though in the evenings it is often crowded to the fullest extent of its capacity. The branch stands between a tenement district crowded with foreigners and one of the better residence districts of the city, and the children who use it represent every gradation of both classes. Three trained children's librarians are in charge of the room, and the juvenile attendance since Oct. 10, 1905, to March 30, 1906 (less than six months), was 57,930, and the juvenile circulation 60,179 volumes. The total attendance, both adult and juvenile, at the branch for the same length of time was 143,904, and the total circulation, both adult and juvenile, was 113,931 volumes. The work at this branch is representative of the steadily increasing volume and importance of the library work for children being done in Pittsburgh. Story hours are held in almost all the branches, frequently in the assembly room connected with each building, and these are always designed to center upon the use of books, and to familiarize the children with the literature of mythology, legend, romance, or some special person or subject.

IMPORTATION CLAUSES IN PROPOSED COPYRIGHT BILL

THE following are the clauses regarding importation of books, so far as concerns the interests of libraries, substantially as agreed upon in the latest copyright conference:

"SEC. 40. That, subject to the provisions of Section 41 herein, the importation, without the written consent of the proprietor of the American copyright, of foreign reprints, although authorized, of books by American authors first published and copyrighted in the United States shall be prohibited, unless agreement permitting importation is entered into between the American copyright proprietor and his foreign assignee or licensee, and the copies imported bear upon the cover or title-page, or the reverse of the title-page, a notice that their importation into the United States is authorized.

"SEC. 41. That during the existence of the American copyright in any book the importation into the United States of any foreign edition or editions thereof (although authorized by the author or proprietor) not printed from type set within the limits of the United States or from plates made therefrom, or any plates of the same not made from type set within the limits of the United States, or any editions thereof produced by lithographic process not wholly performed within the limits of the United States, except where the objects represented are located in a foreign country, shall be and is hereby prohibited: *Provided, however,* That such prohibition shall not apply—

(a) To works in raised characters for the use of the blind;

(b) To a foreign newspaper or magazine, although containing matter copyrighted in the United States printed or reprinted by authority of the copyright proprietor, unless such newspaper or magazine contains also copyright matter printed or reprinted without such authorization;

(c) To the authorized edition of a book in a foreign language or languages, of which only a translation into English has been copyrighted in this country;

(d) To books in a foreign language or languages, published without the limits of the United States, but deposited and registered for an *ad interim* copyright under the provisions of this Act, in which case the importation of copies of an authorized foreign edition shall be permitted during the *ad interim* term of two years, or until such time within this period as an edition shall have been produced from type set within the limits of the United States, or from plates made therefrom, or by a lithographic process performed therein as above provided;

"(e) To any book published abroad with the authorization of the author or copy-

right proprietor when imported under the circumstances stated in one of the four subdivisions following, that is to say:

"(1) When imported, not more than one copy at one time, for use and not for sale, under permission given by the proprietor of the American copyright;

"(2) When imported, not more than one copy at one time, by the authority or for the use of the United States;

"(3) When specially imported, for use and not for sale, not more than one copy of any such book in any one invoice, in good faith, by or for any society or institution incorporated for educational, literary, philosophical, scientific or religious purposes, or for the encouragement of the fine arts, or for any college, academy, school or seminary of learning, or for any state, school, college, university or free public library in the United States; but such privilege of importation without the consent of the American copyright proprietor shall not extend to a foreign reprint of a book by an American author copyrighted in the United States unless copies of the American edition cannot be supplied by the American publisher or copyright proprietor;

"(4) When such books form parts of libraries or collections purchased *en bloc* for the use of societies, institutions or libraries designated in the foregoing paragraph; or form parts of libraries or of the personal baggage belonging to persons arriving from foreign countries, and are not intended for sale."

Sessions of the copyright conference were resumed in Washington March 13 and continued for several days. There was an attendance of about 60 persons, representing the varied interests concerned in the measure. The general aims and results are described in a statement given by Mr. Putnam, which emphasizes the great importance of this effort to unify and systematize copyright legislation, quotes from the President's message on the subject, and refers to former meetings and to the work of this conference. As yet no bill has been formulated to be presented to Congress; but such a bill is to be prepared and submitted to the various organizations which participated in the conference, and when approved by them will be introduced in Congress. It is pointed out that the conferees could not themselves frame a bill. "This had not been expected of them. The most that had been hoped of them was:

"(1) That they should establish some general principles;

"(2) That they should bring forward into proper recognition particular hardships suffered under the existing law and appropriate measures of relief, and

"(3) That by frank expression in a body so disposed to be conciliatory they should furnish

a practicable working basis between interests naturally diverse.

"Now they have accomplished all these things, and accomplished them in a degree quite extraordinary and never predicted. They have, for instance, established, as the judgment of these groups represented, certain general principles. For instance, that the protection of copyright should initiate from publication. This seems simple as stated, but the establishment of it affects in diverse ways the determination of innumerable provisions, and clears away innumerable perplexities.

"Example: That the copyright in a work should cover all the copyrightable matter therein. Equally simple, as stated, but whose enunciation cleared away many embarrassments.

"That the omission of mere formalities should not of itself invalidate the copyright, even though it should prevent recourse against innocent infringements. Under the present law the deposit of copies is not merely a requirement, but a requirement the omission of which will invalidate the copyright; and the copies must be deposited on or before the date of publication. If they are not, your copyright is lost, and you can never make it good.

"The substitution of penalties for invalidation of copyright in any formality not indispensable to the protection of the public.

"The public is much interested in these principles, as it will be in the particular provisions of any bill that may be introduced, but they are not in a condition yet to be promulgated, and, as mere statements of principles, were not intended to be promulgated. They were simply for the guidance of those who are to draft the bill. There was before this last conference a memorandum in the form of a bill which was gone through, provision by provision, section by section, and the framers of the bill will have for their guidance particular provisions and even particular phraseology proposed."

LIBRARY COPYRIGHT LEAGUE

BELIEVING that there may be necessity for active work in protecting the privileges of American libraries from undesirable legislation in the proposed copyright bill, and realizing that the American Library Association is not so organized as to do such work to the best advantage, I call upon all interested to join me in organizing a Library Copyright League, for the purpose above indicated.

Will every librarian who is interested write me *at once*, and present the matter to the governing board of his library, with an appeal for financial support? *Do not delay.*

An organization will be perfected at the earliest moment after sufficient replies are received.

W. P. CUTTER,

Forbes Librarian, Northampton, Mass.

BI-STATE LIBRARY MEETING AT ATLANTIC CITY, MARCH 9-10

THE annual spring meeting of the New Jersey Library Association and the Pennsylvania Library Club was held as usual at the Hotel Chelsea, Atlantic City, N. J., on March 9 and 10. There was an unusually large and representative attendance, due in part to the meetings of the Council of the American Library Association and the American Library Institute held at the same time. The Publishing Board and two or three of the standing committees of the Association also took advantage of this occasion to hold meetings. The Atlantic City meeting in the spring and the Lake Placid meeting in the fall are fast becoming opportunities for the transaction of important business of a general nature, while the papers offered at these gatherings have tended to the consideration of topics of more than local interest. At the opening session, on the evening of March 9, there were nearly 250 in attendance, and at the last session this number was somewhat increased. Librarians from Wisconsin and Illinois were present, and Ohio and New York, Massachusetts, Delaware, and the District of Columbia sent goodly numbers in addition to the members of the associations of the two states under whose auspices the meeting is held.

The first session was in charge of the Pennsylvania Library Club, whose president, Dr. John W. Jordan, presided. Mr. John J. MacFarlane contributed a paper on "A commercial library," in which he brought out somewhat in detail the work of the library of the Philadelphia Commercial Museum, and contrasted with that work the resources and experiences of the various larger libraries of the country along the line of supplying commercial information to business men. Mr. MacFarlane dwelt especially on the need of up-to-date information in commercial affairs, and illustrated the possibilities of our government documents in answering questions on statistics and commerce. It may be said that Mr. MacFarlane's strictures on the lack of the most recent works on commercial matters in most of our libraries seemed a trifle exaggerated. It is certain, however, that the replies to his inquiries indicated a strange lack of fulness with regard to some most important documents.

Miss Sarah Comly Norris Bogle gave, in some detail, an account of the reorganization of the library of Juniata College, Huntingdon, Pa., of which she is librarian. This collection is particularly rich in early Pennsylvania German imprints, many of which were mentioned and described. The session ended with a review of library progress in Pennsylvania, particularly in the last year, by Mr. Thomas Lynch Montgomery, state librarian. Mr. Montgomery was able to report many items of interest, chief among which were a largely increased appropriation for the state library

commission and the erection of several Carnegie libraries.

The second session was held in the lecture room of the new Public Library of Atlantic City, on Saturday morning, March 10. At the close of this meeting an informal and very delightful reception was tendered the librarians by the trustees and their wives. Mr. John Cotton Dana, president of the New Jersey Library Association, presided. The first paper was by Miss Frances L. Rathbone, librarian of the Free Public Library of East Orange, N. J., who spoke at some length on the various devices for guiding a reader to the contents of a library. Her title, "Library guides," she held to mean anything, or anybody, which aids the prospective reader to his book. In particular she discussed leaflets, information for borrowers, signs, guides in the catalog, etc. Miss Rathbone had prepared a summary of her paper which was printed in advance, and had also mounted and displayed a large number of examples of what she considered good and bad guides. Her paper brought out a lively discussion, which was chiefly directed towards the need of explaining the card catalog to new readers, and to objections to signs which were not very simple and direct. Miss Lord, of Pratt Institute, pointed out the fact that the nearer the sign approached to the standard of good printing the better it was, and instanced in a very practical manner the new sign which had been recently placed on the outside wall of the Pratt Institute Free Library.

Miss Louise Connolly, general supervisor of public schools, Summit, N. J., followed with a talk which, for wit and brilliancy, combined with hard sense and keen penetration, was easily the feature of the meeting. Her subject was "The art of using a library," but it might have been called a critical and kindly survey of our modern libraries as they impress one who is trying to use them. It is to be hoped that it may later appear in print.

Mr. Herbert Putnam, Librarian of Congress, presided at the last session, at the Hotel Chelsea, on Saturday evening. The first paper was by Mr. Varnum Lansing Collins, of Princeton University, on the "Preceptorial system," in use at Princeton. It is given elsewhere in this issue.

Miss Adelaide Hasse, of the New York Public Library, told the history of the collection of public documents in that institution under her charge, and touched upon its development, as now in process and in contemplation. Prof. Woodward, director of the Carnegie Institution at Washington, spoke entertainingly of the difficulties of his post. He was of the opinion that he had more gratuitous advice showered upon him than any one else in the country, not excepting the President. He also told why it was that so many public libraries found themselves cut off from the free list of the Carnegie Institution, which is limited to about 300 institutions

all over the world. His position was that their publications should be sold at cost. Although it was not announced by Professor Woodward at the time, it became known during the meeting that the Carnegie Institution has decided to complete Sabin's monumental work on American bibliography. This cannot but give satisfaction to all librarians.

Brief announcements concerning the A. L. A. Conference at Narragansett Pier closed the formal program. Most of those in attendance remained in Atlantic City until Monday, so that opportunity was given for meeting friends and for much "shop-talk" on the Sunday.

WM. WARNER BISHOP,
Secretary pro tem.

PROPOSED ASSOCIATION OF FRENCH LIBRARIANS.

PLANS have been announced for the formation of an Association of French Librarians, which it is hoped may be formally organized in Paris at Easter time. A circular sent out to all French librarians under date of Feb. 1, and signed by 28 leading librarians of Paris, makes a strong appeal for such an organization and presents an outline draft of the constitution. The circular points out the absence of close relations between French librarians and the difficult conditions that are the result of this isolation. A few librarians have felt impelled to take the initiative toward forming an association, "in the thought of overcoming this isolation and ameliorating the situation of libraries and librarians." They have prepared a sketch of the purpose of such an association and a draft of a constitution, and send these out for advice, suggestions and criticisms. The circular continues: "We think that if this proposed association is realized it will be strong only as it responds to the observed and expressed needs of the greatest possible number of French libraries and persons interested in the prosperity of French libraries. The brief outlines given have no pretensions other than to express broadly the thought indicated at several preliminary meetings. If the results of the present referendum are favorable, it is proposed to organize in the coming Easter season the first general meeting."

The sketch of the purpose of the association is in substance as follows: "Our fundamental idea is to endeavor by study and action to make our libraries a vital part of the machinery of modern life, useful auxiliaries to all scientific and practical life. We believe it therefore necessary to formulate and disseminate correct ideas regarding libraries and librarians, on the character of the profession, its relative autonomy, the diverse needs to which it should respond, and its precise and practical adaptation to those needs. We believe that more authority and security must be given to those who devote themselves to

this profession, and that it is eminently useful for librarians and the friends of libraries to make common cause of their studies and their efforts for the improvement of French libraries. It is, therefore, a practical aim that we propose and not the creation of a simply scientific society to share the field with many others. We believe also that it is necessary to begin with some practical work, and we ask suggestions for undertakings among which our association, once organized, may choose its first essay. To aid in suggestions, we note the following matters which deserve consideration:

"1. Meetings, articles, correspondence, conferences, communications contributed to a special bulletin or to one of the existing bibliographical reviews;

"2. Information service, to aid in the establishment and improvement of libraries;

"3. Publication of bibliographies, as for instance, the resumption of M. Jordell's 'Répertoire des articles de périodiques';

"4. Establishment of meetings on questions of interest to libraries." Signatures to the circular include, among others, MM. Adenis, Artois, Bernard, Bouchot, Bouteron, Capet, Cottin, Deniker, Gautier, Grand, Hildenfinger, Ledos, Lelong, Maire, Marchal, Mortet, Poete, Rastoul, Ruelle, Stein, Sustrac, Vicair, and Viollet.

The draft of constitution opens with the announcement of the name of the organization as Association des Bibliothécaires Français; its aim is to "deal with all questions concerning the interests of libraries and librarians;" membership is open to all persons belonging to the profession of librarian or interested in libraries; annual dues are five francs, and persons may become foundation members on payment of not less than 20 francs. The affairs of the association are to be administered by a committee of 20 members, elected by majority vote at the general meeting, and including correspondence votes. One-quarter of the committee members must be elected annually, and retiring members are eligible for re-election. This committee is to appoint each year from its membership a "bureau," composed of a president, two vice-presidents, a secretary, a secretary-assistant, and a treasurer; the retiring president is ineligible for re-election. All decisions of the committee shall be decided by majority vote; six members make a quorum. The committee, in addition to its regular sessions, as designated by itself, shall meet on call of the president, as the interests of the association may demand. The president has full power to act on behalf of the association. The general meeting ("Assemblée générale") is the sovereign authority; it shall be held once a year at a place and date fixed by the committee, shall conduct elections, and financial and administrative matters shall be submitted for its approbation; it may hold extraordinary sessions on call of the president. Besides

the annual general meeting there shall be quarterly meetings devoted especially to the study and discussion of technical and professional questions. The dissolution of the association may be pronounced only at a general meeting specially called for that purpose, by a vote representing a majority of half the members present or represented.

American Library Association

President: Frank P. Hill, Brooklyn Public Library, 26 Brevoort Place, Brooklyn, N. Y.

Secretary: J. I. Wyer, Jr., State Library, Albany, N. Y.

Treasurer: Gardner M. Jones, Public Library, Salem, Mass.

MINUTES OF EXECUTIVE BOARD

A meeting of the Executive Board was held at the Hotel Chelsea, Atlantic City, N. J., on March 10, 1906, at 9.30 a.m. The following members were present: Mr. Frank P. Hill, Dr. E. C. Richardson, Mr. J. I. Wyer, Jr., Miss Helen E. Haines. The minutes of the meeting of January 11 were approved without reading. The names of seven persons not actively engaged in library work, presented by the treasurer, were voted into membership.

Invitation from Asheville for 1907. A letter from Mrs. Annie Smith Ross, of Charlotte, N. C., urging the selection of Asheville, N. C., as the place of meeting for 1907, was read. The matter not being ripe for discussion or consideration, the letter was placed on file.

Committee on publicity. Mr. Purd B. Wright, of St. Joseph, Mo., was appointed a member of the committee on publicity, *vice* J. G. Moulton, resigned. A communication was read from Mr. J. C. Dana, chairman of the committee on publicity relative to arrangements for reprints of papers from conference proceedings, and was referred to Miss Haines to arrange with the committee. The treasurer was instructed to pay the bills of the committee on publicity to the extent of \$50 until the adoption of the next annual budget following the Narragansett meeting.

A. L. A. admission fees and dues. The treasurer, in pursuance of the action of the Executive Board on January 11, submitted a report on A. L. A. admission fees and dues, as follows:

"In submitting this report on an admission fee I venture other suggestions regarding the finances of the A. L. A., which I hope may not be taken amiss at the present time when we are making special efforts to increase our receipts.

"I advocate an admission fee because it gives an easy method of holding members to continuous membership. The really interested and the conscientious members pay regularly each year, but a large percentage pay only

when it is convenient, generally when expecting to attend the year's conference. By careful planning one can pay every other year and yet keep his name in the Handbook and, to all appearances, be a regular member in full standing. This is wrong and unjust to the faithful members who consider it a duty to pay dues regularly and promptly.

"We also need more income and, for that reason, I recommend an annual fee of \$3, instead of \$2. We are now giving the Proceedings, costing, including delivery, about \$1, the Handbook, over 8 cents, and the *A. L. A. Booklist*. This leaves less than 80 cents to pay the running expenses of the Association.

"I do not believe that either an admission fee or increased dues would lessen the number of members to any great extent. I am sure it would increase our receipts, and members who do not value the advantages of the *A. L. A.* at more than \$2 a year are of little profit of strength to the Association. In England, where salaries are much smaller than in this country, the annual dues are a guinea a year, and members are only admitted after formal proposal, announcement on call of the meeting, and election by the association.

"Under our present by-laws a delinquent holds his membership for about 14 months after the expiration of the year for which he has paid. Our last Handbook contains the names of 217 persons who are not in good standing, having been dropped on March 1 under our present by-law no. 1. The last, and in many cases the only, year for which they have paid is 1904, and yet their names have appeared in two handbooks. We ought to purge the lists soon after each conference, so that the annual Handbook shall contain only the names of members in good standing, who have paid for the current year. If a member is dropped, he should be able to rejoin only by paying all back dues, or the admission fee required of new members. If it is more difficult to get in and to maintain membership, it will be more prized. . . .

"Whatever action may be taken regarding the admission fee and annual dues, there is no doubt our life membership is too low. \$25 yields but \$1, or less, at present rates on interest.

"Any new by-law adopted should not take effect until after the coming conference, but this would be in time to allow the dropping of delinquents, and the compilation of the new Handbook according to its provisions. An amendment to the constitution could not take effect until after the 1907 conference.

"Respectfully submitted,
GARDNER M. JONES, *Treasurer.*"

Accompanying the report were several forms for amendment of constitution and by-laws, to accomplish the change recommended. After discussion it was deemed inadvisable to increase the annual dues of either individuals or institutions or the sum necessary to secure life membership, and it was *Voted*,

That the Executive Board recommend to the Council the amendment of the by-laws (Section 1), by inserting after the word "January" the words "save that for the first year the dues for individuals shall be \$3. Any person renewing membership shall pay all arrears of dues or the dues required from new members."

Committee on A. L. A. exhibit at Jamestown, Va. The president's *ad interim* appointment of a committee on A. L. A. exhibit at the Jamestown Exposition was confirmed as follows: Mr. H. J. Carr, chairman; Mr. Melvil Dewey, Miss Isabel E. Lord.

Permanent headquarters. Mr. E. C. Hovey, assistant secretary, and Mr. C. C. Soule, for the Publishing Board, appeared before the Board, the former with a statement as to the progress made in collecting the fund to be used in opening permanent headquarters of the Association in New York City, showing \$1800 paid into the treasury and \$1500 additional in satisfactory pledges. Mr. Hovey expressed his belief that with present prospects the sum of \$5000 net will be raised by August 1.

Mr. Soule stated that the Publishing Board would move into permanent New York headquarters at any time, but that September 1 would best accommodate its work; that it will pay, if necessary, one-half the rent of the new headquarters; that if the Executive Board will pay all the rent, the services of two library experts in the pay of the Publishing Board will be made available for the general correspondence and duties pertaining to headquarters, so far as their connection with the Publishing Board shall permit. Mr. Soule further stated that the Publishing Board will be unable to pay any part of the salary of assistant secretary after April 1, 1906. Mr. Hovey and Mr. Soule were then excused, and after consideration of statements from the treasurer of the Publishing Board and of the A. L. A., showing the sums received from Mr. Hovey and paid to him for expenses incurred in raising the headquarters fund, the Executive Board

Voted, That the services of Mr. Hovey be continued at the rate of \$125 per month until August 1, and that this sum be apportioned \$25 per month to the general treasury of the Association and \$100 per month to the permanent headquarters fund. It was further

Voted, That permanent headquarters be established in New York on September 1, 1906, if sufficient funds be in hand to insure the experiment for one year.

The following resolution from the Publishing Board was read and placed on file: "At the regular meeting of the Publishing Board it was *Voted*, that the Publishing Board feels that its office and administration expenses should be borne by the A. L. A. headquarters, thus leaving its entire income to be used for preparation and publication."

The treasurer, Mr. Jones, submitted a statement, showing that Mr. Hovey had paid in to

him the sum of \$1800 for the purpose of establishing permanent headquarters. From this sum have been paid the following items:

Mr. Hovey, Travel	\$560.15
Mr. Hovey, Salary as assistant secretary	177.03
	<u>\$737.18</u>

A statement was also submitted by Mr. Soule showing that the trustees of the Endowment Fund have paid to Mr. Hovey since April 1, 1905, the following sums:

On account of salary	\$631.31
For travelling expenses (Portland and San Francisco)	358.63
	<u>\$989.94</u>

In addition to the above the Publishing Board has paid to Mr. Hovey for services rendered since April 1, 1905, \$441.66.

J. I. WYER, Jr., *Secretary*.

MINUTES OF A. L. A. COUNCIL

A meeting of the Council of the American Library Association was held at Atlantic City, N. J., on March 10, 1906. There were present the following: Frank P. Hill, E. C. Richardson, Melvil Dewey, John Thomson, W. T. Peoples, R. G. Thwaites, J. I. Wyer, Jr., Miss Helen E. Haines, H. C. Wellman, F. M. Crunden, A. H. Hopkins, Miss M. E. Ahern, W. C. Kimball, A. E. Bostwick; and by invitation C. C. Soule, Herbert Putnam, J. C. Dana, H. J. Carr, W. P. Cutter, W. C. Lane. On motion of Mr. Wellman, the reading of the minutes of the previous meeting was dispensed with.

Revision of copyright law. The first order of business was the proposed revision of the copyright law. The secretary submitted the following report from the Executive Board:

"The report of your Executive Board is based on the following instruction given to it by the Council at Portland, where it was voted 'That the Executive Board be requested to take measures for the representation of the Association at future conferences on the revision of the copyright laws, and in behalf of the Association to protest against the inclusion in the copyright law of the provision prohibiting importation of copyrighted works into the United States without written consent of the author or copyright proprietor, or to secure some modification of the same.'

"Acting on this instruction, the Board has continued Mr. F. P. Hill and Mr. A. E. Bostwick as official representatives of the A. L. A. at such copyright conferences as have been held since the Portland meeting; has held extensive correspondence with authors' and publishers' associations; has communicated to each member of the Council the successive modifications and concessions secured; and has held one important conference with the representatives of the American Publishers' Copyright League. As a result of these actions, the Executive Board has secured an important modification of the proposed im-

portation act as originally drafted by the various associations representing the different copyright interests, and this compromise measure has had the unanimous approval and concurrence of your Executive Board, and will on its behalf be presented to the Council this afternoon by Mr. Bostwick."

Mr. Bostwick then presented the latest draft of this section of the importation clause relating to libraries:*

"The importation shall also be permitted as follows of copies of any copyright book printed abroad with the authorization of the author or proprietor, except authorized reprints of books by United States authors published under the provisions and stipulations of section twenty-nine of this act:

"1. In the case of persons purchasing for use and not for sale, who import subject to the duty thereon, *under the permission given in writing by the author or proprietor of the American copyright of such work*, not more than one copy of such book at any one time;

"2. One copy of such book when imported in any one invoice by the authority of the United States or for the use of the United States;

"3. When specially imported, not more than one copy of any such book in any one invoice, in good faith, for the use of any society or institution incorporated for educational, literary, philosophical, scientific or religious purposes, or for the encouragement of the fine arts, or for the use of any college, academy, school or seminary of learning, or for any state, school, college, university or free public library in the United States, and not for sale, *provided that the edition of the book so imported shall come from the country of origin.*

"4. When such books form parts of libraries or collections purchased 'en bloc' for the use of societies, institutions or libraries designated in the foregoing paragraph; or form parts of libraries belonging to persons or families arriving from foreign countries, and are not intended for sale;

"5. All books and pamphlets in raised characters for the use of the blind."

At the close of this report, Dr. Richardson complimented the Board on the progress made and the substantial results accomplished. Messrs. Wellman, Crunden and Hopkins also expressed gratification at what had been done, but were inclined to insist that the representatives of the A. L. A. should stand for the law in its present form. This subject was discussed by nearly all the members of the Council present at great length, and a number of motions were introduced looking toward specific instruction to the two delegates to the copyright conference, but no definite action resulted upon any of them.

A. L. A. admission fee. The Executive

* Later modifications, in accord with the representations of the A. L. A. delegates, were made in this draft. In its latest form it is given elsewhere in this issue (see p. 171).

Board further recommended to the Council the following amendment to the by-laws, Section 1: Insert after the word "January" the words "save that for the first year the dues for individuals shall be \$3. Any person renewing membership shall pay all arrears of dues or dues required of new members." This recommendation was adopted by vote of 8 to 4. The chair ruled that inasmuch as it required a three-quarters vote to suspend a by-law, it would also require a three-quarters vote to amend. Dr. Richardson appealed from the decision of the chair and asked for a vote as to whether a majority of the Council was not competent to amend a by-law. The decision of the chair was not sustained and, more than a majority of the Council voting for the amendment, it was agreed to as recommended.

Application of Endowment Fund income to Publishing Board. On request of the Publishing Board, the Council voted to appropriate the accumulated income of the Endowment Fund and the income of that fund for the current year to the use of the Publishing Board. The Council then adjourned.

J. I. WYER, Jr., *Secretary.*

REPRINTS FROM PORTLAND PROCEEDINGS

The A. L. A. Publishing Board has issued for the committee on publicity reprints of the following papers included in the volume of Proceedings of the Portland Conference, 1905:

Address of the president: the national library problem to-day; by Ernest C. Richardson.

Library conditions in the northwest; by Charles Wesley Smith.

What state and local library associations can do for local library interests; by J. C. Dana.

The Library of Congress as a national library; by Herbert Putnam.

State library commissions, by Henry E. Legler; and The work of an eastern library commission, by Caroline M. Hewins.

Travelling libraries as a first step in developing libraries; by Gratia A. Countryman.

Library administration on an income of from \$1000 to \$5000 a year: essentials and non-essentials, by S. H. Ranck; and Economies in plans and methods, by Marilla W. Freeman.

The question of library training; by Lutie E. Stearns.

Rational library work with children and the preparation for it; by Frances J. Olcott.

Copies of these may be had at 5 cents each, or at the rate of \$3 per 100, if ordered in lots of 25 or more, by addressing A. L. A. Publishing Board, 10½ Beacon street, Boston, Mass.

State Library Associations

ALABAMA LIBRARY ASSOCIATION

The Alabama Library Association issues the "Proceedings of the first meeting, Nov. 21, 1904" (70 p. S.), as a carefully prepared and interesting pamphlet—a creditable production for one of the youngest state library associations. There is a frontispiece illustration of the Carnegie Library of Montgomery, a brief list of the public and school libraries of the state, and an index, besides constitution, lists of members and full record of papers and proceedings.

CALIFORNIA LIBRARY ASSOCIATION

President: James L. Gillis, state librarian, Sacramento.

Secretary: Miss Mary L. Sutcliffe, State Library, Sacramento.

Treasurer: David M. Belfrage, Cooper Medical Library San Francisco.

The annual dinner and meeting of the association was held at the California Hotel, San Francisco, on the evening of Feb. 27. After the dinner the first order of business was the reading of reports, election of officers for 1906, and notice of proposed amendments to the constitution. The election of officers resulted as follows: president, James L. Gillis, state librarian; vice-president, Melvin G. Dodge, Leland Stanford University Library; secretary, Mary L. Sutcliffe, State Library; treasurer, David M. Belfrage, Cooper Medical Library, San Francisco.

"Recent events of importance to Western scholarship" was the general subject of the program, presented by Professors Charles Mills Gayley and H. Morse Stephens, of the University of California.

Dr. Gayley spoke on the proposed bureau for the reproduction of manuscripts, as outlined last year at the international congress at Liege. In opening, he called attention to original authorities, to good scholarship, and to the fact that in America we lack much in respect to available sources of this character. The libraries of Europe teem with treasures that we need in our work and are inaccessible to most of us. The necessity of the duplication of these, is not merely one of convenience. They are too precious for us to permit only one copy to be in existence. The danger from fire is an ever threatening one. Scholars lament the irreparable loss of the Turin library. Dr. Gayley had this matter brought forcibly to his attention in 1897, when he was at Oxford. He noticed the collotyping process by which facsimiles were then being made, that it was expensive, that 20 copies cost \$100, but that 100 copies could be made for \$2.50 each. The idea came to him that this might be still further cheapened by co-operation; lists could be made out annually, and these could be sent out to libraries and their

subscription asked for. A central library should form an essential feature of the scheme. Here one copy at least of each ms. should be placed. Such a steadily growing collection would in a hundred years represent the cream of the collections of European libraries. Future great scholars will, for instance, want facsimiles of the treasures of the Bancroft library. Such, in detail, is the inception of Dr. Gayley's idea. He is enthusiastic, and has faith that at least a start in this great work will be made in our own day. The proposed bureau is now crystallizing as a practical proposition, and in March the idea will be discussed at the meeting of American university presidents at Berkeley.

Dr. H. Morse Stephens' subject was the Bancroft Library, purchased last year by the University of California. He said, in substance: The credit for the acquisition of the Bancroft Library belongs to the regents of the University of California, and to President Benjamin I. Wheeler. They were all appreciative of the ideas that were advanced regarding the worth of the library. They saw at once the great opportunity, and found a way to accomplish it. Mr. Bancroft also deserves great credit for placing the library at their disposal on the liberal terms that he did. He has really given the university a present of \$100,000, because his library would bring in the open market \$500,000 at least.

Langlois, the eminent historian, wrote an article a few years ago, entitled "H. H. Bancroft & Co." As everything that he writes is read with avidity by historical students, this article was read from Constantinople to St. Petersburg, and did more than anything else to establish Mr. Bancroft's fame in the old world as a book collector. Mr. Bancroft was able to get into the market at a time when the original documents of California were still in existence. The mass of material which he gathered together for the Pacific Coast is absolutely unique. His chief characteristic as a collector was his imagination. He swept in with his drag-net every kind of printed material—business directories, diaries, handbills, account books, and even ships' logs. He sent a man to Alaska for records of the early fur companies and, as a result, we have more of these than can be found at St. Petersburg. Mr. Bancroft was a book collector by the grace of God. He captured everything in sight. It will take fifty students fifty years to get the collection into working order. One knows not where to begin the enumeration of its riches; there is a magnificent pile of briefs in Spanish land cases; an extraordinary collection of records of the old missions; the entire records of the Presidio of San Francisco; large masses of correspondence of old Spanish families; the actual minutes of the Vigilance Committees, which are under lock and key, and are not to be opened until all the participants have passed

away; there are 5000 newspapers from all parts of the state, many of which exist only in this collection. As to the importance of the acquisition, original material is absolutely necessary for the training of students in history. The business of the professor of history is to teach men how to collect and digest material. The Bancroft Library is the best collection of original resources of any specific part of the United States. The time is not far distant when students will come from all over the Pacific Coast to consult this unrivalled collection of original sources.

At the close of the addresses a resolution was passed endorsing the plans outlined by Professor Gayley for the organization of a central bureau for facsimile reproduction of important documents.

A meeting of the association was held in the San Francisco Public Library on the evening of March 24, President Gillis presiding. The amended constitution was discussed and unanimously adopted. It fixes the annual dues of the association at \$1, and its special feature is the division of the state into four districts, each district having a president appointed by the president of the association. The object of this districting is to make it possible for the small outlying libraries to receive the benefit of library meetings. Each district will have its own meetings, and there will be an annual meeting of the whole association. The first district, in which Sacramento is situated, comprises the interior northern counties; the second district includes the counties around San Francisco and along the north coast; the third district includes the counties south of Tehachapi. L. W. Ripley, librarian of the Sacramento Public Library, was appointed president of the first district and J. D. Layman, of the state university library, was appointed president of the second district. Appointments for the third and fourth districts were deferred.

Announcement was made of the summer school for librarians to be conducted at the state university in charge of Miss Mary L. Jones, formerly of the Los Angeles Public Library; and a resolution was passed, offering to co-operate with the N. E. A. in arranging for the meeting of the library section at its convention next July.

The meeting closed with a paper by William R. Watson, telling of the work being done by the California State Library.

DISTRICT OF COLUMBIA LIBRARY ASSOCIATION

President: George F. Bowerman, Public Library.

Secretary: Earl G. Swem, Library of Congress.

Treasurer: Henry S. Parsons, Office of Documents.

The 92d regular meeting of the District of Columbia Library Association was held in the

children's room of the Public Library, March 14, 1906, at 8.15 p.m. The following were appointed members of the committee in charge of compilation of a handbook of the libraries of the District of Columbia: Miss Josephine A. Clark, librarian of the Department of Agriculture; Mr. F. B. Weeks, librarian of the Geological Survey; Mr. Charles H. Hastings, and Mr. Earl G. Swem, of the Library of Congress. The president announced that the remaining two members would be appointed later. By vote of the association, at the February meeting, the president, *ex officio*, is to serve as the seventh member of the committee.

Mr. Claude B. Guittard, librarian of the Coast and Geodetic Survey, was prevented by illness from reading his paper describing the library of the survey. Miss Anne S. Ames, librarian of Mount Vernon Seminary, presented a paper on "The work of a librarian in a private school." In planning courses, the librarian should remember that the pupils are already overworked, and should beware of adding library studies that are not distinctively helpful to the classroom instruction of the various teachers. The librarian's work should manifest itself in the better results obtained by all the teachers. Miss Ames referred to the necessity of a thorough knowledge of the standard reference books. In Mount Vernon Seminary a course of instruction is given in the use of reference books. As a useful adjunct in instruction, a printed list of standard reference books has been compiled, with sufficient blank space after each title for notes. Miss Ames closed with a description of the Christmas book exhibit. This exhibit was established that the seminary students might have the opportunity of examining at their leisure the best 100 or 150 books suitable for gifts at the Christmas season. The books for the exhibit are lent annually by local booksellers.

Mr. Charles H. Hastings, of the Library of Congress, reported upon the recent meeting at Baltimore of the Bibliographical Society of America. Mr. Hastings spoke of the general character of the meeting and the publications which the society now has on hand. Most of the papers read were reviewed briefly, as they are expected to appear soon in the "Papers and proceedings" of the society. Special mention was made of the "List of incunabula in American libraries" which the society has undertaken to compile; also of the project advanced by Mr. A. G. S. Josephson, of Chicago, for the establishment of a bibliographical institute with an endowment of \$1,000,000 for the systematic collection of bibliographical information on a large scale, to supply the needs of investigators and commercial and industrial firms.

The association was fortunate in having present Mr. Arthur E. Bostwick, of the New York Public Library, a delegate of the A. L.

A. to the copyright conference, and Mr. R. R. Bowker, editor of the LIBRARY JOURNAL, representing the American Authors' Copyright League at the copyright conference. Mr. Bostwick explained the purpose of the copyright conference, stating that those in attendance represented the producers, with the exception of the representatives of the A. L. A., to whom were entrusted the interests of the consumers. The American Educational Association was not represented. The vexed question as to the importation of copyright books, he stated, would probably be settled by a compromise to the effect that foreign editions of foreign authors, copyrighted in America, might be imported, but not copyrighted books of American authors published abroad. Mr. Bowker spoke of the value of the local library association in maintaining an active interest in libraries in a community. Mr. Carnegie's foresight in establishing libraries upon the stipulation that the community in each case should support its own library was highly commended. Mr. Bowker referred to the object of the American Authors' Copyright League, and presented the authors' views of copyright. In closing, he maintained that the compromise of which Mr. Bostwick had spoken was about as satisfactory a solution of the importation question as possible, in view of the many conflicting interests of the various constituencies interested in copyright law.

EARL G. SWEM, *Secretary*.

MISSOURI LIBRARY ASSOCIATION

The association has issued its "Handbook," as an illustrated pamphlet of 28 pages, devoted to the activities of the association and to the libraries of the state. It contains a brief sketch of the organization and purpose of the association, list of officers and members, state library laws and directions for availing of them, a summary of libraries in Missouri, recorded alphabetically by towns, an argument for a library commission, and a draft of the proposed commission bill supported by the association. The handbook is a useful and creditable publication.

TEXAS LIBRARY ASSOCIATION

A library institute was held under the auspices of the Texas Library Association at Fort Worth, on Thursday and Friday, March 22 and 23. There were two sessions each day, which were held in the assembly room of the Carnegie Public Library, and in connection with these there was a binding exhibit and an exhibit of picture bulletins from the New York State Library School. The program included the following topics: The library institute: its work; The local library situation; Things that help to make a library successful; Children's work and children's books; Essentials in library administration; The public library, its relation to the community; The question of maintenance; Public library and public

school; Value of a trained librarian. Technical questions, such as cataloging, classification, book selection, binding and mending, hours of opening, etc., were also dealt with in papers and round table discussion. This was the first of a series of institutes planned by the state library association to cover the whole state and to bring in touch the librarians of the small libraries who are prevented by distance from attending the meetings of the association. The beginning was very satisfactory, 15 libraries being represented, including one from Indian Territory.

VIRGINIA LIBRARY ASSOCIATION

President: John P. Kennedy, state librarian, Richmond.

Secretary: Edward S. Evans, assistant state librarian, Richmond.

Treasurer: Miss Mary G. Lacy, Virginia Polytechnic Institute, Blacksburg.

A meeting of the Virginia Library Association was held in the state library building, at Richmond, on March 14. Delegates from every part of the state were present, including Mr. W. H. Sargeant, librarian of the Norfolk Public Library; Mr. J. S. Patten, librarian of the University of Virginia; Miss Mary G. Lacy, librarian of Virginia Polytechnic Institute; Miss Virginia C. Castleman, of Herndon, Va., and Mrs. William E. Strother, librarian of Jones Memorial Library, Lynchburg, Va., besides many others, including the leading librarians in Richmond. Mr. Kennedy, of the Virginia State Library, presided, and resolutions of importance were read and acted upon by the delegates.

A resolution was offered approving the library movement in Richmond, and advising that the city accept the offer of \$200,000 made by Mr. Carnegie on the 13th inst.

But the most important resolution offered during the meeting was the one inviting the A. L. A. to hold its annual convention in Richmond in 1907. It was demonstrated that Richmond was the most practical point for the convention of 1907, at which time the Jamestown Exposition would be in full blast. Statements were made showing that Richmond could offer the most open hospitality to the delegates at that time, and that arrangements could be made for free trains and free boats from Richmond to Jamestown during the convention. The following is the resolution as presented to the meeting:

"Knowing that it is the policy of the American Library Association to aid in the stimulation of library interests in every section of our country, and, that with this purpose in view, it has held its annual convention at different places in the north and west, from Boston to Portland,

"Be it resolved, That the Virginia Library Association, as the representative of the library interests in Virginia, do send through its delegates a most cordial invitation to the National Association to meet in Richmond in 1907, during the time of the Jamestown Exposition; and that we further invite all educational and other associations in the state to join us in extending this invitation; and,

"Be it further resolved, That a committee be appointed to consist of five members to be known as the 'arrangement committee' who shall immediately take active measures to co-operate with the above organizations in pressing the claims of the south, before the A. L. A., and who shall further co-operate with these organizations in making all necessary arrangements for the accommodation and suitable reception of the delegates."

Mr. W. H. Sargeant, J. S. Patten and Edward S. Evans were appointed delegates to represent the Virginia Library Association at the A. L. A. meeting at Narragansett Pier, where they are to press the invitation for the following convention.

EDWARD STEPTOE EVANS, *Secretary*.

WISCONSIN LIBRARY ASSOCIATION

President: H. C. Buell, Janesville.

Secretary: Miss Julia A. Hopkins, Free Library, Madison.

Treasurer: Miss Katharine D. Cramer, Public Library, Oconto.

The 16th annual meeting of the Wisconsin Library Association was held in Madison, February 21-23, and proved the most successful in its history. Those in attendance, about 150 in number, represented 63 different libraries of the state, and the presence of librarians from Indiana, Illinois, Michigan and Minnesota lent additional interest to the meeting. The sessions were held in the club room of the new Madison library building, affording visiting librarians an opportunity to inspect the excellent appointments of this library, and the well-equipped quarters of the Wisconsin library school. The practical topics assigned to various speakers elicited much discussion, in which most of those present participated, resulting in the recital of experiences and bringing out suggestions that proved helpful and inspiring.

The feature of the opening session was a scholarly address on "Books and life," by Dean Edward A. Birge, of the University of Wisconsin. Hon. Harlan P. Bird, of Wausau-kee, submitted a paper detailing the work of his "Library experiment for men," a building where the "lumber jacks" of his region may enjoy in the same building the privileges of a library, restaurant, and bowling alley. "A library club room for men" was the subject of a paper by Miss Mollie Catlin, descriptive of the billiard room auxiliary maintained by the Stevens Point Library. Miss Helen L. Price, of the Merrill library, spoke of the "Special library work with foreigners" which she has undertaken, with special reference to the groups of Slav and Greek colonists in her community. Judge J. M. Pereles, chairman of the Wisconsin commission, closed the evening's program with a practical paper on "What a trustee can do to help the librarian," incidentally mentioning an array of "don'ts" which the properly disposed trustee ought to keep in mind in order that the effectiveness of the librarian might remain unhampered by officious offensiveness and pernicious officiousness.

The Thursday program was devoted to a series of forenoon papers on *Restrictions in libraries, wise and otherwise*, and afternoon papers on *Everyday problems*. These papers and talks were limited to five minutes each, and proved interesting, inspirational and profitable. The fact that nearly everyone present took part in the discussion and comment demonstrated that the topics evoked interest born of personal experience. The topics were as follows:

"Loaning but one book, or at most two books at a time."—Miss Mary A. Smith, librarian Public Library, La Crosse.

"Requiring guarantors from adults."—Miss Katharine D. Cramer, librarian Public Library, Oconto.

"Never loaning outside city limits."—Miss Lucy Lee Pleasants, librarian Public Library, Menasha.

"Permitting but one renewal."—Miss Julia A. Hopkins, librarian Free Library, Madison.

"Restricting Sunday readers to material found in the reading room."—Miss Charlotte Templeton, librarian Public Library, Oshkosh.

"Retention of borrower's card for an unpaid fine."—Miss Henriette von Briesen, librarian Public Library, Columbus.

"The seven-day book: why not transfer it?"—Mr. J. V. Cargill, chief of circulating department, Milwaukee Public Library.

"Making no exceptions in the loaning of reference books."—Miss Agnes L. Dwight, librarian Public Library, Appleton.

"Closing children's room at eight o'clock."—Miss Mary J. Calkins, librarian Public Library, Racine.

"Fines."—Dr. George W. Peckham, librarian Public Library, Milwaukee.

"Fiction on the shelves: some practical hints."—Miss Julia E. Elliott, head instructor Wisconsin Library School.

"Simplicity in cataloging."—Miss Agnes Van Valkenburgh, head cataloger Milwaukee Public Library.

"School duplicate collections: a suggestion."—Miss Katherine I. MacDonald, assistant secretary Wisconsin Free Library Commission.

On Friday morning Miss Mary Emogene Hazeltine, chief of the Wisconsin commission's instructional department, conducted a question box. A resolution, suggested by Hon. H. L. Ekern, was adopted, presenting strongly the need of low postal rates for the transmission of library books in remote communities, and adding:

"The Wisconsin Library Association, in annual session, hereby asks the members of Congress from this state to advocate the enactment of such laws as will bring about the purposes indicated above.

"It asks that Congress make provision permitting books to be sent to individual borrowers, through the mails and by mail carriers, at a rate not exceeding one cent a pound,

or fraction thereof, the return rate of postage being likewise not in excess of this amount, including a request for a new-book loan; provided that the transportation of books coming under this act shall be limited to those which are secured from the Library of Congress, or any state, county, city, village, town, or travelling library supported in whole or in part by taxation or appropriation from public funds.

"Resolved, That the secretary of this association transmit a copy of the above memorial to each member of Congress representing the state of Wisconsin or any district thereof, and also to the president of each state library association in the United States, with a request that similar action be taken by such organization."

Formal tenders of hospitality for the next annual meeting were received from Janesville and Milwaukee, and were referred to the newly-elected board of officers. The officers are: president, H. C. Buell, Janesville; vice-president, L. D. Hinkley, Waupun; secretary, Julia A. Hopkins, Madison; treasurer, Katharine D. Cramer, Oconto.

Library Clubs

CHICAGO LIBRARY CLUB

President: Miss M. E. Ahern, *Public Libraries*, 156 Wabash avenue.

Secretary: Miss Evva L. Moore, Oak Park Public Library.

Treasurer: C. A. Larson, Chicago Public Library.

The March meeting of the club was held on the evening of the 8th at the Public Library with more than 60 in attendance. The president, Miss Ahern, being out of the city, by her request Mr. Clement Andrews of the John Crerar Library, occupied the chair. Miss Sophie Hyde, of the John Crerar Library, was elected to membership.

Miss Warren, of the School of Education, read a letter addressed to the president from the board of trustees of the University of Chicago, giving information concerning the plans for the erection of a memorial library building in honor of the late President Harper, and planned to cost a million and a half, to be provided by popular subscription. The plan involves a general library building erected in the middle of the main quadrangle to serve the double purpose of a general university library and an administrative center and headquarters for all the libraries of the university, including the departmental libraries upon the main campus, and the libraries of the School of Education, the Yerkes Observatory, and all other schools of the university wherever located. The lower portion will be devoted to stack room and at the top of the building will be a great reading room, or group of reading rooms. The plans afford

space for a million and a half books and provide for 1000 desks for readers. Adjoining the library building on different sides will be other buildings devoted to special subjects and containing departmental libraries. These buildings will be connected overhead by bridges with the main building on the same level with the main reading room. The readers in any one of these reading rooms may thus pass freely to any one of the rest, or may have brought to them a book from any or all of the rest. By this means all the libraries are practically consolidated into one, but each departmental building contains its own departmental library in close association with its lecture room, offices, etc. A blue print of this plan was on exhibition, and the subject was referred to the president to appoint a committee of two to look into the matter and report at the next meeting.

The chair then introduced Mr. Edwin L. Shurman, literary editor of the *Record-Herald*, who delivered a most interesting address on "What the American public is reading, and some principles of book reviewing." After discussing the paper in a manner which showed the interest it aroused the meeting adjourned. Mr. Shurman said in part that many of the older critics and the censors of public morals are pessimistic in regard to the present day taste in literature. Because of the great amount of reading of light and trashy books, they maintain that the quality of literature is deteriorating, and that the literary taste of the reading public is not what it should be.

Mr. Shurman said that fiction may be roughly divided into five classes: the historical romance, as "The crisis," 400,000 copies of which have been sold; the religious historical novel, as "Ben Hur" and "Quo Vadis," of which respectively 500,000 and 750,000 copies have been sold; fiction which deals humorously with American life and characteristics, such as "David Harum" and "Mrs. Wiggs of the cabbage patch;" the imaginary romances, usually not of a high literary order, but harmless; and the realistic novel, such as "The house of mirth." While it is true that public taste is often unable to distinguish between good and bad literary art, still this is a defect of youth, not of deterioration.

It is the duty of the critic and the librarian to encourage the reading of the best books each mind is capable of enjoying. Every book is entitled to a fair criticism. It must be remembered that the chief function of the critic is not to denounce, but to point out the beautiful and good. The process of improving the public taste will be slow. The newspapers must keep in touch with the public. Librarians should be readers, and when opportunity offers give a word of critical advice. In time there will be a stepping from the flimsy and light to the more serious and thoughtful. EVVA L. MOORE, *Secretary*.

HUDSON RIVER LIBRARY CLUB

President: George G. Champlin, New York State Library.

Secretary: Miss Celia M. Houghton, Public School Library, Albany.

Treasurer: Miss Jane Brower, Albany Free Library.

A meeting of the Hudson River Library Club was held in the New York State Library, Wednesday, March 14. After a few words of welcome, Mr. George G. Champlin, the president, introduced Mr. James I. Wyer, reference librarian of the state library, who gave a talk on "Reference books for a small library."

Miss May Child Nerney, of the state library, then spoke upon "Genealogical books for a small library." Mr. Anderson, state librarian, spoke informally upon "The attitude of the state library to the smaller libraries of the district," and also stirred up a spirited discussion of the ways in which the club might be most useful.

At the close of the meeting the members of the club examined with much interest a selection of the best books of 1905 which were on exhibition.

NEW YORK LIBRARY CLUB

President: Henry W. Kent, Metropolitan Museum of Art.

Secretary: Miss Alice Wilde, New York Public Library, Washington Heights Branch.

Treasurer: Victor H. Paltsits, New York Public Library, Lenox Building.

The fourth of this season's meetings of the New York Library Club was held on the afternoon of March 8, in the Millbank Chapel, at Teachers College, Columbia University. The minutes of the previous meeting as published in *LIBRARY JOURNAL* were approved, and a detailed report for the year from the treasurer read and accepted.

The subject of the meeting was "Book-binding," the first speaker being Mr. John Cotton Dana, who considered chiefly rebinding for libraries. In his talk he would speak of four things: the exhibit to be seen later in the Educational Museum, a few practical points, the literary side, and the anatomy of the joint between cover and book. The exhibit was the result of 15 years' study of the subject and of the changes made in the New-ark library and their results. It was originally prepared for that library, has since been travelling around the eastern states, and will later journey west. The practical question to be asked is, What is the economical binding for a library? One great difficulty at present is that we are almost without standards; the librarians and assistants are often ignorant on the subject and no statistics have been gathered about the value of bindings or their economy—whether a 30 cent binding pays.

In one large library of good standards the much-used books are bound in brown duck, and as this rough surface catches dust and dirt so well most are not fit to touch. In another art vellum with gold lettering is used; here the gold lettering rubs off, leaving the books with a very shabby appearance. In another reference books which will stand on the shelves 10 to 50 years are bound in leather which decays in from five to eighteen years, and here are long sets the early volumes of which are already decayed and the recent volumes of which are still being bound in leather. These are examples of unwisdom, but to discover the materials that are wise is a task of the most prodigious difficulty. In the first place, it must be remembered that bookbinding is a craft in the best sense of the word, that to bind a book well calls for the most painstaking care, and that the spirit of the binder must go into it. The essentials in good binding are ease in opening, strength and flexibility of joint and that the whole binding be adapted to the paper. The following materials have been found good in the Newark library: for much-used books half red cow with imitation leather sides, which can be washed; for less used books English imperial morocco cloth, or for a cheaper binding dark blue art canvas with gold lettering; for reference books not much used half best morocco; for newspapers half duck with cloth sides. Newspapers seldom called for it is sometimes better not to bind at all, or old books not much used, it being often preferable to leave the old binding on the latter, merely wrapping them in paper and marking. The literary side of binding covers many questions only to be answered by one having a wide knowledge of books and editions. For fiction, which accounts for more than half the bills, some such questions as these might be asked: If not the only copy, are the others good enough and could this be spared? Would it be economy to discard? Is it a book which it is the library's policy to encourage? If not, has it served its purpose? If the only copy, is it worth keeping? If only useful for the history of literature, cover and reclassify in literature. Is it the best edition? Would it be better to discard this and replace with a good edition? Mr. Dana then showed a diagram of the anatomy of the joint between cover and book used in the Newark bindery, saying that if the work were well done throughout it would last as long as the book, and concluded with this result of his experience that it is worth while to take an interest in the work, to pay well when it is well done, and if possible to pay better when it is better done.

Miss Collar, of the Pratt Institute Library School, then gave an interesting talk on the historical side of binding, and Miss Rathbone, of the same school, described the very simple and practical method of preparing

books for the binder used in the Newark library and recently tried at Pratt.

The new constitution submitted by the committee on revision and sent to all members the week previous was then read, and it was moved by Mr. Paltsits that it be considered article by article. This motion was amended by Dr. Canfield to read that the constitution as recommended by the executive committee be adopted as printed, the vote in favor of the amendment being 19 to 17.

The chairman of the dinner committee made a brief report, announcing the date as April 17, the new members were elected, and the meeting adjourned to enjoy the exhibits. These were arranged in the Educational Museum of the college, and were two, the Newark exhibit on binding and that on modern typography and illustration loaned by the Society of Printers, of Boston.

Alice Wilde, *Secretary*.

Library Schools and Training Classes

CARNEGIE LIBRARY OF PITTSBURGH TRAINING SCHOOL FOR CHILDREN'S LIBRARIANS

March has been the eventful month of the present school year. Special arrangements were made early in the year with the Western Reserve Library School for the second year students to attend special courses of lectures at the Western Reserve Library School, the subjects of the courses to be "History of the printed book," "History of libraries," "Library organization," and "Book selection." The students spent six weeks in Cleveland taking these courses and doing practical work in the children's department of the Cleveland Public Library. They returned to Pittsburgh on the 27th of March. It is impossible to estimate the value of this experience in broadening the outlook of the students.

Among the special lecturers of the month was Miss Caroline Burnite, supervisor of work with children, Cleveland Public Library, who lectured on "The growth of literature for children." Gilbert D. Emerson, bookbinder, Philadelphia, Pa., on March 6 and 7 lectured on "Bookbinding." On the 15th Miss Emily Greene Balch, associate professor of economics at Wellesley College, gave a lecture before the training school in the auditorium of the East Liberty branch on "The Slav immigrants— who, whence and why." On March 19 Mr. Graham Romeyn Taylor, of the Chicago Commons, talked on "Municipal neighborhood centers: the social extension of a park system," illustrated by lantern slides. A particularly pleasant feature of the month's lecture course was the visit from the representatives of the two library periodicals of the country. Miss Ahern, on her return home

from her eastern trip, stopped in Pittsburgh and delivered two lectures before the school on March 19, her subjects being: "Business methods" and "The personal element in library work." On March 27 and 28 Miss Haines gave three lectures on "Discrimination in fiction," "The development of library associations," and "Library periodicals."

DREXEL INSTITUTE LIBRARY SCHOOL

The students of the library school attended the bi-state meeting of the Pennsylvania Library Club and the New Jersey State Library Association at Atlantic City, March 9-10. A re-union of students, graduates and instructors was held at dinner on Saturday night, March 10, when about 35 were present. This spring outing is always enjoyed by the students, who thus gain a chance to see and hear many of the prominent workers in the profession.

The annual out-of-town visit to libraries will this year include Princeton and Trenton, and the libraries of New York and vicinity. The visit will be made early in May.

Miss Rosalie V. Halsey, class of '03, talked to the students on March 1, about "Early American children's books," of which she has made a special study.

Miss Mary P. Farr, class of '95, gave an informal talk to the class, March 22, on "The work of an organizer," a very practical and helpful subject by one who has had much experience in the work.

Miss Plummer and the students of the Pratt Institute Library School visited our school on March 27, when the usual interchange of experience on the part of the students of both schools made an agreeable variation in the day's work.

Miss Daisy B. Sabin, class of '04, has been elected librarian of the Public Library of Burlington, Iowa.

Miss Florence Thompson, class of '05, has been appointed to a position in the Library of the Department of Agriculture.

M'GILL UNIVERSITY SUMMER LIBRARY SCHOOL

The third session of the summer school of library economy conducted by McGill University, Montreal, Canada, will open on May 30, to close June 27. The course will be similar to those of previous years. While keeping specially in view the needs of librarians or assistants in smaller libraries, it presupposes no knowledge of the subjects of instruction. At the same time the teaching will prove valuable to any one who may desire assistance in special directions, or may wish to obtain a general view of the whole field of library effort. Besides the specific subjects of classification, accessioning, cataloging, shelving, charging, order work, reference, etc., there will be lectures and demonstrations

on other topics and practical work in the university library. The fee will be \$5 for the course. Further information may be had on application to C. H. Gould, librarian of McGill University.

NEW JERSEY SUMMER LIBRARY SCHOOL

The first session of the summer school for library training to be conducted by the New Jersey Public Library Commission will be held at Asbury Park, N. J., from May 21 to June 22, 1906. The course will deal with first principles of library economy, classification, cataloging, book selection, etc., and is intended especially for the improvement of small libraries, for promotion of acquaintance among librarians, and to induce such students as can do so to secure more advanced training. There will be no entrance examination, and the course will be free to any one holding a position or under appointment to a position in a New Jersey public library. Any teacher or member of a library board, or other persons in New Jersey, desiring to take the course will be admitted for a fee of \$5 and cost of necessary supplies. The course will be in charge of Miss Sarah B. Askew, organizer for the commission, and there will be numerous lectures by outside librarians.

NEW YORK STATE LIBRARY SCHOOL

The annual visit to New England libraries, which has always been made in April, will this year be postponed until June 18-29, to enable the students to attend the A. L. A. meeting at Narragansett Pier. Some 20 or more of the school have indicated their intention to combine the visit with the conference, and it has seemed well worth while to defer the visit and secure a large representation from the school at Narragansett Pier.

A bill has been introduced in the New York legislature appropriating three and a half millions for a building for the state education department. It is planned to include ample quarters for the state library and library school.

The following changes in curriculum have been authorized by the faculty: Library buildings, which has heretofore been a senior subject, will in the future be divided between the two years, 6 lectures in the junior year and 12 in the senior year. The instruction will still be in the hands of Mr. W. R. Eastman.

The course in printing will this year be given by Miss Elva L. Bascom, of the state library staff, who has done editorial work in connection with publications of the library and educational department for several years and has been, during part of that time, directly in charge of the library printing.

A course of 12 lectures on public documents will be offered during the years 1906 and 1907 by Mr. J. I. Wyer, Jr., as a senior subject.

This course will be an extension of that on U. S. government documents, which have been given by Mr. Wyer for the last two years, and will include additional practice work and consideration of state and municipal documents.

It is hoped to have during the next year some regular instruction in children's work and in library organizing for small libraries. The faculty is unanimous in the desire to arrange for these courses as eminently practicable and likely to be in immediate request when our students leave school.

Miss Mary E. Ahern, editor of *Public Libraries*, lectured before the school on March 16-17. Her subjects were "Being a librarian" and "Business aspects of librarianship."

SIMMONS COLLEGE SUMMER LIBRARY CLASS

The corporation of Simmons College, Boston, will open to women a summer class for the study of general methods of library work, to be held during the six weeks, July 10 to Aug. 18, 1906. Exercises will be conducted in the college building on The Fenway, from nine o'clock till three, five days in the week.

The program includes lessons in cataloging, classification—either Decimal or Expansive—reference, and library economy. Instruction will be given largely by lectures, to be followed by practice. The aim will be to make the entire course as practical and suggestive as possible. It is planned to be especially helpful to those in the smaller libraries, who are unable to take the longer courses of study. The books and equipment used in the regular Simmons College Library School will be drawn upon so far as needed. In Boston and the nearby towns are to be found an unusual number of notable libraries of varying types. Visits to some of these will form part of the course. The class will be conducted by Miss Mary E. Robbins, director, with Miss Beatrice Winsor, of the Newark Free Public Library, as instructor, and Miss Abby L. Sargent, of the Medford (Mass.) Public Library, as lecturer on the Expansive classification.

The class will be open only to women now holding library positions, or under appointment for positions. High school training or equivalent preparation will be expected. The tuition will be \$20 for the six weeks. For further information and application forms address Miss Mary E. Robbins, Simmons College, Boston, Mass.

SOUTHERN LIBRARY SCHOOL

Miss Mary W. Plummer, director of the library school of Pratt Institute Free Library, gave a course of lectures on "The history of libraries," with lantern slides, on March 20-22, to the students of the Southern Library School.

WISCONSIN LIBRARY SCHOOL, SUMMER SESSION

Correction should be made of the statement in March L. J. (p. 134) that the library school to be opened by the Wisconsin Free Library Commission on Sept. 26, 1906, would take the place of the summer school, previously held. A regular summer session (the 12th) of the school will be held from June 16 to Aug. 24, 1906, and in its new quarters, and with improved facilities it should have even more success than heretofore. This summer session is designed, as usual, for the librarians of small public and school libraries, and for library assistants, who cannot leave their work for a year's course, but who can obtain leave of absence for this short period. There will be two courses of study, elementary and supplementary. The former, from July 16 to Aug. 24, with forty hours of study a week, includes the usual technical instruction in cataloging, classification, reference work, bibliography, book selection and buying, etc., in the form of lectures with practice work. Only students will be admitted who are already engaged in library work or under definite appointment to positions; no entrance examinations are required, but a high school course or its equivalent is considered necessary to admission.

The supplementary course offers three series of lectures—on Printing, Binding, and Elements of prose fiction—covering the four weeks from July 30 to Aug. 24. The course on printing, from July 30 to Aug. 4, will be conducted by Mr. Henry E. Legler, secretary of the Wisconsin Free Library Commission, and will deal with the subject from the historical as well as the practical side. The binding course, from Aug. 6 to 11, will be conducted by Mr. John Cotton Dana, librarian of the Newark Free Public Library, treating of library binding for use, care of books, book labels, book plates, etc., and illustrated by a special exhibit. The course in prose fiction, from Aug. 13 to 24, will be conducted by Henry Burrowes Lathrop, associate professor of English literature in the University of Wisconsin. The supplementary course is open to all who have completed a summer library course of good standing, and also to other properly equipped students. Tuition for the entire supplementary course is \$15. The courses in printing and binding are \$5 each, or \$10 for the two. The course in Elements of prose fiction is \$10. For the supplementary course there is no charge for students who are holding positions in Wisconsin libraries or have definite appointments thereto; for others the tuition fee is \$20 for the course. Application for admission to either course should be made by June 10, and application blanks and further information may be had by addressing Miss Mary Emogene Hazeltine, preceptor, Wisconsin Library School, Madison, Wis.

Reviews

BALDWIN, J. M., *ed.* Dictionary of philosophy and psychology. In 3 v. v. 3, in 2 pts.: Bibliography of philosophy, psychology and cognate subjects; [by Benjamin Rand.] N. Y., Macmillan, 1906. 25+542, 543-1192 p. 8°.

The third volume, in two parts, of the "Dictionary of philosophy and psychology" has made its appearance, both as recorded above and as an independent volume issued under Dr. Rand's name. Volumes 1 and 2 were published in 1901 and 1902, respectively, and have accordingly become serviceably familiar to librarians; volume 3 completes the work by giving us the most adequate bibliography of the literature of these subjects in any language. The two parts of volume 3 conform in size, approximately, to the earlier volumes, and, since they may be purchased separately, will become a bibliographical tool in many quarters; while the "Dictionary" proper appeals to a somewhat narrower constituency. The compiler, Dr. Rand, of Harvard University, clearly states the ideal principle of all bibliographical work in his preface, when he says that its real value depends upon the extent in which it serves to reveal valuable sources, and as a vantage ground from which to carry forward independent philosophical research.

If bibliography details what has been done, only to lead the student to re-state, re-trace the old, then better less bibliography and more life. A bibliography ought to stimulate. It need not be exhaustive; it must be inclusive. Not finality but suggestibility should characterize the true bibliography. The point I would contend for is that bibliographies should not be mere lists, tabulated sheets like election returns of the output of any given subject, but reasoned, digested, classified materials, grouped about problems, opening fields of endeavor and research in such wise that they "allure to brighter prospects" and new endeavors. There may easily be too much knowledge of what has been done, purchased at the expense of training out of the student every drop of initiative and originality, and librarians, least of all, want to minister to this sort of thing by the dead level enumeration that poses for bibliography in these days.

The present bibliography has been ten years in the making, by an expert student and teacher in the subject, with all the sources and helps which the Harvard University Library and the combined authorities of this and other countries could afford. The older works of Ersch and Gruber, "Encyclopädie der wissenschaften;" Ersch and Giessler, "Bibliographischen handbuch der philosophischen litteratur;" Gumposch's "Die

philosophische und theologische litteratur der Deutschen," were used. Special bibliographies, like Schwab's "Bibliographia Aristotelica;" Adicke's "German Kantian bibliography;" Laban's "Das Schopenhauer-lexicon;" periodicals; annals of societies; library catalogs; annual bibliographies published during the last ten years by the *Zeitschrift für Psychologie*, *L'Année Psychologique*, *Psychological Index*, etc., were consulted. A grateful acknowledgment is made to Poole for the availability of articles of philosophical import in purely literary journals; while for verification of imprint, edition, etc., (on which much labor was expended) the national and trade bibliographies with which librarians are familiar, were utilized.

The arrangement of subjects follows the order adopted by the annual bibliographies previously mentioned. Thus we have a system of classification for these subjects, and any considerable collection of works would wisely be cataloged with reference to this fact. There are seven main divisions: History of philosophy, Systems of philosophy, Logic, Aesthetics, Philosophy of religion, Ethics, and Psychology. Under each of these main headings are two subdivisions: General (bibliographies, dictionaries, periodicals, histories, systems) and Special (subordinate topics with entries alphabetically arranged). Thus under History of philosophy we have general works (bibliographies, dictionaries, etc.) covering about 40 pages, followed by specific authors (an honor roll of philosophical writers) from Thales to Spencer, 600 names; their works, collective and separate, translations, criticisms, embracing nearly 500 pages. In all cases the first and also the latest editions are noted, while for the more classical and important writers all editions are given. Part 2 treats the remaining topics in like manner. Psychology may be taken as indicative of the method of classification, there being 11 subdivisions under "general" and 26 under "special subjects."

These volumes constitute a truly international bibliography, no preference being apparently shown for English, except in the use of group names and subject headings. The *Psychological Index*, published annually since 1894, becomes for 1902 and following years an annual supplement to this comprehensive work. For psychology, these sources are well-nigh exhaustive; for the other topics a fairly adequate supplement is furnished. The non-expert user of these volumes will find some difficulty until familiar with the classification. It is not one bibliography, but seven bibliographies; it is not an index, but a classified index, so that one must in a sense know what he is looking for. Altogether it is a work which does honor to American scholarship, and puts the student of psychological science, as well as the librarian, under the keenest obligations. ERWIN W. RUNKLE.

Library Economy and History

GENERAL

BULLETIN DES BIBLIOTHÈQUES POPULAIRES: publié sous les auspices de la Bibliothèque de l'enseignement public et de l'inspection générale des bibliothèques, Secrétaire de la redaction, M. M. Pellison. Ann. 1, 1906. no. 1-2, Jan.-Feb. Paris, E. Cornély, 1906. 3 fr.

BELL, Hamilton. The modern public library. (*In Appleton's Booklovers' Magazine*, April, 1906. p. 515-526. il.)

An agreeably written review of the evolution of library buildings, from the "reservoir libraries" of an older day—the Bodleian, British Museum, Bibliothèque Nationale—to the "modern or fountain type of library," as represented by the Library of Congress, Chicago, Boston and New York public libraries. There are numerous illustrations, including floor plans of the three last-named buildings.

The *Bulletin of the New Hampshire Public Libraries* for March contains a careful and suggestive article on "Genealogy in the library," by Otis G. Hammond.

Ceska Osvěta for March contains articles on "Reading for the young," by H. Promyk; "Reading room furniture," with illustrations, by J. Dont; and continues J. Zima's "Librarian's notes" and Zivny's exposition of "Cataloging rules." The notes touch upon university extension, news of Bohemian libraries, and the 1905 conferences of the A. L. A. and L. A. U. K.; and there is the usual annotated list of current publications.

CUNNINGHAM, Arthur. Training of teachers in library work. (*In Normal Advance* [Terre Haute, Ind.], January, 1906. p. 108-110.)

Presents the need of training teachers in essentials of library economy, and briefly describes the "department of public school library science" recently established in the Indiana State Normal School, of which Mr. Cunningham is librarian.

HARWOOD, W. H. Free libraries and fiction. (*In Westminster Review*, February, 1906. 165: 207-215.)

Largely a criticism of the circulation statistics of British libraries, the author claiming that a large percentage of fiction issued from public libraries is not read, and for several reasons, one of them being that so many of the books that come from public libraries are so filthy that persons of discriminating taste will not handle them; another being that many of them are utter trash. Nevertheless, the issue of these books helps to swell the

libraries' circulation figures. It need only be remarked that most of these criticisms do not apply to libraries where there is in a considerable measure free access to the shelves. Most of the shortcomings of the public library are due to the starvation salaries paid in English libraries, though the writer says that "we must nevertheless admit that, as a rule, they give us more for our money than any other rate-supported department."

LEIGH, J. G. Free libraries and their possibilities. (*In Economic Review*, Jan. 15, 1906. 16: 32-42.)

"It is the object of this paper, not so much to criticise the libraries, or to attack the social movement of which they are an evidence, as to indicate in what way something could be done to enlarge their influence, and thus undermine most of the objections which are generally urged against them." Strong plea is made that libraries should train the reader how to use books. The prevailing thought that all that is necessary is to place books in the reach of the masses is characterized as "the utmost nonsense." The question is not so much what people read as what they understand, and the efforts of libraries have been heretofore mostly directed in an effort to popularize reading rather than to popularize understanding. The article contains practical suggestions and is especially interesting as coming from a person who is not a librarian or connected with libraries.

The *Library Assistant* for March is devoted to report of the addresses and debate at a special meeting of the Library Assistants' Association on Feb. 7, to consider the proposal to affiliate with the Library Association of the United Kingdom, made in April, 1905. Arguments for and against affiliation were presented by W. C. Berwick Sayers and George E. Roebuck respectively, and the discussion showed strongly opposed opinions. A vote taken at the close of the debate showed 9 favoring affiliation and 25 opposed. The matter will be finally decided by a ballot submitted to the entire membership of the association.

Low, Florence B. The reading of the modern girl. (*In Nineteenth Century and After*, February, 1906. p. 278-287.)

Based on the answers received to a series of questions sent to 200 girls, and the conclusion reached is that first and foremost, schools must cease to regard literature as an examination subject. In other words, the teaching of literature in schools is largely responsible for the deterioration in literary qualities of the books read by girls.

PEET, Harriet E. Co-operation between libraries and schools: the need in Chicago. (*In*

Elementary School Teacher, February, 1906.
6: 310-317.)

A review of what is being done in the way of co-operation in many of the cities, with a plea for greater co-operation of the same sort in the city of Chicago.

Public Libraries for March is devoted almost wholly to the subject of library training, opened with a strong plea for "Scholarship for the trained librarian," by W. E. Henry, and giving reports of the work and aims of ten library schools, four summer training courses and three library apprentice training classes; there are also several suggestive "Letters from librarians who have been in the schools," expressive both of criticism and appreciation.

ROSSITER, W. S. What shall we do with public documents? (*In Atlantic Monthly*, April, 1906. p. 560-565.)

Reviews the extravagances and paradoxes of present methods of public document distribution and recommends the division of such documents into two classes, 1, manuals and handbooks on agricultural, mechanical and labor subjects and inexpensive reference books; and 2, scientific and statistical publications, expensive and useful to a limited number of persons. The first class should be issued in large numbers for free distribution; the second should be available only in a small edition, sent free to libraries and specified publications, and the remainder distributed for sale to authorized "congressional book-sellers" in specified cities on simple and businesslike terms.

LOCAL

Atlanta, Ga. *Carnegie L.* (7th rpt. — year ending Dec. 31, 1905.) Added 4355; total 31,572. Issued, home use 106,644 (fict. 47,425; juv. 24,666); visitors to reading room 56,800. New registration 2824; total cards in use 13,075. Receipts \$19,787.39 (\$12,000 city appropriation, \$6517.82 balance building fund); expenses \$19,761.99 (salaries \$5551.75, books \$2898.92, periodicals \$294.09, binding \$311.95, light \$793.10, heat \$603.75, building \$7263).

The children's department has a registration of 3859 and the circulation is 25 per cent. of the whole issue. A story-hour is held every Friday afternoon, and Miss Wallace says: "A marked difference has been shown in the quality of the books read since the story hour and the picture bulletin have been employed to illustrate literature."

In the catalog department "work has progressed in the alphabetizing of the depository cards of the Library of Congress. The cards have also been transferred from temporary to permanent quarters. The housing of the depository cards in a small library is a matter of much consideration in both expenditure and storage. After investigation we adopted the

L. B. card index vertical unit as our unit for future additions. Each of these units which measures $15\frac{1}{2} \times 24 \times 51$ inches, has a storage capacity of 40,000 cards, or a working capacity of 30,000 cards to a unit. In other words, each unit has 10 drawers 24 inches long which holds a double row of L. C. cards. Each drawer has a storage capacity of 4000 cards or a working capacity of 3000 cards. Each unit therefore has 10 drawers with a working capacity of 30,000 cards. We have bought six units and have ordered two more for the growth of the coming year. Having adopted the L. C. card for our catalog and shelflist we are modifying our original catalog, bringing it as nearly as possible within the rules now used on the L. C. cards. Our library is a good example of what the printed card has done for the average library in reducing the work in the catalog department to such an extent that the catalog force is enabled to work in other departments and to give to the public the benefit of its special knowledge."

Included are reports of the Southern Library School, conducted by the library, and the December, 1905, meeting of the Georgia Library Association.

Baltimore, Md. *Enoch Pratt F. L.* (20th rpt., 1905.) Added, 12,686; total 285,502. Issued, home use, 620,049 (fict. 74 per cent.); ref. use 108,707; circulation of periodicals 248,600. Borrowers' cards in use 37,501.

A full and interesting report, emphasizing the constantly increasing need of an increased income if the library is to enter into the larger fields opening before it. There are now seven branches and five stations in operation, and the brief reports from each of these give some interesting details of the library's work and influence. The collection of books for the blind has been considerably increased, and collections in Yiddish and in Spanish were notable accessions of the year. The annual stocktaking showed the risk of loss as one to every 14,289 of circulation; since the library's opening in 1886 the total recorded loss of books has been 444 v. In the catalog department the most conspicuous change was the increased use of the Library of Congress cards, and the almost complete use of printed or typewritten cards. A public card catalog has been begun. The library has 196 institutions or agencies reached for outside distribution of books through travelling libraries and like collections, among them being 29 Sunday-schools and church missions. "During the summer five of the Sunday-schools kept their libraries in operation, and five playgrounds used our books. Several of the newspapers of the city registered during the year, and though they have not taken boxes, they have found it very convenient to send to the library for a few books which they might need in connection with their work. No trouble has been experienced in collecting fines; at times even more money

is sent in than is due. The number of books lost is remarkably small."

Braddock, Pa. Carnegie F. L. (Rpt., 1905.) Added 4946; total 43,385. Issued, home use, 309,258 (fict. 54.66 per cent.).

A new series of readers' cards was begun at the beginning of the year, so that no record is given of the new registration or of the total number of registered readers. "Work with the schools continues to expand;" there are now over 6000 books in use in about 150 schoolrooms and it is estimated that every book is read twice a month or oftener. "For the most part these books go to the primary grades, starting with books adapted to children who have been in school a year or less, and continuing to about fourth or fifth grade. Books for sixth grade are supplied to a few outlying districts, but generally speaking advanced pupils come to the library for books." There are three branches and two stations in operation, the latter being open only in the evening.

California State L. At its March meeting the board of trustees adopted a scheme of rules for library service, classifying and grading the various positions on the staff and defining principles of appointment. The rules are issued in leaflet form. They are based closely upon the civil service rules of the Brooklyn (N. Y.) Public Library, although this entire scheme was too extended for adoption in full. The board also passed resolutions regarding representation of libraries, through their librarians, at the annual meetings of the American Library Association and National Association of State Librarians. These resolutions recited the advantages accruing to libraries through such representation in giving knowledge of newer methods and stimulating the individual librarian to better effort, and then proceeded to call the attention of governing boards of state libraries and allied institutions to the importance of the work of the National Association of State Libraries, and the value of membership in it and attendance at its meetings, and to urge such governing boards to send their librarian or other representative to the annual meeting of the association at Narragansett Pier, and to provide for payment of the expenses involved out of library funds. The resolutions further authorize the attendance of the state librarian of California at the Narragansett Conference at the expense of the library.

Correction should be made of the statement in February L. J. (p. 92) that Miss Bertha Kumli had been appointed assistant in the organizing work of the state library. Miss Kumli and Miss Mabel Prentiss are both engaged as organizers, on an equal footing, carrying on the same kind of work throughout the state, in giving advice regarding library administration and aiding in the establishment and development of small public libraries.

Chicago, Ill. John Crerar L. (11th rpt., 1905.) Added 20,223, of which 2497 were gifts; total 142,971. No. visitors 67,386, or a daily average of 216. The estimated total use of the library is given as nearly 250,000 v. and periodicals. "The time required to fill calls has been calculated on the call slips for the third week in December. The average time was 1.71 minutes, and 83 per cent. were filled within three minutes. These figures show a marked improvement over those for 1904, which were 2.37 and 80 respectively." The use of the library's printed catalog cards by other libraries continues; in all 90,321 cards have been sold or sent in exchange and 1824 given away. The inventory completed during the year shows a loss of but 35 books in four years. There were many changes in the staff, which have necessarily involved some loss of efficiency in service.

Cleveland (O.) P. L. A bill authorizing the library board to issue bonds for \$700,000 for the erection of a central building was passed by the legislature on March 31. The matter must be submitted to a public vote at a special election for final ratification.

The Miles Park Carnegie library branch building was opened on the evening of March 24. This is simple in its general lines and effect, but most attractive and admirably arranged. On the main floor is the central delivery room, giving a rotunda effect with its surrounding circle of columns, and opening from this are the reference room and the children's room. In the basement is an auditorium, with a seating capacity of about 400 persons.

Dover (N. H.) P. L. (23d rpt., 1905.) Added 957; total 32,548. Issued, home use 51,048. New registration 468. Reading room attendance 19,660; Sunday attendance 1991. Receipts \$4272.32; expenses \$4268.52 (salaries \$2345.56, books \$526.64, magazines \$353.65, binding \$493.94, printing \$132, lighting \$278.60).

The event of the year was the removal to the attractive new Carnegie building, which was opened to the public on July 20, 1905. "The opening of the children's room was the realization of a long cherished hope;" during the five months of its use it had 5902 visitors and a circulation of 5414 v. The historical room devoted to the library's collections in genealogy, local and New Hampshire history, has given new facilities for arrangement and growth, and its use is steadily increasing. A beginning has been made toward the adequate equipment of the science room with collections illustrating natural science, which is already attractive to children and many grown people. The trustees' report is a vigorous exposition of the place the library ought to hold in the community, and an invitation to all to avail themselves of its contents.

Dubuque, Ia. Carnegie-Stout F. L. (3d rpt. — year ending Dec. 31, 1905.) Added

2471; total 26,536. Issued, home use 96,958. New registration 612; total registration 8417. Receipts \$8786.18; expenses \$7968.18 (salaries \$3295.79, books \$1296.64, binding \$909.77 printing \$101.75, stationery \$137.01, periodicals \$264.93, heat \$711.15, light \$625.15).

A simple, clear report of effective work. The most important incident of the year was the installation of a new steel stack costing \$11,500, the gift of Andrew Carnegie, which has fully relieved overcrowding and made ample provision for future growth. In buying, the "A. L. A. catalog" has been checked and titles not in the library are being added. "The printed cards bought from the Library of Congress facilitate the general work of cataloging so materially that it is now possible for the assistant in charge to give the much-needed time to analytical work." The medical collection has been classified and cataloged. Reference use has steadily increased, although the circulation shows a decrease, as a result of the closing of the library during alterations. The children's room is now closed on all but one evening in the week, a change that seems desirable, despite the decrease in circulation involved. Considerable work has been done with the schools, four school libraries of 291 v. being now in operation. "In each case new books have been purchased for these school libraries, duplicating those owned by the main library. The care which the pupils have taken of their books is evidence of the attention the teachers have given the subject. Even in so brief a time children are showing also improvement in their choice of reading."

East Orange (N. J.) F. P. L. Recent changes in the library rules includes the extension of time limit on all adult books, except "seven-day" books, to four weeks instead of two, with the privilege of renewal if not in demand; and the use of the assembly room of the library free during library hours for all meetings of educational, literary and philanthropic organizations of the city; on the evenings when the library is closed the hall may be rented for such purposes.

Furman University, Greenville, S. C. The *American Architect and Building News* of Feb. 3 gives two pages of the plans and elevation of the library building of the university. This plan provides for a lecture room in the basement and for the control of the whole first floor by a single person.

Haverhill (Mass.) P. L. On the evening of March 19 the library opened its Washington Square branch in a room in a business block, formerly occupied by the Men's Club. The room, which faces the park, is on the ground floor, large, airy and easy of access, and is attractively decorated and equipped. The woodwork, wall bookcases and furniture

is in light ash, and the room is lighted on three sides by 14 large windows. There are accommodations for about 40 readers, with room for considerable increase. Many interesting pictures and prints are hung on the walls, and provision for temporary art exhibitions is made by a screen 13 feet long by 6, covered with denim and fitted with 48 feet of brass rods for hanging pictures. The branch has a well chosen general collection for circulation, reference and general reading, and for children and adults. It is open on week days from 9 a.m. to 9 p.m., with an hour and a half closing at noon, and two daily deliveries are made from the main library.

Indiana State Normal School, Terra Haute. The school has recently established a department of public school library science, conducted by Arthur Cunningham, the librarian. This department offers three courses of instruction, constituting a year's work as one of four branches or subjects of study usually pursued at one time, to which all students are eligible. Credits for satisfactory work done will be given on the regular curriculum of the school. The first course only has been offered for the winter term of the current school year. Course 1 is on the use of the library in public school work, the object being to prepare the teacher for intelligent, systematic and scholarly use of collections of books. Instruction is given in the use of catalogs, indexes, classification and shelf-arrangement of books, scope, special value and methods of using general reference material, children's books and pictures, selection of books for schools and teachers' libraries, and relation of the library to the public school. Five recitations per week are required, with the usual time for preparation. Courses 2 and 3 are on the organization and management of school libraries. They are designed to teach the more technical work of the school librarian, and will be made as practical as possible. Instruction and practice will be given in ordering, accessioning, classification, cataloging, preparation of books for shelves, binding and repair work, care of pictures, charging systems, etc., including the making of bibliographies on assigned subjects. The usual time in class and work will be required. Successful completion entitles the student to one regular credit for each course pursued. The election of course 1 does not necessitate the subsequent taking of further work in the department. Courses 1 and 2 may both be taken at one time, if the student desires.

Library of Congress, Washington, D. C. The discussion in Congress on March 22 on the legislative, executive and judicial appropriation bill, making appropriations for the library for the next fiscal year, was enlivened by a characteristic attack on the administration of the library and on the librarian by

Representative W. P. Hepburn, of Iowa. Mr. Hepburn objected vigorously to "the total cost of this institution that we call the Congressional Library," which he figured as over a million dollars a year by including interest on the entire cost of the site, building and equipment. He expressed approval of the architecture and decoration of the library, but felt that none of the credit for those features was due to "this man who is now charged with these vast expenditures and who is known as the librarian," and he held up to scorn the practice of "this gentleman" in "ransacking the second-hand book stores of the world by communication and by his messengers to find books, books. What kind? What do the American people care for the curiosities in the bookbinder's art or for these old and musty tomes probably reprinted over and over again? What do we or the American people care for being the owners and custodians of this class of literary curiosity?"

Mr. Burton, of Ohio, came to the rescue of the library and Mr. Putnam, pointing out that such criticisms disregarded the essential nature of the library. "It is not a circulating library at all. It is a reference library. It is like the British Museum, which costs for annual maintenance \$636,000 a year, where wages are much cheaper than here, or the Bibliothèque Nationale in Paris, and we should provide for it all the valuable books which may be useful. In the more than million books there you will find a copy of the original folio edition of Shakespeare's works and numerous books from Thomas Jefferson's library, which not only have his bookmark, but thumbmarks as well, and his notes written in the margin." Mr. Hepburn, however, said that he did not accept as any valid reason for wasteful expenditure the fact that "one of the original books of Shakespeare has been added to the library." He added: "I do not know whether the gentleman, in pursuing his Shakespearean studies, would prefer to get hold of that old and musty and dog-eared volume or to have a clean one in modern print. I think that, perhaps, would be valuable in a collection of curiosities in our National Museum, perhaps, if it did not cost too much. And why should the gentleman especially desire that volume of Thomas Jefferson's that has the thumbmarks of Thomas Jefferson on the margin? Does he take any pleasure in ascertaining the fact that Thomas Jefferson was not as cleanly in his habits as he ought to have been? Does that improve the public mind? Does that give value to this great institution?" Further criticisms made by Mr. Hepburn included objection to "an army of unnecessary employees" and to having "an entire regiment of the friends and protégées of this man Putnam foisted upon the public rolls at salaries more or less extravagant."

There was some objection also to the dis-

tribution of the printed catalog cards by the library, for the sapient reason, advanced by Representative Prince, that if the library authorities "have a right to get a force to distribute card indexes" it would logically follow "that they have a right to get a force to distribute the books themselves throughout the country. The moment you begin to distribute a portion of it, will gentlemen be kind enough to tell me where it will stop? You permit them to distribute card indexes and the next time they will say 'we are distributing books and sending them to New York, sending them to Atlanta, Ga., and to Galesburg, Ill.,' and claim that this distribution of the books to the people throughout the country is a part of the business of the library."

Strong speeches in behalf of the library were made by a number of Congressmen, with specific answer to the criticisms noted. Mr. Littauer referred to the very detailed investigation that had been made by the appropriations committee of the entire administration and cost of the library, and pointed out that "the force connected with the institution is appointed without reference to civil service rules. We made a thorough examination into how that force was appointed, and how promotions took place in the force, and the general condition of the administration. We found that out of some 236 appointments made by the present librarian, more than three-quarters of them, 167 in number, were appointed without even a letter of recommendation from either a senator or a representative." James Breck Perkins, of Rochester, spoke warmly of the usefulness and admirable management of the library, saying: "It has been my fortune to see some of the great foreign libraries, and to some extent to carry on, with others, studies in the great libraries of the world. My friend from Iowa, I presume, will say that those studies were of small importance, and certainly no one values their importance less than myself; but still in that way I have had the opportunity of comparing the great libraries of Paris and London with the great library of the United States, and I have risen here to-day to say that in the opportunities which our library furnishes to scholars, however little value my friend from Iowa may attach to their labors, in the promptness with which they can be attended to, in the facilities which are furnished to them for the careful investigation of any branch of any history or science, there is no library in the world that, in my judgment, furnishes such facilities, such promptness and such convenience as the Congressional Library of the United States."

Los Angeles (Cal.) P. L. On Feb. 27 the library directors voted to remove the library to new quarters in a business building at Hill and Third streets. Two floors were leased for the purpose and it was decided to begin

removal at the earliest possible moment. This decision is due to the overcrowded and unsanitary condition of the present quarters in the city hall and the constant danger there of loss by fire. The new quarters are regarded as temporary, but as the best makeshift available until the long desired central building can be obtained. The Laughlin annex, in which the library is to be installed, is a three-story structure, just completed, fire proof and with concrete floors. There are 20,000 square feet of floor space on the two floors. Added to this is 5000 feet of space in the basement and 20,000 feet of roof garden space. The lighting of the building is regarded as excellent. The work of removal was begun on March 15.

Louisville (Ky.) P. L. On Jan. 23 the city council voted to accept Mr. Carnegie's second gift of \$200,000 for eight branch library buildings. This offer was made a year previously, and though at once accepted by the library trustee confirmatory action by the city authorities was deferred. It is planned to begin work on several of the branches as soon as plans can be prepared.

During January additional room was provided for the children's department, by equipping a small room adjoining. (formerly a chess room) for the use of the younger children. This has relieved the congestion in the main room not only by giving additional space, but by requiring entrance at the large room and exit at the small one. In the three months this department has been open it has circulated 18,661 v. A collection of over 2000 pictures is in constant circulation among the children and by teachers, for use in school work.

Lowell (Mass.) City L. (61st rpt.—year ending Dec. 31, 1905.) Added 1381; total 69,698. Issued, home use 126,904 (fict. 73 per cent.); ref. use 10,917. New registration 1659; total registration 29,791. Receipts \$15,381.14; expenses \$15,379.14 (salaries \$9304.30, books \$2396.35, periodicals \$140.27, binding \$937.45, lighting \$1971.29).

The appropriation for the year was \$3000 less than previously, and the trustees make an urgent plea for more adequate support; comparative tables for other Massachusetts libraries are given, to show that the expenditure is commensurate with the library's growth and "much less than that of any library of its size in the state." The generous bequest of the late John Davis produced an income of \$3657.05 for 1905, but this the trustees feel required to devote to improvement of the library's collections and extension of its work, and not to the running expenses. From this source they have so far purchased a large collection of engravings, fitted up the children's room, and spent \$3200 on technical, reference, and other valuable books; they intend to install open shelving in the exhibition

rooms, giving free access to several thousand volumes of the best books, and to open the library on Sundays. They, however, strongly oppose the recommendation of the city council that the Davis funds be applied to running expenses, and make a clear statement of the reasons that should induce the city to adequately support its own library. The librarian makes no independent report.

Mansfield, O. A petition was recently prepared among persons opposed to the Carnegie library building, now in course of erection, asking that the building be made into a city hospital and that the money which Mr. Carnegie has advanced, amounting to \$10,000 on his \$35,000 gift, be returned to him unless he will allow the building to be a hospital. The petition, which is said to have had over 2000 signatures, is largely supported by the local trade unions.

Maquoketa (Ia.) F. P. L. (2d rpt.—year ending Dec. 31, 1905; in local press.) Added 740; total 6068, of which 3871 are in the circulating department and 2197 in the Boardman reference department. Issued, home use, 24,366 (fict. 87 per cent.); children's books formed 36 per cent. of the entire circulation.

Massillon, O. McClymonds L. (7th rpt.—year ending Dec. 31, 1905; in local press.) Added 744; total 13,887. Issued, home use, 40,942, of which 25,747 were drawn by adults. New registration 592; total registration 3023. Receipts \$5600.49; expenses \$3758.30 (salaries \$1604.45, books \$612.81, magazines \$188.53, binding \$227.03.)

Work is much hampered by the overcrowding incident to inadequate quarters; "the children's room especially might well be twice its present size, as there are times under existing circumstances when it is crowded almost to suffocation."

Minnesota, Libraries in. The annual reports of our libraries have shown a steady growth in the work throughout the state. The number of tax-supported libraries has increased from 57 as given in the last biennial report, to 61 at the present time. The record of progress in 1905 shows that gifts for buildings have been received by Virginia, Grand Rapids and Madison and new buildings have been completed in 8 towns—Brainerd, Little Falls, Redwood Falls, Alexandria, Morris, Madison, Fergus Falls and Grand Rapids. Nearly all reports show an increase in circulation, and a broadening of the work of the library in many directions.

There is still much work to be done in Minnesota. Of the 59 cities and villages having a population of over 2000, there are 18 still without tax-supported libraries, although 3 of this number have free association libraries, and 3 subscription libraries. There are but 3 cities of over 5000 people which have no public library. Of the 76 cities and villages

having a population of between 1000 and 2000, there are 43 without public libraries of any kind.

—*Minnesota P. L. Commission Bulletin, Feb., 1906.*

Montgomery, Ala. On the morning of March 7 the residence of Dr. Thomas M. Owen, director of the Alabama State Department of Archives and History, was destroyed by fire, and his extended and valuable collection of historical and genealogical material was totally lost. In this collection were included the manuscripts of several unpublished county histories, important genealogical documents relating to Alabama families, a valuable collection of papers and publications of the University of Alabama, which had been prepared for shipment to Tuscaloosa for exhibition at the university's 75th anniversary celebration, records of the societies of Sons of the Revolution and United Sons of Confederate Veterans, and Confederate war papers. The fire originated and burned most fiercely in the library, and it was impossible to save any of the contents.

New York P. L. A Carnegie building, serving the double purpose of a home for the St. Agnes branch and for the library for the blind, was opened at 444 Amsterdam avenue, on Monday, March 26. The St. Agnes branch, which has been located at Broadway on the corner of 82d street for the past six years, was opened in June, 1894, in the parish house of St. Agnes Chapel, under the auspices of that organization, whence its name. It subsequently became an independent library, and it was the first of the small free circulating libraries to follow the example of the New York Free Circulating Library in consolidating with the New York Public Library. It has now on its shelves about 17,000 volumes and circulates 115,000 annually.

The front part of the main floor of the new building will be devoted to the library for the blind, which has now one of the largest collections of books for the blind in the United States. It has been located since its establishment in 1896 in the basement of the parish house in West 91st street, and has been operated by the New York Public Library for the past three years. The building occupied by these two branches is the 18th of those erected from the Carnegie fund. It is from designs by Babb, Cook & Willard. It has three stories and basement, measures 50 feet front by 80 feet in depth, and has a massive front of Indiana limestone. The basement is occupied by a large receiving and packing room and space for book storage, by a boiler room and by toilet rooms. On the main floor, besides the library for the blind, there is the main adult circulating room. On the second floor are the children's circulating and reading rooms, and on the third floor a large periodical and newspaper reading room. The janitor's quarters are in a partial fourth story. Be-

sides these there are work rooms and quarters for the use of the staff. The trim of the entire building is in oak and the walls are painted in a creamy tint. The building is heated throughout with hot water, on a combination of the direct and indirect systems, and is lighted with electricity. It is furnished with two small elevators, one for the janitor's supplies, operated by hand, and the other for books, operated automatically by electricity. The building, with its equipment, cost about \$80,000, exclusive of the site, which was furnished by the city.

New York City, General Theological Seminary L. (Rpt.—year ending April 30, 1905; in *Proceedings of board of trustees, 1905, p. 343-352.*) Added 1291; total 37,847. Circulation 2397 v. For reference and reading the recorded use was 5687 v., of which 1509 v. represent evening use, and the average number of readers per month has been 583 during the day and 207 during the evening hours. The number of borrowers correspond almost exactly to the total of students and officers of the seminary; the privileges of borrowing are granted to outsiders only in special cases for "reasons of unusual weight."

A reserved book collection for specific study purposes and collateral reading has been formed, divided for circulating purposes in two classes—1, those of primary importance for consultation by all, and therefore, only loaned over night; and 2, those of less importance for reading by all but of value as illustrative and related material. The latter, which form much the larger class, are loaned in the usual way, but with the understanding that if in great demand they may be recalled. "By this selection, exhibition and loan restriction, the attempt is made, first, to enable more than one student to use the important books within a short period of time, in distinction from lessening the number of users by loaning the books indefinitely or indiscriminately, and second, to place before the student in one location all the books assigned for study in one course, together with an authoritative collection of illustrative and related material."

Some re-arrangements were made in the reading room during the year, and an adjacent room has been fitted up for study or committee meetings. The work of transferring entries from the old author catalog to the new dictionary catalog has been nearly completed. No extensive reclassification has been attempted, though this seems inevitable within a few years. "But the carrying out of such reclassification must not be begun until careful and lengthy plans have been settled upon, so that the results will be harmonious and lasting." New methods of recording and verifying books and recording continuations have been adopted, and some progress has been made in sorting the large uncataloged and unarranged collec-

tion of pamphlets. "The building up of the collection in two or three special lines is to be hoped for, and is planned—such as comparative religion, sociology, biography, etc., bearing in mind, of course, that never before has there been such great need of care in purchase to guard against the ephemeral, as now in the days of endless book production." During the year covered, on Aug. 30, 1904, Mr. Edward H. Virgin, formerly assistant in Harvard University Library, was appointed librarian.

New York State L., Albany. Resolutions calling attention to the needs of the state department of education and endorsing the proposition that the state erect a separate building for that department and the state library were adopted on March 1 by the conference of colleges and university presidents then in session with the heads of the state education department. Some weeks previously Senator Raines introduced into the state legislature a resolution directing the senate finance committee to investigate and report a bill for the acquirement of such a building, and calling attention to the crowded condition of the capitol and the need of an adequate library building.

Northwestern University L., Evanston, Ill. "Northwestern University: a history," edited by Arthur Herbert Wilde and published some months since by the University Publishing Society, New York, contains a chapter on the university library by Miss Lodilla Ambrose, assistant librarian. This opens with a statement of the place a library should hold in the work and life of a college, and touches briefly on the development of American college libraries, before tracing the history of the Northwestern University library from its inception in June, 1856, to the present time. In 1857 a room was set apart in the university building for the library, which then contained 1977 v. and 37 pamphlets. The first catalog, printed in 1868, recorded about 3000 v. The first important accession was the library of Dr. Johann Schulze, of Berlin, containing 11,246 v. and 9000 pamphlets, rich in Greek and Latin classics, bought in 1869 through the generosity of Luther Leland Greenleaf, of Evanston; "no second gift of so great value has yet been bestowed on the library, but lesser gifts of later years are significant factors in its working power." The library building, erected in 1894 largely through the gift of real estate and a fund of \$50,000 from Orrington Lunt, is described in considerable detail, and the extent, character and use of the collection at the present time are fully set forth.

Ohio Historical and Philosophical Soc. L. Cincinnati. (Rpt., 1905.) Added 436 v., 1019 pm.; total 18,481 v., 67,019 pm.

In February, 1905, Mrs. Catherine W. Lord, the former librarian, resigned and was suc-

ceeded by Miss L. Belle Hamlin. Miss Hamlin says:

"A large amount of time and labor has been expended in the library this year in an endeavor to re-arrange the volumes with a system which would make them more accessible and, consequently, more useful to readers. The old catalog lost its usefulness when our collection was moved to its present quarters, and the society arranged to have a new card catalog made in the catalog department of the library of the University of Cincinnati. Several thousand books were cataloged, but the work was practically discontinued throughout this year, owing to insufficient force in that department. However, I have prepared, with the assistance of a typewriter, nearly 6000 cards for a shelf-list, which covers all the books included under the card catalog made by the catalogers of the university, and have moved the greater portion of the entire library in order to place the cataloged volumes on the stacks in regular rotation to accord with the shelf-list, and have re-arranged and classified generally most of the books not yet cataloged."

Passaic (N. J.) P. L. (17th rpt. — 18 months, January, 1904, to July, 1905.) Added 3942; total 19,360. Issued, home use, main library, 75,214; Reid Memorial 119,451. Reading room attendance, main library 28,630. Reid Memorial 127,937. Receipts \$13,694.80; expenses \$12,238.23 (salaries \$3894.21, books \$2632.70, newspapers and periodicals \$685.17, rebinding \$1263.46).

The Reid Memorial Library, opened in 1903 (see L. J., 29: 493), has justified the wishes of its donor in all respects. Not only has its book circulation and reading room use steadily increased, but the varied activities centering in the building have been most successful. Free lectures, paid for and volunteer, especially designed for foreigners, have crowded the hall to its utmost capacity; clubs and societies have gladly made use of the rooms for social and educational purposes; there have been sewing and knitting classes, and both here and in the main library excellent exhibitions, notably those of women's handwork representing Passaic's cosmopolitan inhabitants, architects' drawings and pictures illustrating early New Jersey history. School libraries have been much in demand, the most interesting extension of the work having been made in response to the German students of the fourth ward by placing 100 good German books for adults in the German-American school. Miss Campbell also says:

"The wisdom of providing books in the foreign languages so many of our citizens read seems assured when the statistics show in 12 months the 550 books, in the 11 foreign languages we then had, were borrowed 11,114 times. Without these books in their own language many of our adult foreigners would have

been cut off from all avenues of culture, and their children would grow up without the example of the use of books in their homes."

Queens Borough (N. Y.) P. L. The Elmhurst Carnegie library branch building was dedicated on the afternoon of March 31. It is situated at Broadway and Cook avenue, Elmhurst, and opens with about 5000 volumes on the shelves.

Salem (Mass.) P. L. (17th rpt.—year ending Nov. 30, 1905.) Added 1992; total 47,299. Issued, home use 94,234 (fict. 78.73 per cent.). New registration 787.

There was a somewhat smaller use of the library during the year. Means of extending its facilities are considered, especially in the establishment of distributing agencies, but the adoption of these means implies increased funds to meet the cost of such service. Mr. Jones recommends the extension of the present building, using the existing fund of nearly \$50,000 for the purpose, and outlines the general character of the alterations desired. Such enlargement and rearrangement would give a storage capacity of over 100,000 v. instead of the present 50,000, and facilities for 130 readers instead of the present 50.

Syracuse (N. Y.) P. L. (Rpt.—year ending June 30, 1905.) Added 2218; total 66,928. Issued, home use 137,742, a decrease of 12 per cent. from the previous year. From the children's room 32,560 v. have been issued, and there are over 3000 v. in the circulating department. Receipts \$55,100; expenses \$45,781.04 (books \$3281.28, serials \$335.22, binding \$838.82, salaries \$13,050.27, furnishing \$18,451.11).

Mr. Mundy's report is devoted to an account of the opening and description of the handsome Carnegie building, opened on March 23, previously described in these columns (L. J., 30: 479). An increased income is greatly needed, particularly for the purchase of books, the available funds for this purpose having been reduced \$5000 a year for the past two years. This, despite the new building, has resulted in a marked decline in circulation.

University of Michigan L. (Rpt., 1904-5.) Added 12,230 v., of which 10,089 were additions to the general library; total 194,672, of which 154,435 are in the general library. Recorded circulation in reading room and seminary rooms, 102,991; home use by members of faculties 12,354. This is a loss of 75,339 v. in the reading room use.

Important accessions of the year are recorded, and various minor changes in arrangement and methods are noted. This is the retiring report of the veteran librarian, Raymond C. Davis, now librarian emeritus, and closes with an interesting summary of the changes and development in the library

since 1877, the year of Mr. Davis's appointment.

Mr. Koch, the present librarian, recently prepared for publication and circulation among the faculty an extended report upon the desirability of extending to students the privilege of borrowing books for home use. The practice of leading university libraries in this respect was cited and analyzed, and the adoption of this privilege was strongly recommended. The board of regents on Jan. 19, 1906, adopted rules in accordance with this recommendation, permitting students to borrow two books at a time with a limit of two weeks on each book, and privilege of renewal if there is no other demand for the book.

University of Chicago. Plans for the Harper memorial library building, which is to be erected from a public subscription fund of \$1,250,000, now in course of collection, will follow the designs drawn in 1902 by Shepley, Rutan & Coolidge, and approved by the university commission appointed at that time to consider the plans and policy of the library. These plans were reviewed in these columns on their presentation (see L. J., 28: 70-71), and at the Niagara Conference Professor Burton set forth the problems they are intended to solve (L. J., 28: C19-23). The site for the building has been selected at the south edge of the campus, facing south, and will be flanked by the modern language building on the west and the history library on the east. It will cover an area of 80 by 216 feet and will be 100 feet high, exclusive of the tower, which will rise to a height of 260 feet. The great reading room, which will be located on the top floor, will be 75 feet wide by 216 feet long and 40 feet high. The trusses in this room will be of traceried timber work, and the windows will be decorated in stone tracery. There will be five floors of stackrooms around the outer walls of the building and eight floors in the center of the building. Immediately above the stackrooms on the outer sides will be the administrative offices. The entire building will be fireproof.

FOREIGN

Bodleian L. In the London *Times* of March 17 Bodley's librarian, Dr. Nicholson, made public appeal to Oxford men and others for subscriptions which would enable him to purchase the Bodleian copy of the first folio of Shakespeare. This was thrown out of the library as "superfluous" in 1663-4, was recognized last year when brought to the Bodleian for examination, and the present owner was later offered £3000 for it by an American collector. The owner, however, gave the Bodleian the opportunity to buy it for the same price, giving the library till March 31 to raise the sum. Dr. Nicholson writes: "For the Bodleian to pay £3000, or £1000, for any printed book is simply impossible; indeed, it has never given more than

£220 10s. for a single volume, and that a manuscript collection of Anglo-Saxon and other early English charters." Subscriptions amounting to about £1500 were received, and on March 28 Lord Strathcona and Mount Royal, the Canadian High Commissioner, gave £500 to complete the amount needed.

Wellington (New Zealand) P. L. A collection of books for the blind, the gift of Mr. C. B. Izard, has been made a feature of the library. There are about 150 volumes, all but two being in the Moon type.

Gifts and Bequests

Carnegie library gifts

Baker College, Baldwin, Kan. March 16. \$25,000 to complete library building, on condition that \$75,000 be raised for an endowment fund.

Georgia School of Technology, Atlanta. March 16. \$20,000 for a library building.

Hamline University, St. Paul, Minn. March 16. \$30,000, on condition that a like sum is raised for endowment.

Richmond, Va. March 13. \$200,000, being a repetition and doubling of the previous offer of \$100,000, made several years ago.

Librarians

AVERY, Mary L. A memorial sketch of the late Mary L. Avery by Miss Mary W. Plummer, is issued by the Pratt Institute Library School Graduates' Association. The association has also presented to the Pratt Institute Library School a memorial bookcase, containing 100 books which were Miss Avery's favorites, for which a special bookplate has been designed.

BLACKWELL, Richard J., librarian of the London (Ontario, Canada) Public Library from its opening in 1895 until 1905, died at his home in South London on March 19, aged 51 years.

HADLEY, Chalmers, a member of the present junior class of the New York State Library School, has been appointed state organizer for the Indiana Public Library Commission. His duties to begin Nov. 1. Mr. Hadley will be one of the assistant instructors in the summer school for librarians at Winona Lake, Ind.

HAWKINS, Miss Emma Jean, of the New York State Library School, class of 1902, has been appointed organizer of the Athenæum Library at Saratoga. Miss Hawkins recently completed a temporary engagement as cataloger at the Brooklyn Institute of Arts and Sciences.

HOAGLAND, Miss Merica, has resigned her position as organizer of the Indiana Public

Library Commission to accept a position with the Winona Bible School, which is a part of the educational work conducted at Winona Lake, Ind., and at the Winona Technical Institute at Indianapolis. Miss Hoagland, who was formerly a member of the board of trustees of the Fort Wayne (Ind.) Public Library, has been connected with the Indiana Public Library Commission since 1901, and was one of those most active in securing its establishment in 1899. She has taken a leading part in library development throughout the state, and her untiring work has greatly extended the commission's activities in reaching small libraries and in conducting a summer training course at the Winona assembly. Miss Hoagland has been a member of the American Library Association since 1896, and has attended most of its annual conferences, and she is a member of the executive board of the League of Library Commissions.

IMHOFF, Miss Ono Mary, of the New York State Library School, class of 1898, has completed the organization of the Hearst Free Library, Anaconda, Mont., and been appointed legislative reference librarian for the Wisconsin Free Library Commission.

KNOWLTON, Miss Julia C., of the New York State Library School, class of 1906, has been appointed assistant in the New York State Library.

LEONARD, Miss Mabel E., of the New York State Library School, class of 1906, has been appointed assistant in the New York State Library.

LINDLEY, Harlow, librarian of Earlham College, Richmond, Ind., has been appointed a member of the staff of the Indiana State Library, to aid in the organization of the department of Indiana historical and bibliographical material. His appointment does not take effect until Nov. 1, 1906.

SABIN, Miss Daisy, a graduate of the Drexel Institute Library School, has been elected librarian of the Burlington (Ia.) Free Public Library, succeeding Miss Miriam E. Carey, resigned.

STEVENSON, William M., formerly librarian of the Carnegie Library, Allegheny, Pa., has for the past two years been travelling and studying libraries and library science in Europe. Since January, 1905, he has been a student of library economy at the University of Göttingen, and he has recently expressed an intention to re-enter library work in the course of a year or so.

TYLER, Arthur Wellington, for many years well known in library circles, died on March 27 in the Muhlenberg Hospital, at Plainfield, N. J., following an operation performed some time previously. Mr. Tyler was born in Pittsfield, Mass., March 14, 1842, a son of Wellington Hart and Caroline Carpenter Ty-

ler, the founders of the Maplewood Institute of Pittsfield. He was graduated from Amherst College in 1867, and was for a time on the editorial staff of the *New York Mail*, later occupying a similar place on *Moore's Rural New Yorker*. He subsequently became an assistant in the Astor Library, and from 1876 to 1879 was librarian of the Johns Hopkins University Library at Baltimore. From 1879 to 1883 Mr. Tyler was librarian of the Indianapolis (Ind.) Public Library, and during the following two years held a similar position at the Quincy (Ill.) Public Library. He then organized the Plainfield (N. J.) Public Library, and afterwards also the Blackstone Library at Branford, Ct., and later was appointed assistant librarian of the Washington (D. C.) Public Library. For the past two or three years he had been in ill health, and living with relatives in Plainfield, N. J.

Cataloging and Classification

The *A. L. A. Booklist* for March contains the annotated list of "Books on English history published in 1904," selected and annotated by W. Dawson Johnston, previously issued independently by the Publishing Board.

BIBLIOTHÈQUE NATIONALE. Catalogue des dissertations et écrits académiques provenant des échanges avec les universités étrangères et reçus par la Bibliothèque Nationale en 1904. Paris, C. Klincksieck, 1905. 293 p. 8°.

— Catalogue général des livres imprimés de la Bibliothèque Nationale. Auteurs. T. 24, Carp-Catzius. Paris, Imprimerie Nat., 1905. 8°.

CRAWFORD, Esther. Cataloging: suggestions for the small public library. Chicago, Library Bureau, 1906. 46 p. O.

A revised enlarged edition of the pamphlet published in 1900; simple, practical and careful in exposition, with many illustrations of sample cards.

ENOCH PRATT F. L. OF BALTIMORE CITY. Bulletin, January, 1906. v. 11, no. 4. p. 83-159. O.

Records all accessions for 1905, including a special list of Spanish works.

FITCHBURG (Mass.) P. L. Music bulletin of the Francis H. Jenks music library; gift of Herbert I. Wallace. Fitchburg, 1906. 28 p. O.

This is a full and interesting collection, comprising music literature, music biography, music fiction (very inadequately represented by five titles), general collections, and the much richer divisions of dramatic music, sa-

cred music, vocal music, orchestral music, pianoforte music, organ music, and music for stringed instruments. In each division entries are of the briefest, and there is practically no analytical work, so that the full amount of material available is hardly shown. An index to composers is a most useful feature, indicating the general character of the collection, which is especially strong in such names as Auber, Beethoven, Berlioz, Cherubini, Chopin, Handel, Haydn, Mendelssohn, Mozart, Rossini, Schubert, Schumann, Verdi, and Weber. The collection is apparently about ten years or more behind the time, as is evidenced by the inadequate representation or absence of Humperdinck, Strauss, Tchaikowsky, and others, but with judicious supplementing it should readily be made comprehensive and extremely valuable.

HARVARD UNIVERSITY LIBRARY. An index guide to the shelf classification of the Harvard College Library: 1, Plans of the bookstack; 2, Index of shelf-marks; 3, Index of subjects. [Cambridge, Mass.,] Printed for the library, 1905. 43 p. .25 1/2 cm., (Special publications, 4.)

As this is intended only for the use of the Harvard library, and would not be of use elsewhere, copies are not sent to other libraries.

The NEWBURYPORT (Mass.) P. L. bulletin no. 17 includes a five-page genealogical list, "a selection of books in the library dealing with family history, not including individual and collected biographies."

NEW YORK MERCANTILE L. Bulletin of new books, no. 26, Accessions for the year 1905. New York, 1905. 24 p. O.

The NEW YORK P. L. Bulletin for March contains selections of letters from Spencer Roane, 1762-1822, on public affairs, and from Willis Gaylord Clark on American literature in 1830. In the February number there were given letters of Francis Jeffrey (1813) and Thomas Campbell, and a "Catalogue of the Becks collection of prompt books." This collection was bequeathed to the library by George Becks, who died on May 17, 1904, after a long and varied theatrical career, and contains many rare and interesting items.

PEARL, A. S. Electrical engineering classification. (*In Electrical World*, March 10, 1906. p. 521.)

The *Readers' Index*, issued bi-monthly by the CROYDON (Eng.) PUBLIC LIBRARIES, contains two good short annotated reading lists on "British Parliament" and "Making of modern Europe, 1815-1871."

The SALEM (Mass.) P. L. Bulletin for March contains a special reading list on Birds.

Bibliography

ALUMINUM. Minet, Adolphe. The production of aluminum and its industrial use. N. Y., Wiley, 1905. 266 p. D.

List of a few important treatises and memoirs on aluminum, p. 255-56.

ARBOR DAY. Bascom, Elva L. Arbor day list: books and articles on arbor day. (*In A. L. A. Booklist*, March, 1906, p. 73-87.)

—Columbus (O.) Public School Library. Books and references for arbor and bird day, 1906. Columbus, 1906. 16 p. O.

BELGIUM. Stainier, L. Contribution à la bibliographie de Belgique pour 1903 et 1904. Bruxelles, Misch & Thron, 1905. 13 p.

From *Revue des Bibliothèques et Archives de Belgique*, no. 3, 1905.

BOCCACCIO. Bourland, C. B. Boccaccio and the Castilian and Catalan literature. Paris, [Macon, Protat frères] 1905. viii, 233 p. 25½cm.

"Bibliography of translations into Castilian and Catalan of Boccaccio's works other than the Decameron," p. 214-231.

BOOK-RARITIES. Delpy, A. Essai d'une bibliographie spéciale des livres perdus, ignorés ou connus à l'état d'exemplaire unique. Fasc. 1: A-G. Paris, A. Durel, 1906. 156 p. 8°.

Announced in *Bibliographie de la France*, Jan. 20, p. 166.

BOOKS. Annual American catalog, 1905; containing a record, under author, title, subject and series, also the full titles and descriptive notes, of all books recorded in *The Publishers' Weekly*, 1905, directory of publishers, etc. N. Y., Office of The Publishers' Weekly, 1906. 36+375+329 p. O. cl., *\$3 net.

—English catalogue of books, for 1905; giving in one alphabet under author, title and subject, the size, price, month of publication and publisher of books issued in the United Kingdom and some of those issued in the United States: being a continuation of the London and British Catalogues. 69th year. [N. Y., Office of the The Publishers' Weekly,] 1906. 302 p. O. cl., *\$1.50 net.

BRACHIOPODA. Shimer, H. W. Old age in brachiopoda—a preliminary study. (*In American Naturalist*, February, 1906. 40: 95-121.)

Followed by a two-page bibliography.

CANADA. Wrong, George M., and Langton, H. H., eds. Review of historical publications relating to Canada. v. 10: Publications of the year 1905. (University of Toronto studies.) Toronto, Morang & Co., Ltd., 1906. 12+222 p. O.

This 10th volume completes the first series of this valuable work. An index volume to the series is now in preparation, and is announced for publication about July 1, 1906. It is to follow the general plan of the indexes issued by the *English Historical Review*, *Revue Historique*, and similar publications, will be bound to match the set, and sold separately at \$1.

DOUBLE HENS' EGGS. Parker, G. H. Double hens' eggs. (*In American Naturalist*, January, 1906. 40: 13-25)

Contains a 3-page chronological bibliography.

DUGONG. Dexler, H., and Freund, L. Contributions to the physiology and biology of the dugong. (*In American Naturalist*, January 1906. 40: 49-72.)

Followed by a 2-page chronological bibliography.

EDUCATION. O'Shea, M. V. Dynamic factors in education. N. Y., Macmillan, 1906. 3 p. l., v-xiii, 320 p. 19½cm. Bibliography: p. 301-312.

FOOD ADULTERATION. Winton, A. L. The microscropy of vegetable foods, with special reference to the adulteration and the diagnosis of mixtures. N. Y., Wiley, 1906. xvi, 701 p. 24½cm.

"General bibliography": p. 671-674.

GARDENING. Chicago Public Library. Selected reading list on gardening. Chicago, February, 1906. 32 p. T.

GAS. Wyer, S. S. A treatise on producer-gas and gas-producers. N. Y., *Engineering and Mining Journal*, 1906. 296 p. 24cm.

"Bibliography of gas-producers": p. 277-290.

LIFE INSURANCE. Maze, C. Étude juridique du risque dans l'assurance sur la vie. Paris, Lib. Gén. de Droit et de Jurisprudence, 1905. 2 p. l., 214 p. 25½cm.

Bibliographie: p. 207-209.

LUTHER'S HYMN. Ein' feste burg ist unser Got: vortrag, gehalten v. Max Hermann in der Gesellschaft für deutsche literatur zu Berlin und mit ihrer unterstützung herausgegeben. Mit 6 tafeln und einen bibliographischen anhang. Berlin, B. Behr's Verlag, 1905. 32 p. 4°.

- MADAGASCAR.** Grandidier, G. *Bibliographie de Madagascar*. 1. ptie. Paris, 1905. viii, 433 p. 8°.
- MUNICIPAL AFFAIRS.** Library of Congress. Select list of books on municipal affairs, with special reference to municipal ownership; with appendix: Select list of state documents. Comp. under the direction of A. P. C. Griffin. Washington, Gov. Print. Office, 1906. 34 p. 25½cm.
- MUSIC.** Pazdírek, F. *Universal-handbuch der musikliteratur*. 1. teil. Band C. Wien [1906]. xvi, 696 p. 8°.
- NECTURUS MACULOSUS.** Eycleshymer, Albert C. The habits of *necturus maculosus*. (*In American Naturalist*, February, 1906. 40: 123-135.)
Followed by a 2-page bibliography.
- NERVOUS SYSTEM.** Bailey, P. Diseases of the nervous system resulting from accident and injury. N. Y., Appleton, 1906. xii, 627 p. 24½cm.
Bibliography: p. 603-615.
- NEWCOMB, Simon.** Archibald, R. C. *Bibliography of the life and works of Simon Newcomb*; from the Transactions of the Royal Society of Canada, 2d ser., 1905-1906, v. II, sec. 3; Mathematical, physical and chemical sciences. (Issued November, 1905.) Ottawa, J. Hope & Sons, 1905. p. 79-110. O.
- PAINTING.** Marcel, H. *La peinture française au XIX siècle*. Paris, A. Picard & Kaan, [1905.] 358, [2] p. illus. 21cm. (Bibliothèque de l'enseignement des beaux arts.) "Bibliographie" at end of chapters.
- PETRARCH.** *Bibliotheca Nacional, Lisbon*. A exposição Petrarchiana da Bibliotheca Nacional de Lisboa: catálogo summario pelo director da mesma bibliotheca Xavier da Cunha. Lisboa, Imprensa Nacional, 1905. 80 p. 25cm.
- RAILROAD RATES.** List of works in the New York Public Library relating to government control of railroads, rate legislation, etc. (*In New York Public Library Bulletin*, March, 1906. p. 184-209.)
- ROME.** Calvi, Emilio. *Bibliografia di Roma nel medio evo (476-1499)*, con indici per soggetti e per autori. [v. 1.] Roma, E. Loescher e C.; Bretschneider & Regenbergl, 1906. p. xxii, 175. 8°.
- TARIFF.** Library of Congress. List of works on the tariffs of foreign countries. General; Continental tariff union; France; Germany; Switzerland; Italy; Russia; Canada; comp. under the direction of A. P. C. Griffin. Washington, Gov. Print. Office, 1906. 42 p. 25½cm.
- TOSCANELLI.** Vignaud, H. *Bibliografia della polemica concernente Paolo Toscanelli e Cristoforo Colombo*. Napoli, Salvietti, 1905. 2 p. l., 36 p. 26½cm.
- TRADE UNIONS.** Iranzo Goizueta, R. *Las asociaciones profesionales industriale obreras*. Trade unions. (Inglaterra-Estados Unidos.) Madrid, V. Suárez, 1905. xi, 375, [2] p., 1 l. 19cm., (Biblioteca de economía social, no. 1.)
"Bibliografía": p. [353]-366.
- VIRGINIA COMPANY.** Kingsbury, Susan M. An introduction to the records of the Virginia Company of London, with a bibliographical list of the extant documents. Washington, Gov. Print Office, 1905. 3 p. l., 5-214 p. 31 x 24½cm.
Introductory to the proposed edition of the records of the Virginia Company of London, to be published from the ms. in the Library of Congress. Also issued as the author's dissertation for the degree of doctor of philosophy, Columbia University.

INDEXES

- ANNUAL LIBRARY INDEX, 1905**; including periodicals American and English, essays, book-chapters, etc., bibliographies, necrology, and index to dates of principal events; ed., with the co-operation of members of the American Library Association, by W. I. Fletcher and H. E. Haines. N. Y., Office of *The Publishers' Weekly*, 1906. 10+ 416 p. O.
- BIBLIOGRAPHIE DER DEUTSCHEN ZEITSCHRIFTEN-LITERATUR**, mit einschluss von sammelwerken und zeitungsbilagen. Unter mitwirkung von A. L. Jellinek und E. Roth, hrsg. von F. Dietrich. Supplementb. 6: *Bibliographie der deutschen rezenzenen* 1905. Lief. 1. Leipzig, F. Dietrich, 1906. 4°.
- ENGLISH HISTORICAL REVIEW.** General index of articles, notes, documents and selected reviews of books contained in the *English Historical Review*, v. 1-20, 1886-1905. N. Y., Longmans, Green & Co., 1906. 8+60 p. O.
Covers 1, General index; 2, Index of writers.

Notes and Queries

APPEAL FOR CATALOGS AND PRINTED MATERIAL.—In the early morning of March 30 the administration building of the University of Idaho, with almost the entire contents, was destroyed by fire. The loss includes the entire library of about 12,000 volumes. As our loss is very heavy for so young an institution and state we are asking for help, especially for the library. We would be glad to receive library catalogs, especially from the larger libraries, and any material which is likely to prove useful in a college library. Packages should be sent to the University of Idaho Library, Moscow, Idaho.

BELLE SWEET, *Librarian.*

ELSON'S "UNITED STATES."—A communication published in your March number states that the text of "The new illustrated history of the United States," by Henry W. Elson, published by the Review of Reviews Co., appears to be the same as that of Elson's "History of the United States of America," published by the Macmillan Company in 1904. Your correspondent is in error. Not only was the Macmillan history thoroughly revised by Mr. Elson, but a history of American literature, by the same author, which was entirely new, was incorporated in the work.

THE REVIEW OF REVIEWS COMPANY.

BULLETINS ON BOOK BUYING.—The A. L. A. committee on book buying has issued bulletin no. 21, in the familiar post-card size, dated March, 1906. It notes recent library lists of value, Australian and Canadian booksellers, and recent second-hand catalogs. The rules of the American Publishers' Association (February, 1902) regarding sale of fiction are given. The following examples of price increases are given:

"Miss Hapgood's trans. of Turgenieff, 16 v., \$32 net in N. Y., not over 5 per cent. discount. Published in London by Dent & Co. and delivered in Washington from London for \$24. These books are printed by De Vinne in N. Y., sent to London and sold there and delivered to a library in the U. S. cheaper than the same library can buy them in N. Y.

"A London house and a New York house issue circulars about the 'Political history of England,' to be published by Longmans, 12 v. The London house price \$20, the New York makes a 'special price to libraries of \$25.'"

Bulletin 20 (February) gave a useful list of dealers at home and abroad in books in foreign languages.

ART REFERENCE BOOKS.—Having recently had occasion to make as complete a collection as possible of the pictures of saints mentioned in the Roman Catholic calendar, I have consulted with more attention than usual the books in the library bearing on the subject. I find two of these so valuable that I take this opportunity of calling the attention of libraries which have had an artistic clientèle to

the "Dictionnaire historique et raisonné des peintres," par Adolphe Siret. Brussels, 1883, 2 vols., 8°, pp. 568 and 481, with useful tables of painters by schools in chronologic and alphabetic order. The illustrations, of which there are a great number, are particularly valuable, including works by many artists which are not usually selected. The other collection, which I think is not as widely known as it deserves, is the series of reproductions in photo-lithography published by Reber & Bayersdorfer, of which the first volume appeared in Munich in 1889. This library has only the first set, but I believe that a second has appeared. It is accompanied with full indexes, with short notes on the painters, and the names of the galleries in which their paintings may be found. Each volume contains about 144 plates. The possession of this set gives to a library, at a reasonable cost, the command of the best representative collections of reproductions of the great artists with which I am acquainted.

WILLIAM BEER.

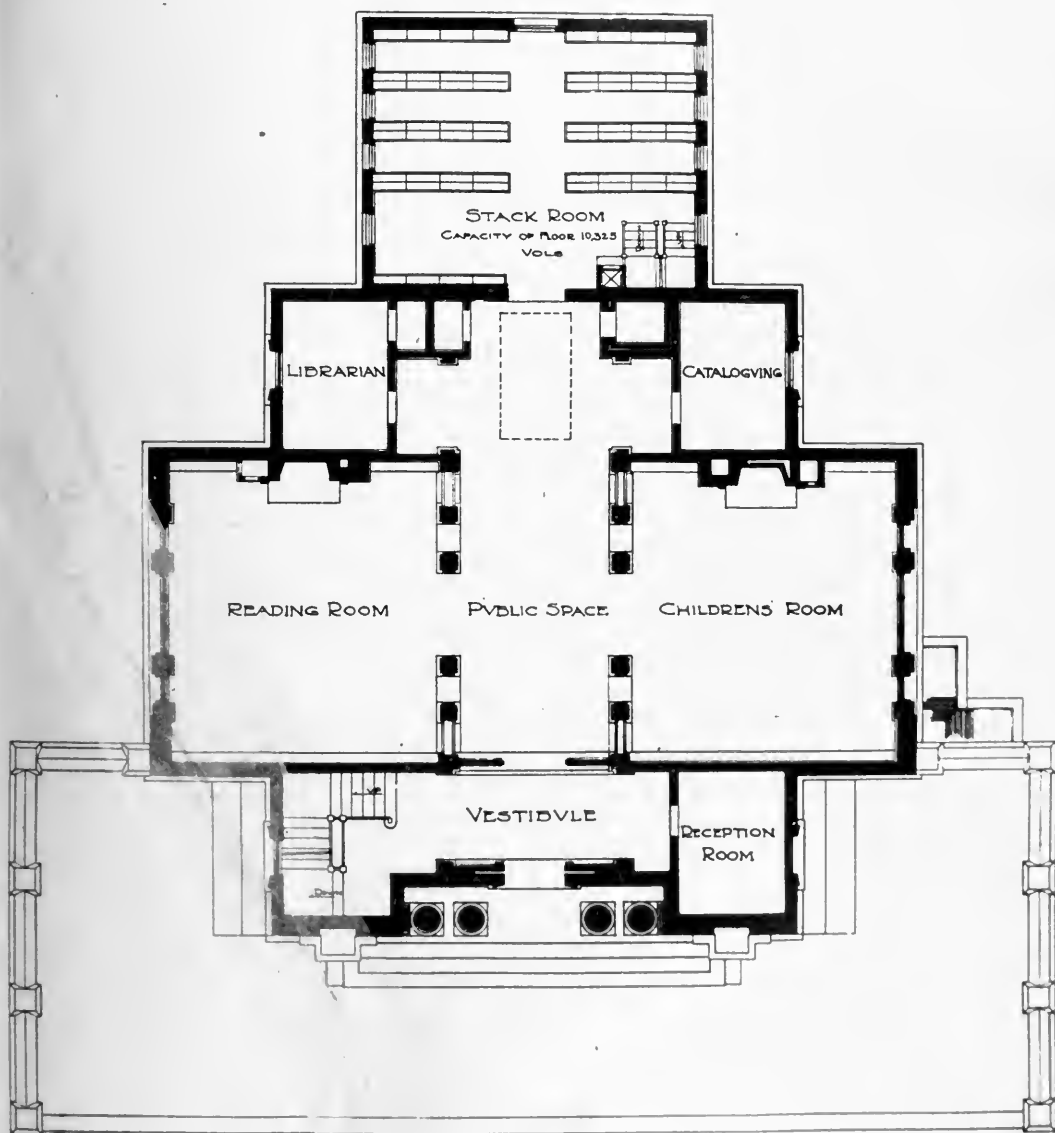

HARPER'S "BOOK OF FACTS," 1906.—The publishers are advertising this reissue as a new edition, "thoroughly revised and brought down to date by competent scholars." The title-page pronounces it "a record of history from 4004 B.C. to 1906 A.D." The first date is about as justifiable as the second. Open the book at any place and you see evidence of its being the same as the edition of 1895, with here and there a table brought down to date, noticeably under England, France, Germany, and the United States. But under most countries history stops at 1892 or thereabouts; see, e.g., Australia, Belgium, Denmark, Greece, Ireland, Italy, Mexico, Scotland, Spain and Sweden. If you look under *Battles* you might think that the world had enjoyed sweet peace since 1892, or under *Banks*, that all financial institutions had closed their doors in that year. *Churches* have been inactive for more than a decade; *medical science* has not been heard from for a score of years. The history of *Boston* closes with the opening of its new public library building, and the last event deemed worthy of chronicling under *Dublin* is the burial there of Charles Stuart Parnell (1891). For aught that this "Book of facts" tells to the contrary, the late Adolph Sutro (of library fame) is still mayor of San Francisco. Apparently none of our states have had governors for 12 years or more, and the census of 1890 is good enough for the "competent scholars" who brought the book down to date. In this process of "revision" the plates were shorn of their page numbers, and so the publishers were able by a little juggling to get up a "new edition" at a minimum cost.

No. 5

ARRANGEMENTS for the Narragansett Conference of the Library Association are now fairly completed, and as the program given elsewhere indicates, this meeting promises to be varied and interesting to a marked degree. The plans for the post-conference cruise have been abandoned, as the responses received were insufficient to guarantee its success, and it is probable that no single general post-conference will be undertaken, but that there will be a number of alternative visits or tours arranged to places of interest along the New England coast. The general program, it will be seen, centers mainly on the work of the larger city public library—its relation to the city as a tax-supported institution; its adaptation to the needs of distinct classes among the population—blind people, working men, and foreigners; and the construction of buildings for its branches and its main collection. Aside from professional subjects, the program is stronger than usual in addresses of a general or literary character, by speakers of reputation in other than library circles; while the long list of section, round table, and allied meetings should give ample representation to every special interest found within the profession.

In view of the terrible calamity in San Francisco last month, it has been announced that the National Educational Association, which was to have held its annual meeting in that city in July, has cancelled all its plans and will hold no general conference this year. Should this course be followed, there seems no good reason why the American Library Association should not suggest to the N. E. A. the possibility of holding the annual meeting of its Library Department in connection with the Library Association meeting at Narragansett. A joint meeting of the two great national bodies of teachers and librarians would probably be impracticable, on account of its unwieldiness and the difficulty of obtaining adequate accommodations; but a meeting of the Library Department could probably be satisfactorily arranged, giving opportunity for a

fuller and more general discussion of library and school questions from the standpoint of teachers and of librarians than has been possible under the ordinary conditions of N. E. A. conventions. Whether this plan proves practicable or not, information regarding the A. L. A. conference should at least be brought specifically to the attention of the N. E. A. and its members, in the hope that those teachers interested in library work may avail themselves of the opportunities it offers, as a substitute for the N. E. A. meeting.

IRREPARABLE among the losses caused by the San Francisco calamity was the destruction of the libraries of the city. The summary given elsewhere schedules the bare facts, so far as these are available, but hardly indicates the full extent of the loss. For it is not only a blow to the library interests of San Francisco and the Pacific coast, but to scholarship and historical research throughout the country. In rough figures over 700,000 volumes have been destroyed, and a conservative estimate of the money loss is stated as three million dollars; this, of course, without consideration of the unique historic value of much of the material. Foremost probably in historical and bibliographical importance was the great Sutro collection, of which the latest reports indicate that a portion escaped destruction, and the library of the Pioneers' Society, with its original records of the days of the Argonauts and forty-niners. The Mercantile Library collection also was of great value, for in the early years of its existence it bought generously and with discrimination, and it contained many rare and valuable works that can never be replaced. Gone, too, is the Public Library's fine collection of California newspaper files, running back through the last sixty years, and its rich collection of pamphlets relating to the early history of the state. The Mechanics' Institute Library of about 120,000 volumes, particularly strong in scientific works, the law libraries of the city and the supreme court, the important specialized collection of the Academy of Sciences, the

small but notable collection of the Bohemian Club, and a long list of minor association libraries and private collections, round out the record of destruction. Fortunately the great Bancroft collection escaped the fire and is intact. Its transfer to the shelter of the state university was begun as soon as local conditions permitted, and by this time it is established in permanent quarters, safe from the dangers of fire or vandalism.

HOPEFULNESS is the keynote of all the messages that have come from San Francisco librarians. The Mechanics-Mercantile "will rebuild at once"; the Public Library plans to reopen immediately; and on all sides there is evident determination and high courage. The Public Library reports a nucleus of 30,000 books remaining out of a former 160,000 as a basis for reconstruction. These are made up of the contents of four branches, ranging from 3000 to 9000 volumes each, 3000 from the delivery stations, and several thousand in the possession of borrowers. The main library is absolutely lost, not even a page or part of a book remaining in the ruins of the city hall. With this working collection, with \$75,000 insurance probably available, with the sites remaining, and with an authorized bond issue of a million dollars for a new building, the library authorities face the future with confidence. Nevertheless help will surely be welcome in the great task of restoration and replacement. From the library of the state university there has already come an appeal for duplicates of books lost, and the Public Library, Mechanics-Mercantile, Academy of Sciences, and other libraries destroyed or injured will undoubtedly receive with appreciation sympathy expressed in gifts of books. There should be no need to appeal to the strong bond of fellowship that unites all American librarians; to indicate the need is sufficient to insure widespread response, and we are sure that all librarians will make special effort to send substantial gifts of books and other material to their brethren of the Pacific coast as soon as they are assured that such gifts are desired and can be handled without inconvenience. It should be remembered, too, that enforced reduction in the staffs of the crippled libraries is almost inevitable, and this

should be borne in mind by Eastern librarians in filling vacancies or in making new appointments.

THE death of Dr. Richard Garnett removes one of the librarians of the old order, who in his library spirit and devotion prophesied and inspired the new generation. Nothing could be more delightful than the welcome which any seeker after knowledge received from that kindly scholar during the many years when he sat at the center of the great reading room of the British Museum, his wealth of knowledge always cheerfully at the disposal of any one who asked. His perpetual smile, especially in connection with his curious manner of speech, seemed to those who knew him little possibly a muscular habit rather than a real expression of interest; but it was real, and really represented the man's sweetness of nature and wonderful catholicity of interest alike in persons and in subjects of knowledge. Henry Bradshaw's warm heart and great cordial hand were known chiefly to those scholars of the University of Cambridge, young and old, who had reason to come in personal relation with his tender and beautiful character; but Richard Garnett was set in the most public of places, where all men and women could turn to him, and to none was he ever other than courteous, helpful, kindly in all things, large or little. His long service in the reading room earned for him later the first place in the English library world, as keeper of printed books in the Museum, and the promotion rejoiced greatly all those who knew the library and the man. In his later years, especially after his retirement, he lent his name perhaps to more enterprises than he could readily supervise or co-operate in, despite his enormous powers of detail work; but in yielding to this temptation, before which so many men of our time give way, he was persuaded quite as much by good nature, by the desire to oblige those who sought his name, as by hope of pecuniary gain. To have known him was a blessing and an inspiration, and it is scarcely possible to put on paper for those to read who did not know him any adequate expression of the affection and respect with which his name will be remembered.

BOOKS AND LIFE*

BY EDWARD ASAHEL BIRGE, *Ph.D., LL.D., Dean of College of Letters and Science,
University of Wisconsin; Director Madison Free Library*

THE aspect of the subject to which I would call your attention is the often observed fact of the extent to which modern life in all of its phases is becoming based upon books. I say *in all of its phases*, for we are concerned with the present extent of this relation between books and life and with its rapid increase, rather than with its existence. Ever since the beginnings of human society men have based their actions on the teachings of experience. Part of these teachings each individual has directly derived from his environment, and he has supplemented and enlarged them by means of those coming from the remembered experience of others, often belonging to an older generation. Later in history there were added those teachings derived from books—from the recorded experience of others. With that enlargement of the basis of the human action which comes from the remembered experience of others we, as librarians, have nothing to do, and, indeed, there is little to say about it now which could not have been said with equal propriety, one, two, or twenty centuries ago. With books the case is different. The last century, the last generation, the last decade—each has seen a transfer of the basis of action from the oral to the printed word, which could be paralleled by no other period of equal length in the history of civilization. The story of this transfer from talk to print, from rule of thumb to textbook, from tradition to school, from practice to science, is long and intensely interesting. I can touch only a few phases of it.

First consider the lengthening of the school period for children. I do not think it is possible accurately to compare the present length of this period with that which existed a century or a half century ago; nor would such a comparison greatly interest us. It is enough for our purpose to know that years have been added to the school life of many thousands of the youth of all classes. As a single illustration, consider the effect of the high school, whose development into a large and popular

institution, an institution affecting great masses of the people, belongs almost wholly to the period within the life of the generation now on the stage. A half century ago the public high school was almost unknown and the private academy reached very few persons. Only a generation ago the number of students in secondary schools was hardly one-tenth of the present number. The attendance on institutions of secondary grade has thus increased five times as rapidly as the population. Within the past fifteen years the attendance in the high schools of Milwaukee has more than trebled, while only a little more than fifty per cent. has been added to the population of the city. In Racine almost exactly the same ratio holds, and so for many other cities of the United States, the increase being least marked in New England cities, and greatest in the cities of the West.

The formative influence of the high school youth are far more extensively and exclusively books than were those of his father or grandfather, who probably began to learn his trade, or his business, at about the age when his boy enters the high school, and who therefore, during the period of adolescence, received his training from action rather than from study, from oral rather than from printed experience.

One may find to-day in the writings of many teachers jeremiads over the shortness of the average school life of children. I would not contradict their statistics and would join in their regrets, but the fact remains that the most striking phenomenon in the life of the children of the past thirty years is the extent to which their training has been committed to the use of books and the rapid growth of the use of books as the period has advanced. Few as the school years of children now are, those of any older generation have been fewer. This aspect of the matter is the one that is of interest to us, and the school life of the present, instead of arousing our regrets by its brevity, may well call out our astonishment by its length, and demand the use of our best wits to see the changes which have been caused in the life of the present and to forecast those which in the

* President's address before Wisconsin Library Association, Feb. 21, 1906. The A. L. A. Publishing Board will supply reprints at 5c. apiece, or \$3 per 100.

future will flow from this fundamental change in education.

One of these correlated changes is already apparent—the extension of the period of book learning for many thousands of persons into the college and university course.

In 1850 the total attendance on colleges in the United States was about ten thousand. Half a century later, when the population of the country had increased about three and one-third times, the college students had increased in a tenfold ratio, or more than three times as rapidly as the population. Even more significant is the growth in the number of college students in more recent years. Since 1889 the number has more than doubled, thus continuing in the latest years a ratio of growth with reference to population quite as great as in earlier years.

An equally significant, and quite as conspicuous change, is seen in the growth of technical education. Thirty years ago, when I came to Wisconsin, the university was graduating from two or three to half a dozen engineers yearly, and these could not all find occupation in this commonwealth, with a population then of more than a million people. Now a hundred graduates go out at Commencement, while the population of the state has little more than doubled, and while other engineering schools of high rank have multiplied all around it.

Nowadays the man of books, rather than the man of tradition, is directing the work of the world. In the copper mines of the north the old-fashioned mine captain, who received his profession and its traditions from his father, is disappearing and has almost vanished. His place is taken by the graduate of a mining school, who interprets what he sees, not by the light of the experience of his elders, communicated to him orally, but by the far clearer light of the collective experience of men embodied in books. When the capitalist now desires to explore for new iron mines he employs not the old-fashioned prospector, but puts into the field a party of young men often fresh from the geological laboratory. Thus science, organized knowledge, book learning, is driving out with increasing rapidity the picturesque figures of past times—times wholly past, though only just behind us in years. That "bookish theoretic," so detested by Iago, is apparently firmly in control

of affairs and has displaced its predecessors and rivals.

In countless other ways the same fact is shown. Half a century ago a youth who desired to become a lawyer or a doctor entered the office of a practitioner and learned his profession by practice and experience. Now he goes to the school of law or medicine and gains his entrance to his chosen calling by the way of books and laboratories. Even commerce and trade, in which the rules of practical experience seem most firmly entrenched, are shifting their bases to books, and schools of commerce and trade schools are springing up on every hand to give youth a broader foundation of knowledge than can be gained from practice. Still more significant are the facts shown by the enormous development of agricultural experiment stations, farmers' bulletins and farmers' institutes. Agriculture, that calling which of all others is most ancient and most conservative, is rapidly changing its basis from tradition to books. Perhaps I ought not to say "most conservative," for there is one calling which may better deserve the title—that of the domestic industries practiced by women. Yet even here a beginning of the transfer, although a small one, has been made by schools of domestic science.

While this beginning is but small, and while the traditional professions of women have not yet been greatly modified by books, the life of no class of the community has been more profoundly affected by this general change than has that of women. With the passing away of home industries and with the great increase of wealth which the past century, or half century, has seen, have come vastly increased opportunities to women for leisure, for release from domestic duties, and for the prolongation of school life. The statistics of high schools and colleges sufficiently show the use which they are making of this leisure. Other facts are equally obvious and significant as showing the transfer of the basis of woman's life from domestic experience to books. The woman's club, I suppose, may be said fairly to take the place of the sewing circle of our mothers and grandmothers. The contrast even in the name is significant, as marking the transfer of interest from the circle of domestic experience to the wider domain of the recorded life of the world, to the realm of books.

Thus at whatever point we examine the life of the present, we find it basing itself on books, both for action and for enjoyment, and that in an ever-increasing degree. This truth is peculiarly evident to you as librarians, since the facts of your own profession and the rapid growth of libraries and library work afford one of the latest phases of this general movement.

From 1875 to 1896 the number of libraries in the United States just about doubled, increasing steadily, and adding, during this period, about 2000 libraries, or a little less than 100 per year. From 1896 to 1900, 1350 libraries were added, or about 450 per year. From 1900 to 1903, 1500 libraries were founded, or 500 per year. In the past ten years the number of libraries must have doubled; a ratio of growth at least four times that of the population. . . .

It is plain that the adjustment of the library to this movement of men's minds towards books is the most important practical question for all of us. Questions of management, of administration, of methods are all of secondary importance beside this one—if, indeed, they may be called even secondary. For this change of base is a revolutionary affair, not a mere matter of readjustment of detail, and it is no easy task for the library to find itself in such a movement. Libraries are so small a part of the national intellectual life, so small, in the mass, for example, in comparison to the schools, so small in the single institution in comparison to the great universities, that their proper influence and work are easily overlooked. There is sometimes danger that they may be swept into currents guided by other forces rather than find opportunity freely to contribute their own share to the movement.

Let us then turn to the more practical side of the question, and ask how the library is adjusting itself, in this changed relation of men, where it has best succeeded, and where it still has most to do. Let us ask where experience seems to promise successful solution of problems, and where the problems are in that stage in which only doubtful success can be expected from experiments, and final solution still lies far before us.

The library began as a place to keep books, permitting their use by the public, but often under such restrictions as seem to indicate that this service was granted "grudgingly and

of necessity." Books and the higher life were in some obscure way correlated in the mind of the librarian, and he too often seemed to feel that these were treasures not to be shared by the many. The first change which came, therefore, as the library was swept into the general intellectual current of the time, was the removal of restrictions on the use of books and their replacement by devices intended to encourage and extend that use. A second step, and a much more revolutionary one, has been to teach the community directly the uses of books, and thus not merely to afford easy conditions for the use of books on the part of those who want them, but to add a positive force which will compel the books to go out into the community, there to perform their present service and to create a demand for an increased service in the future.

This change marks a fundamental departure of the library from its old basis, and one which will affect it greatly, for good and perhaps for ill. The movement toward freedom of administration was really concerned with small matters, and left unaltered the central plan and purpose of the library. But with the assumption of direct educational work for children, for women, for men, the library has entered upon a new epoch in its evolution. It has taken up duties which are certain greatly to increase, if successfully performed, duties whose performance will demand greatly enlarged resources—of space and of money, of books and of working staff. And what is of even greater importance, the purpose, the point of view, of those who control the library, and the temper of the administration, will change, and ought to change, under the pressure of these new duties.

This positive and educational library work falls into two main types—that for children, and that for adults—both men and women. It is still in a tentative condition, in a formative and experimental period. The results are still so few and recent that they do not admit any exact formulation. They permit only general and suggestive statement.

Work for children is, in some ways, the easiest educational attempt of the library, since it runs parallel to the work of the schools, and those for whom the work is done are easily reached and easily guided. Its function is, of course, in part to supplement the school. It would be, however, a great mis-

fortune if it were looked upon merely as a supplement to the school, as a means of providing reading which the school ought to buy, but cannot afford. Its purpose is rather to begin in childhood, both for pleasure and for profit, a voluntary association with books which lie wholly outside of the school program. It aims to begin the early formation of the habit of reading as distinguished from study—a habit which will be permanent, instead of ending with the period of formal instruction. It recognizes the fact that school life must soon end, and that when the end comes, the important feature of the child's intellectual condition is not so much the amount he has learned as the temper and habit of his mind toward books. Has he merely learned certain truths from books or are books open to him? It is of fundamental importance to the community that the second alternative be secured. The school libraries and children's librarians are, therefore, not to feel that their duty is to supplement the school. That duty lies on a different, and, in a way, a higher plane, in a more spiritual region. It is their part to make the child a citizen of the world of books, and to naturalize him so thoroughly that he will always remain a citizen. Thus only can he share fully, not only in the high and permanent pleasures that books afford, but also in that great movement of life toward books which marks our time.

From remarks which I have heard on various occasions, I believe this extension of library service and library duties to youth has often been misunderstood. Work with school children, whether done by the library force as part of their duties, or by assistants especially engaged, has seemed to many to be a somewhat unnecessary extension of the library—something of a luxury. These added duties have often been assumed by the libraries under special pleas, and for reasons temporary in character. But in that wider view which I am trying to present, the truth is recognized that the library is a permanent storehouse of books for the community, to which the citizen of every class and age must repair for knowledge not only interesting and useful, but necessary to the conduct of life. We recognize also that while the training of the schools soon ceases for every individual, the service of the library extends

throughout life. We assert also that the possibilities of this service must be taught to the members of the community from childhood, and that the efficiency of the books will largely depend on the efficiency with which this teaching is done.

Especial care must be taken with children and youth toward the end of the ordinary school periods—in the upper grades and in the high school. Here it is that the transition to independent reading must come. The children's room must not be merely an appendage to the kindergarten and primary school, but the library must supply to youth of all ages not only books, but inspiration in reading. The questions which arise in work for children are many and often perplexing, but, if these general principles are accepted, they are, after all, questions of detail rather than of principle.

The library's influence over women has been the greatest in extent and productive of the largest results; so much so that, in the opinion of many critics of the public library, that institution is in great danger of becoming "feminized." I shall not attempt to discuss so large a subject as that indicated by this fearful word, but it may not be unprofitable to touch upon the causes which have given the work of the library for women at once so great an extension and so great a success, as well as some obvious limitations. I should place first among the causes, both for the success and the limitation of this influence, the recent acquisition by women of large opportunities for the intellectual life, their natural conservatism, and their greatly increased leisure as compared with men. That women read books, and read them in enormous numbers, is granted, indeed asserted. That they read seriously I have heard questioned and have always wondered at the doubt. It seems to me rather that they never read in any way except seriously. How many women—reading women, I mean—can put away an unfinished book without a certain sense of guilt? How many can "browse about" in a library, and enjoy doing so? How many really like to read a dictionary or encyclopædia without ulterior designs upon an article for the women's club, or, at least, without wanting to know something? These are all tests—unconscious, but none the less excellent—of real readers, of those to whom

books are live and intimate friends. While I have no statistics at hand, I fear that many women most devoted to libraries would fail to reach this standard. The field of the intellectual life has been widely opened to women so recently that they still feel a certain sense of duty along with the privilege which is granted them in entering it, rather than a complete sense of being at home there. The conservatism of women helps this tendency to read seriously and for general purposes. The traditional use of books as a means of culture appeals to their more conservative mind as it does not to men. They are more easily induced to read for reading's sake—they are willing to read the books one ought to read. They are moved by considerations of mental improvement independent of any result beyond the improvement itself. The library as a library attracts them. Then, too, the amount of their reading and its character is modified by the fact that women are so much more limited than men in means to pass their leisure. Jerome K. Jerome (if correctly reported by newspapers) recently pointed out that much so-called reading is no more an intellectual process than is smoking a cigar, and that often we go to books just as to the cigar, to pass the time and to prevent the intrusion of disagreeable thoughts. Of course this is, and ought to be, wholly true, and since with us the cigar is a masculine privilege, the woman must take to books as the man takes to smoking, and even to drinking. Speaking seriously, the library is to many women a relief from care—the only distraction from the monotony of routine. It is a cheap and easy thing to sneer at this use of books, but we who believe in the friendship of books know that here lies one of the greatest blessings they can give, as it is one of the greatest blessings of true friendship. Nor do we wonder that the uncultivated, or the half-cultivated, often choose their book friends from a class not greatly above their own.

On the other hand, women have hardly begun to use books on lines along which we are seeking to get men to read—in directions connected with their trade or profession. Domestic industries, so far as they are in the hands of women, are still almost wholly dependent upon tradition. They are not ex-

posed to competition. Failure or inefficiency does not put the proprietor out of business. Their results are not measured in dollars and cents. In a word, the whole line of motives which is forcing masculine industries over to the basis of books is lacking in the chief feminine occupations. We are now seeing only the feeble beginnings of the attempt thus to transfer them from tradition to science. A long time must pass, and social conditions greatly change, before the transfer is made. Thus women are not forced from general to special lines of reading, while they have greater motive for general reading than have men.

As a result, women are becoming, to a degree without example in the past, the possessors and transmitters of the life of culture. I do not believe that fewer men read good literature than formerly, but the increase in masculine readers of this type has been so much less than the increase in women readers that in comparison the number of men seems to have shrunk greatly. Of course much of this reading by women for culture is desultory and aimless, much is misdirected. But after all deductions are made, it remains true that the knowledge of books, and, indeed, the friendship of books, seems to be tending to become the possession of women rather than of men. It has always belonged to a certain class of men—not a very large part of the community—and it is still theirs; but its extension to other classes has been along female lines rather than male, and its transmission to the next generation seems only too likely to depend in a large measure upon the female line. College statistics at present show the same facts. Language, literature, and art are the chosen studies of women. Men turn rather to science, economics, or politics—subjects which, they suppose, bear directly on future plans for life. These great subjects whose main purpose in education is the uplifting of the mind, the widening of the mental horizon without direct reference to any specific line of life—these appeal far more strongly to women than to men, and their influence, in a rapidly increasing degree, will reach the next generation through the mother rather than through the father. It would be a pessimistic view which should say that modern society is coming to

depend on the mothers for the accumulation and transmission of culture, while retaining in the male line the function of accumulating and transmitting wealth, though much could be said for the thesis and a very plausible argument could be constructed for it.

If all this is true, it is inevitable that women should use libraries far more than men. It is equally inevitable that in this large use much should be trivial, much customary, much misdirected and unwise. Nature has no means of reaching success except by the rule of natural selection—the old-fashioned plan of “cut-and-try,” and this means much failure along the road of advance. We who see the work of the library from our daily experience know how much it is contributing of culture, how much of happiness, to the life of women, and through them to that of the community.

But men—why do they not use the library, say the critics, and what shall the library do to increase its use by men? You have all read the vigorous article that the *Independent* published on this subject last summer, which, with much of error, contains a good deal of truth in a stimulating form. It presents a subject which must have a somewhat larger treatment.

It ought first to be said that in this and other articles on the topic the terms *women* and *men* are by no means similarly used. The writers are not concerned about men at large—the husbands and brothers of the women who are said to visit the library—the women of comparative leisure, who are seeking information on art, literature, or ancestry, who are trying to get up a paper for the club, or who visit the library for recreation. It is the plumber, the machinist, the grocer, whose absence they deplore, and to whom they think the library ought to give help. Not only so, but it is the plumber as a plumber, rather than as a man, whose presence is desired and who is to be aided. The library, says the *Independent* in effect, ought to teach the plumber how to “plumb;” ought to furnish him with information which his boss is unable to give. But this is a new function for libraries, however useful it may be, and a function which libraries do not attempt for women. Dressmakers do not (I speak under correction, but I think I am right) expect to secure at a library a knowledge of how to fit

a difficult customer, any more than do tailors. Yet this sort of thing, we are told, the library ought to do for men; and we are told in a tone which implies that here is an obvious duty which only wilful ignorance can overlook.

It ought rather to be recognized that in undertaking this work the public library is entering a new and almost unexplored field of effort, and also that it is trying to extend its influence to classes of the community which it has not hitherto reached, and along lines of knowledge which it has never seriously attempted to follow. In such a work there must be many experiments and many failures, and the positive results will be small for a long time. . . .

The problem for the library, as regards men, is therefore twofold: 1, Can men be induced to visit the library for general purposes, to use it in ways similar to those for which women come to it? 2, How can the wage-earners and handicraftsmen be induced to visit the library and use its books for their practical advantage?

Let us first consider the general question: Can we reach the men? The women come to the libraries, say the critics, in shoals and droves, for all sorts of intellectual purposes, good and bad. You catch the children, they say, in school, when they cannot get away, and indeed are glad of relief from lessons; but the men—can we reach them and affect their lives? In reply we must say at once and frankly that no such large volume of success with men is possible as has been the case with women. The public library came to women at the precise moment when increased education disposed them to use it, and increased leisure gave them the opportunity. It fills a space in their lives which would be otherwise void. But the present time is one of decreased leisure and increased intensity of work for all classes of men. Perhaps I ought to except from this statement the wage-earner, who as eight hour laws and customs come into force will have more time for reading than the man of almost any other class in the community. This movement toward lessened hours of labor is more effective where libraries are best organized and therefore presents an opportunity for the extension of library influence, both general and special. The opportunity must be improved, yet

neither the wage-earner nor the business man will be easy to reach; neither has been among the active patrons of the library in the past. Their lives are already full, both with business and pleasure, and if the library is to reach them, it must attract them on lines which appeal to them more strongly than business or present pleasure. It must reach needs which they know and feel to be real.

I do not believe that men of the present generation will come to libraries in great numbers for the purposes that attract women. We might as well admit that they will not substitute the novel for the cigar, the printed story for the companionship of the club. They will not read good books because they ought to do so, and the number who will read them because they like to do so is unfortunately not great. Men have not thus acted since the world began, and man-like, they will not do so now, even though such conduct on their part would help our library statistics very greatly. Nor will any great number of them read in order to enlarge their basis of life, for, in spite of the greatness of the movement toward books, it affects at first hand only a few people in the community. The mass of workmen, now and always, will get their knowledge from tradition or at secondhand. It will be the unusual man who will get his ideas from books at first hand and thus improve his work and that of his fellows.

The problem is then to reach these few, and through them the community; and this brings us to the second phase of the question. I do not find that the problem has been solved; perhaps it is too recent. But libraries have been attempting its solution by various methods and with varying success.

The first and most successful attempt is that of the large libraries, like that of Pittsburgh and the Pratt Institute of Brooklyn, which maintain a technical library for the men—a library adequately housed in its own rooms and administered by a special librarian. These technical libraries for working men succeed in their aim of reaching many of the class for which they are established. They offer not merely an opportunity for reading, but that guidance in the use of books which all classes of the community need, if they are to use books for a serious purpose. They show us that success in this line of effort may

be reached if the library has an income sufficient to enable it to undertake the task on a large scale.

This condition is, however, not that of most of the libraries which are represented here. Our incomes are none too large for the work which we must necessarily do for the general public. Such libraries must ordinarily content themselves with offering to men opportunities for reading without special guidance in the use of the books. This work has been attempted in a good many of the smaller libraries. They attempt to provide masculine conditions for reading and reading material which will appeal to men. The first includes a well-furnished, comfortable room for men, where a man can come in his working clothes without feeling that he is out of place; smoking may be allowed or not—both plans are tried without great difference in apparent result. The masculine reading comprises copies of newspapers and magazines; good books of literature which can be left in the room (paper bound copies suggested); most important of all are trade journals; if possible, files of the recent volumes of these journals, selected according to the industries of each town; and the most readable and most recent reference books on similar subjects. In a word, a room is furnished and provided with reading which will appeal to the classes of men who do not ordinarily use libraries and who are not greatly interested in literature.

This plan is a good one and ought to be tried, but I believe the conditions are exceptional under which it will reach large numbers of men. Inertia and habit will keep most of them away from the library. They will see the daily papers at their wonted places of resort, and the room, necessarily lacking in much of the freedom of the club, will fail to attract very many of them. They will not form the habit of visiting it, even though they might enjoy it if the habit were formed. It must also be remembered that increasing numbers of the larger manufacturing concerns are providing their employees with reading of this kind, and thus limiting the use of the city library.

In some libraries the attempt to reach men has gone still further and has led to an inclusion of attractions which are ordinarily

regarded as outside of the work of a library. They have attempted to combine to some degree the privileges of a club with that of the public library. The Stevens Point Library has a club room, equipped with billiard tables, cards, etc., as well as with technical journals and similar books. This, the librarian reports, is very successful in attracting boys, many of whom learn to use the library. Men, however, do not come in large numbers, as they do not care to use a place frequented by boys, and in which smoking is not permitted. At Wausaukec a special room with games and where lunch is served has been established at the library as a means of furnishing a sort of club room for lumber men who come to the village, especially on Sunday, and who have no other place of resort, except the saloon. How far such methods are advisable as a part of library work is a question which will often be asked during the coming years and which only experience can answer. At present such enterprises have not gone beyond the stage of early experiment.

Summing up the result, I would frankly confess that the reports which I have received are not numerous enough for a positive judgment, yet it is my impression that where there is an income large enough to provide a special librarian and a public large enough to warrant the expense, this movement for special libraries for men is likely to succeed. It seems also to be true that where the library provides the men with opportunity for reading only, and does not furnish guidance for readers, no very large use is made of technical books and there is no greatly increased use of the library in general. How to guide the reading seems, therefore, to be the central factor in the solution of the problem.

In a small town a special librarian is impossible, for financial reasons, but there, as well as in large cities, lectures can be given which deal with practical subjects and the aid to their knowledge which the library affords. Many cities are giving such courses of lectures, notably perhaps New York, and with considerable effect on the use of the public library. I have no statistics regarding such lectures from the various cities, but undoubtedly this method offers the easiest plan for extending the use of the library in smaller cities and towns. I say the *easiest*, and it

will not be difficult to secure good lectures on literature, history, or art, but lectures on the practical subjects are much more difficult to obtain, since it is hard to secure lecturers who know more about the trades than do the craftsmen who constitute the audience.

If these movements are to succeed, they must not be attempted in an amateurish way. They must be well planned and well executed—planned and executed with careful reference to the wants of the men of the community. Above all, they must be persistently carried out with full vigor year after year, even though results are apparently small. Their purpose must be steadfastly maintained and the methods of execution continually readjusted, as success or failure indicates. It is no light or easy thing to change the habits of half the adult members of the community—to cultivate the reading habit in those who have reached maturity without acquiring it—and the work which the library proposes for itself involves such a task.

If men are to be reached at all it must be on a business basis, not on that of occasional effort. Nor must the missionary spirit prevail, for men, as a rule, do not wish to be reformed or to be helped. They must find in the library a place which appeals to their sense of comfort and which gives them things that they want, or, like other sensible people, they will not use it.

One word in closing this topic, and that in emphasis of what I have already said. It is easier to keep a boy reading as he grows up than to catch him again as a man after the library has lost him. Take a lesson from the church. The boy who graduates from Sunday-school rarely returns for a post-graduate course. In the wise administration for the work for children and youth lies the main hope not of reaching, but keeping men in the library.

But it should be definitely understood that this enlargement of library work which the times are forcing upon us means increasing expense, more room, more books—which must be more frequently renewed—and a larger library staff. It means the attempt to do efficiently several lines of intellectual work for the public instead of purveying literature for those who desire it. This new work the library can readily accomplish, but not with

the staff which was sufficient for the old duties. Any library can provide, for example, the list of desiderata mentioned in the *Independent's* article, which could easily be extended. They can all be furnished by the library if the public wants them and will pay for them. They cannot be, and ought not to be, supplied by an already overworked library staff of two or three persons.

The library, therefore, should not enter upon these duties blindly or ignorantly. It is a great task which is thus undertaken—to educate the community to use books and to guide it in that use. Although small beginnings are possible, the work will inevitably grow on our hands just as that of the schools and colleges have done, and for similar reasons. But whatever difficulties lie in the way of their performance, it is plain that the library must assume these new duties. With many experiments, with many failures, with many partial successes, the library will extend its teachings, its conscious influences, until they touch the life of the community at every point.

In this rambling talk I have discussed library work as it looks forward to new problems, and have devoted only a word, and that perhaps a rather disparaging one, to the traditional use of the library. I would not leave the subject in this way. For the traditional use of books remains and will remain the center of library work and the main source of its best influences. The problem of the library to-day, looked at from within and not from without, and in relation to other agencies, is essentially that which confronts the university. Both institutions once stood for culture and for culture exclusively. Both are now challenged by the spirit of the newer time and are called upon to justify themselves as public utilities. This they must do, and that in full measure, but there is real danger that both, in the multiplicity of the new duties thus forced upon them, may forget the weighty words, "these ought ye to do and not leave the other undone." For, after all, the highest public utility which the library offers, or can offer, is the opportunity to cultivate the friendship of books. This utility is none the less precious because it is intangible. Indeed, it is the unique privilege of the library among municipal enterprises

that it can provide a service which aids the higher life of the citizen so directly and so purely. In the spirituality of this function, the library stands second only to the highest institutions of pure learning, and to the church.

No new undertaking, no extension of work, no plea of necessity can warrant or justify any loss of power on this highest level. The problem is not to discover how to sacrifice as little as possible of the old spirit to the new duties, but to learn how through the new duties we may make more widespread and more potent for good that oldest and best inheritance from the past—the love of books.

"The people's university" the library has been called, but it would be as great a pity if the librarian so understood this term as to believe that people came to the library only to learn, as it would be if any went there who could not learn what they sought. That university which is a place to study rather than a place to live is missing its best possibilities, and in a similar way the library ought to be, first and always, a place to read rather than a place to study. I would not go so far as to say that I want to find it a place to "loaf," though I might easily be provoked into saying so; but certainly it must be a place where I can "invite my soul"—such a place as the world gives me elsewhere only in the church or in the silence of nature. Trade journals and technical works are of great use; books for women's clubs are good things; the children's room is a necessity; but these of themselves no more make a library than a kitchen, dining room and bedroom make a home. Out of such utilities as these you may get a boarding house, but nothing better; the family makes it a home. Those are wholly wrong who believe that standard books are so cheap that anyone can buy them, and therefore the library could conceivably get on without them. Without the best literature you might get a very useful institution, no doubt, but not a library, for in a library the great works of great authors are the soul and theirs is the spirit which enables the library not merely to contribute to the advance of the community toward prosperity and intelligence, but also, in some degree, to touch its higher life to finer issues.

LIBRARIES OF HISTORICAL SOCIETIES

A COMMITTEE consisting of Dr. Reuben G. Thwaites, superintendent of the Wisconsin Historical Library; Dr. Benjamin F. Shambaugh, of the University of Iowa, and Dr. Franklin L. Riley, of the University of Mississippi, has just submitted an elaborate report to the American Historical Association upon "The best methods of organization and work on the part of state and local historical societies." This document, containing elaborate statistics and other data, considers the entire subject in detail under the several headings "statistical," "organization," "scope and purpose," "methods of presentation," "interesting the public," and "co-operation," the report being practically a synoptical treatise on the management and aims of such societies. A synopsis of the recommendations in the document is presented by its author, Dr. Thwaites, in the *Iowa Journal of History and Politics* for April. This, however, omits the statistical features summarized below, which are taken from the manuscript of the report itself.

Owing to the nature of these organizations, which range in effectiveness from the great state societies of Massachusetts, Pennsylvania, and Wisconsin to the small and often feeble local historical societies of minor counties and towns, complete statistics were unobtainable; but the tabulated returns, although necessarily showing many gaps, exhibit on the library side a remarkable showing.

In treating of the libraries of the 61 state historical societies and departments of history and archives, Dr. Thwaites says: "As will be seen, the returns are incomplete. Nevertheless those given show that in the state historical libraries and departments of the United States thus far heard from in detail there are shelved 1,591,191 books and pamphlets; it is probable that if figures could also be had from those not reporting there would be a total of nearly, if not quite, 1,700,000. State appropriations reported exhibit a total of \$140,370 annually; it is probable that the total might reach \$175,000 were the value of all state help represented in the above table, for in numerous Western commonwealths there are additional perquisites of official printing, stationery, postage, and miscellaneous supplies. The report on invested funds represents but three societies, which have an aggregate of \$444,000; but no doubt the facts, if ascertainable, would reveal a total for the various states of upwards of \$500,000."

In commenting upon the tabular statement representing 110 local historical societies, he writes: "Even from this incomplete table, we have an aggregate of 885,133 books and pamphlets in the several reporting libraries, and an annual income of \$93,372. We may safely

conclude that nearly every society of importance is here represented by statistics; yet were all the figures in, we doubtless should find a total of upwards of a million books and pamphlets—and were it possible to give the total of all membership fees and miscellaneous cash gifts devoted to the conduct of this class of societies, it is quite within the region of possibility that \$200,000 are annually contributed in the United States for this purpose."

Other items in the report, of special interest to librarians, are the following:

"Of the national societies engaged in the collection and publication of historical material—for obvious reasons the American Historical Association is not included in the report—easily the most important in library and resources is the American Antiquarian Society. Its substantial building at Worcester, Massachusetts, contains 120,000 volumes and a valuable collection of manuscripts, portraits, and antiques. The American Geographical Society, at New York, is housed in a \$200,000 building and possesses a library of 40,000 volumes. Other flourishing bodies are the American Numismatic and Archaeological Society of New York, the Daughters of the American Revolution (with a large building in Washington, now in process of construction), and the Jewish Publication Society of America.

"The list of sectional societies embraces many that are doing important work. The wealthiest and most effective of these is the New England Historic Genealogical Society, of Boston, housed in a building worth \$65,000 and having a library of 66,000 titles. It possesses, also, notable collections of manuscripts, and a large museum of portraits, curios, and antiques. The Confederate Memorial Literary Society, of Richmond, owns a museum and grounds valued at \$60,000, and an interesting library of printed and manuscript material relating to the history of the South prior to the War of Secession.

"It was found that 12 societies or departments own their own halls—those valued at \$100,000 or over being: Wisconsin, \$610,000; Iowa department, \$400,000; Massachusetts, \$225,000; Pennsylvania, \$200,000; and New Jersey, \$100,000. Thirteen are housed in their respective state capitols, seven are quartered in state universities, and six in other public buildings. The largest state appropriations are given to Wisconsin, \$32,000; Minnesota, \$15,000; and Iowa (department and society together), \$15,000. The Massachusetts, Pennsylvania, and Wisconsin societies are of course the wealthiest in endowments, possessing respectively \$221,000, \$169,000, and \$53,000 in invested funds. The largest libraries are: Wisconsin, 275,000 titles; Pennsylvania, 245,000; Massachusetts, 155,000; Kansas, 115,000; and New Hampshire, 100,000.

"Some of the local societies are institutions

of considerable importance. The Essex Institute, of Salem, Massachusetts, with its income of \$15,000, library of 400,000 titles, and building valued at \$28,000, easily takes rank with the state societies. So also do the New York (City) Historical Society, with 1057 members, endowment funds aggregating \$236,000, yearly income of \$12,800, and a building costing \$400,000; the Chicago Historical Society, with a library of 100,000 titles, housed in a \$185,000 building, and supported by endowment funds aggregating \$96,000; the Long Island Historical Society, of Brooklyn, with 70,000 titles, in its own building; the Western Reserve, of Cleveland, with 60,000 titles in a \$55,000 building; the Worcester (Mass.) Society of Antiquities, housing 55,000 titles within a building valued at \$25,000; and the Buffalo Historical Society, which dwells in a \$200,000 building, has a library of 16,000 titles, and receives a municipal grant of \$5000 per annum (the only instance of this sort that has come under our notice).

"Many of those owning much smaller libraries and museums, quartered in less costly houses, are also institutions wielding a wide influence in historical study. It is interesting to note the considerable number finding lodgment in public library buildings, a significant connection promising well for both organizations. In several of the Eastern states, notably in Massachusetts, where nearly every town possesses an historical society as well as a public library, the former frequently owns or rents some historic building, generally a colonial farmhouse, which, often with excellent taste, has been converted into a public museum. This is an example well worth following by other local societies. In the South and the Middle West are many communities with historic structures that might be preserved for a like purpose."

DESTRUCTION OF SAN FRANCISCO AND OTHER CALIFORNIA LIBRARIES

THE terrible catastrophe in San Francisco on April 18, when earthquake and fire practically obliterated the city, included in its destruction nearly all the libraries of San Francisco, while the effects of the earthquake alone caused injury to libraries in other towns or cities.

From various reports received the record of destruction appears to be as follows:

SAN FRANCISCO

Public Library, main collection, located in the north wing of the city hall, completely lost; four branches are left, with about 30,000 volumes. The total contents of the library system (six branches and eight deposit stations) was given in the last report (to June 30, 1905) as 160,457. The library was founded under the first general library law of the

state, passed in March, 1878, and was opened to the public on June 7, 1879. It opened with 6000 books, for reading room use but not for circulation, in rented quarters in Pacific Hall, with a city appropriation of \$24,000. The circulation of books was begun in 1880, when there was an issue (home and library use) of 354,000 v. among 10,500 cardholders. The library has grown steadily during succeeding years, and in 1905 it contained a strong and well rounded general collection and circulated 830,225 v. for home use among 40,479 readers. It was established in attractive quarters in the city hall in 1893, and owned three of its branch buildings, while the city bond issue of 1903 made provision for appropriation of \$1,647,000 for the purchase of a site and erection of a fine central building. George T. Clark, the librarian, is a member of the present Council of the American Library Association, and Joy Lichtenstein, assistant librarian, has for the last two years been president of the California Library Association.

Under date of April 28 Mr. Lichtenstein writes: "We are still in the ring, if a little the worse for wear. Will start up next week. You would not know us just now, but wait until you see the new San Francisco." In a letter written May 2, he says: "The main library is entirely gutted—I could not find even a souvenir book or part of one. It is burned bare and absolutely nothing was saved. All the branches are saved except two; the new McCreery branch will probably be made headquarters. We had just been buying \$5000 worth of books for this branch, and so possess many good reference works. The branches all contain standard collections (reference and popular) and some periodical sets, and this is what we have to build on. We expect to get about \$75,000 insurance and have left \$30,000 of this fiscal year's appropriation. The spirit here is wonderful, and if no reaction comes it ought to be Chicago over again. But the ruin is well-nigh complete. Over half the town in area and probably nine-tenths of the productive part of it is gone—absolutely level with the ground. All the rest is more or less shaken, hardly a house escaped entirely. Our trustees meet to-day and will take steps toward reorganization. We will probably not be able to carry our whole staff, and this will leave some excellent people open for positions. I trust that some libraries will be able to take advantage of this. As to our future: there will be nothing to speak of to levy taxes on in San Francisco next year. A bond issue or something else will have to be resorted to, to get funds for running the city government. The charter makes it mandatory to levy at least 1½ c. on the \$100 of assessed valuation. Thus our future income depends somewhat on how much the city can raise to run the government. As to the main library, the lot is already purchased and a million dollars of bonds authorized for the building. If the

bonds are sold we can go right ahead. The whole thing depends upon the maintenance of the present spirit. If so, San Francisco will rise nobler than ever before. But the task is colossal — enough to make the strongest spirit quail. Fortunes have been swept away; men of standing a few weeks ago are now taking their places in the bread line. But the strong men are standing stiff and may pull us through — as an optimist, I believe they will."

Mechanics' Institute Library, at 31 Post street, in the heart of the business district, completely destroyed. The library was founded in 1854, and contained about 120,000 volumes, its development, especially in later years, having been particularly in technical, industrial and scientific works, while it had also many fine art books. It possessed a complete file of the British specifications of patents and rare and complete periodical sets, and had a membership of about 5000. By a merger arrangement effected in January of this year the library had been consolidated with the old Mercantile Library, under the name Mechanics-Mercantile. The librarian, Mr. Frederick J. Teggart, who is also honorary custodian of the H. H. Bancroft collection purchased last autumn by the University of California, writes: "We propose to rebuild at once." With insurance and other funds, the library authorities will have about \$150,000 with which to begin the work of replacement.

Mercantile Library, at 223 Sutter street, completely destroyed. This was the pioneer library of San Francisco, organized in 1852 and incorporated in 1853. Its history, however, had been unfortunate, its real estate investments proving disastrous, and the competition of the Odd Fellows', Mechanics' and other libraries pressing heavily upon it. Its building at Van Ness and Golden Gate avenues was sold in 1902, the library having been removed to the rented quarters on Sutter street. In January of this year it was merged with the Mechanics' Library, as previously noted. It contained about 80,000 volumes, especially strong in art and literature, and including many rare and valuable works.

Sutro Library, stored in two divisions, one in a warehouse at Pine and Battery streets, completely destroyed; and one in a building at Montgomery and Washington streets, escaped with little injury. This great collection of about 200,000 volumes was gathered by Adolf Sutro, former mayor of San Francisco; it had been his expressed intention to give the collection either to the city or to the University of California, but this was not stated in his will, which bequeathed all his "books and papers" to his sister, and the estate since his death in 1897 has been involved in family law suits, the library having been packed away in storage and kept absolutely inaccessible. As it had never been classified or inventoried — though a beginning in this task was made under Mr. Sutro's direction — no authorita-

tive statement of its contents can be given, but it is known that it contained many treasures, among much that was probably valueless, for Mr. Sutro bought his books almost wholesale, through agents all over the world. It contained for instance the collection, including thousands of early manuscripts, formerly owned by the monasteries of Bavaria, which were confiscated in 1886 by the government of the kingdom, lumped into one great lot and bought by Sutro's agents. In the same way he acquired from the Mexican government a forgotten collection of books, memorials, diaries and manuscripts bearing upon the early history of California and Lower California. This collection, regarded as containing invaluable materials of history of the old Pacific coast, it is said was never unpacked from its boxes. The library is said to have contained also a complete collection of Shakespeare folios — first, second, third, and fourth — many rare manuscript items of Shakespeareana, nearly a full set of folios of Ben Jonson, a rich collection of editions of the Book of Common Prayer, many fine specimens of early printing in Europe and Mexico, rare and valuable incunabula, a collection of British pamphlets and broadsides running from the early 17th century and said to be the most complete outside of the British Museum, and a remarkable collection of Hebrew manuscripts. About 120,000 v. are said to have been stored in the building that escaped the fire, including the Shakespeare, Book of Common Prayer and British broadside collections.

Other libraries destroyed are: the Academy of Sciences Library of about 12,000 volumes, important as a collection in natural history, particularly in transactions and proceedings of scientific societies; the San Francisco Law Library, 30,000 volumes; Law Library of the Supreme Court, 15,000 volumes; French Library, 10,000 volumes; library of the County Medical Society, 5000 volumes; part of the fine California collection of the Bohemian Club, 5000 volumes; the historical library of the Society of California Pioneers, notable for its collection of typewritten pioneer reminiscences; and the B'nai Brith Library, 10,000 volumes. A number of valuable private collections, both law and general, are also destroyed, as are the Booklovers' libraries and nearly all the bookstores.

The H. H. Bancroft Library of over 50,000 v., escaped the fire, which stopped within one block of the building and was not injured by the earthquake. This collection, the richest in existence relating to the history of the Pacific coast, was purchased last year by the University of California for \$250,000, as has been previously noted in these columns. It had not yet been removed across the bay to the university buildings at Berkeley, but was still housed in the building erected for it by Mr. Bancroft, an isolated two-story brick structure near the corner of Valencia

and Army streets. It was the only library left intact in the city. At the time of the shock the manuscripts and books had already been packed for removal, and their transfer to Berkeley was effected under military escort the first week in May.

LELAND STANFORD JR. UNIVERSITY

New library building completely wrecked by earthquake, as were most of the other buildings; books, collections and apparatus not greatly damaged. Loss to the university estimated at about \$4,000,000. The library building was not entirely completed, the cornerstone having been laid in May last. It cost \$1,000,000, and was a magnificent example of the mission style of architecture.

UNIVERSITY OF CALIFORNIA, BERKELEY

The library was not damaged by earthquake, but has lost about 1000 volumes, which were in San Francisco and elsewhere. Mr. J. C. Rowell, the librarian, has issued a circular asking publishers or others to contribute copies of the more important lost volumes, of which titles are given.

SANTA ROSA

Public Library, housed in beautiful Carnegie building costing \$50,000 (15,000 v.), badly wrecked. Miss Barnett, the librarian, writes: "There was no fire, so the damage is almost entirely to the building and furnishings. The books are intact." The cost of repairs is estimated at \$6000. The worst damage was in the California room, which was entirely demolished.

SAN JOSE

Public Library, housed in \$50,000 Carnegie building (about 15,000 v.), escaped with slight damage by earthquake, but is said to be the only stone building left standing in the city.

REDWOOD

Free Library, in attractive Carnegie building (about 2500 v.), said to be seriously damaged.

OAKLAND

Public Library, in \$50,000 Carnegie building, opened in 1902, reported damaged to extent of about \$2000.

From the California State Library, at Sacramento, the following appeal has been sent out: "The state library desires to make a special collection of matter relating to the San Francisco fire, and we should receive with great thanks any contribution to it that our library friends may be able to make, in the shape of newspapers or otherwise. We should like particularly to get private letters received in the Eastern states descriptive of the experiences of the writers during the catastrophe, and the period of confusion following it. Would you be kind enough to let this be known among the library people? If requested, such letters will of course be sealed up for any number of years the donor may request."

LIBRARY REFORM IN FRANCE

THE French Minister of Public Instruction last summer appointed a commission to study the organization of the archives and libraries of France. The general committee at once resolved itself into two subcommittees, on Archives with M. Cochery as chairman, and on Libraries with M. Leopold Delisle, for so many years the director of the Bibliothèque Nationale, as chairman. Discussing the matter in two letters to *Le Temps* for Dec. 27, 1905, and Jan. 10, 1906, which are reprinted in *Bibliothèque de l'Ecole des Chartes* for November-December, 1905, Professor C. V. Langlois, of the University of Paris, and one of the foremost of French bibliographers and historical students, says:

"A unique occasion is thus offered to competent scholars and administrators to give suitable and thorough consideration to the very grave library problem. The condition of libraries in France leaves much to be desired and for the following reasons:

"The calling of librarian is not yet in our country a legally regulated and protected profession with definite duties, as the teaching professions have long been. It is not truly a career. Entrance to and promotion within its ranks are haphazard and the pay is not always proportioned to the work done.

"No uniform recruiting at the bottom. The university libraries alone require (since 1893) a definite and serious preparation before admission to the library staff. Those holding diplomas from the *Ecole des Chartes* and the *Ecole des Langues Orientales* are exempt from examinations for positions in the Bibliothèque Nationale. Since 1898 there are formalities in the nature of examinations of varying grades (which usually mean little or nothing) for entrance to most of the 'bibliothèques classées,' and special competitions when vacancies arise in the different municipal libraries, but there are still libraries where not even the pretence of an examination exists, where the first comer may be installed at once without certificate of general education or of technical preparation.

"No regular promotion. Nowhere, even in the Bibliothèque Nationale or in the university libraries, does there exist a fixed relation between promotion at will and promotion by seniority. It is an arbitrary régime tempered by the justice of the chief librarians who are often enough chosen, as is well known, outside the profession and from persons whom the politician, who holds the appointing power at the moment when vacancies occur, chooses to or must appoint. This circumstance does not of course prevent clear-sighted and fair librarians, for it often happens that these improvised judges of the hierarchy are very good fellows indeed, but it cannot but demoralize the subordinates, the real members of the pro-

fession, because it sensibly lessens their chances for reaching, by merit, the best places which the career offers. Organized vocations differ precisely from those which are not organized, in that those in chief administrative positions must first prove their right to be there.

"No adequate pay. It is not enough to say that library work in general is poorly paid, especially in the lower grades; the statement must be emphasized. In the Bibliothèque Nationale beginners remain at 1800 francs for years. There are now in this library a dozen attendants at this salary, several of whom are over 30 years old and of more than six years' service. But the inequality between different libraries is more regrettable still. There are libraries where the staff does not do much, either because there is really not much to do or because established tradition proscribes excessive zeal, and the salaries are sometimes higher than in the large libraries where the work is very hard.

"Maximum and minimum salaries in different libraries are fixed by chance, when occasion arises, without concerted plan or preliminary comparisons, and they are shockingly out of proportion.

"Such defective conditions could not have lasted till now if public opinion had held the profession of librarianship in proper esteem.

"But it cannot be denied that the majority of the French public still consider library positions as semi-sinecures, a conviction so widespread indeed that some librarians have but lately shared it.

"One still recalls that assistant in the Bibliothèque Nationale, a member of the Institut, who never went to the library even to draw his salary (he said that another employee brought it to his house), and who when recalled to professional duties by his superior replied in substance: 'I believe it to be more useful to society to write good books than to catalog bad ones.'

"The attitude of such librarians has helped not a little to re-enforce existing prejudices. Prejudices the more deplorable because they are the roots of all the ills which with us afflict our libraries.

"Beyond the vague idea that librarians are making a calling of their own, the French public has not sufficiently grasped the eminent rôle which libraries, general as well as special, scientific as well as popular, are now playing in modern society; and it is because this social value of libraries as instruments of research and education is not clearly conceived that their budgets remain so miserably small even while parliament and local authorities give liberally in other ways to science and education. The libraries of France are very poor; the annual budget of the Bibliothèque Nationale and of the three great general libraries

in Paris is less than a million francs; only 20 libraries of the province have more than 10,000 francs annually to spend. The state aids municipal and popular libraries only by grants of books, while the annual sum devoted each year to scientific and literary subscriptions far from increasing is diminishing little by little.

"Abroad, especially in the German and English countries, the situation is quite different. We must neither exaggerate to ourselves the happy conditions of German, English or American librarians nor the influence of their activity on the communities in which they work; they have troubles of their own. The Proceedings (September, 1905) of the last conference of American librarians reads: 'In the United States the administrators of public libraries are not always chosen for their professional merit; sometimes distinguished amateurs or politicians in distress (as recently happened in Connecticut) are selected for these posts.' In the extremely favorable impression which, at a distance or in passing, is left by a study of the libraries of certain foreign countries there is room assuredly for optimistic illusion. None the less, however, the libraries of these countries have certain advantages over ours.

"Whoever doubts this has only to glance over, e.g., Graesel's 'Handbuch der bibliothekslehre' and the publications of the American Library Association. We have nothing in France to compare with the vast administrative establishments of the great libraries of Boston and Washington, or the innumerable public libraries which Mr. Carnegie, his fore-runners, and his imitators, have established in Scotland, England and the United States, nor have we anything to compare as bibliographic instruments with the general catalog of the British Museum library or the 'Gesamtkatalog der preussischen wissenschaftlichen bibliotheken.' But the chief advantage which the German, English and American libraries have over ours is assuredly the faith of the German, English, and American public in their mission.

"Now this faith, of which even the excess holds something to admire, benefits the foreign libraries only because their librarians share it; it has for long penetrated and permeated their *personnels*. This faith, source of life from which all else proceeds, has found its apostles in the librarians, and they sustain it by their zeal and care. Our libraries will equal in all respects the libraries of Germany, England, and the United States when our librarians have for the dignity and ideals of their profession as lofty a sentiment and regard as have our confrères beyond the Rhine and across the sea. But how are they going to have it if they continue to be recruited as in the past under an arbitrary régime? To

sum up, it appears that the real remedy for the present library situation in France is a reform in *personnel*. I desire to indicate in a second letter the view of the subcommittee on libraries as to how this reform may be brought about."

In his second letter Professor Langlois gives a brief account of the discussion and resulting recommendations of the subcommittee; recommendations which will be embodied in a proposed law covering the whole matter of the reform of archives and libraries:

"When the committee met, it found itself without a definite program, but confronted by a host of questions relating to public libraries. Very wisely it decided to study first those topics which might properly be made a subject for legislation and which were based on sound principles, leaving the details of application for later consideration. It was soon recognized that the career or profession of librarian must be organized on the model which is at present offered in France by the educational professions. The first matter then was to consider a serious and uniform entrance requirement. No one is to be permitted to join the staff of a public library who does not present certain certificates of general education and of professional competence as well. The librarian must be, so to speak, a 'gentleman' from the intellectual point of view, and he must know his trade before attempting to practice it. It is not too much to insist, therefore, that henceforth all candidates for library work must first have completed a symmetrical high school course, the entrance to which will be equally guarded by preliminary conditions; must show additional certificates of secondary education and the certificate of professional apprenticeship. Such a system would have in it nothing new, since it is already in force in our university libraries. In fact it is scarcely more than giving general application to the library training of which our university libraries have proved the efficiency for 15 years. The committee has made up a list of the credentials covering general education which will be recognized. The certificate covering professional training will be given after a course of six months in one of the libraries, which shall be designated by the proper authorities to receive apprentices (*stagiaires*). It is to be well understood that such a course will be organized for the specific purpose of training these apprentices and not for the benefit of the library itself, and the committee particularly mentions the experience of foreign libraries which has tended to transform this apprentice into a gratuitous assistant.

"This apprenticeship will be offered every year or every other year to as many candidates as there seem likely to be vacancies in

prospect, and it would have of course a technical and professional character. The committee has not felt called to outline a program, but in all probability it will closely resemble the instruction now given in all university libraries. The committee found considerable difficulty in fixing the number of libraries which shall be required to employ only these trained assistants. Certainly the national libraries, all the larger reference libraries excepting those in the university, and the more important municipal libraries, to be exact, the 37 of the latter which are known as 'classées.' As for the other municipal libraries, 100 in number, but three pay the librarian a salary of 1800 francs or more, while none of the popular libraries have resources equal to the scale of salaries which the committee wishes to fix for trained workers. It was clear then that the line must be drawn somewhere, and the committee fixed it between the 'bibliothèques municipales classées' and the other municipal libraries not so designated. The administration of the small local libraries, the popular libraries as it were, will not be changed.

"The committee will also make definite recommendations regarding promotion, in which regard merit and seniority of service will be equally considered. The positions will be classified and promotions will be from grade to grade. The whole matter of advance will be in the hands of a central consulting committee. The only exception to this rigid provision for promotion is made with the chief librarian, but even in his case ten years at least of service and the attainment of a certain grade will be recommended. These measures will be definitely embodied in a law which will be recommended for passage, and which if enacted will make librarianship in France a profession comparable to that of professors in secondary and higher schools."

In some discussions of this report by M. J. Laude a suggestion has been made that each city shall henceforth be obliged to provide for its library a definite sum to be fixed by the minister of public instruction and the mayor, that the state shall also contribute to the aid of all municipal libraries, and that all salaries shall be increased not only in the lower grades where the necessity is greatest, but in the larger salaries for the chief librarian, and finally that there shall be created in the office of public instruction a bureau for the direction of public libraries. These recommendations, however, go farther than the committee deems wise and are likely to impair the whole bill and prevent even such salutary reform as seems possible. They are interesting, however, as indicating that the reforms are not failing to find friends who are willing to go even further than the official thinks wise.

J. I. WYER, JR.

A NATIONAL LIBRARY FOR THE BLIND

A PLAN outlining the establishment of a library for the blind has been formulated by Asa Don Dickinson, of the staff of the Brooklyn (N. Y.) Public Library, and was described in the *Brooklyn Eagle* of March 18. Mr. Dickinson has had charge of the organization of the department for the blind maintained by the Brooklyn Public Library, but believes that the most satisfactory means of supplying books for blind readers would be through a great central national collection, which should avail itself of the free postal transmission of such books. He says:

"There are about 80,000 blind people in this country. A fortunate few among this great army have learned to do something or to make something toward their own support. A considerable number have been taught to read in their younger days, and this accomplishment is a great boon so long as access to fresh material remains to them. But books for the blind are expensive and scarce. And the forms of raised type in which they are printed are many and various. Few public libraries throughout the country care to take up a form of work where much money must be spent to benefit the few blind people of their own immediate field. And supposing that a couple of hundred dollars is found to be spent in this way, what is the result? A score of books (in three score volumes) are bought and the blind inhabitants of the district canvassed; many of them have never been taught to read, or have become blind late in life and have never been taught to read books for the blind. Of those who can read, few are they who can read more than one form of the four kinds of type, whose use is pretty equally divided throughout the country. If our score of books are all of one type, they will serve only a part of our scanty blind reading public; if they are of several types, there will be only a half dozen available to each reader. These will soon be read and in six months' time the dust will be thick upon them and the trustees and the librarian will remember them only when they think of mistakes made and money squandered."

In supplying books to the blind, use should be made of "those potent tools of progress—co-operation, combination, organization." "If we gather our books for the blind into one storehouse, preferably near the center of population and on a trunk line of communication, we can, by a recent act of Congress, send the individual book through the mail to the individual citizen free of charge, and he can return it to us free of charge when he has finished with it. Free delivery of books through the mail has been the dream of librarians for a generation, yet though it has become an accomplished fact as to books for the blind, only

slight use has thus far been made of the privilege.

"It would be very difficult, almost impossible, to persuade the libraries throughout the country to contribute their quota of books for the blind to the general storehouse until it was known to be a responsible institution with a sound financial backing. It would probably be necessary to gather a large collection and to start the work before other libraries were asked to contribute their collections to our fold." Essentials for the establishment of such a central library are: 1, money, selection of name and location, the latter in some place where communication with the whole country is easy and rents are low; 2, purchase and cataloging of books and collection of information about the blind; 3, advertisement of the purpose and scope of the institution; 4, co-operation and interest on the part of libraries and library associations, church societies, etc.; 5, travelling libraries sent to co-operating libraries, personal instruction of blind persons, and reading to the blind. It is also urged that systematic effort be made to gather and arrange all possible information regarding blind persons in the United States, to study the different systems of raised print, with a view to selecting the best, and to help the blind to a new occupation by employing them to transcribe more books into raised print. Mr. Dickinson asks: "Could the scope of the existing American Printing House for the Blind be enlarged to include this work? Could the Library of Congress so enlarge the scope of its existing department for the blind as to make it a national library for the blind? Or should an effort be made to interest some philanthropist in the plan?"

DR. RICHARD GARNETT

DR. RICHARD GARNETT, for forty-eight years in the service of the British Museum, whose name was a household word among scholars and librarians throughout the world, died of internal hemorrhage at his home in London, on April 13, 1906. Richard Garnett was born in Lichfield, England, on Feb. 27, 1835, the eldest son of Rev. Richard Garnett, who was assistant keeper of printed books in the British Museum. His early education was at home and at private schools, and in 1851, at the age of sixteen, he entered the service of the British Museum as a junior assistant. Practically, therefore, his whole life was passed among books. In 1875 he was made assistant keeper of printed books and superintendent of the reading room, in which position he was from 1881 to 1890 concerned with the preparation of the great printed catalog. From 1890 to 1899 he was keeper of printed books, and in the latter year he re-

tired from the service of the Museum.* In 1883 the University of Edinburgh conferred upon him the degree of LL.D., and in 1895 he was made Commander of the Bath. Of his long connection with the British Museum the *Athenæum* says: "His knowledge of the extraordinary collection under his care was wonderful, and his kindness in assisting research exemplary. Many a student owes to his memory and reading references on abstruse subjects and authors which only an encyclopædic mind could carry. Such learning is rare at any time, and especially in the present age, in which the hurry of competition and premature specialization have almost eliminated the all-round scholar. His knowledge and enthusiasm were at the service of all who approached him, and he was singularly tolerant of those odd or wayward characters which are an occasional feature of the reading-room. He had a keen eye for bibliographical treasures, and his discovery of some letters by Shelley will be remembered."

Dr. Garnett's literary activities were incessant, even during the years of his most exacting professional work. He possessed the gifts of imaginative skill and poetic fancy, and of unremitting industry, and the list of his writings would be imposing if produced by a man with no other vocation. Taken as representing time and work in addition to that required by the daily routine of his profession, and they are a remarkable indication of the breadth and depth of his scholarship, his versatility, and his indefatigable energy. His first volume was "Primula," a book of lyrics, printed in 1858. This was followed by "In Egypt" and other poems (1859); "Poems from the German" (1862); "Relics of Shelley" (1862); "Idylls and epigrams" (1869); "Life of Carlyle" (1887); "Life of Emerson" (1888); "Twilight of the gods" (1888), fantastic tales of a delicate poetic charm; "Life of Milton" (1890); "Iphigenia in Delphi" (1891); "Age of Dryden" (1895); "Sonnets from Dante, Petrarch and Camoens" (1896); "William Blake" (1895); "Richmond on the Thames" (1896); "A history of Italian literature" (1898); "Life of Edward Gibbon Wakefield" (1898); "Essays in librarianship and bibliography" (1899); "Essays of an ex-librarian" (1901); "William Shakespere, pedagogue and poacher" (1904). In 1903 and 1904 he collaborated with Edmund Gosse in an illustrated record of English literature. He was a liberal contributor to the "Encyclopedia Britannica" and the "Dictionary of national biography," and was editor of "The international library of famous literature." He wrote many papers and addresses for the Library Association of the United Kingdom, edited his father's "Philo-

logical essays," the works of Thomas Love Peacock, Drayton's "Battle of Agincourt," Beckford's "Vathek," the works of Matthew Arnold, and many rare and curious manuscripts. The remarkable little volume, "De flagello myrto: thoughts and fancies on love," first published anonymously in 1895 and just issued in a second enlarged edition, was written by him, the announcement of its authorship being made in the issue of the *Athenæum* (April 21), in which his obituary appears. He belonged, of course, to many literary and learned societies, among them the Library Association of the United Kingdom, of which he had served as president; the Bibliographical Society, the Massachusetts Historical Society, American Philosophical Society, Dante Society, Societa Bibliografica Italiana, and he was a trustee of the National Portrait Gallery. The death of his wife three years ago seriously affected his health and spirits, but his death was unexpected and came as a sudden blow to the hosts of friends whom he had made in the course of a long, useful and kindly life.

THE MILTON (MASS.) PUBLIC LIBRARY

At the annual town meeting in March, 1902, the town of Milton appropriated \$50,000 for a new library building. When plans were submitted by the architects, Shepley, Rutan & Coolidge, of Boston, it was found that the appropriation was not sufficient to build an entirely fireproof building, with the space and conveniences necessary for the work. To meet this deficiency, Mr. Nathaniel T. Kidder, one of the trustees, gave \$21,000 to make the building complete. In honor of this gift the main floor of the library has been named Kidder hall, and is so designated by a suitable bronze tablet.

Work on the building was begun early in 1903, and on June 11, 1904, it was opened to the public. It is built of brick and limestone, in the Italian Renaissance style. Its frontage is about 75 feet, and its depth 85 feet. There is a broad stone terrace in front and the entrance is through a porch with Ionic columns. Opening from the vestibule immediately on the right is a reception room, and on the left the stairs to the second story and basement. The public space and working space are lighted from above. Here are the issue desk, catalog cases, bulletin boards, etc. On the left of this space is the general reading room, and on the right the children's room. Back of these, to the right and left, and also opening from the working space are the librarian's room and the cataloging room. At the rear of the working space are two fireproof stack rooms. In the basement are a room for the use of the Milton Historical Society, the staff

* For note of Dr. Garnett's retirement see L. J., 24: 129, and for portrait see L. J., 24: 559.

room, janitor's shop, boiler room and coal bins, lavatories, a room for the branch and school work and a general work room. A book lift connects the basement with the upper floors. On the second floor are an art room, a trustees' room, and two other rooms, which are at present used for storage. The floors of the public space, corridors and lavatories are of white marble; other floors are of oak and pine, with cement in the basement. The building has plenty of windows, and is also well equipped with electric lights.

The furnishings are of fumed oak in simple but beautiful design; the walls are painted in delicate yellows and greens, and the electric light fixtures are of a dull green bronze, a combination which gives a reposeful effect. The heating and ventilating plants do their work admirably. The total cost of the building, outside of the land, was \$71,000; the cost of the furnishings about \$5,000.

Library work in Milton has its peculiar problems. The town has a population of 7054 (the census just taken); it covers an area of 8400 acres, or $13\frac{1}{4}$ square miles. It is largely a residential town, although the Baker Chocolate Mills, nominally across the river in Dorchester, but in reality lying partly on the Milton side, bring to the town many operatives. The population of Milton is not large, but the town spreads over so much territory that its residents use five railroad stations and as many postoffices. These geographical problems have been solved partly by deposit and delivery stations and partly by a system of house-to-house delivery.

The new building is located at what is known as the "Center." It is the center geographically, at which point are grouped two churches, the high and consolidated grammar schools, and the town hall. At East Milton, Mattapan, and at a farming settlement in the Blue Hills known as Scott's Woods, the library has reading rooms, which are also deposit and delivery stations. At Milton village there is a deposit and delivery station. The distances from the central library vary from 1 to $2\frac{1}{4}$ miles. An electric car line connects these points. With the exception of the reading room at Scott's Woods (open twice a week), these reading rooms and stations are open daily; from 250 to 400 books are on deposit, some of which are changed each month. There is also a weekly delivery from the central library. Magazines, newspapers and a few reference books are to be found at each reading room.

The system of house-to-house delivery covers one section of the town where the estates are large and where the distances are too great to be covered by deposit or delivery stations. The delivery is made once a week by wagon. This service is made possible by a trust fund, the income of which pays one-

third of the cost of delivery. A fuller account of the work will be found in the *LIBRARY JOURNAL* for June, 1905. Deposits of books are sent to the schools, to the Convalescent Home, to the poor farm, and to a barber shop in the village, which reaches certain men and boys who do not frequent the reading rooms.

Regular meetings of the Milton Historical Society, of a boys' club, and of committees of other societies are held at the library. The art room is used constantly for exhibits of local and other interest, also for classes in the study of art.

The total number of volumes in the library is 15,693. In January, 1900, the work of reorganizing was begun, and the library was classified and recataloged. At that time the population of Milton was 6578, and the circulation from the library for the year ending Dec. 31, 1899, was 19,168. So great has been the growth of the work that the present system includes a central library, three reading rooms (which are also deposit and delivery stations), four deposit stations, and a house-to-house delivery. As previously stated, the circulation in 1899 was 19,168; in 1905 it was 57,349, a circulation per capita of 8.1, and a net gain of 38,181.

ONTARIO LIBRARY ASSOCIATION

"AN unqualified success" is the verdict to be rendered upon the seventh annual meeting of the Ontario Library Association. In attendance, interest and practical value the meeting, held in Toronto Easter Monday and Tuesday, April 16 and 17, was the best yet. The presence of the newly-appointed Deputy Minister of Education, Mr. A. H. U. Colquhoun, and the Superintendent of Public Libraries, Mr. T. W. H. Leavitt, added much to the value of the meeting.

The sessions were preceded by a luncheon of the executive committee on Monday noon, the guests being Mr. Colquhoun and Mr. C. H. Gould, of McGill University Library, Montreal. The opening session on Monday afternoon was well attended and the reports of the officers received careful attention. Four Carnegie buildings were opened during the past year, viz., St. Thomas, Galt, Waterloo and St. Mary's, and donations have been made to Woodstock, Picton, Bracebridge, Wallaceburg, Brampton, Perth, Burlington, Gravenhurst, Belleville and Oshawa. The Ottawa building is ready for formal opening, and the Toronto plans are about completed for the main building and one of the branches. The secretary also noted the attempts made to hold library institutes. Though none were held during the year, some progress was made to that end and the association decided to hold several during the coming year. This is an impor-

tant advance movement. The report of the secretary and the address of the president urged again a library commission, and there are better prospects for such a commission than at any previous time.

Two very interesting committee reports were given, one by Dr. Bain on "List of best books of 1905," and the other by Mr. Gurd on "Juvenile books suitable for Canadian libraries." Dr. Bain had his list in print and distributed it to the members. Mr. Gurd's list of about 1000 titles is in the printer's hands. Both are being issued by the government.

The papers given at the meeting this year were: "The one-room library and its possibilities," by Mrs. Jones, Newmarket; "The treatment of pamphlets," by Miss Rowsome, Guelph, and "The public library and the school," by O. J. Stevenson, St. Thomas. The last named paper provoked sharp discussion, opinion being divided as to the advisability of the library attempting so much for the school, with the danger of neglecting the work in its own more immediate sphere.

The most interesting feature of the meeting was the study of library buildings on Monday evening. This was illustrated by about 100 lantern slides of libraries in Ontario, United States and England. Merits and defects were frankly pointed out and much interesting discussion followed. As four library boards about to build had representatives present, the practical value of this discussion is evident. Shortly after the meeting the secretary arranged for deputations from two other library boards to come to Toronto to see the slides.

Two interesting resolutions were presented, one recommending the Decimal classification as the official classification for Ontario libraries and the other urging the matter of cheaper postage on British periodicals. The first resolution stands over till next year. The association closed its proceedings by being photographed.

There was one feature of this year's meeting that meant sadness and regret. We missed the friendly presence of Mr. R. J. Blackwell, who died early this year. He was one of the founders of the association and had not missed a meeting. The association missed very much his hearty discussion of library problems.

The following are the officers for 1906-7: president, Norman Gurd, Sarnia; 1st vice-president, Albert Sheldrick, Chatham; 2d vice-president, Rev. W. A. Bradley, Berlin; secretary, E. A. Hardy, 65 Czar street, Toronto; treasurer, A. B. Macallum, 59 St. George street, Toronto; councillors: James Bain, Toronto; Judge Hardy, Brantford; J. Steele, Stratford; A. W. Cameron, Streetsville; Judge Mahaffy, Bracebridge; ex-president, W. J. Robertson, St. Catharines. The next meeting will be held on Easter Monday and Tuesday, 1907.

E. A. HARDY, *Secretary*.

American Library Association

President: Frank P. Hill, Brooklyn Public Library, 26 Brevoort Place, Brooklyn, N. Y.

Secretary: J. I. Wyer, Jr., State Library, Albany, N. Y.

Treasurer: Gardner M. Jones, Public Library, Salem, Mass.

NARRAGANSETT CONFERENCE, JUNE 29 - JULY 6, 1906

OUTLINE PROGRAM *

Friday, June 29

Morning. Free for arrival.

Afternoon.

2.30. Executive Board.

3.30. Council.

5.00. Committees (as may be arranged).

Evening.

8.30-10. Informal reception.

Saturday, June 30

Morning. Free.

Afternoon.

2.30. First general session.

Welcome in behalf of the state, Lieut.-Gov.

Hon. Frederick H. Jackson.

Welcome in behalf of the Rhode Island Library Association, Harry L. Koopman, librarian Brown University, Providence, R. I.

Welcome in behalf of the local committee, Rowland G. Hazard, Esq.

Response, President American Library Association.

President's address, Frank P. Hill, librarian, Public Library, Brooklyn, N. Y.

Library affairs in Great Britain, Henry R. Tedder, librarian Athenæum Club, London.

Report of Council.

Reports of officers:

Secretary, J. I. Wyer, Jr.

Treasurer, Gardner M. Jones.

Trustees of Endowment Fund, C. C. Soule.

Reports of committees:

Bookbuying. A. E. Bostwick, chief of Circulation Department, New York Public Library, chairman.

Title-pages to periodicals. W. I. Fletcher, librarian, Amherst College Library, chairman.

Book binding and book papers. G. F. Bowman, Public Library, Washington, D. C., chairman.

[The reports of the several committees heretofore presented at one session have been distributed throughout the general sessions, in the hope that this arrangement will give more than the usual time for discussion.]

Saturday, June 30

Evening. 8.00

National Association of State Librarians. 1st session.

*Subject to change.

John Pendleton Kennedy, state librarian, Virginia, president.

Catalog Section. 1st session.

Miss Theresa Hitchler, superintendent of Cataloging Department, Brooklyn Public Library, chairman.

Round table meeting for small libraries.

Miss Frances L. Rathbone, librarian, Public Library, East Orange, N. J., in charge.

Sunday, July 1

Morning and afternoon free.

Evening. 8.00.

Singing, in charge of Albert T. Briggs, Cambridge, Mass.

Authors' readings. Names to be announced.

Stereopticon glimpses of 12 A. L. A. post-conferences, F. W. Faxon, chairman, Travel Committee, A. L. A.

Monday, July 2

Morning. 9.30.

Children's Librarians' Section. Mrs. Arabelle H. Jackson, 1st assistant, Children's Department, Carnegie Library, Pittsburgh, Pa., chairman.

Bibliographical Society of America. William Coolidge Lane, librarian, Harvard University Library, president.

Afternoon. 2.30.

Trustees' Section. W. T. Porter, trustee of the Public Library, Cincinnati, Ohio, chairman.

League of Library Commissions. Henry E. Legler, secretary of the Wisconsin Free Library Commission, president.

College and Reference Section, 1st session. J. T. Gerould, librarian, University of Missouri, Columbia, Mo., chairman.

Evening. 8.00.

2d general session.

The public library as a municipal institution:

In relation to the city as an educational institution. Hon. David A. Boody, president, Board of Trustees, Brooklyn Public Library.

As affecting its administration. Horace G. Wadlin, librarian, Public Library, Boston, Mass.

The future of library commissions. Melvil Dewey (on behalf of League of Library Commissions).

Effects of earthquake and fire on San Francisco libraries. Frederick J. Teggart, librarian, Mechanics' Institute Library, San Francisco, Cal.

Reports of committees:

Gifts and bequests. Joseph L. Harrison, librarian, Providence Athenæum, Providence, R. I., chairman.

A. L. A. Publishing Board. W. C. Lane. Co-operation with National Educational Association. James H. Canfield, librarian, Columbia University, chairman.

Library administration. W. R. Eastman, library inspector, New York State Library, Albany, N. Y., chairman.

Public documents. Adelaide R. Hasse, head of Document Department, New York Public Library, chairman.

Index to prose fiction. Josephine A. Rathbone, Pratt Institute Library School, Brooklyn, N. Y., chairman.

Tuesday, July 3

Free for Providence trip.

Wednesday, July 4

Morning. 9.30.

National Association of State Librarians. 2d session.

Catalog Section. 2d session.

Afternoon. 2.30.

3d general session.

Address, Rev. W. H. P. Faunce, president of Brown University, Providence, R. I.

Address, Hon. George H. Utter, Governor of Rhode Island.

Subjects fit for fiction, Owen Wister.

Reports of committees:

Ways and means. E. C. Hovey, chairman.

Permanent headquarters. Herbert Putnam, Librarian of Congress, chairman.

Publicity. John Cotton Dana, librarian, Public Library, Newark, N. J., chairman.

Evening. Free.

Thursday, July 5

Morning. 9.30.

College and Reference Section. 2d session.

Children's Librarians' Section. 2d session.

Afternoon. 2.30.

4th general session.

Planning and construction of library buildings:

Raymond F. Almirall.

C. C. Soule.

Bernard R. Green.

W. H. Brett.

Views of a consulting architect. Prof. A. D. F. Hamlin, Columbia University.

Reports of committees:

International relations. Dr. E. C. Richardson, librarian, Princeton University Library, Princeton, N. J., chairman.

Library training. Miss Mary W. Plummer, director, Pratt Institute Library School, Brooklyn, N. Y., chairman.

Evening. 8.00.

Round table meeting for proprietary libraries. Charles K. Bolton, librarian, Boston Athenæum, Boston, Mass., in charge.

Round table meeting for small libraries. Miss Mary E. Downey, librarian, Public Library, Ottumwa, Ia., in charge.

Round table meeting for naval and military libraries. Frederick Charles Hicks, librarian, U. S. Naval War College, Newport, R. I., in charge.

Friday, July 6

Morning. 9.30.

5th general session.

The library in relation to special classes of readers:

Books for the blind. Emma R. Neisser, Free Library, Philadelphia, Pa.

Books for the foreign population. James H. Canfield, librarian, Columbia University, New York City.

Supply and use of technical and industrial books. Harrison W. Craver, Technology librarian, Carnegie Library, Pittsburgh, Pa.

Libraries and settlement work. Cora Stewart, custodian Station P, Public Library, Boston, Mass.

Announcement of result of ballot.

Reports of committees.

Unfinished business.

LOCAL COMMITTEES IN CHARGE OF CONFERENCE ARRANGEMENTS

General committee of the Rhode Island Library Association.—Joseph LeRoy Harrison, Providence Athenæum, Providence; William E. Foster, Public Library, Providence; George Parker Winship, John Carter Brown Library, Providence; Richard Bliss, Redwood Library, Newport; J. Harry Bongartz, State Law Library, Providence; Clarence S. Brigham, Rhode Island Historical Society, Providence; Herbert O. Brigham, State Library, Providence; Mabel E. Emerson, Public Library, Providence; Frederick W. Faxon, Boston, Mass.; William C. Greene, trustee Narragansett Library Association, Peace Dale; George D. Hersey, M.D., Rhode Island Medical Society, Providence; Harry L. Koopman, Brown University Library, Providence; Mrs. Minerva A. Sanders, Deborah Cook Sayles Public Library, Pawtucket; Ama H. Ward, Harris Institute Library, Woonsocket; Ethan Wilcox, Public Library, Westerly.

Honorary committee of citizens.—Rev. W. H. P. Faunce, D.D., chairman; Gen. William Ames, Stephen H. Arnold, Isaac C. Bates, Daniel Beckwith, William Binney, G. Alder Blumer, M.D., Mrs. Harold Brown, Kenyon L. Butterfield, Admiral F. E. Chadwick, U. S. N., Charles S. Chapin, Howard L. Clark, Mrs. Alfred M. Coats, Samuel Morris Conant, Rev. John B. Diman, Hon. William W. Douglas, Miss Sarah E. Doyle, Hon. Elisha Dyer, Stephen O. Edwards, William Gammell, Professor Henry B. Gardner, Hon. F. P. Garretson, Col. R. H. I. Goddard, Col. William Goddard, Rev. Daniel Goodwin, D.D., Rev. Edward Everett Hale, D.D., Professor Albert Harkness, LL.D., Miss Caroline Hazard, Mrs. William L. Hodgman, Eleazer B. Homer, Hon. Frederick H. Jackson, Miss Lida Shaw King, Miss Amelia S. Knight, Rev. George L. Locke, D.D., Frederick Roy Martin, Stephen O. Metcalf, Horace G. Miller, M.D., Professor

W. H. Munro, Edward I. Nickerson, Mrs. Gustav Radeke, Hon. Walter E. Ranger, Henry D. Sharpe, William P. Sheffield, Jr., Mrs. Thomas P. Shepard, George L. Shepley, Walter H. Small, Hon. John H. Stiness, Alfred Stone, James E. Sullivan, M.D., Cornelius S. Sweetland, Hon. William H. Sweetland, Hon. George H. Utter, William B. Weeden, Herbert J. Wells, Rev. Charles J. White, D.D., Owen Wister, Miss Mary E. Woolley.

Special committees have also been appointed as follows: Reception committee, Providence day committee, Newport day committee, Relations with A. L. A., Badge, Handbook, Hotels and meeting rooms (F. W. Faxon, E. C. Hovey, Earl N. Manchester of Brown University Library).

COMMITTEE ON TITLE-PAGES AND INDEXES TO PERIODICALS

The committee met in New York, on April 12, and agreed on a plan of action in co-operation, if that can be secured, with the Association of Periodical Publishers. Later in the same day Mr. W. I. Fletcher, chairman of the committee, met this association at their monthly lunch and business meeting, where he was cordially received and given an opportunity to express the views of his committee. Mr. Joseph Mitchell Chapple, editor and publisher of the *National Magazine*, was appointed as a committee of the association to co-operate with the A. L. A. committee in drawing up a statement which might receive the approval of both associations and have weight with publishers. Such a statement is now in preparation.

State Library Commissions

NEW JERSEY PUBLIC LIBRARY COMMISSION:
Henry C. Buchanan, secretary, State Library, Trenton.

The sixth annual report of the commission, just issued (40 p. O.), records a general improvement in library conditions throughout the state. The appointment of an organizer, to visit small libraries and give advice and help in their management; closer relations with the state library associations; and the carrying through of plans for a summer course in library training, are means by which the work of the commission has been strengthened and made more useful to librarians of the state. Booklists, bulletins, and similar publications have been freely distributed, and every effort is made to aid in establishing new libraries and to help untrained librarians. By arrangement with the Philadelphia Free Library, its department of books for the blind is placed at the service of blind readers in New Jersey, the books being sent free through the mails, on condition that the commission subscribe toward the printing of books in raised characters. During 10 months Miss Askew, the commission's organizer, visited 79

public libraries and also visited 10 towns and villages without libraries, in the effort to awaken interest in library organization or to explain the travelling library system. "16 of the libraries visited were uncataloged; 13 had only printed lists of titles arranged alphabetically; 42 were either unclassified or with very imperfect classification, and 15 of these had the books arranged on the shelves as they had been bought, using the accessions book as a catalog." Of the libraries visited, 21 have adopted new methods and greatly improved their administration. The commission has been represented and its work described at the meetings of the state library association and the state federation of women's clubs. It has now 50 travelling libraries, with 3400 v. in circulation, of which 12 have been loaned to small libraries, 20 to study clubs, and 18 to towns without libraries; the circulation through these libraries has been over 12,000 v., of which 59 per cent. was fiction. An annual fee of \$2 is charged for the use of these libraries. Abstracts are given from the reports of the chief New Jersey libraries, and the usual full statistical table of libraries of the state is appended. It shows a total of 132 libraries reporting to the commission, 85 of which are free, 36 subscription, 11 school or institutional; 40 are in whole or part supported by the town, 63 own their buildings, 86 have reading rooms, and 23 have separate rooms for children.

State Library Associations

CALIFORNIA LIBRARY ASSOCIATION

President: James L. Gillis, state librarian, Sacramento.

Secretary: Miss Mary L. Sutcliffe, State Library, Sacramento.

Treasurer: David M. Belfrage, Cooper Medical Library, San Francisco.

The report of the March meeting, as given in April L. J., should be corrected according to the following particulars:

According to the new constitution, adopted at the special meeting on March 23, the name of the association is changed from Library Association of California to California Library Association. The four districts into which the state is divided cover, 1, the interior northern counties; 2, the counties around San Francisco and along the north coast; 3, the San Joaquin Valley counties; 4, the counties south of Tehachapi. Each district is to have its own president, appointed by the president of the association, and each holds quarterly meetings, with an annual meeting of the whole association. The number of districts is left to the discretion of the president.

COLORADO LIBRARY ASSOCIATION

President: Alfred E. Whitaker, State University Library, Boulder.

Secretary: H. E. Richie, Public Library, Denver.

Treasurer: C. R. Dudley, Public Library, Denver.

The association held its regular quarterly meeting on Saturday evening, March 31, at the office of the State Superintendent of Public Instruction in the capitol building, Denver.

The program was as follows: "Problems of the college library," by Miss Mabel C. Shrum, librarian of the State School of Mines; "Art and the modern library," by Henry Read.

The rest of the evening was devoted to informal discussion of different topics, especially the subject of books for the blind and a union list of the magazines and periodicals in the different libraries of the state.

H. E. RICHIE, *Secretary*.

DISTRICT OF COLUMBIA LIBRARY ASSOCIATION

President: George F. Bowerman, Public Library.

Secretary: Earl G. Swem, Library of Congress.

Treasurer: Henry S. Parsons, Office of Documents.

The 93d regular meeting of the District of Columbia Library Association was held in the children's room of the Public Library, April 25, 1906, at 8.15 p.m., President Bowerman in the chair. The two additional members for the committee in charge of compilation of the handbook were announced by the chair as Miss Oberly, of the Library of the Department of Agriculture, and Mr. W. Moseby Williams, of the committee on the public library of the Board of Trade. The secretary announced the election of two new members, Mr. William A. Pollard, Public Documents Library, and Mr. W. F. Dodd, Law Division, Library of Congress.

Dr. F. H. Garrison, in his paper on the "Library of the Surgeon-General's Office," stated that the library, containing 156,469 volumes, or 433,522 volumes and pamphlets, is one of the three largest medical libraries in the world, surpassed in numbers only by the collections at Paris and St. Petersburg. This library contains an unrivalled collection of medical periodicals and is rich in incunabula. The first printed work of Hippocrates, the "father of medicine," is here in the original Greek, issued by the Aldine Press at Venice in 1526. There are 51 different editions of his collected works in numerous languages, and the total number of his works here reaches 882. The collection, started by Surgeon-General Lovell prior to 1836, has been materially enlarged through the efforts of the various surgeon-generals, especially Dr. John S. Billings, now director of the New York Public Library, and through liberal appropriations by Congress. There have been issued a number of catalogs and indexes of the library, one of which, the *Index Medicus*, is now under the patronage of the Carnegie Institution. The "Index catalog" of the library, limited to 1500 copies, distributed with discrimination, is one

of the most stupendous bibliographical works ever undertaken, a monument to the department, to the enterprise of Dr. Billings, and to the scholarship of Dr. Robert Fletcher, the present librarian. This catalog is not only a list of the works to be found in the library, but also a complete bibliography of medicine. Although bibliographies of medical literature had been attempted by Gesner as early as 1545, and by Merklin, von Haller, Plocquet, Haeser, Young, Forbes, Atkinson, Callison, Watts and others, yet, in the language of Osler, "their efforts are Liliputian beside the Gargantuan undertaking of the Surgeon-General's Office."

Dr. Fletcher spoke of the library being in fact the "National medical library;" of the aid that it had received from the periodical publications of Great Britain and other foreign countries, and of the great benefit to the medical profession by the establishment of laboratories for research work.

Dr. Edwin A. Hill, in taking up his paper on "The chemical card index of the United States Patent Office," stated that he would give a brief digest of his paper "on a system of indexing chemical literature, adopted by the classification division of the U. S. Patent Office," which appeared in the *Journal* of the American Chemical Society, vol. 22, p. 478-494. He said that the index, now of about 500,000 cards, was an index not simply to chemical patents, but an index to the whole of chemical literature. On account of the variety of names of substances and the interminable work in searching chemical classes, the most direct system seems to be to recast the formulas of the compounds, writing the atoms in alphabetical order of the chemical symbols—disregarding the water of crystallization—and then arranging the formulas on an alphabetical basis. Dr. Hill illustrated by formulas and told of a number of devices used in his work.

Dr. William H. Seaman, of the U. S. Patent Office, gave an interesting biographical sketch of the late Colonel Weston Flint.

HAROLD TAYLOR DOUGHERTY,
Secretary pro tem.

MAINE LIBRARY ASSOCIATION

President: Arthur J. Roberts, Colby College, Waterville.

Secretary: Gerald C. Wilder, Bowdoin College, Brunswick.

Treasurer: Miss Alice C. Furbish, Public Library, Portland.

The 11th annual meeting of the association was held at Auburn, April 25 and 26. Sessions were held in the Public Library. The first session opened on Wednesday afternoon, April 25, with an address of welcome by Hon. John A. Morrill, to which Ernest W. Emery, state librarian, responded. Papers were read as follows: "The desk attendant in a small library," by Sarah E. Osgood, librarian Lewiston Public Library; "The public library and the Sunday school," by Rev. W. F. Livingston,

assistant state librarian; "Opening the public library on Sunday," by John Haley, librarian of the Dyer Library, Saco, read in the writer's absence by Dr. Hartshorne; "The college student and the library," by Edward W. Hall, librarian of Colby College.

A discussion on "The contribution of the trustees to the success of the library" was opened by Rev. E. C. Whitmore, of Waterville; and a question box was conducted by Alice C. Furbish. At the business meeting which followed an invitation was received to meet in Waterville next year, and a nominating committee was chosen.

In the evening a public meeting was held in Odd Fellows' Hall, at which an address was delivered by Arthur E. Bostwick, of the New York Public Library.

Thursday morning's session was opened with a talk, "Glimpses of some foreign libraries," by George T. Little, librarian of Bowdoin College. Papers were also read on "The mission of the library to the preparatory school," by Ella W. Ricker, librarian Fogg Memorial Library, South Berwick; "Teaching high school pupils the use of the library," by Elizabeth M. Pond, librarian Belfast Free Library; "Success attained by one library in co-operating with schools in rural communities." A general discussion followed on "The public library and the public schools," opened by Payson Smith, superintendent of schools, Auburn, and a question box was conducted. In accordance with the report of the nominating committee the following officers were elected: president, Arthur J. Roberts, Colby College; vice-presidents, J. H. Winchester, Corinna, Miss Annie Prescott, Auburn; secretary, Gerald G. Wilder, Bowdoin College; treasurer, Miss Alice C. Furbish, Public Library, Portland.

In addition to the usual resolution of thanks the following resolution was adopted:

Resolved, That the Maine Library Association, on this earliest opportunity since the decease of Leonard D. Carver, its first president, expresses its appreciation of his important and lasting service to the library cause in this state, of the ability and faithfulness with which for many years he discharged the duties of state librarian, and of his personality, genial and generous, that made him the friend of every librarian in Maine.

Resolved, That the association desires to place upon its records its great satisfaction that recent appointments at the state library have recognized long-continued and faithful labor and are in accord with the true principles of civil service.

MASSACHUSETTS LIBRARY CLUB

President: Horace G. Wadlin, Public Library, Boston.

Secretary: Miss Louisa M. Hooper, Public Library, Brookline.

Treasurer: Miss Mary E. Robbins, Simmons College, Boston.

A meeting of the Massachusetts Library Club was held at the Boston Public Library on Thursday afternoon, May 3.

Miss Mary Morison opened the meeting with a paper on the fiction of the year. By

concrete examples she showed how difficult is the work of selection.

Mr. Edward T. Hartman spoke on the Massachusetts Civic League and libraries. As secretary of the league he thought he had discovered work to be done by the libraries, which was not done, and he therefore felt justified in speaking before the club. The Massachusetts Civic League has two lines of work. 1, legislative, *i. e.*, the instructing of the legislators; 2, for civic improvement, to see that public institutions serve their functions and to get right thinking people to be active in such lines. The one need which Mr. Hartman thought the libraries could fill was to inspire interest in good literature (as though no librarian had ever thought of it before) and to direct the reading. He found little knowledge of civic improvement, and suggested that every library should have Robinson's "Improvement of cities and towns." The librarians should inform the citizens as to the bills under consideration by the state legislature. The library which can give up-to-date information on current affairs is better than one which can give out the fiction called for. He also recommended "the bulletin habit." His remarks caused considerable feeling, though every one recognized the limitations of his knowledge of the work of libraries. Mr. S. S. Green, of the state commission, therefore undertook to tell of the varied work of the state commission and of many individual libraries.

Miss Alice G. Chandler followed with a paper on the work of the committee on libraries of the Woman's Educational Association, which is so active in sending travelling libraries throughout the state.

Mr. Wadlin told the librarians present that there were three places in Boston which every one should visit—the town room, which is the center of the work of the Massachusetts Civic League, the office of the state commission, and that of the A. L. A. Publishing Board. He called upon Miss Browne to speak upon what should be found at the A. L. A. headquarters.

The session was closed by Miss A. H. Thwing, who told of the work of the Orr's Island (Maine) Library, which is becoming the social center of the place.

NINA E. BROWNE, *Recorder*.

NORTH CAROLINA LIBRARY ASSOCIATION

President: Mrs. Annie Smith Ross, Carnegie Library, Charlotte.

Secretary-Treasurer: Dr. Louis R. Wilson, University of North Carolina Library, Chapel Hill.

The second annual meeting of the association was held in the Olivia Raney Library, Raleigh, on Friday and Saturday, April 27 and 28, with an attendance of 25 members from all parts of the state and 13 representatives from other Southern states. The latter were Miss Ida J. Dacus, of the Winthrop

Normal College Library, Rockhill, S. C.; Mr. J. P. Kennedy, state librarian of Virginia; Miss Julia Rankin, of the Carnegie Library, Atlanta, Ga., and the following young ladies composing the class from the Southern Library School of Atlanta: Miss Eloise Alexander, of Atlanta; Miss Mattie Bibb, of Montgomery, Ala.; Miss Florence Bradley, of Atlanta; Miss Marion Bucher, of Decatur, Ga.; Miss May Chapman, of Macon, Ga.; Miss Carolina Dailey, of McDonough, Ga.; Miss Jessie Hopkins, of Athens, Ga.; Miss Louise McMaster, of Winnsboro, S. C.; Miss Sara Manypenny, of Chattanooga, Tenn., and Miss May Martin, of Easley, S. C.

The address of welcome was made by Dr. Richard H. Battle, president of the Olivia Raney Library, of Raleigh. Following this address, Dr. Wilson, the secretary, presented a detailed report in which he showed that a new library spirit had been prevailing in the state for the past five years, and that within that brief period a great step forward in library work had been taken. He pointed out the fact that in 1900 there were no rural school libraries in the state, that there were but few city libraries, and that the college librarians were inactive. But within the short period of five years over 1300 rural school libraries had sprung up; a dozen or more city libraries, with trained librarians and carefully chosen boards of trustees, had been established, and the college libraries had begun in a more serious way the work of winning the respect and the place in college life which should be theirs.

The president, Mrs. Ross, outlined in her report the work of the association during its two years of activity. The most significant note sounded by her was that the association, as an organization, had become impressed with its responsibility to the people it represented and that it had turned itself seriously to the consideration of the many problems with which it was confronted.

At the conclusion of the reading of these reports, Miss Julia T. Rankin, of Atlanta, with the class from the Southern Library School, discussed from various viewpoints the subject of "Library organization." This discussion, apart from the fact that it was very instructive in and of itself, was especially significant in that it gave an unmistakable proof of the fact that the day has come, not only in North Carolina, but in the whole South as represented by the class, when the training of the librarian has become considered as essential to the usefulness of the library as is the training of a teacher to the usefulness of the school.

At the evening session on Friday, Mrs. Lindsay Patterson, of Winston, and Dr. Edwin Mims, of Trinity College, Durham, spoke respectively on "The library and the woman's club" and "Public libraries of North Carolina." Mrs. Patterson, as a prominent worker in the women's clubs of the state, impressed

upon the club women the importance of the library as a means leading to a fine, broad culture, and urged them to become more interested in the general library movement. Dr. Mims spoke of the growth of public sentiment in favor of library development. He saw in the recent growth of the libraries the dawning of the day in North Carolina when a community would feel itself disgraced if it were without a public library. Both addresses were unusually stimulating. They will be published later and sent out by the association.

At the conclusion of the evening session a delightful informal reception was given the members of the association by the citizens of Raleigh.

At the morning session on Saturday the following papers were presented: "The library and the public school," by Professor E. P. Moses, of the city schools of Raleigh; "Rural libraries," by Mr. J. Y. Joyner, state superintendent of public instruction, of Raleigh; "College libraries," by Miss Ida J. Dacus, of the Winthrop Normal College, Rockhill, S. C.; "A state library commission," by Mr. John P. Kennedy, of the Virginia State Library. Discussions of these and other topics were participated in by Mr. M. O. Sherrill, of the North Carolina State Library, Miss Julia S. White, of the Guilford College Library, and other members of the association. The discussions relating to the establishment and management of rural school libraries and the activities of a library commission were especially interesting.

The final business session of the meeting was held Saturday afternoon. Among a number of resolutions passed at that session were the important ones of preparing a statement to be presented to the next General Assembly showing the need of a new fireproof building for the state library; of presenting a statement to the General Assembly relative to the creation of a state library commission, and of extending an invitation to the American Library Association to hold its annual meeting for 1907 at Asheville, N. C. The last resolution, given in full, is as follows:

"Recognizing the fact that the library movement in the South has grown with unusual rapidity in recent years and that at present it would be stimulated to larger achievement by the inspiration and encouragement which a serious meeting of the American Library Association in the South would give it; and

"Inasmuch as the city of Asheville, N. C., the most beautiful of all the cities of the far-famed 'Land of the sky,' has, through its local library association and other organizations, expressed its very great desire that the American Library Association Conference for the year 1907 be held within its borders, therefore be it

Resolved, That the North Carolina Library Association join with the various organizations of the city of Asheville in their most cordial invitation with the sincere hope that the meeting will be most beneficial and inspiring to all the sections of the country represented; and be it further

Resolved, That this association call upon the State Literary and Historical Association, the North

Carolina Federation of Women's Clubs, and other educational bodies and leaders, to present with it, through the president and secretary, invitations of similar import to the officers of the American Library Association at its approaching meeting at Narragansett Pier.

Voted unanimously, Raleigh, N. C., April 28, 1906."

Having completed all of its proposed work for the session, the association proceeded before adjournment to the election of the following officers for the coming year: president, Mrs. Annie Smith Ross, of the Carnegie Library, Charlotte; vice-presidents, Dr. C. D. McIver, of the State Normal College, Greensboro, and Mrs. Solomon Weil, of the state federation of women's clubs, Goldsboro; secretary-treasurer, Dr. Louis R. Wilson, of the University of North Carolina Library, Chapel Hill.

LOUIS R. WILSON, *Secretary*.

Library Clubs

ANN ARBOR LIBRARY CLUB

President: B. A. Finney, University of Michigan Library.

Secretary: Miss Franc Pattison, University of Michigan Library.

Treasurer: Miss Amanda Belser, University of Michigan Library.

The following report covers the activities of the club for the past year:

At a special meeting of the club in June, 1905, the members of the library staff of the university presented Mr. R. C. Davis, who retired from the administration of the library after 28 years of continuous service, with a leather chair as a mark of their esteem. Mr. Davis continues as librarian emeritus, and as professor of bibliography gives the course in bibliography, somewhat enlarged, which he introduced into the American collegiate curriculum in 1879.

At the December meeting Mr. Davis gave a very interesting paper on "Land and sea serpents," and Mr. Koch, the new librarian of the university, exhibited some foreign and private bookplates, of which his collection now numbers over a thousand.

The January, 1906, meeting was held on the 17th, and was devoted to Benjamin Franklin, with an interesting paper by Professor C. H. Van Tyne, of the history department of the university.

The subject of the February meeting was "Library schools," and the different schools were represented by those members who had attended them. This was partly for the benefit of several students who are expecting to attend some library school after graduation, and the discussion was at times most animated.

On March 7 Miss Frances Olcott, director of the training school for children's librarians of the Carnegie Library of Pittsburgh, made Ann Arbor a visit, and lectured in the after-

noon at the Barbour Gymnasium, after which a pleasant reception was held. In the evening she was the guest of the club.

The April meeting took the form of a trip to Detroit, on the invitation of the Detroit Library Club. About 20 members formed the party, and after inspecting the Detroit Public Library were served there with a delightful luncheon, to which about 40 sat down. The visitors were shown through the printing establishment of the *Detroit News* and the Cranbrook Press, and in the afternoon visited the private library and art collection of Mr. James E. Scripps, the Woodward Avenue Branch Library, and the Art Museum. The day was concluded with the regular meeting of the Detroit Library Club in the evening. There was a good paper on French libraries by Miss Briggs, followed by discussion and refreshments. The Ann Arbor club appreciated the hospitality and courtesies of Librarian Utley and his staff, and bears testimony that inter-library meetings are worth while and should be held often.

FRANC PATTISON, *Secretary*.

LONG ISLAND LIBRARY CLUB

President: Miss Eleanor B. Woodruff, Pratt Institute Free Library.

Secretary: Miss Mildred A. Collar, Pratt Institute Library School.

Treasurer: Miss Mary A. Kingsbury, Erasmus Hall High School Library.

The sixth annual meeting of the Long Island Library Club was held in the auditorium of the Medical Society of the County of Kings, Brooklyn, on Friday evening, April 27, 1906. The meeting was called to order by the president, Mr. A. T. Huntington. After a brief report by the treasurer, Miss Mary W. Plummer, chairman of the nominating committee, presented a list of officers for the ensuing year, who were duly elected, as follows: president, Miss Eleanor B. Woodruff, Pratt Institute Free Library; vice-president, Mr. Herbert W. Fison, Williamsburgh Branch, Brooklyn Public Library; secretary, Miss Mildred A. Collar, Pratt Institute Library School; treasurer, Miss Mary A. Kingsbury, Erasmus Hall High School Library.

The president, in announcing the general topic, "The library resources of Brooklyn and Queens," spoke of the advantages to be derived from wider acquaintance with the special features of the different libraries, thus affording opportunity for greater co-operation between them.

The first speaker, Miss Jessie F. Hume, gave an account of the development of the Queens Borough Library, which was organized in 1896. There are now 11 branches covering a wide area and presenting problems which are quite different from those in the other boroughs. Its trustees decided that instead of building three large Carnegie branches with their proportion of the Carnegie

gift, it was better to build eight small ones, four of which have now been completed. The circulation in Queens Borough has increased from 20,000 the first year to 320,000 in 1905.

Mr. Frank P. Hill outlined the history of the Brooklyn Public Library, stating that it is the successor of three libraries. The Athenæum was founded in 1852, and the Mercantile Library Association organized in 1857 on the lines of the Mercantile Library of New York, which continued until 1878, when the name was changed to the Brooklyn Library, which continued until it was consolidated with the Brooklyn Public Library in 1903. In 1892 a law was passed permitting the establishment of a free public library, but no means were provided for carrying it on. In 1896 the Brooklyn Library Association, under Mrs. Mary E. Craigie, president, petitioned the legislature for a charter on the plan of 1892, and a board of directors was appointed. Much credit is due the members of this board, nearly all of whom were women, for the work accomplished. The first year \$5000 was appropriated, of which \$4000 was spent for books and nearly \$1000 for periodicals, the books being cataloged and prepared by the women without pay. At the present time there are 25 branches, a library for the blind, travelling libraries and an administration department, but as yet no central library, as in most cities.

Miss Isabel Ely Lord stated that the Pratt Institute Library, unlike other libraries in the community, was founded through the generosity of one man, Mr. Charles Pratt. The technical school was established in 1887 and the Free Library the following year. Until the Brooklyn Public Library was started it was almost the only free library in the city. Since the foundation of the Public Library the Pratt Institute has turned its resources in special directions. It has always done a large amount of reference work, and it now has five rooms for reference use. Of the 85,000 volumes in the library, one-third are reference books. The art reference room contains a fine collection of art books and photographs, which are free for the use of all students. Through the applied science reference room an effort is made to reach all persons in that locality who are engaged in any trade. The room is equipped with 300 periodicals and trade journals.

Miss Susan A. Hutchinson stated that the library of the Brooklyn Institute of Arts and Sciences has a special work in supplementing the museum collections. The library now contains about 16,000 volumes, largely scholarly and monographic, and inclusive of some popular books. The nucleus of this library was the oldest library in Brooklyn, founded in 1823, which later developed into the Youth's Free Library. In 1900 the books were divided, and a portion were retained at the Central Museum and others formed the nucleus of the Children's Museum Library. The

library is provided with numerous zoölogical bibliographies and indexes, and the Zurich catalog of scientific literature. It contains a file of government publications relating to science, is strong in architectural books, and now has 2100 maps.

The Children's Museum and Library are unique from the fact that it is the only special museum and library devoted to the needs of children. Miss Miriam S. Draper briefly outlined the work of this library, which combines the features of an excellent nature library and a school reference library.

Miss Emma Toedteberg ably presented the status of the Long Island Historical Society Library. This library was founded 43 years ago, and contains rare folios, manuscripts, choir books, and a copy of Audubon's "Birds" in fine condition. It is rich in American manuscripts and Revolutionary collections, having 123 original letters of George Washington.

Dr. James P. Warbasse spoke for the library of the Medical Society of the County of Kings, which was founded in 1845 and moved to the present building in 1900. Many private libraries have been secured, so that it now contains 65,000 volumes and 35,000 pamphlets, and is one of the largest medical libraries in the world. It is housed in a fireproof building and three medical journals are published there. Books are loaned to 7000 members and expressed to all parts of the state. The library is free not only to every doctor, but entirely free to laymen as well.

The chairman stated that it is proposed to print a small handbook which shall give the resources of Brooklyn libraries, and include not only those mentioned in the program of the evening, but also the Y. M. C. A. and Y. W. C. A. libraries and those connected with educational institutions like Adelphi College, Packer Institute, the Polytechnic, etc.

Through the kindness of Mr. Huntington lantern slides were provided to illustrate the work of the Brooklyn Public, Pratt Institute, and Queens Borough libraries. The thanks of the club were tendered to Mr. Huntington for his generosity in furnishing the slides, and to the Kings County Medical Society for their hospitality. At the conclusion of the formal program the audience adjourned to the banquet hall, where light refreshments were served.

MIRIAM S. DRAPER, *Acting Secretary.*

NEW YORK LIBRARY CLUB

President: Henry W. Kent, Metropolitan Museum of Art.

Secretary: Miss Alice Wilde, New York Public Library, Washington Heights Branch.

Treasurer: Victor H. Paltsits, New York Public Library, Lenox Building.

The annual dinner of the New York Library Club, this year celebrating the club's attainment of its majority, was held on the evening of Tuesday, April 17, in the rooms of

the Aldine Association, 118 Fifth avenue, about 100 members and guests being present. The speakers were Mr. Wallace Irwin, Mr. Norman Hapgood, Miss Louise Connolly, Miss Ruth Putnam, and Miss Marie Shedlock, who delighted the company, in response to their applause after her speech, by telling, as only she could, Hans Andersen's story of "The true princess."

ALICE WILDE, *Secretary.*

TWIN CITY LIBRARY CLUB

President: W. W. Folwell, State University Library, Minneapolis.

Secretary-Treasurer: Miss Clara F. Baldwin, State Public Library Commission, St. Paul.

The second meeting of the club was held at the publishing house of the H. W. Wilson Co., Minneapolis, on Monday, March 4, 1906. Supper was served in the hall on the second floor at seven o'clock, and at the short business session following the supper Mr. D. L. Kingsbury, assistant librarian of the Minnesota Historical Society, presided in the absence of both president and vice-president. Dancing and a social hour followed in the adjoining ballroom. The members of the club then adjourned to the basement to inspect the printing and binding department, and afterwards assembled in the editorial rooms, where talks were given by Mrs. H. W. Wilson and Miss Clara Fanning, on the methods employed in compiling the *Cumulative Book-Review Digest*; by Miss Anna L. Guthrie, on the *Readers' Guide to Periodical Literature*; and by Miss Marion Potter on the "United States catalog" and *Cumulative Book-Index*. All of these talks were full of interest and tended to increase the already profound respect of all librarians present for these valuable publications.

The third meeting of the club was held in the rooms of the Minnesota Historical Society, at the capitol, St. Paul, on Monday evening, April 2, 1906. After a social hour visiting the various departments of the library, including the museum, the meeting was called to order by the president, Dr. Folwell, in the reading room of the society. D. L. Kingsbury, assistant librarian, spoke on the general library and especially the collection of government publications. Many members of the club were surprised to learn that the library has files of the documents and journals of the Senate and House for the first 14 congresses nearly complete. J. B. Chaney told of the newspaper collections, which from a small start in 1868 have grown to 7000 volumes. The society is now receiving more than 500 papers weekly. Short talks were given by Miss Annie Vose on the cataloging of the library, and by Miss Emma Hawley on the reclassification, which is now in progress. Miss Emma E. Vose talked about the scrap-books of the society, and Mrs. Rose B. Dun-

lap spoke on the literary work, especially Minnesota biographies and the life of Governor Ramsey. Rev. E. C. Mitchell told something about the collections in the museum, which he started when he found an Indian axe in 1847. Warren Upham, secretary of the society, spoke of its general progress during the last 10 years. Dr. Folwell urged the club members to ask the legislature for a larger appropriation for the historical society, especially to provide money for indexing the newspapers of the society, and to catalog the letters of General Sibley and Governor Ramsey. These papers, he said, would be worth \$50,000, and should be placed in a fireproof vault.

CLARA F. BALDWIN, *Secretary*.

SOUTHERN WORCESTER LIBRARY CLUB

President: Miss Harriet B. Sornborger, Bancroft Memorial Library, Hopedale.

Secretary: Miss Beatrice Putnam, Free Public Library, Uxbridge.

The Southern Worcester Library Club, composed of librarians from the southern part of Worcester county, Mass., and immediate vicinity, was informally organized at a meeting held in the Bancroft Memorial Library, of Hopedale, Mass., on March 1, 1906. The librarians present upon invitation of Miss Harriet B. Sornborger, of Hopedale, were Miss Bertha Franklin, of Bellingham; Miss Ethelwyn Blake, of Milford; Mrs. Laura C. Saddler, of Upton; Mrs. Gertrude C. Bowker, of Upton, and Miss Beatrice Putnam, of Uxbridge. Library methods were freely discussed and the proposition was made by the hostess that a club should be formed, and that the reading course now being published in *Public Libraries* should be made somewhat the basis of work.

On May 3 a second meeting of the club was held in the Thayer Memorial Building in Uxbridge, Mass. The subject considered was "Relation of the school and the library." Librarians, trustees, school superintendents and teachers were present from the vicinity to the number of about 50. Miss Sornborger presided and introduced as the first speaker Rev. C. A. Roys, president of the board of trustees of the Uxbridge Free Public Library, who welcomed the guests. A paper was read by Mr. C. F. Taylor, superintendent of the schools of Hopedale, Bellingham and Mendon. Mrs. Mary E. S. Root gave a delightful talk upon her work as children's librarian in the Providence Public Library; and in the discussion which followed Mr. S. A. Melcher, superintendent of the Northbridge schools, and Mr. F. S. Brick, superintendent of the Uxbridge and Douglas schools, took part. The weight of the argument seemed to be in favor of having the librarian act as an expert to open the library to both teachers and pupils, rather than that so much should be required of the teacher alone.

BEATRICE PUTNAM, *Secretary*.

Library Schools and Training Classes

CARNEGIE LIBRARY OF PITTSBURGH TRAINING SCHOOL FOR CHILDREN'S LIBRARIANS

Mr. Gilbert D. Emerson, bookbinder, Philadelphia, Pa., gave two lectures, April 2-3, on "Materials for bookbinding" and "How to mend books in public libraries." April 16-19 Miss Clara W. Hunt, one of the regular visiting lecturers of the school, gave six lectures, as follows: "Planning and equipment of the children's room," "The successful children's librarian," "Some problems of administration," "The personal relation of the staff with the children," "Selection of books for the children's room," and "First one hundred books for the children's room." The students had the privilege also of meeting Miss Hunt socially one evening during her stay here.

During the same week there was a pleasant visit from Miss Linda A. Eastman, of the Cleveland Public Library, and the students of the Library School of the Western Reserve University. They spent two days in Pittsburgh inspecting the central library and its branches.

Entrance examinations for the coming year will be held on Saturday, May 26.

DREXEL INSTITUTE LIBRARY SCHOOL

The students began their out-of-town visits on April 23 by going to Trenton and Princeton. At Trenton the Public Library was of special interest. Mr. Strohm and the members of his staff were most hospitable in their reception of the class, and the students carried away a delightful impression of an active working public library. From Trenton the class proceeded to Princeton, where a different type of library, the university library, was inspected under the able guidance of Dr. Richardson and his assistants. The biennial visit to the libraries of New York City and vicinity began May 2. During the past month the students have also visited the Free Library of Philadelphia and some of its branches and the University of Pennsylvania Library, where they have been given every opportunity to study methods.

Miss Eastman, accompanied by some of the students of the Western Reserve Library School, visited the school during the Easter holidays. It was much to the regret of the students that on account of the holidays they were unable to meet the visitors.

Mr. W. R. Eastman, of the New York State Library, gave on April 20 a helpful talk on library buildings, illustrated by lantern slides.

Miss Engle, who has charge of the children's work in the Free Library of Philadelphia, gave an informal talk on that work to the class on April 26.

Mr. Herbert Putnam visited the school on

April 30, and spoke to the class on the work of the Library of Congress.

ALICE B. KROEGER, *Director*.

INDIANA LIBRARY SCHOOL

The Library School of the Winona Technical Institute at Indianapolis was completely destroyed by a fire which occurred April 11 at three o'clock in the morning. At eight o'clock the library school students assembled in the president's residence and voted to continue their course. Fortunately the Easter vacation, which began April 12, allowed the directors of the Winona Technical Institute and the library school time to readjust losses.

Commodious quarters have been assigned in the Graphic Arts building. The equipment of the library school, including a collection of some 1500 volumes, which was completely destroyed, will be replaced. Owing to the loss by fire of the 40 or more applications for next year's course, if the class is not filled after the first examination other examinations will be held Aug. 14 and Sept. 12.

The kind offers of books and study outlines from librarians throughout the country have been greatly appreciated by the Winona Technical Institute and Library School.

MERICA HOAGLAND,

Director Library School.

IOWA SUMMER SCHOOL

The Iowa Library Commission announces the sixth annual session of the summer school for library training, to be held at the State University of Iowa, Iowa City, June 18 to July 28, 1906. Miss Alice S. Tyler, secretary of the commission, will have charge of the course, assisted by Malcolm G. Wyer, librarian of the state university, in reference work and bibliography; Miss Maude Van Buren, in cataloging; and Miss Irene Warren, in classification. A special course in library work for children will be given during the last two weeks of the session, July 16 to July 28, by Miss Edna Lyman, children's librarian of the Oak Park (Ill.) Public Library, and there will be a new course for teachers who are in attendance at other departments of the summer school, on the care and use of libraries from the teachers' standpoint, to be given by Miss Irene Warren, whose work as librarian of the School of Education, University of Chicago, particularly qualifies her to give such instruction. Further information regarding the summer library school may be had on application to Miss Alice S. Tyler, secretary, Iowa Library Commission, Des Moines.

MINNESOTA SUMMER SCHOOL

The Minnesota Public Library Commission announces the seventh annual session of the summer school for library training, to be held at Minnesota State University, June 19 to July 31, 1906, as a department of the summer school. The course will be under the direction of the secretary of the commission, Miss Clara F. Baldwin, who will give the lectures

on classification, accession, shelf-list, and the general organization and administration of a library. Mrs. Karen M. Jacobson, of the commission, will give the lectures on cataloging, book selection and binding. Miss Margaret Palmer, librarian of the Rochester Public Library and a graduate of Pratt Institute Library School, will give the lectures on reference work. Miss Edna Lyman, who has been successful in children's work in the Oak Park (Ill.) Public Library, will give the lectures on children's work, with special emphasis on books for children. Special instruction on the lettering of books, labels, and bulletins will be given by Miss Mary Moulton Cheney, of the Minneapolis School of Fine Arts. A three weeks' course for teachers or high school students in charge of school libraries will be given during the last three weeks of the school, July 9-27.

Further information may be had on application to Miss Clara F. Baldwin, Minnesota Public Library Commission, St. Paul.

NEW YORK STATE LIBRARY SCHOOL

The New York State Library School has issued a circular of information for 1906-7, which is the first printed announcement of the changes or modifications adopted under the new régime. These are mainly in the line of providing for what may be called graduate work by admitting to the senior class students of previous library school training or library experience. The regulations regarding admissions to the senior class are as follows:

"1. Completion of junior work does not necessarily imply admission to the senior class. Class work and examinations and those personal qualifications which make or mar success will be weighed, and only those who seem well adapted to library work will be received for the second year.

"2. Candidates from other registered library schools, if certified as having satisfactorily completed a sufficient number of courses of study, may be admitted to the senior class of the New York State Library School, provided they are graduates of a registered college, and meet the entrance requirements in other respects. Before graduation they must complete the class work and pass examinations in all junior and senior subjects or submit equivalent credentials.

"3. In exceptional cases candidates without previous library school training who have had sufficient library experience may, upon proper recommendation, be admitted to the senior class of the New York State Library School if they are graduates of a registered college and meet the entrance requirements in other respects. Before graduation they must complete the senior class work, such junior class work as the faculty may require, and pass examinations in all junior and senior subjects or submit equivalent credentials."

Special students will be taken only as conditions may permit. Entrance examinations are given only for candidates whose college

course has not covered the subjects and amount of work specified in the announcement; for 1906 they will be held May 28-29, and later in the fall a few days before the opening of the school. The summer course will be omitted this year. There is no correspondence course.

The list of the faculty is given as follows: Edwin H. Anderson, director; J. I. Wyer, Jr., vice-director; Florence Woodworth, director's assistant; W. S. Biscoe, instructor in bibliography, advanced classification, history of libraries and printing; Ada Alice Jones, secretary of faculty and instructor in advanced cataloging; W. R. Eastman, instructor in library buildings, founding and government; Martha T. Wheeler, instructor in selection of books, indexing; Ada Bunnell, instructor in elementary classification; Corinne Bacon, in charge of program and summer course and instructor in elementary cataloging, order and accession, shelf and loan department work; Edna M. Sanderson, registrar.

SENIOR BIBLIOGRAPHIES

The object in requiring from each senior the preparation of an original bibliography is to render the students familiar with the use of the tools and material necessary in such work; to give them such an idea as only actual work can, of the minor points as well as the chief features which mark a good bibliography, such, for instance, as selection of material, classification, annotation and technical perfection. In the selection of topics, the effort is made to cover a subject or field which has not before been similarly treated, so that the bibliography may be a real contribution. It is the best of these bibliographies which have been printed in the 39 numbers of the "Bibliography bulletins" issued by the New York State Library during the last 11 years. The subjects chosen by the members of the class of 1906 are as follows: Miss Beal, The canals and waterways of New York.

Miss Eastwood, Characterizations of great people in poetry.

Miss Eaton, Reading list on art for children.

Miss Gamwell, A selected bibliography of gardens and gardening.

Mr. Goodrich, A reading list on the old northwest.

Miss Henry, Child labor.

Miss Hiss, Esperanto.

Miss Knowlton, Reading list on popular botany and zoölogy.

Miss Leonard, Bibliography of education for 1905.

Miss Mulliken, Some contemporary dramatists.

Miss Nelson, Mormons and Mormonism.

Miss Nerney, Handbook of genealogies in the New York State Library.

Miss Thomas, Trans-Mississippi frontier ranch life.

Mr. Walter, Northampton, Mass.

PRATT INSTITUTE LIBRARY SCHOOL

The spring term opened according to calendar April 2. Eighteen of the students of the general course visited libraries in New Jersey and Pennsylvania during the previous week's vacation under the guidance of the director. The trip extended from March 24 to 31, and included Princeton, Trenton, Philadelphia, Bryn Mawr, Wilkes-Barré, and Scranton. Many pleasant social occasions were sandwiched in among the visits, and the director desires hereby to acknowledge appreciatively the kindness and hospitality met with everywhere.

The coming term includes several courses of lectures, among them the usual ones on "Library buildings," by Mr. W. R. Eastman, and on the "History of libraries," by the director. A new course is that to be given by Miss Ida M. Mendenhall ('04), embodying the normal school course given by her under the Indiana State Library Commission. This consists of six lectures on: 1, Co-operation between the library and the school; 2, Reading of children; 3, Principles of selection in children's books; 4, Reading lists helpful in the selection of children's books; 5, Picture bulletins; 6, Reference work with children.

A number of the general course students have had on hand an interesting piece of work in the reorganization of the library of the Willow Place Chapel, Brooklyn.

The students of the advanced class during the coming term will have some practical work in the following libraries: Brooklyn Public Library, reference and children's departments; Columbia University Library, cataloging department; Lenox Library, manuscript department.

SOUTHERN LIBRARY SCHOOL

The Southern Library School entertained Mr. Andrew Carnegie at an informal buffet luncheon in the class room April 6. The occasion was delightfully informal, and the class room never looked prettier with the lunch table decorated with apple blossoms and violets, and a big log fire burning cheerily in the open fireplace.

The class went on its Easter vacation April 12.

The students attended the meeting of the North Carolina Library Association at Raleigh April 27-28.

UNIVERSITY OF WYOMING SUMMER SCHOOL

A course in library methods is to be given at the summer school of the University of Wyoming, Laramie, from June 25 to August 3, under direction of the librarian, Grace Raymond Hebard.

WASHINGTON STATE SUMMER LIBRARY SCHOOL

The Washington State Summer School for Library Training announces its second an-

nual session at the University of Washington, Seattle, from June 25 to Aug. 3, 1906.

Miss Harriet E. Howe, of the Illinois State Library School, has been re-engaged as director. She will be assisted in the work of instruction by Charles W. Smith, acting librarian of the university, and by Miss McDonnell, also of the university library. Several lecturers have been secured, including State Librarian Hitt and Mr. Smith, of the Seattle Public Library. Courses have been outlined which will appeal to two classes of students: 1, beginners; 2, those who took the work last summer or who have had its clear equivalent. For the first class the work of last year will be repeated without essential change. For the second class, advanced courses will be inaugurated in library economy, reference work, and public documents. The equipment of the school has been strengthened by the purchase of some 300 books for laboratory use. Money has also been voted for the purchase of an extended exhibit of library economy. This exhibit has been collected at the Illinois library school during the past year and will be forwarded in time for the summer session. The number of students in each class will be limited to 17; advanced registration required. Further particulars may be obtained by addressing Librarian, University of Washington, Seattle, Wash.

Reviews

NEW YORK STATE LIBRARY, Bulletin 102, Library School 21. United States government documents; by James Ingersoll Wyer, Jr. Albany, 1906. 78 p. O.

This bulletin gives the text of the New York State Library School alumni lectures of 1905, revised, and with statement of the practice work required, and it should rank as the most useful, practical, and complete manual on the characteristics and handling of public documents that has yet appeared. There are five main divisions: Production and nature, Acquisition, Arrangement and classification, Cataloging, Use; and the appendixes deal with the class work required and the bibliography of the subject. Each division is prefaced by indication of desirable references, and is considered in compact and logical order. The exposition of the subject is wholly instructional—practical and untheoretical, with insistence upon the need of personal acquaintance with and handling of documents. Especially useful is the recommended list of sets for small libraries, with excellent annotations, while the hints on obtaining, weeding out, and utilizing documents are thoroughly practical and sensible. These and some other parts of the lectures were published a year or so ago in pamphlet form, as "U. S. documents in

small libraries," first by the Minnesota Public Library Commission and then by the League of Library Commissions; but these pamphlets are now out of print, and indeed the full text as here given contains nothing that could well be spared. Careful and intelligent study of this bulletin should enable any librarian to face the problems of a document collection with assurance that it can readily be made a source of help and a most useful part of the library's equipment. Mr. Wyer recommends careful selection and simplicity of record for the small library, emphasizing particularly the importance of steady refusal, on the librarian's part, to cumber shelves with volumes that are dumped upon the library by well-meaning Congressmen, and that will never be used or needed. In cataloging, simplicity and uniformity of entry are dwelt upon, with clear statement of the diverging arguments for "inversion" and "non-inversion," a selected list of recommended author headings, and numerous practical examples. The careful classed and annotated list of existing indexes to public documents shows how much has been done within the last decade to make available the immense amount of information that exists in this material, and the present bulletin is a most effective means to the same end.

Library Economy and History

GENERAL

BAKER, Ernest A. Direction for popular readers. (*Contemporary Review*, April, 1906. p. 498-504.)

A plea for good non-technical, non-specialist reading lists or bibliographies, anent the recent work of the National Home-Reading Union in publishing a series of graduated booklists prepared by experts for children, desultory readers, and students. The annotated A. L. A. bibliographies are described with approval, but with the general objection that they (especially the "Bibliography of fine arts" and "Literature of American history") are too exclusively for scholars. Singularly enough the "A. L. A. catalog," the chief work of the Association for the popular reader, is not mentioned.

The *Bulletin des Bibliothèques Populaires*, published monthly (except August and September) under the auspices of the Musée Pédagogique, Paris (E. Cornély, 101 Rue de Vaugirard), hardly fulfils in its March and April issues the promise of its title. In the first number (Jan.-Feb.) there was given a full and most interesting report of library conditions in France, and the purpose of the *Bulletin* was stated as twofold: first, to promote the interests of popular libraries, serving

as a bond between the libraries and their friends, and publishing at intervals articles of doctrine or information relating to the work of popular libraries in France and elsewhere; second, and principally, to serve as a critical bulletin of new French books, for the use of persons administering or availing themselves of public, popular, or school libraries in France or elsewhere. The March and April numbers are entirely devoted to a classed, selected, and fully annotated record of new publications, careful, and useful in selection of French books. It is evident, however, that the *Bulletin* will not touch adequately upon subjects of library technique, organization, and administration.

FARR, Harry. The libraries and the counties; to be read at the monthly meeting of the Library Association in London, on March 19, 1906. Cardiff, 1906. 10 p. D.

A plea for the extension of the benefits of the Libraries Acts to the rural districts, by organizing villages throughout the country into library districts under the county councils.

The *Library Association Record* for March, besides the article on "Library binderies," noted elsewhere, contains a paper on "Sunday opening of free libraries," by A. Capel Shaw, who describes the principles worked out in the Birmingham Public Libraries, and gives sensible doctrine on this much-discussed subject. In Birmingham the reference library is open for reading and reference use from 3 to 9 p.m. on Sunday. While Sunday reading is distinctly recreative in character, the Birmingham Reference Library does not contain current fiction, save as this is to be found in periodicals. The question to be considered as regards Sunday opening "is not now so much Is it right? or Is it wrong? but Is the use likely to be made of the library on Sunday commensurate with its cost?" Mr. Shaw thinks that in many small towns with inadequate funds the extra cost entailed must make Sunday opening prohibitive. In Birmingham a Sunday staff of five Jews is employed who are paid in money, under the direction of one of the senior officers of the regular staff, who is paid in time, and this is thought to be "possibly the most economical arrangement that could be made;" the cost "seldom exceeds a guinea a Sunday."

LITERATURE OF LIBRARIES, 17th and 18th centuries; ed. by Henry W. Kent and John Cotton Dana. Chicago, A. C. McClurg & Co., 1906. In 6 v., v. 1 and 2, 8°, regular edition, limited to 250 sets, \$12 net; large paper edition, limited to 25 sets, \$25 net.

Vol. 1, "Concerning the duties and qualifications of a librarian," by Cotton de Hous-

saye; vol. 2, "The reformed library keeper," by Durie. This set is to be devoted to reprints of rare and out-of-print works on libraries and their management, intended to make available to librarians the early authorities on these subjects.

Public Libraries for April is mainly devoted to the work for children being carried on by public libraries, including articles on "Picture books good and bad," by Caroline F. Gleason; "Fairy tales;" "How shall children be led to love good books?" by Isabel Lawrence; and reports from six libraries on the work they are doing in this direction.

THOMSON, John. Hither and thither: a collection of comments on books and bookish matters. Philadelphia, G. W. Jacobs & Co., [1906.] 8+388 p. D.

Among the essays or addresses included are "A plea for free libraries" and "The value of reading fiction." Many of the articles are reviews or semi-bibliographical accounts, embracing such subjects as the Masters of the Rolls series, Early chronicles, Botany and booklore, Children's literature, Orogania's San Marco, Liturgical manuscripts, etc.

LOCAL

Atlantic City (N. J.) P. L. (4th rpt. — year ending Dec. 31, 1905.) Added 3258; total 9000. Issued, home use 89,601 (almost double that of 1904.) New cards issued 2887; cards in use 5556. This does not include the 765 cards issued to non-residents who make the two-dollar deposit.

This first 12 months' use of the new building has demonstrated its practical utility, as already enlargement and rearrangement to give increased facilities are indicated. Miss Abbott, however, urges extension of work in all directions — in removing the age limit of 10 years for children, many of whom have been regretfully turned away when they have presented themselves at the library saying, "I've come to start in." That the children appreciate their privileges in the library has been abundantly shown. It is also suggested that restrictions for adult cards be removed so that even those persons whose names are not in the directory, but who are employed in Atlantic City, may draw books. The work with the schools has gone on apace, special attention being given to the needs of the teachers. Picture collections are being made for school use, and an industrial exhibit of woods, animal and vegetable products and minerals has been purchased and placed in cases in the children's room. In the cataloging department most of the current purchases have been carded. A modern development of library work has been brought by the telephone, which is used not only for ordering books, but in requesting data from the reference room.

Boston Medical L. The special committee appointed to consider a suitable memorial to the late librarian, Dr. James Read Chadwick, have recommended that the periodical room of the library be called the Chadwick periodical room, and that a bust or portrait of Dr. Chadwick with a suitable tablet be placed therein. It is further recommended that a fund to be known as the Chadwick book fund be raised, to provide for the purchase of periodicals, completion of files, and the binding of periodicals, a department in which the library always has been lacking in means, and that a suitable bookplate be placed in every bound volume. It is also recommended that a memorial window be placed in Holmes hall reading room.

Brookline (Mass.) P. L. (49th rpt. — year ending Jan. 31, 1906.) Added 4222; total 62,061. Issued, home use 138,798 (fict. "less than 59 per cent."). New cards issued 1279.

Of the total circulation, 17,156 v. were issued from the two delivery stations, and from the school reference room 7197 v. were issued to teachers. The attendance in the children's room was 20,509, and 9195 books were issued to children under 12 years of age. The reclassification and recataloging of the library, begun in May, 1901, was completed in September, 1905; the cost of this work is estimated at from 20 to 30 cents per book for non-fiction, which includes mending and labelling.

"A careful account was kept of the time spent in reclassifying and recataloging 65 somewhat popular scientific volumes (59 titles) which were in fairly good condition. The average cost for these was 20 cents per book."

Brooklyn (N. Y.) P. L. (8th rpt. — year ending Dec. 31, 1905.) Added by purchase 67,550, by gift 3541 v.; total 476,969 v.; 26,785 pm. Issued, home use 2,579,068 (fict. 67+ per cent.; juv. 36 per cent.). New registration 75,542; total borrowers 190,265. Receipts \$309,388 (of which \$286,888 is original city appropriation, to which were added two special appropriations for Carnegie branches and books); expenses \$294,398.11 (salaries \$151,688.36, of which \$23,372.50 was for the administration department; books \$63,296.40, periodicals \$7239.45, binding \$17,518.03, light and heat \$5189.70, stationery and printing \$11,229.64, supplies \$12,690.68, rent \$15,210.84).

A record of large growth and steady development. Mr. Hill points out that the library is now second in rank among the public libraries of the country, New York holding the first place. A suitable central building to serve as a depository and administration center is a pressing need, and an important step toward its realization was taken in the selection of a site adjoining Prospect Park plaza, which is regarded as "adequate to meet the requirements of the library for at least fifty years to come." During the year six Carnegie branch buildings were erected, mak-

ing a total of seven already completed. The establishment of a branch in a new and attractive building has in every case meant a great increase in circulation — in some cases practically a doubling of the former issues. The library system now contains 25 branches, and it is considered probable that a total of 43 may be needed in the near future to keep pace with the growth of the city. The Carnegie branch buildings opened during the year were: Williamsburgh, Bedford, DeKalb, Carroll Park, Flatbush, and South; in May the library (7000 v.) of the Hebrew Educational Department was turned over to the Public Library and received the name "Brownsville branch." The addition to the Montague branch, extending the reading room and giving a large children's room, was opened early in the year, and in April the library for the blind was opened at the Pacific branch. The circulation of the library system showed an increase of 483,944 over the preceding year and was the largest in its history; issue of fiction shows an increase of 1 per cent. There were 4321 v. lost during the year, of which 1424 were charged to borrowers and never returned. The binding is practically all done at the Chivers bindery, near the library's administration building, and it is found to be extremely satisfactory and "cheaper in the end, as a book bound in the Chivers way never needs rebinding."

Requests for books not in a given branch, or desired for teachers or other special use, are met by the interchange department, which sent 16,349 v. to distant readers during the year. To the travelling libraries department 1265 v. were added, giving a total of 10,025, which had a circulation of 60,976 — a decrease from the previous year. These books go to clubs, societies, schools, recreation centers, and similar points of distribution. The library staff is now 227, an increase of 22 appointments during the year. Weekly meetings of the chief librarian and heads of departments are held, and monthly meetings of the chief librarian and branch librarians; and it is planned to arrange for general meetings bringing assistants into more direct contact with the chief librarian and superintendents. Mr. Hill makes only one recommendation, that trustees visit the branches as often as possible, to come in closer touch with the work of the library staff and the activities of the library.

The various reports of superintendents and branch librarians, which follow in due order, are very interesting. Miss Hunt, for the children's department, calls attention to the continued effort to raise the standard of quality in the children's books circulated, and to the greatly improved work of the children's librarians. "It has been very interesting to study the practical working out of the different building plans as they affect the work with the children. At Pacific we have a chil-

dren's room on the second floor, with its entire work — not in *spirit*, fortunately — separated from that of the adult department. At Montague the division is even greater, the children having an entrance on another street from the main department. East and Ridge-wood have also the separate entrance and charging desks for the children's rooms. In the remaining branches the children have their books charged at the general delivery desk, using their special room for reading, reference work and selecting books. We have long thought that some combination of the two plans would be best, since such a separation as exists at Pacific and Montague makes it rather difficult to bridge over the gap for the 'between age' children, while the keeping of adults waiting in line, at Williamsburgh for instance, when over 600 juvenile books may be circulated in one afternoon and evening, seems rather hard on the adults. We hope to plan in our next new large building to retain the desirable feature of having the children's room on the same floor with, and visible to the adults, but using the general delivery desk only during the quiet months, there being a separate charging desk in the children's room in winter."

The report of the cataloging department, by Miss Hitchler, superintendent, is a careful exposition of the great volume of detail work often ignored in the consideration of library routine. It centers upon the "frequently recurring question" of the cost of cataloging, and gives full particulars of the time, cost, and methods of the varied operations of the department — in the cataloging of current accessions, the recataloging of the great bulk of old material in the Montague collection, the mechanical processes of carding, pocketing, pasting, etc., compilation of special lists, ordering and filing Library of Congress cards, revision of branch catalog cards, examination of books for discarding or purchase, compilation of comparative, general and special statistics, technical examinations prepared and revised for apprentice class, varied assistance given to branches and departments, and many other details, some of which seem hardly classifiable under the ordinary work of a cataloging department. The department comprises 30 catalogers and 6 messengers, and the amount spent for salaries in 1905 was \$24,242.27. "Deducting from this amount the \$3687.46 for branch current cataloging, \$6264.27 for recataloging, \$600 for work on the depository catalog, and \$690.54 for cataloging the Greenpoint collection for that branch, leaves \$13,000 spent for cataloging the 62,129 new accessions, and union cataloging, etc., the 13,987 volumes of the old Montague collection, in addition to the other work of the department — an average cost of .17 per volume. It has been estimated that the average cost of cataloging a new title is .30 and that of cataloging a duplicate .15."

The report as a whole, with its full tabulated statistics, will repay careful attention.

The Greenpoint Carnegie branch library building was opened on the evening of April 7.

Brooklyn, N. Y. Pratt Institute F. L. (Rpt. — year ending June 30, 1905.) Added 5510; total 82,222 (incl. 4595 French and 3543 German). Issued, home use 141,503. New registration 6408 (children 1919).

The first report of the present librarian, Miss Lord, admirable in form and arrangement. It is a suggestive and interesting record of a year "largely spent in completing the reorganization of the detail of the library work, begun under the former librarian." The opening of the applied science reference room, opening of the circulating department every evening, and the establishment of a regular weekly story hour in the children's room, were incidents of chief importance; but there is also evident a large amount of minor development in the direction of greater freedom and simplification in the use and administration of the library. The circulation of 58,847 v. from the 4000 volumes on open shelves makes clear the importance of unrestricted access to books and the desirability of extending it more fully, while the opening of the circulation department every evening has relieved the former pressure of evening work and been appreciated by library users. In August, on account of vacation schedules, the library is closed, at 6 p.m., except on Saturday. The duplicate pay collection of popular novels has been discontinued, and reserve postal cards are no longer allowed for new fiction, both these practices being regarded as creating a privilege for money and therefore undesirable in a free public library; "we were surprised to receive very few complaints at the change, while there were many expressions of appreciation of it." In the reading room there has been a marked decrease in use, probably owing to the removal of this department to the second floor, and the diversion of some of its former users to the new applied science reference room. The change is regarded as distinctly advantageous, as the reading room now connects directly with the general reference room and the periodical reference room. A large number of scientific and technical periodicals were added during the year, and on the other hand it was decided to materially reduce the number of newspapers, weeklies and other periodicals formerly bound. "In the January number of the library bulletin was published a classified list of the current periodicals in the applied science reference room. The edition of 2000 was exhausted within two months, and we are already considering the advisability of reprinting the list."

In the reference department there were 17,983 visitors, the only falling off being in the use of Institute students. No statistics are kept of the use of reserved books, so that these may be made as accessible as possible. Government documents have been rearranged and all unnecessary duplicates weeded out; catalogs of educational institutions are no

longer classified or cataloged individually, "they are kept in a single file alphabetically by the name of the institution, and except in unusual cases only the current catalog is preserved." Use of the photographs in the art reference room has largely increased, these being constantly borrowed for illustrative use by clubs and lecturers; a deposit is not required from responsible people known to the library authorities.

The applied science reference room was opened Sept. 12, in the attractive quarters of the former reading room on the first floor. It is open from 12.30 to 9.30 p.m., and its evening use is naturally the largest. The room is equipped with an extended collection of Patent Office reports, bound and current trade and technical journals, transactions of scientific and engineering societies, reference books, and a collection of over 500 trade catalogs. Slow growth of use of this room was expected, and an attendance of 7007 for nine and a half months is regarded as satisfactory. Efforts have been made to make known the existence of this room by distribution of printed notices, visits to factories, shops, labor organizations and manual training classes.

The children's room was closed in August for redecoration and improved equipment, and on its opening on Sept. 1 a re-registration of the children was begun, which showed that the department is used by children from 72 schools in widely separated sections of the city. The story hour on Tuesday evenings has been given regularly since October, and the room is open for reading and circulation in the evening only on Saturday; at the story hours attendance has ranged from 32 to 140, admission being by ticket. This part of the library's work was fully described by Miss Annie Carroll Moore, the children's librarian, in *L. J.*, April, 1905. Some work with the schools has been done, but this cannot be much extended on account of lack of facilities for many more children than now use the library; exhibits and special bulletins form an attractive feature of the work of this department.

The brief summaries of the work of cataloging and order departments note some interesting changes or modifications in method. In the cataloging department the full official catalog "had grown to such proportions and was such an expense to keep up that it was a serious problem." It has been replaced by a check-list on slips (instead of cards), each slip containing as many titles of books by the same author as would go on the slip—often from six to eight; fiction was entirely omitted, except for a name-slip, as the alphabetical fiction shelf-list makes another full entry unnecessary. The space taken by this "official check-list" is less than one-fifth of that taken by the former official catalog, and the expense of continuing it will be nominal. The

public catalog, formerly in three alphabets—author, title and subject—has been consolidated into two, a "name catalog" of authors and titles, and a subject catalog. The entire fiction shelf-list has been checked up, with indication of the number of copies of each book that could be used to advantage, and also with indication that books considered trashy or undesirable are not to be replaced; there has also been a general weeding out of out-of-date or valueless material, especially in newspapers and periodicals. There has been a great increase in rebinding, as books are now sent to the binders much more promptly than heretofore; this, it is pointed out, is really an economy, as it greatly prolongs the life of a book.

Burlington, Vt. Fletcher F. L. (32d rpt. — year ending Dec. 31, 1905.) Added 1000; total 30,379. Issued, home use 41,683 (fict. and juv. 31,383).

The chief event of the year was the completion of the card catalog, begun the previous year by Miss Mary P. Farr, with one assistant. The whole expense of the catalog amounted to \$3401.86, of which \$2548.54 was for salaries and clerical work during 14 months; \$283.11 for cases; \$237.35 for type-writing machines, and \$332.86 for supplies and incidentals.

Cambridge (Mass.) P. L. (48th rpt. — year ending Nov. 30, 1905.) Added 6317; total 70,388. Issued, home use, 228,799, of which 145,470 were from the main library, including children's room, an increase of 36,423 over previous year.

The newly installed travelling libraries, placed with one exception in the local delivery stations have shown most satisfactory results both in circulation and enlarged influence. Each library has been increased from 50 to 75 books, fiction and non-fiction being in the proportion of two to one. The one exception to the delivery stations as depositories has been the Douglas Club, of North Cambridge. Work between the library and schools has been furthered by an additional appropriation by the city council for books. An important extension of this work has been an installment of books, by request, in St. Mary's parochial school. The librarian has also had many conferences with school principals for the purpose of arranging visits to the library for special library instruction by grammar grade pupils. In the cataloging department a revision of juvenile fiction was completed, and lists of books designed to aid in the movement against the spread of tuberculosis were prepared, as well as special lists on technical subjects made by the classes of the Rindge Manual Training School. The newspaper room proved such a success that extension is needed. The income from the Woolson bequest has been used in the purchase of music scores, and in this connection it is recom-

mended that a fine arts department be formed and separately shelved. Altogether the year has been creditable as far as limited funds would permit.

Chicago (Ill.) P. L. (33d rpt. — year ending May 31, 1905.) Added 22,879; total 304,510. Issued, home use 1,336,190 (fict. 46.67 per cent., juv. 29.25 per cent.); ref. use 352,856. New registration (two years) 73,368; cards in force 67,370. Attendance in ref. room 128,643. Spent for books \$19,884.79; spent for salaries (173 persons) \$125,013.88.

The cutting down of expenses in the year preceding this report has put the financial affairs of the library on a better basis and permitted more liberal buying of books. There has been a steady growth in all departments during the year covered. Important additions to the reference collection are noted. A sum of \$20,000 was received, on account of the bequest of the late Hiram Kelly, which when the estate is finally settled, will be increased to about \$200,000. Through the 68 delivery stations 788,657 v. were circulated, and over half of the total number of borrowers' cards issued were applied for at the delivery stations. Three motor wagons have been purchased for the delivery service; these have each a carrying capacity of 2500 pounds and each can do the work of two delivery wagons and four horses. "The library will soon be able to establish a daily return delivery to each one of the stations formerly reached only once a day by wagon, and this improvement in the service is bound to result in a still greater use of books." There are now 911 books for the blind in the library, and 859 were issued for home reading. Six branch reading rooms are in operation, in addition to the beautiful Blackstone memorial branch. The Medical Society of Chicago, which has occupied and equipped one of the library rooms as a lecture hall, gave a series of popular free Saturday night lectures, besides holding its own regular meetings; the Municipal Museum of Chicago has been installed in two spare rooms on the fourth floor of the building, where it has held several exhibits, with lectures and informal talks.

There are elaborate statistics, and the report indicates an immense and varied public use of the library in all its departments.

Chicago. Newberry L. (Rpt., 1905.) Added 9766; total 210,654 v., 72,804 pm., maps, etc. The library was open 295 days and had 84,141 visitors; 132,751 v. were consulted. The use of the various departments was: medical, 53,335 books and periodicals; history, 26,720 v.; philosophy, 20,562; art and letters, 13,746. In the department of genealogy the index to genealogies has now reached 700 folio volumes.

Columbus (O.) P. School L. (29th rpt. — year ending Aug. 31, 1905.) Added 3927;

total 64,025. Issued, home use 250,492; lib. and school ref. use 389,863; total 640,355, of which 580,232 were issued to juv. readers. Receipts \$6999.67; expenses \$6999.67 for books, periodicals, bindings, supplies, etc.; salaries (paid from another fund) \$5055.

The very large statistics of use include detailed record of reading and reference issue of periodicals, reference books, and similar works, which are not ordinarily included in circulation statistics. Nevertheless the use made of the library is remarkable in its extent and general character, this library, which is supported by school funds, being practically a part of the city school system, although it performs also the functions of a general public library. Its collection of supplementary reading numbers 23,790 v., which had a circulation of 100,948 during the school session of 39 weeks. Children are allowed to draw only one work of fiction a week, except books used for required reading in the schools. The percentage of fiction in the total circulation is less than 48. Besides reference and branch libraries in all the public schools the library sends books to police and fire stations, institutions and settlement houses. It is pointed out, however, that at least four permanent branch libraries are necessary for the most effective work.

Cumberland, Wis. The new building was formally opened March 17. On week days the library will be open from 1 to 9 p.m. There is some sentiment for Sunday opening, but no conclusion has been reached. The total cost of the new library building was \$8800.

District of Columbia P. L., Washington. "The Public Library of the District of Columbia as an organ of social advance" is described by the librarian, G. F. Bowerman, in *Charities* for April 14, 1906 (16: 105-110). The work done in the circulating department, through lists and bulletins, in the children's room, through free lectures and story telling, and through schools and travelling libraries, is described, with emphasis upon the need of a larger appropriation than Congress has yet granted.

Fitchburg (Mass.) P. L. (33d rpt. — year ending Nov. 30, 1905.) Added 2075; total 45,816. Issued, home use 76,538 (fict. 65.9 per cent., of which 21.09 per cent. was juvenile). No. cardholders 4219. Receipts \$7864.56; expenses \$7864.56 (salaries \$2928.61, books \$1287.76, periodicals \$273.95, binding \$735.72, janitor \$831, light \$559.03).

On account of the reduced appropriation expenses have been curtailed in every direction, and only 630 new books were purchased. The library building, given 20 years ago by Hon. Rodney Wallace, cost \$84,500, and an annual appropriation of at least 10 per cent. of that amount is necessary for proper maintenance. Money is needed particularly

for books in foreign languages—for the Finns, Italians and Hebrews—and deposit stations would be a great advantage. The most notable gift of the year came from Herbert I. Wallace, who purchased and presented the valuable music collection of the late Francis H. Jenks, of Boston.

Galveston, Tex. Rosenberg L. A statue of the late Henry Rosenberg, founder of the library and benefactor of many Galveston institutions, was unveiled on March 6. The statue is placed in Tremont street, near the library, and the exercises were held on a platform erected on the library terrace.

A course of free lectures on "Great English novelists of the 19th century," by J. G. Carter Troop, of the University of Chicago, was given at the library on Monday afternoons in February and March, and a series of four free stereopticon evening lectures on different subjects, by professors of the University of Texas, was also given.

Hartford (Ct.) P. L. On April 25 Clarence G. Mellen, 17 years old, pleaded guilty in police court to a complaint lodged by the library authorities, charging him in six counts with mutilating books belonging to the library. A fine of \$50 and costs on each of the counts was imposed by Judge E. G. Garvan, making a total of \$309.56. The fine was paid by the boy's father. The damage done to the books is not compensated for in the fine imposed, as many of the volumes mutilated were valuable or out-of-print works, which cannot be replaced. The library authorities were able to trace to young Mellen 102 books from which he had cut illustrations, and believe that many other books now in circulation were damaged by him in the same way, though the extent of the injuries will not be known until these are returned and examined. About half of the books traced to young Mellen were exhibited in court, and seen to be irretrievably slashed and ruined. In the examination the prisoner said that he loved books and had about 275 of his own; he said he cut up the library books to get pictures for his scrap book collection. "I got some books from the library and saw two or three pictures that I wanted and I couldn't get them any other place. I cut them out, and as I wasn't detected I cut others, it seemed so easy to do it." He added that he had not read the books taken, that he had never cut any pictures from his own books, and that if the library books had belonged to him he would not have mutilated them. His father testified that the boy was deeply interested in reading and in art. The sentence imposed was in accordance with the recommendation of the prosecuting attorney.

Hopedale, Mass. Bancroft Memorial L. (20th rpt.—year ending Dec. 31, 1905.) Added 514; total 10,920. Issued, home use

19,879 (fict. 69 per cent.); visitors to reading room 9563. New cards issued 224; cardholders 1000. Receipts \$2691.09; expenses \$2691.09 (salaries \$1041.02, books \$448.34, periodicals \$132.75, binding \$145.37, heating \$327, lighting \$284.25).

The circulation of juvenile books was nearly one-fifth of the whole. There have been nine Library Art Club exhibits and also a most successful exhibition of amateur photography numbering 309 pictures. Special efforts are being made to bring together works on local history.

Illinois library institute. A successful library institute was held at Mattoon, April 6 and 7, under the auspices of the library institute committee of the Illinois State Library Association. The sessions were held in the Carnegie library building and were attended by 13 librarians. There were four instructional sessions, with practical talks and illustrative work, on technical and routine subjects; and one evening session devoted to a public meeting, when Professor Alvord, of the University of Illinois, gave an address on "Local history, the library, and the public."

Irvington-on-Hudson, N. Y. Guiteau L. (4th rpt.—year ending March 1, 1906.) Added 661; total about 5000. Issued, home use 17,112 (fict. 45 per cent.). New members 222; total membership 1478; no. readers 4275 (1580 children).

Jersey City (N. J.) F. P. L. (15th rpt.—year ending Nov. 30, 1905.) Added 5061; total 96,276. Issued, home use 486,562 (fict. 69.4 per cent.). New registration 4128; total registration 34,798.

Special reference is made to the death, in January, 1906, of Dr. Leonard J. Gordon, president of the board and working head of the library. The year's work has been in some respects the heaviest in the library's history. More than half of the home circulation was through the 14 delivery stations. Work with the children is steadily growing, and a circulating department for children is to be established in connection with the children's reference room. Class room libraries are used by an increasing number of schools, and the circulation of books from these collections is larger than ever before.

Lancaster (Mass.) Town L. (43d rpt.—year ending March, 1906.) Added 897; total 33,067. Issued, home use 13,345 (fict. 435 per cent.; juv. 188 per cent.). New registration 121; total registration 1694.

"During December and January the librarian gave a course of lectures at the high school on the use of the library, the pupils taking notes. The school was divided into four classes for practical work in the library. Questions were given them on the card catalog, the periodical indexes and the reference books, and they were graded according to

their work. The pupils did exceeding well and improved steadily."

Leominster (Mass.) P. L. (rpt. for year ending Feb. 1, 1906.) Added 730; total 22,279. Issued, home use, 25,072 (fict. 799 per cent.); school use 11,553. New cards issued 870; cards in use 6794. Receipts \$3,723.63; expenses \$3,637.97.

The use of the reference room has steadily grown; re-cataloging has been continued; and in its various departments "the year's work shows unusual progress, and makes, therefore, a satisfactory record for itself." It is also announced that a children's room will soon be opened.

Lexington (Ky.) P. L. (6th rpt., 1905.) This is the first report since the library was installed in its handsome Carnegie building. Added 817; total not given. Issued 49,220 (fict. "at least 80 per cent. "). Cards in use 3678; "these figures do not represent the children of the public schools who use the large number of books purchased by the library for supplementary reading in the schools." The children's room is one of the most attractive departments of the building; there is also a pleasant reading room for colored people. The county medical society maintains one of the library rooms as a medical library, and holds its meetings there. The report contains several illustrations, and a short historical sketch of the library—which was formed as far back as 1796, as the Transylvania Library—with a description of its new building.

Los Angeles (Cal.) P. L. The library was opened in its new quarters on April 15.

Louisville (Ky.) P. L. In the Louisville *Courier-Journal* for April 8 Mr. Yust gives an account of the colored branch of the library, opened in separate quarters in September, 1905. He says: "Some difficulty was experienced in securing quarters suitable for the purpose. Householders seemed to be under the impression that their property might be desecrated by such use. Finally, after several abortive efforts, William Andrews, colored, agreed to move his family to the second floor and rent the first floor of his house at 1125 West Chestnut street to the library. Three small rooms were altered somewhat and fitted up with temporary shelving so as to present a very attractive appearance. Meanwhile about 1400 volumes of new books were bought, classified and cataloged at the main library, according to the same system employed in all the libraries. A card catalog was made.

"The opening exercises were held Sept. 23 in the Knox Presbyterian Church. Brief addresses were made by a number of the trustees and also by several of the leading colored teachers. It was really a notable occasion, the opening of the first entirely separate library for the colored people. It was em-

phasized as marking an epoch in the development of the race. The large-minded attitude manifested by the trustees in presenting the library was equalled only by the grateful and almost pathetic enthusiasm of those who received it.

"The librarian in charge is Thomas F. Blue, a graduate of Hampton Institute and formerly secretary of the Colored Y. M. C. A. The assistant is Rachel D. Harris, who taught for a number of years in the city schools. This experience is of great value to her in helping the school children, who constitute a large part of the library's readers. Every effort is made to make it as easy as possible to use the library. The printed regulations adopted for the main library have been modified only in the interests of greater freedom. At the other libraries applicants for library privileges are required to have their application signed by a real estate owner. It soon developed that this rule would be a hardship on the colored people and restrict the use of the library, because comparatively few among them hold real estate. It was decided therefore to require only the signature of some one known to be responsible. Although borrowers carry only one card, they may draw any number of books on it for special study provided these books are not in demand by other readers.

"The library is patronized largely by the boys and girls attending school, and it is with them that the most effective work is being done. The teachers are among its warmest supporters. They not only consult it themselves, but regularly refer their pupils to it for supplementary study and help. There have been many expressions of appreciation from ministers, who also make large use of the excellent collection of reference books. The reading class among the colored people is relatively small, but rapidly increasing, and the library is doing much toward developing the reading habit. The total number of cardholders is 1420. During the six months that the library has been in operation the attendance has been 18,876, and the number of books drawn for home reading 8119. Readers as well as the librarians are encouraged to recommend books for purchase. The total number now in the library is 2278. Among the most popular of the periodicals are the *Colored American* and the *Voice of the Negro*. The heavy magazines like *Harper's Monthly* and *Review of Reviews* are not much in demand. The first book drawn out for home reading was Booker T. Washington's 'Up from slavery.' The 12 books that have had the largest circulation are: Chesnutt, *Marrow of tradition*, out 23 times; Churchill, 'Richard Carvel,' out 24 times; Doyle, 'Sherlock Holmes,' out 23 times; DuBois, 'Souls of black folk,' out 22 times; McCutcheon, 'Nedra,' out 25 times; Reade, 'Put yourself in his place,' out 28 times; Rice, 'Mrs. Wiggs of the

cabbage patch,' out 32 times; Rice, 'Lovey Mary,' out 23 times; Rice, 'Sandy,' out 55 times; Spearman, 'Daughter of a magnate,' out 32 times; Washington, 'Up from slavery,' out 28 times; Washington, 'Working with the hands,' out 23 times. Other popular books are Dunbar's 'Lyrics,' Thwaites' 'Daniel Boone,' Helen Hunt Jackson's 'Ramona,' and George Eliot's works. The colored people have no hesitation in expressing their preference for books by and about their own people. It is not clear why George Eliot is such a favorite.

"The circulation of fiction predominates, but the percentage is only 64, whereas at the main library it is 81. This may be due to the fact that the so-called leisure class, who are supposed to read the most fiction, is smaller among the colored people, or that the novel does not appeal so strongly to the negro mind; or that the library is used more largely by pupils, teachers, ministers and other professional people, who come to it for more serious purposes. They find it helpful in their daily work. One woman who makes a business of raising chickens called at the library for medical help because many of them were dying. Nothing on the subject could be found and the librarian was unable to prescribe for sick chickens, but a book on poultry was ordered for her immediately.

"The juvenile books, of which there are 450, are exceedingly popular even with adults. About 300 new ones have been ordered. The rear room is especially devoted to children's work. The weekly story hour is conducted by trained kindergarten teachers in the colored schools. The room is frequently filled before the appointed time and many have to be turned away. A boy's club also meets there once a week for reading and the consideration of books of special interest.

"One of the most satisfactory features of the library is the attractiveness of the rooms. They are small, but well adapted to their purpose and are kept scrupulously neat and clean. There is free access to the shelves, and any one may examine any book in the library. It is the quietest of all the libraries in the city, and a distinctly library atmosphere prevails. It is not only supplying the intellectual wants of the people, but it is a standing object lesson in cleanliness and order. It is steadily growing in popularity and influence."

Malden (Mass.) P. L. (28th rpt. — year ending Dec. 31, 1905.) Added 3335; total 48,722. Issued, home use, 135,198 (fict. 74.81 per cent.) school use 15,590; lib. use 12,358. New cards issued 1501; cards in use 13,698.

"The activities of the library during the past year have been along lines established and persistently followed for many years, by strengthening and extending which new avenues of work have been opened and their opportunities followed out. All that has come

in the way of work in the children's room, with the schools, through delivery stations, and by other branches of library service have not come as innovations by themselves, but as the legitimate results of the principles which have governed the conduct of the library from its establishment." The use of school libraries, selected from over 1700 volumes set apart for the purpose, has been extended to third grade pupils.

Mansfield, O. Memorial L. Assoc. (18th rpt. — year ending Dec. 31, 1905.) Added 1025, including bound magazines; total not given. Issued, home use 47,120 (fict. 25,944); visitors to reading room 34,695; total borrowers' cards 7000.

During the year past it has not been thought best "to undertake any more work or to make any more additions to our present equipment except what was absolutely necessary." The new building is fast approaching completion and will make up for all the deficiencies of present quarters. There have been many valuable gifts, including over three hundred volumes from the library of the Hon. John Sherman, and many pictures have been mounted for clubs and school work. It is arranged to have a children's story hour once a week during the ensuing year.

Medford (Mass.) P. L. (50th rpt., 1905.) Added 2009; total 29,683. Issued, home use 80,922 (fict. 73 per cent.; juv. fict. 42 per cent.). New registration 1148; total cardholders 4856. Receipts \$9149.87; expenses \$9149.67 (salaries \$4302.16, books \$1573.40, janitor \$737.05, rebinding \$521.02, periodicals \$325.68, fuel \$293.60, lighting \$199.32).

"An attempt has been made to call attention to an account of an experiment in popularizing the study of fiction by R. G. Moulton in his 'Four years of novel reading.' The plan consists in the reading by all the members of a 'Classical Novel Reading Union' of the same novel at the same period, while the announcement of the novel to be read is accompanied with suggestions coming from some 'literary authority' of some one or two points to be noted in the book; then follow meetings for discussing the novel. There have been put on a blackboard in the delivery room from time to time the lists of the different novels styled classic, giving with the list the suggestions designed to call out the points and lessons to be found in the different books."

Work with the schools has been much hampered by insufficient supply of books, but 96 day schools and five Sunday-schools receive regular service from the library.

Milton (Mass.) P. L. (36th rpt. — year ending Dec. 31, 1905.) Added 1159; total 15,693. Issued, home use 57,349 (fict. 25,319; juv. fict. 14,321). New registration 446; total cardholders 2487.

Increased use in all departments is the rec-

ord of the year. The population during the last five years has increased from 6578 to 7054, while the circulation for the same period has increased from 42,264 to 57,349. The abolition of an age limit has resulted in a large increase in the number of children using the library. Borrowers are allowed to take out at one time as many books as are desired, provided but one is a "seven-day book." The work of the children's room for its first year in the new building is reported in detail; bulletins, exhibits, two public story hours, and much reading aloud by the children's librarian have helped to interest and attract children.

New Bedford (Mass.) P. L. (54th rpt., 1905.) Added 4092; total 92,805. Issued, home use 118,904 (fict. 67.7 per cent.). New cards issued 1661.

Mr. Tripp makes a clear presentation of the resources, activities and needs of the library. The special strength of the collection is in Quakerana, genealogy and art books; material relating to the whaling industry is extensive and every effort is made to increase it. There are two branches and three delivery stations, besides deposit stations at engine houses and schools. The newspapers are largely used for lists of additions, and the monthly bulletins and many special reading lists reach many readers. Exhibits of photographs and half-tones are continuously displayed in the reference room, and the Newark bookbinding exhibit was displayed in September. Lectures on library methods have been given by the librarian to a class of the teachers' training school. It is recommended that more should be done for children through the schools, as there is no room for a children's department in the library; boxes of books should be sent to every school room, teachers should be allowed to sign application blanks for children, and the age limit should be dropped from 12 to 10 years.

Nashville, Tenn. Carnegie L. (4th rpt. — year ending Dec. 31, 1905.) Added 3193; total 29,333. Issued, home use 73,471 (fict. 45,843; juv. 13,707); school circulation 20,960. New registration 3890; total re-registration 8020. Receipts \$11,351.45 (city appropriation \$10,000); expenses \$11,088.20 (salaries \$5357.50, books \$2238.66, furniture \$803.12, periodicals \$430.95, binding \$310.90, janitor service \$457.32).

This report covers the first full year of service in the new building, and shows a constantly increasing use of the library by the public. The present reference room has already proved too small, and it is suggested that an adequate reference room should be fitted up on the third floor and the present reading rooms utilized for open shelves. At present there are open shelves only for about 1000 volumes in the reading room. Several meetings of art and educational associations have been held in the library assembly rooms.

All recent and current accessions have been cataloged, but there are considerable arrears in the cataloging of the old books. The L. of C. printed cards are used, 10,901 having been purchased in 1905. In the children's department 19,878 v. were circulated and only seven were lost; a story hour is given on Saturday mornings. Visits were made by the librarian to all the white public schools, and invitations to visit the library were extended to teachers and pupils. In response 31 teachers brought their classes, numbering from 25 to 50 each, and many children became borrowers after their visit. Boxes of books are sent to 11 schools, including four night schools; in all 3970 v. have been sent to the schools in this way. "This supplementary reading has cost the library \$1020.15 and the schools \$209.82." Many extracts from letters of teachers and the school superintendent are given, showing the general appreciation of this use of library books. Various suggestions are made for the extension of the library's usefulness, but these would be dependent upon increased funds.

Accompanying the report is a typewritten slip, ingeniously summarizing the money value of the library to the people who use its books. Thus, Miss Johnson points out that, with a total circulation of 94,431 v., and a loss of 20 — estimating each book at a value of \$1 — "the people of Nashville received in 1905, \$94,431 in return for the \$10,000 appropriated by the city. The children alone read from their room 19,878 books, which estimated at the low cost of 75 cents each would be \$14,908, which is nearly \$5000 more than the city gives the library." Further examples of the library's money value to the individual are given: "Tennyson's life," by his son, cost \$10, has circulated 46 times, making \$460 given to the people by that one book. "Adolescence," by Hall, recently bought at \$7.50, has circulated 15 times, making \$112.50 from this book to the public. One man read in three months \$132 worth of books. They were non-fiction. Picked up at random, 7 novels recently bought costing \$1 each have been out the following number of times and are still in circulation: 46, 30, 25, 86, 40, 58, 37, making in all 302 times. Costing \$1 each these represent \$302 given to the public from 7 novels.

"It will also be understood that the 94,431 books circulated in 1905 are, with the exception of a few worn out, still in circulation, and are doing the same service in 1906 they did in 1905. Also that the use of the 94,431 books borrowed from the library and taken to the homes of the people are entirely outside of the use of the large number of expensive non-circulating books, reference books and bound magazines constantly used in the library."

The library issued the first number of a four-page *Bulletin* under date of April, in connection with the Nashville meeting of the state federation of women's clubs. It contains brief notes on the need of a state library

commission, how to get a Carnegie library building, work of the Nashville library during the year, and a short list of works necessary in library organization.

New York P. L. In *Charities* for March 17, 1906 (15: 885-886), Mary Kingsbury Simkovitch has an article on "The New York Public Library assembly halls," calling attention to the very slight use that is being made of these halls in the branch libraries. She urges that "these halls ought to be open for the free discussion by the neighborhood of its neighborhood needs." Interesting in its connection with this article is the action just taken by the city department of education, in giving courses of lectures in the assembly halls of the library, in co-operation with the library. These have begun during the month of April with a course of four lectures on Shakespeare's dramas at the Tompkins Square branch, a course of four lectures on descriptive geography at the Tremont branch, and a course of the same length on France and Spain at the 135th street branch. The library has kept open in each case half an hour after the close of the lecture, so that those who wish to borrow books on the subject of the evening's talk may do so. The attendance so far has been excellent. It is expected that during the next season the number of public library lecture centers will be largely increased. The assembly room at the Hudson Park branch, 66 Leroy street, was occupied during April by the Tuberculosis Exhibition of the Charity Organization Society.

The experiment of opening some of the branch reading rooms on Sundays from two to six p.m. and keeping some of them open until ten o'clock on week days continues. After a month's trial this service in the branches where the average attendance is not satisfactory is discontinued. In general the Sunday attendance is much better than that between nine and ten p.m., although the latter is large on the lower East Side, reaching an average of 61 per evening at the Rivington street branch.

New York State L. On April 25 the senate finance committee amended and reported favorably the bill introduced by Senator Raines for the construction of a new building for the exclusive use of the state educational department and the state library. An important amendment decided on by the committee was to offer prizes to the successful architects submitting plans, so as to stimulate the competition. The bill limits the total expenditure for the building to \$3,500,000, and appropriates \$400,000 to be used for the drafting and preparation of plans and specifications and the acquisition of a site in the vicinity of the capitol. This amount is to be available this year. Next year the first appropriation for the building itself will be made. In the architectural competition prizes amounting to

\$20,000 will be offered and the architect whose plans are accepted will receive a bonus of \$10,000; the author of the plans considered second choice will receive \$7,000, and the architect whose plans are third will receive \$3,000.

Newark (N. J.) F. P. L. In December, 1905, the library decided to make a collection of trade catalogs. Letters were sent to 200 manufacturers, principally of machinery, and over 300 catalogs were obtained and are now arranged for use in the bound periodical room, adjoining the reading room on the second floor.

Northampton, Mass. Forbes L. (11th rpt. — year ending Nov. 30, 1905.) Added 5853; total 104,460. Issued, home use 106,103 (fict. 42 per cent.). New registration 119; total registration 6115, estimated as 30.7 per cent. of the population. Receipts, aid fund \$12,025.31; expenses \$11,449.79 (officers and employes \$8251.99, fuel and lighting \$1083.36, supplies \$1235.55); book fund \$13,212.61.

The report is mainly devoted to the correspondence between the library trustees and trustees of Smith College, regarding the subsidy of \$2500 which the college was requested to pay toward the library's support, in return for the according of library privileges to college students. The difficulty was bridged over for three years by the agreement of the college authorities to pay \$2000 yearly and the gift of \$500 a year in addition from an anonymous donor.

Mr. Cutter reports a slight increase in circulation, due to the increased use of pictures from the art department; this department now contains 59,672 pieces. Weekly distributions of books have been carried on in outlying districts, schools, clubs and institutions, in all 14,004 v. having been circulated through these outside agencies. Important additions have been made to the collection of pictures; for the use of teachers 1350 stereoscopic views have been purchased, for circulation with stereoscopes. "These have had extensive use, although a very recent purchase." Effort is being made to strengthen the collection of technological books. There were numerous changes in the cataloging staff, but 14,384 v. were cataloged during the year, "making a total of 39,545 cataloged volumes in the library, or 37.8 per cent." More shelving is a pressing necessity.

Oberlin (O.) College L. (Rpt. — year ending Aug. 31, 1905.) Added 3816 v. (purchased 1450), 3236 unbound v.; total 67,554 v., 39,987 unbound v. Chief accessions and gifts of the year are noted, and appeal is made for an increased book fund. For home use 15,614 v. were drawn by 1288 persons.

The chief event of the year was the offer of Andrew Carnegie, by virtue of which a new building "is some day to become a reality."

Of importance in the working of the library was the appointment of a trained reference librarian, Miss Antoinette Metcalf, and the rearrangement of the reading room so that books reserved by professors for the use of their classes were brought under supervision. "Heretofore these books have been on open shelves, without supervision, with the result that books were carried from the building, hidden or kept by a student in order to prevent others from having an opportunity to make use of them. Our present system, whereby such books are kept on shelves, under supervision, and for each book taken a signed card is left with the reference librarian, has worked to perfection. During the entire year, out of 1500 books thus reserved, not more than half a dozen have in any way disappeared, and it has been possible at any time to tell a student just where a given book could be found. Many expressions of satisfaction have come from the students as to the new arrangement. In spite of the inconvenience of having to sign a card for the book, the knowledge that the book could be found, and that it would not remain in any one's hands an undue length of time, has offset all the inconvenience. We would not willingly go back to the old arrangement."

Ottumwa (Ia.) P. L. (3d rpt.—year ending Dec. 31, 1905.) Added 5047; total 18,029. Issued, home use 70,229 (fict. 60 per cent.), of which 29 per cent. were issued to children. New registration 862; cards in use 6151. Receipts \$5183.35; expenses \$4859.49 (salaries \$2497.50, books \$1238.02, binding \$575.07, periodicals \$122.95).

The circulation shows an increase of 11 per cent. over that of the preceding year, and over one-fourth of the total issue was through schools, two branches, one station, and other agencies. The extent of the circulation is notable, as the city has a population of only 23,000 and there are not over 10,000 v. in the circulating department. The collection of newspaper clippings grows constantly and is proving most useful, as is the picture collection. A separate children's room is much needed, as the work with children is steadily increasing.

"It has been the policy of the library to organize and thoroughly develop one new feature each year. Our new work this year has been to start as many branches and stations as the library can afford with its present resources." These include two branches, each open one or two afternoons and evenings a week; one station, in a small shop, open daily; and collections of books at the Y. W. C. A., city mission, city prison, fire department, and schools.

Owatonna (Minn.) F. P. L. (6th rpt., 1905; in local press.) Added 827; total 9833. Issued, home use 35,856. New registration 656; total active borrowers 3436.

The last report of Miss Maude Van Buren,

whose term as librarian was closed under circumstance previously noted in these columns. She says: "It has been our aim this year to reach those who through indifference or timidity, or ignorance of the fact that a free public library, entertaining and instructive, exists for them, have heretofore failed to make use of their privileges." Lists, bulletins, loan and travelling collections have been among the means used to spread a knowledge of the library. German and Danish books have been in constant demand, and there has been marked increase in reading and reference room use. The revision of the catalog was completed during the year. Visits were made to the schools, with the result of bringing many more children to the library, and a Saturday morning "poetry hour" was held during the spring months. The county extension plan begun the year before was developed, eight travelling libraries of 40 volumes each being kept in active service at eight county stations; the total county circulation was 3377, of which 37 per cent. was non-fiction.

Providence (R. I.) P. L. An organization known as the Children's Library Helpers has been formed to assist the children's department of the library, both financially and in other ways. It is composed of members and associate members, the former being children, with an annual fee of 50 cents; the latter being parents or friends of children, with an annual fee of not less than \$1. The funds are devoted to the purchase of duplicates or other needed books, or to other needs of the department. The children's department contains only about 6600 v. and had a circulation of over 42,000 v. in 1904, so that its supply is quite insufficient for the demands upon it.

Southbridge (Mass.) P. L. (Rpt.—year ending March 1, 1906.) Added 517; total 20,057. Issued, home use 29,585. New registration 499; total registration 2269. Receipts: \$2886.72; expenses \$2784.62; additional fund \$1080.80, of which \$50.03 was expended.

Books for boys and girls show the greatest increase in circulation, and a children's room is regarded as "the crying need of this library."

Taunton (Mass.) P. L. (40th rpt.—year ending Nov. 30, 1905.) Added 1168; total 51,468. Issued, home use 58,911 (28,135 fict.; 13,706 juv.). New registration 1055; total new registration 6570. Receipts \$9246.19; expenses \$9246.19 (books \$1601.59, periodicals \$507.04, salaries \$2709.45, binding \$788.20).

This report covers the first year of work in the new Carnegie building. A course of free lectures was given during February, March, and April, and several exhibits have been held through the Library Art Club.

Toledo (O.) P. L. (31st rpt., 1905.) Added 10,571; total 65,491. Issued, home use 227,827 (fict. 45 per cent.; juv. 40.7 per cent.).

New registration 3987; total registration 19,055.

Much has been done to improve the equipment and methods of the library, but the work is much hampered by unsuitable and inadequate quarters. The circulation has grown beyond the library's power to meet demands for books. "In the juvenile department the problem was to maintain the stock in the children's room in the face of a 20 per cent. increase in circulation over 1904; to make good 871 books worn out, and to meet an unexpected and phenomenal demand for school libraries. One-half of the 5161 children's books added went into the schools. Of the 2416 volumes of fiction added, 687 were current novels for the rental shelves. The remaining 1729 were used to replenish and strengthen our stock of the older standard fiction, the demand for which is constant." Class room libraries were established in the high school, and collections of children's books were sent to a social settlement, where a story hour was experimentally conducted.

University of Texas L. The library class conducted under direction of the librarian is now closing its fourth year, 13 students having carried through the year's work. Of these 13, eight are now employed in Texas libraries.

Virginia State L. The appropriation of \$31,800 for two years' administration of the library, granted at the recent session of the legislature, will enable the state librarian, Mr. Kennedy, to effect a complete reorganization of the library force and carry out many measures for developing the library's efficiency.

For many years the sole support of the library has been derived from the sale of public documents, which has given the institution an annual income of from \$5000 to \$8000. The present appropriation provides for \$22,300 for the salaries of the members of the library force, \$7500 for the department of travelling libraries, and \$2000 for library furnishings, which for some time have been much needed.

Waterbury, Ct. Silas Bronson L. (36th rpt.—year ending Sept. 30, 1905.) Added 5190; total 65,716. Issued, home use 116,709, of which 10,213 were from the school libraries (fict. 72.70 per cent.); juvenile books formed 35 per cent. of the circulation of the main library.

"The gift of \$3000 by the city has enabled us to extend our system of school deposit libraries. The collection of books now numbers 2052, distributed through grades four to nine, inclusive, in seven schools." One result of this extension is the interest shown by parents, and the use of the school libraries practically as neighborhood libraries in the outer parts of the city.

Weymouth, Mass. Tufts L. (27th rpt., 1905.) Added 758; total not given. Issued, home use, 54,042 (fict., incl. juv., .682 per

cent.). New registration 327; total registration 5306. Receipts \$3872.32; expenses \$3746.78 (books \$594.66, salaries \$1256.71, janitor \$300, supplies, \$210.94, binding \$102.51).

"2543 volumes have been loaned to the teachers on their special cards besides the collection of books sent to seven of the schools situated at a distance from the library. This work has proved very satisfactory." A third vacation reading list was compiled for the schools, and is given in appendix to this report. The long-needed revision of the card catalog has been undertaken. In June an interesting and successful drawing exhibition of the public schools was held, which brought many persons to the library for the first time.

Wichita (Kan.) P. L. The circulating department of the library was closed on the evening of April 4, to permit the assistants to attend Mme. Bernhardt's performance. [The reading and reference room was open during the usual hours.]

Wisconsin State Historical Soc. L., Madison. The library has just purchased an interesting volume from the standpoint of American history, being a scrap book kept by Pierre Margry, the celebrated editor of French documents appertaining to early French exploration of the Mississippi valley. In this book M. Margry mounted clippings from American and European magazines and newspapers, bearing chiefly on this subject, adding thereto in his own handwriting, both in ink and pencil, annotations, criticisms, and other data. The scrap book is significant not only for the material it contains, but as illustrating Margry's methods of work and trend of thought.

Worcester County (Mass.) Law L. (8th rpt.—year ending March 9, 1905.) Added 463; total 24,027. Attendance 2709 readers, to whom 17,317 v. were issued.

When desired, volumes of cases, reports and textbooks will be loaned to responsible persons in any part of the county, on a reasonable time limit and on payment of transportation both ways. Dr. Wire gives, as usual, some practical suggestions regarding binding and care of books.

FOREIGN

Ontario, Canada. The report of the Ministry of Education for 1905 (Toronto, 1906), records 397 public libraries reporting for the year ending Dec. 31, 1904; these have 179,485 members, 180 reading rooms, a total of 1,153,778 v., and the circulation from these libraries for the year amounted to 2,507,233 v. There were 88 public libraries that did not report, and 6 libraries were established in the year 1905. The usual tabulated lists and statistics are given.

Ottawa (Can.) P. L. The handsome Carnegie library building was opened on April

30, Andrew Carnegie being present at the exercises.

University of Toronto L. (Rpt.—year ending June 30, 1905.) Added 3292; total 80,937. A library fee has been imposed upon students in medicine, and funds for the purchase of textbooks for their special use have been provided. Extension of the reading room is now as pressing a necessity as is extension of the stack room. "In fact, an entire reconstruction of the building, making provision not for 10 or 15 years, but for 25, 50 or 100 years, is the only proper solution of the problem of lack of accommodation in all branches of the library service.

Gifts and Bequests

East Douglas (Mass.) P. L. By the will of the late James Smith, of East Douglas, the library receives a bequest of \$6000.

Lancaster, N. H. The town has received a gift of \$15,000 from John W. Weeks, of Newton, Mass., for a library building to be a memorial to his father, the late William D. Weeks.

New Ipswich (N. H.) P. L. By the will of the late Mary M. B. Whitman, of Washington, D. C., the library receives a bequest of \$10,000 for the maintenance of the library, the fund to be known as the "Henry Ames Blood and Royal Henry Blood memorial fund." The bequest is not available until after the death of the testator's husband.

New York Historical Society L. The library has received a valuable gift in the library of Rufus King, of 5247 v., rich in historical and antiquarian material relating to America. This is the gift of the late Mrs. Charles Ray King and her daughter, Mary Rhinelander King.

Carnegie library gifts

Darien, Ct. At a town meeting on April 9 it was voted not to accept Andrew Carnegie's offer of \$5000 for a library building. The vote was 45 to 43, on a second ballot. Two later meetings were held, with a similar result, at the third meeting on April 30 the vote being 130 to 121.

Denison University, Newark, O. April 21. \$40,000 for a library building, provided an equal amount is raised for endowment.

Denver (Colo.) University. April 20. \$30,000 for new library building, provided an equal sum is raised for endowment.

Guthrie Centre, Ia. At a special election held on April 3, the proposition to accept a \$5000 Carnegie library building was defeated by 91 votes. Out of the 616 votes cast, 300 were cast by women. Of the votes cast by

men, a majority of 29 were against the proposition.

Perth Amboy (N. J.) P. L. April 24. \$450 additional, for installing seats in auditorium of library building.

Rochester, Ind. April 27. \$5000 additional, making a total of \$15,000.

Practical Notes

BINDING MATERIALS. The Newark (N. J.) Free Public Library issues the following "Schedule of material used on outside of books":

1. Popular novels, all juveniles and all books other than novels which are much used and will become too much worn and soiled as to the leaves to be worth keeping after about five years: half red or light brown cowskin and green keratol or Meer's artificial leather for sides.

The cowskin is brown, because that color seems to be less injured by dye than any other. It is of good quality, about 16 cents per square foot. The keratol and artificial leather wear well, do not gather much dirt and can be cleaned. Keratol costs about 35 cents per square yard; the artificial leather costs 25 cents.

2. Novels and other books which are very little used: Follow style of set where advisable, otherwise full dark blue art canvas or green imperial morocco cloth.

The canvas has the thread dyed of both warp and woof. It does not grow gray at the corners or joint. It costs about 20 cents per square yard. Imperial morocco cloth is made in England. It is very strong. It costs about 45 cents per square yard.

3. Periodicals which are much used, but not the early numbers of long sets if they are not often handled: Three-quarters brown cowskin, imperial morocco cloth sides.

In a century set, for example, current volumes are put into this binding; volumes 10 years old or more if not often consulted are bound as per next paragraph.

4. Periodicals and proceedings of societies which are little used and all little used large books: Follow style of set where advisable; otherwise green canvas backs, dark blue art canvas or imperial morocco cloth sides. Lettered in black.

The green canvas is not sized. This binding and nos. 2 and 3 are the only ones the librarian can be quite sure will not decay in from three to 15 years. But see the leathers made in England dressed as recommended by the Society of Arts.

5. Duplicate collection novels: These are books lent for one cent per day. The borrowers thus pay their first cost and also their rebinding. They are kept in first-class condition and rebound thus: half green cowhide, red keratol or Meer's artificial leather.

LOOSE-LEAF BOOK BACK. (Described in *Official Gazette*, U. S. Patent Office, Feb. 13, 1906. 120: 2011-2012.) II.

Twelve claims are allowed for this patent.

MATHEWS, E. N. Library binderies. (*In Library Association Record*, 15th March, 1906. 8: 73-78.)

As a result of practical experience Mr. Mathews believes that "it is both economical and advantageous to establish a bindery," and his article describes the development, methods and results of the bindery of the Bristol Public Libraries. The library system includes a central library (founded in 1613 and containing an important collection of ancient folios and quartos, incunabula and early 16th century books), six large new district libraries and three smaller ones; and the problem of handling heavy arrears of binding work and the restoration of ancient bindings has been a very serious one, in view of the insufficient income available. A beginning was made in home binding by the employment of one man for repairs and recasing. Later a library bindery was established in connection with the opening of a new district library for Bristol North. This adjoins the library building, but is built apart from it, with an area of 400 or 500 square feet, and is fitted with all the necessary equipment of a modern workshop. "The result of a year's work ending 31st March last shows that with one practical binder and two sewers there were 2864 volumes rebound in leather or cloth, including special binding for the local collection, and 2271 volumes were repaired or re-cased. In addition, early printed books, involving much care and labor, were restored to the extent of 41 folio volumes, making a grand total of 5176 volumes. The cost of binding materials during the same period amounted to the sum of £28 13s. 3d., which with the cost of wages and sundries brought the total cost to the sum of £207 7s. 4d., and represents the binding for the whole of the libraries, exclusive only of newspaper and periodical volumes and specifications of patents. The net cost of this, working out to a little over 9d. per volume, including the restoration of the special bindings. Books needing very slight repairs, such as securing loose pages or guarding plates, are done by the ordinary staff at each library, while at the central the staff, at stock-taking time, once a year, carefully clean and polish the restored bindings of the more valuable books." The salary here mentioned, of less than \$10 a week for a head bookbinder, indicates, however, that American librarians cannot accept Mr. Mathews' figures as applicable to American conditions. Like most of those who have experimented with binding, Mr. Mathews recommends morocco, pigskin and stout roan for reference books or other valuable works; for cheaper books, morocco, buckram and canvas cloths. In color he considers red preferable, as the dye seems to act favorably on the leather.

Librarians

BEER, William, on April 19, resigned the position of chief clerk of the New Orleans Public Library. Mr. Beer, who has long been librarian of the Howard Memorial Library of New Orleans, was also appointed librarian of the Public Library at the time of its organization, this title being changed to that of chief clerk in 1903, when the library was placed under the local civil service law. He continues his work as librarian of the Howard Memorial Library.

BLISS, Robert P., librarian of Crozer Theological Seminary, Chester, Pa., was on May 3 appointed secretary of the Pennsylvania Free Library Commission, in charge of the department of travelling libraries. Mr. Bliss has for several years been active in library affairs in Pennsylvania and in the work of the Keystone State Library Association, and is thoroughly familiar with the conditions and needs of libraries in the state.

CRUNDEN, Frederick M., librarian of the St. Louis Public Library, has taken leave of absence for several months on account of ill health.

FLINT, Weston, formerly librarian of the Washington (D. C.) Free Public Library, died at his home in Washington on April 6, after a brief illness. Mr. Flint was born in Pike, Wyoming county, New York, July 4, 1835. At the age of 17 he began teaching, and in 1855 entered Alfred Academy, which was about to be raised to a university, where he was graduated in 1858. In 1860 he was graduated from Union College, and in 1863 received the degree of A.M. After teaching in New York, Pennsylvania and Ohio he went to St. Louis, in connection with the hospital service of the federal army, and was there appointed military agent for Ohio, acting also for Michigan and New York in the care of sick or wounded soldiers. In 1866 to 1869 he was attorney for claims in St. Louis, and active in state politics, and later became editor and publisher of the *St. Louis Daily Tribune*, and organized the second board of the state geological survey, of which he was secretary. In 1871 he was appointed United States consul to Chin Kiang, China, from which he returned in 1874, to engage in literary work, lecturing and study of law. He was admitted to the bar in 1878. For the 10 years 1877-1887 he was librarian of the scientific library of the United States Patent Office, serving also with the Senate civil service investigating committee, and in 1889 he was appointed statistician of the U. S. Bureau of Education, having in charge the 1893 report on the libraries of the United States and Canada. On Sept. 29, 1898, he was appointed librarian of the newly organized Washington (D. C.) Free Public Library (now the District of Columbia Public Library), of which

he was then a trustee. This position he held until about a year ago, when he retired from active work, and was succeeded by George F. Bowerman. Mr. Flint belonged to many associations, among them the American Library Association, of which he was a life member; the American Historical Association, American Folk Lore Society, and National Geographic Society. His wife, who was Miss Lucy R. Brown, of Ohio, died several months ago.

JEWETT, Walter Kendall, assistant in the John Crerar Library, Chicago, was on April 10 elected librarian of the University of Nebraska, Lincoln, succeeding J. I. Wyer, Jr., his appointment taking effect May 1. Dr. Jewett is a graduate of Brown University, the class of 1891, and received the degree of M.D. from Harvard in 1895. After six years spent in the practice of medicine in Massachusetts and two years of study and travel in Europe, he entered the New York State Library School in 1903, completing the course in 1905.

NELSON, Miss Esther, of the New York State Library School, class of 1906, has been appointed librarian of the University of Utah.

SCOTT, Miss Carrie E., of the New York State Library School, 1905-6, has been appointed assistant to the supervisor of work with schools, in Pittsburgh, Pa.

WALTER, Frank Keller, of the New York State Library School, class of 1906, has been appointed assistant in the reference department of the Brooklyn (N. Y.) Public Library.

Cataloging and Classification

CLASSIFICATION IN USEFUL ARTS AND NATURAL SCIENCE. — We have had some inquiries concerning the classification of books in the Useful arts and Natural sciences, and it may be of interest to those who are making some use of this part of our classified catalog to know that many changes were made in these classes of the D. C. We worked this out before having the classification of the Brussels Institut Internationale de Bibliographie, which we now use for new divisions whenever possible. We would probably have used it altogether had it been available when we began our work.

We have not subdivided the class 537, but have classified books in 621.3 rather than 537, whenever it was at all possible to do so. We have not found the separation of books in the theory and practice of electricity (537 and 621.3) particularly inconvenient. It would, of course, be more convenient to have them together, but we feel that this would necessitate an entire reconstruction of the general

scheme of classification and that the disadvantages of this would be quite as great as the advantages. The greatest change in other classes was that made in (770) Photography and (790) Amusements. In expanding both of these classes, the classification of the Brussels Institut Internationale de Bibliographie was followed.

We have inserted references in the classified catalog where it seemed necessary to connect subjects, or where books treating different phases of the same subject were widely separated, as in the case of books on Railroads, which may classify in 656, 385 or 625.

MARGARET MANN, *Chief cataloger,*
Carnegie Library of Pittsburgh.

BERKSHIRE ATHENAEUM (*Pittsfield, Mass.*) *Bulletin* for April contains lists of books for boys and girls, giving in conjunction a popular book and one recommended to be read with it. Thus, with Oliver Optic's "Young navigators" is bracketed Lady Brassey's "Voyage in the *Sunbeam*," and in the girls' list Miss Alcott's "Little men" is accompanied by "Swiss family Robinson," Mrs. Barr's "Trinity bells," by Henry James's "Memoirs of an American lady," etc. The boys' list is devoted to Willis J. Abbot, Jacob Abbott and Oliver Optic; the girls' includes Miss Alcott, Amy Blanchard, Mrs. Champney, and others.

CATALOGUE des livres et manuscrits composant la bibliothèque du feu Salvatore Meluzzi, maître de la chapelle du Vatican, suivi du catalogue d'un choix de livres appartenant à un amateur. Rome, D. G. Rossi, 1906. 123 p. 8°.

CASE L., *Cleveland, O.* Finding list of French fiction. Cleveland, 1905 [1906]. 22 p. T.

CHICAGO P. L. *Bulletin* no. 74. Accessions, from Feb. 1 to May 1, 1906. 16 p. O.

EAST ST. LOUIS (*Ill.*) F. P. L. Classified catalogue: a complete list of books in the circulating, reference and children's departments. Jan. 1, 1906. East St. Louis, Ill., 1906. 12+216 p. O.

A short-title D. C. classed list, with separate lists of supplementary reading for schools, reference books, and juvenile books. Advertising pages are inserted at frequent intervals and included at front and back. One copy of the catalog is given free to each family holding readers' cards.

JOHN CRERAR L., *Chicago.* Supplement to the list of serials in public libraries of Chicago and Evanston. 2d ed., corrected to November, 1905; ed. by C. W. Andrews; with a bibliography of union lists of serials, comp.

by Aksel G. S. Josephson. Chicago, 1906.
10+220+28 p. O.

The second cumulative supplement to the "List of serials in public libraries of Chicago and Evanston," published by the Chicago Library Club in 1901. Records 8460 serials received in 19 libraries; the original list gave 3540 entries not here reprinted, so that in both lists 12,000 serials are recorded. "One change in method of entry has been made by unanimous consent of the larger libraries. The entry of foreign serials having individual titles under the society has proved so inconvenient that such serials are now entered under the title, in accordance with the rule for American and English publications."

The NEW YORK P. L. *Bulletin* for April contains an extended selection of letters of John Adams and John Quincy Adams, 1776-1838, printed from the original manuscripts in the Bancroft collection, owned by the library.

The ST. LOUIS (Mo.) P. L. *Bulletin* for April contains short reading lists on Agriculture and botany, and Stories of the opera.

The SALEM (Mass.) P. L. *Bulletin* for April contains a good classed special reading list on Botany.

ERNEST A. SAVAGE, librarian of the Bromley (Eng.) Public Library, has written "A manual of descriptive annotation for library catalogues," which the Library Supply Co., of London, are about to publish. The manual discusses various methods of preparing and publishing guides for the use of readers, and provides a code of rules for analyzing contents of books. Ernest A. Baker, author of the "Guide to best fiction," has contributed a chapter on evaluation and a historical note.

The SEATTLE (Wash.) P. L. *Bulletin* for March has a reference list on "Gardening."

U. S. DEPARTMENT OF AGRICULTURE L. *Bulletin* no. 58: Accessions to the department library. October - December, 1905. Washington, Gov. Print. Office, 1906. 64 p. O.

WISCONSIN. *Department of Education*. List of books for township libraries in the state of Wisconsin, 1906 and 1907; prep. by Maud Barnett, state library clerk; issued by C. P. Cary, state superintendent. Madison, 1906. 88+255 p. O.

Prefaced by "Suggestions to teachers" on accessioning, classification, cataloging, care of books, etc., and with an alphabetical list of headings to be used in making a dictionary catalog of the books listed. There are 699 titles in the list, which is classed and annotated and followed by an author and title index.

- FRENCH REVOLUTION. Sargent, G. H. The French Revolution and Napoleon in literature and caricature. [Greenwich, Ct.] Privately printed at the *Literary Collector* Press, 1906.
A descriptive article noting contemporaneous literature of the subject. Originally intended for publication in the *Literary Collector*.
- GAMES. List of good games; with references to books containing descriptions of how to play them. (*In Carnegie Library of Pittsburgh Monthly Bulletin*, April, 1906, p. 230-241.)
- HARPER, William Rainey. The *Biblical World* for March is devoted exclusively to memorials of the late William R. Harper. The number concludes with a five-page chronological bibliography (p. 248-252), by E. J. Goodspeed. About one-half of the list is devoted to books and the other half to articles. Dr. Harper published in various periodicals.
- HOLBERG, Ludvig. Deichmanske Bibliothek, Christiania. Katalog over Holberg-litteratur i det Deichmanske Bibliothek. Kristiania, 1906. 8°. [400 numbered copies.]
A classed bibliography, with full index appended. Carefully printed. It is not intended for free distribution, but will be sent postpaid to the United States and Canada for 65 cents.
- ITALY. Gamurrini, G. F. Bibliografia dell'Italia antica. v. 1: parte generale. Arezzo, D. Racuzzi, 1905. 15+454 p.
- ITALY. Schellhass, Karl. Italienische bibliographie 1904-5. (Separat-abdruck aus "Quellen und forschungen aus italienischen archiven und bibliotheken herausgegeben vom Koenigl. Preussischen Historischen Institut in Rom." Bd. viii.) Roma, tip. Unione Cooperativa Editrice, 1905. 99 p. 8°.
- LABOR. Schmidt, P. Bibliographie der arbeiterfrage für das jahr 1905; nach materien geordnet. Berlin, L. Simion, 1906. 102 p. (Beiheft zum *Arbeiterfreund*.)
- LAW. Cruzado, Manuel. Bibliografia jurídica mexicana. Mexico, Tip. de la Oficina Impresora de Estampillas, 1905. 2 p. l., 385 p. 23½cm.
- LIBRARY WORK: a bibliography and digest of current library literature. v. 1, no. 1, April 1906. Minneapolis, H. W. Wilson Co., [1906.] 32 p. O.
The first number of a periodical (frequency of issue not stated), "published as a means of bringing the work of the H. W. Wilson Co. to the attention of libraries" and sent free to librarians. The present number is a subject index or digest of articles in periodicals, books and pamphlets on library work appearing in 1905. Of the 285 entries 127 are of contributions to the *LIBRARY JOURNAL*, and 90 of contributions to *Public Libraries*; the 68 remaining entries refer to the *Library World*, the various library commission bulletins, "A. L. A. tracts," etc. The annotations are frequently so full as to be practically abstracts. Prefaced by an illustrated account of the H. W. Wilson publishing house. A cumulated volume made up of the successive numbers of this publication is promised for the future, which will form "a handy reference book on library science."

McPIKE, Eugene F. A suggestion for an international bibliographic exchange. (*In Science*, April 6, 1906. 23: 547.)

Suggests that the various historical and scientific societies should collect information regarding special bibliographies in preparation, this information being later transmitted to the Smithsonian Institution and the Library of Congress.

MANUSCRIPTS. Hara Prasād Sāstri, Mahamahopādhyāya. A catalogue of palm-leaf and selected paper mss. belonging to the Durbar Library, Nepal; [with] hist. introd. by C. Bendall. Calcutta, Baptist Mission Press, 1905. 2 p. l., xxxii, 32, [273], 23 p. fold. pl. 26cm. (Notices of Sanskrit ms. [Extra no.])

MEMORIAL DAY. Chicago Public Library. Special bulletin no. 1 (rev. ed.): Memorial day, patriotism, the flag. Chicago Public Library, March, 1906. 16 p. O.

MUNICIPAL GOVERNMENT. Brown, Charles H. List of titles on municipal government, with special reference to city charters and to local conditions in Chicago; prep. at the request of the City Club of Chicago for the Chicago Charter Convention. Chicago, City Club, March 1, 1906. 52 p. O.

A compact practical classed list, especially strong in city charters of leading American cities. Includes many analyticals, and for each entry there is indication of the Chicago library or libraries where the work cited is available. An author index is appended.

MUSIC. Universal-handbuch der musikliteratur aller zeiten und völker. Als nachschlagewerk und studienquelle der welt-musik-literatur eingerichtet u. hrsg. von F. Pazdirek. T. 1, Die gesamte, durch musikalienhandlungen noch beziehbare musikliteratur aller völker. bd. 4-6. Wien, Pazdirek, 1906.

ORIENTAL DRAMA. List of works in the New York Public Library relating to the Oriental drama. (*In New York Public Library Bulletin*, April, 1906. p. 251-256.)

Omits only Hebrew drama, which will follow in a special list. Native Sanscrit, Turkish, Persian, Arabic, Chinese, Japanese, Burmese, Hindoo and Bengalese dramas are included, as well as translations and related works.

PAPACY. Vergnes, A. La condition interna-

tionale de la Papauté. Toulouse, É. Privat, 1905. 3 p. l., [9]-235 p. 23½cm. Bibliographie: p. [9]-15.

RAILWAY RATES. Brooklyn (N. Y.) Public Library. The railway rate problem. Brooklyn Public Library, 1906. 24 p. D. Good classed and annotated reading list.

REFORMATION. Fisher, G. P. The Reformation. New and rev. ed. N. Y., Scribner, 1906. 20+525 p. 22cm.

A list of works on the Reformation: p. 475-502.

SANSKRIT DRAMA. Schuyler, M. A bibliography of the Sanskrit drama, with an introductory sketch of the dramatic literature of India. N. Y., Columbia University Press, 1906. 11+105 p. (Columbia University, Indo-Iranian series, v. 3.) 23cm.

SANSKRIT MANUSCRIPTS. Winternitz, Moriz, and Keith, A. B., comps. Catalogue of Sanskrit manuscripts in the Bodleian Library. v. 2, begun by Moriz Winternitz; continued and completed by Arthur Berriedale Keith; with a preface by E. W. B. Nicholson. N. Y., Oxford University Press, 1905. 26+350 p. Q.

Vol. 1 was published 45 years ago, and the present volume records the additions made to the collection since that time. Preceding the catalog are an index of shelfmarks of mss., palæographical index, and list of works cited. Then comes the catalog of the 766 mss. of Vedic and non-Vedic literature, an index, and addenda and corrigenda by Dr. Winternitz.

SERIALS. Josephson, Aksel G. S. A bibliography of union lists of serials. 2d ed. (*In John Crerar Library. Supplement to the list of serials in public libraries of Chicago and Evanston.* 2d ed. Chicago, 1906.) 28 p. O.

A revision and extension of the list first printed in the Proceedings of the American Library Association, Atlanta Conference, 1899. Rearranged geographically by countries and cities, with a chronological table and an alphabetical index of cities.

SOCIOLOGY. Bliss, W. D. P. A bibliography of economic and social subjects. (*In Social progress, an international year book.* 1906. p. 265-288.)

SWEDISH LITERATURE. Almquist, J. A. Sveriges bibliografiska litteratur förtecknad. D. 1. Egentlig bibliografi. Häft 2. Stockholm, P. A. Norstedt, 1905. 153-320 p.

Notes and Queries

"THE FLOWER GARDEN." — "The flower garden," by Ida D. Bennett (Country home library), N. Y., McClure, Phillips & Co., 1905 (1903), is same as "The flower garden: a handbook of practical garden lore," by Ida D. Bennet, Ill., 1903. On title-page of 1903 edition author's name is spelt with one "t," while on cover two "t's" are used. A. L. A. cards follow title-page. Otherwise editions are identical.

PURD B. WRIGHT.

DISPOSITION OF FOUND ARTICLES. — I should be glad to learn what disposition is made elsewhere of articles of value found in library buildings. We often find jewelry, purses, etc. Of course, in most cases such articles are claimed, but occasionally we are unable to restore such property, even by advertising it in the newspapers. Is it customary to regard such property as belonging to the library after a certain length of time, and, if so, how long? By what method is such property sold for the benefit of the library?

GEORGE F. BOWERMAN,
Librarian, Public Library, Washington, D. C.

"CYCLOPAEDIA OF COMMON THINGS." — We wish to call attention to the fact that Sir George W. Cox's "Little cyclopædia of common things" (published by Sonnenschein and imported by the Macmillan Company) is the same, word for word, except for the omission of whole articles and of the colored plates, as Champlin's "Young folks' cyclopædia of common things." Cox's book was first published in 1882, according to Sonnenschein's "Best books." Champlin's was copyrighted in 1879.

ETHEL J. HEATH,
In Charge of Reference Room, Brookline (Mass.) Public Library.

BULLETINS ON BOOK BUYING. — Bulletins 22 (April), 23 (March), and 24 (May) have been issued by the A. L. A. committee on book buying. Bulletin 23 is devoted to the proposed clauses regarding importation of books by libraries, approved by the A. L. A. delegates and Executive Board. These clauses, given fully in April L. J., are summarized, and the committee says: "This section is now the official expression of the desires of the American Library Association, having been unanimously approved by the Executive Committee and also, though not unanimously, by the Council. It does not, of course, bind individuals or libraries in any way, or prevent them from taking such action as they may deem proper; but it is only fair to the delegates that no such action be taken without full knowledge of the circumstances under which they thought it best to urge the compromise that has now been approved by the Association." Bulletin 24 gives lists of 36 dealers issuing useful second hand and special catalogs, and 12 "lists of books helpful in purchasing books for small libraries."

VARIATIONS OF TYPE IN INDEXES AND BOOKLISTS. — I desire to protest against the growing custom of using different faces of type in headings or entry words of indexes and booklists. It is very common nowadays to employ full face type for authors' names, small caps for subject headings and lower case for titles. Many go so far as to print the author's name in black face even after the subject, or title. This seems to me particularly objectionable, first because it looks very badly, giving the page a spotted appearance, and, secondly, because it distracts the mind from the order of the entries which are usually alphabetical. In indexes to periodicals the author entries are usually least sought for; hence the black face is wasted on them. Again the great relative prominence of the black face is likely to lead one to think that the entries in caps or lower case between the several black face entries belong to the previous black face entry, instead of being independent entries. In my opinion the proper use of black face type is to catch the eye, and the earlier way of using it, as in the earlier volumes of the "American catalog," is decidedly commendable, and later departures from that usage are decidedly to be condemned.

WILLIS K. STETSON.

"WISCONSIN IN THREE CENTURIES." — The New York Publishing Society (sometime the Century History Company, and the Publishing Society of Wisconsin) has recently issued a work in four volumes entitled "Wisconsin in three centuries." I have not yet seen the publication in its entirety, but am credibly informed that my name appears on the title-page thereof in the capacity of "chairman" of its "board of editors." My sole connection with this history is the fact that I wrote the brief introduction, purely as a matter of friendly courtesy to the author, Mr. Henry Colin Campbell, managing editor of the *Milwaukee Journal*, he having shown me the proof of his first volume, and his monographic work in connection with the Parkman Club publications being well and favorably known to me. This act of courtesy did not make me an "editor" of the work, much less the chairman of any so-called "board of editors" thereof. My several vigorous protests to the publishers against this unwarranted use of my name in the prospectus, proved unavailing; all that appears possible now to do is to request my fellow librarians not to catalog the work under my name. In justice to Mr. Campbell, who, I am glad to be able to say, has in no way been responsible for the peculiar methods of his publishers, the history should be credited to him, although from the subordinate manner in which his name is given on the title-page, this fact is not apparent to the cataloger.

REUBEN G. THWAITES,
Madison, Wis.

FRANK PIERCE HILL, PRESIDENT AMERICAN LIBRARY ASSOCIATION, 1905-1906
CHIEF LIBRARIAN BROOKLYN (N. Y.) PUBLIC LIBRARY

THE LIBRARY JOURNAL

VOL. 31

JUNE, 1906

No. 6

THE present number of the JOURNAL is very largely devoted to a consideration of the use now made by libraries of the printed catalog cards issued by the Library of Congress. This is practically a continuation of the similar report made in these columns four years ago, and a comparison of both articles will show how great has been the increase in the libraries using the cards and in the variety of purposes to which they are applied. The articles by Mr. Hicks and Miss Ambrose show also how important a part the L. C. cards (to use the abbreviation now generally adopted) have come to play in library reorganization, and indicate the possibility of using them in reclassification also. The advantages of the cards in appearance and bibliographical correctness are readily stated; the specific economy they effect in general cataloging work is less readily demonstrable, for in analyzing this feature no two libraries are likely to employ the same methods or to base these methods on uniform conditions. It will be observed, for example, that the estimate of greatest saving (that of Princeton University) does not include allowance for the cost of ordering the cards, in time or money; while the statement of the New York Public Library, that for the main union catalog the L. C. cards are more expensive than original work, does not include in the cost of the home-made cards anything but the mechanical cost of copying by typewriter or hand. The report of the Chicago Public Library is one of the most useful, in its indication of practical and common-sense means by which red tape may be eliminated in handling the printed cards, and their use made to conduce to economy of time and money. It is plain, of course, that the keeping of elaborate statistics and analytical studies of the use of these cards as against original work, forms in itself an added item of cataloging expense; such comparative statistics are perhaps necessary at first, but they should be dropped as soon as their purpose has been fairly accomplished and every effort should be made to obtain the greatest possible simplicity of method. There is no question that the reports here given indicate that

the work of the Library of Congress in providing these cards is proving of very great value to libraries throughout the country, and that the usefulness of the cards is bound to increase and become more diversified as time goes on.

AN interesting point in this consideration of the use of printed catalog cards is brought out by Mr. Bishop in his estimate of the space required for card cabinets. His final estimate is that about three card trays are needed for every 1200 volumes, and he points out the necessary conditions of light and floor space required for the convenient use of the card cabinets. Architects have not as yet given much attention to the demands of the catalog, in planning library buildings; but it is apparent that these demands are considerable, and that the growing use of cards means a steadily increasing requirement of storage space. The printed catalog now seems in large measure to have been superseded by the card cabinet; but it is a question whether in time the printed volumes, despite the expense and time involved in their production, may not prove necessary to replace the ever-increasing array of card cabinets. This would be especially the case in the great libraries, though the use of cards would continue of course by such libraries for special purposes and for later accessions to the collection. It is probably a long look ahead to the day when the card catalog will require so much storage space as to become a pressing problem, yet this possibility demands thought in the planning of library buildings.

IN Denmark the organization of a library association some six months ago has been followed by the publication of the first Danish library periodical, which is henceforth to be published quarterly under the editorship of the president of the association. It is interesting to note that the organization of librarians in Denmark was brought about mainly for the purpose of obtaining lower prices for books, and that this has been successfully ac-

complished. Formal agreement has been entered into between the librarians' association and the Danish booksellers' association, granting a discount of not more than 25 per cent. on books purchased by libraries represented in the library association, such purchases to be made through and certified by the office of that association. Other significant points in this agreement are that orders for second-hand books will not be accepted by the library association, whose members agree to encourage as far as possible the purchase of new books, and that membership in the association is restricted to the free popular libraries or school libraries, which form practically a part of the national educational system. The fact that the Danish teachers' association had long sought unsuccessfully to obtain the privileges now granted to the librarians shows that compact organization of the interests directly concerned in any undertaking is the most powerful form of argument. Membership dues in the Danish library association are set at a low uniform rate for personal membership, and for library membership at a sliding rate, graded according to the number of volumes, which would probably in most cases indicate also approximate income. This is an ingenious arrangement, which perhaps conveys a suggestion for other library associations.

AN interesting experiment has been successfully carried out by the New York Library Association in its series of round table meetings, held this spring to replace its usual annual series of library institutes. The round table is practically a library institute reduced and made as personal and individual as possible. In place of the eight institutes previously held, there have been twenty-six of these round table meetings, which have reached nearly 200 libraries and over 300 persons. The small informal meetings brought together as a rule about a dozen persons, though a few ranged in attendance from fifteen to twenty. The sessions were devoted to exposition of technical or general subjects—in each case chosen by the local representatives—and were entirely informal in the presentation of topics and in discussion. Each

institute was in charge of a visitor appointed by the association's committee, and the attendance was largely representative of those connected with small local libraries, who seldom come in touch with organized library work or attend meetings of library associations. All reports speak of the round tables as interesting and spontaneous to an unusual degree, and it is apparent that they have reached more small libraries, probably more effectively, than has ever been done before. The plan was outlined at the last year's meeting of the state association, and its success is likely to ensure its continuance. Somewhat similar has been the experience of the Michigan Library Association in regard to the institutes it has conducted this season. The institute which most resembled a round table meeting in informality of procedure and character of attendance was the one that seemed to be the most effective in reaching the small libraries and imparting enthusiasm and instruction. The results of this year's institute work in both New York and Michigan seem to show the wisdom of following out this modification of the original institute idea.

A HEARING on the copyright bill was given in Washington by the Senate and House committees on patents early in the month, but we are not yet able to give a full report as to the provisions affecting libraries. Mr. Bostwick attended the first hearing, but could not stay until he had opportunity to be heard, so that Col. Stephen H. Olin stated on his behalf the official position of the American Library Association. Mr. W. P. Cutter made a lucid and trenchant statement of the position of the libraries opposing any restrictions on library importation, handing to the committee a list of the libraries and library associations which he was authorized to represent. He urged that the present copyright provisions should be maintained in the new bill, or that section 30 (E, 3), after the first use of the phrase "United States" should be dropped; that is, that the privilege of importing American books should not be made an exception to the permission to import. We shall endeavor in the next issue to give a full statement of Mr. Cutter's argument.

THE LIBRARY OF CONGRESS CLASSIFICATION AND ITS PRINTED CATALOG CARDS

By FREDERICK C. HICKS, *Librarian, U. S. Naval War College, Newport, R. I.*

THE recent experience of the Library of the U. S. Naval War College in the classification of its collection is probably unique. It is therefore dangerous to draw general conclusions from it; but with a consciousness of this danger, it may not be futile to chronicle briefly the chief points in this experience.

The collection of books in the Library of the Naval War College has been accumulating since the founding of the institution in 1885. It had never been properly housed until its removal in July, 1905, to the new library building erected as an annex to the main building of the War College. The collection consists of less than 10,000 volumes. This number represents a rather large special collection, made up mostly of works on international law, military and naval subjects, and books of geography and travel. Until July of last year the care of these books had devolved upon naval officers connected with the War College, who had little time or training to devote to such a task. The selection of books purchased had been carefully made, but their care from the librarian's point of view had been neglected. The card catalog, roughly made by many hands, had outlived its usefulness. The classification was of the fixed location order, and with the removal of the books to new quarters lost all the value that it had ever possessed. The books must be entirely recataloged and classified. How this work could be done with a limited force, while carrying on the current work of the library and the general work of reorganization, was a distressing problem. It is, however, in a fair way to be solved by making use of aids obtainable from the Library of Congress.

First of all, this library was made a depository for a "partial depository set" of the printed catalog cards issued by the Library of Congress. This set contains all cards that have been printed representing books in the Library of Congress in the classes which are valuable to the Naval War College. It is kept up to date by checking up the proof-sheets sent out by the Library of Congress, which are then returned to Washington and the

cards received in exchange. This set will serve as a permanent reference bibliography; but at the present time is principally useful in ordering printed cards by serial numbers for use in the process of recataloging. Of course the "partial depository set" in this case serves a purpose identical with that of the "travelling catalogs" obtainable from the Library of Congress, from which to order cards. When the cards have been received subject headings are typewritten at their heads preparatory to filing them in the card trays.

The process thus far outlined has of course been duplicated in the experience of many libraries. But the next step is, I am informed by the Library of Congress, a new one.

The question that presented itself was something like the following: Given a library of 10,000 volumes without catalog or scientific classification. Supply the catalog by means of the printed cards of the Library of Congress. Would it not then be wise to adopt the classification indicated by the notation at the bottom of the Library of Congress cards?

The arguments in favor of the scheme were that the classification of the books might be hastened, in most cases the work being reduced to the mechanical process of labelling and marking the books, and writing the call-numbers at the top of the cards. The work of recataloging and reclassifying the Library of Congress had already advanced so far that it would be possible to obtain cards with class marks for a majority of the books in the library of the Naval War College. The scheme of card distribution also having passed beyond the experimental stage, the classification of books according to the notation indicated on the cards might be considered permanently possible for a large proportion of new books likely to be received. The objections to adopting the scheme were (1) that the complete classification is not available in printed form, so that the use of the notation indicated on the cards savors of slavishness; (2) some of the cards that were issued when the distribution of cards was commenced do not contain the class marks, and there is no complete

printed scheme from which to supply them; (3) there is yet no index such as that contained in the Dewey system.

The relative merits of the system itself as compared with older well-known classifications, of course, had to be considered. In this particular case the point was of special importance because the Library of the Naval War College is technical in character. It was found that no printed scheme available fully met the needs of this library, so that the use of any of them necessitated the dangerous work of "adaptation." The conclusion was reached that for this library the merits of the system itself as compared with Dewey or Cutter need not be made the basis of choice.

It was therefore decided to appeal to the Library of Congress for information concerning the practicability of using its classification, and if the objections mentioned could be met, to adopt it for this library. The information received was to the effect that there seemed to be no reason why, in a government library special in character, and likely to be in intimate relations with the Library of Congress, the use of the scheme was not practicable; that the scheme of classification was likely to be as full as other schemes, certainly in the subjects with which the Naval War College is concerned; that ultimately and when complete, the scheme would appear in printed form, with an index; that in the meantime it would continue to be printed section by section; and that for those unprinted sections with which it was necessary immediately to deal, arrangements could be made to obtain typewritten copies. A detail that was to be observed in adopting the system was that the Cutter-Sanborn author tables were used instead of the Cutter three-figure tables in assigning author marks, the latter tables not having been completed when the classification was commenced. It was learned, however, that no library had thus far adopted the Library of Congress classification in connection with the printed cards, though it was being used to some extent by the U. S. Army War College Library, the Library of the U. S. Engineer School of Application (Washington Barracks), the U. S. War Department Library, and the Virginia State Library.

Finally it was decided to adopt the system as a whole on the ground that the advantages

to be derived in a government library where the number of assistants was limited, and where a close connection with the Library of Congress would be maintained, would outweigh any present disadvantages that might exist.

Thus far there has been no cause to doubt the wisdom of that decision. Whether the small public library, general in scope, would be justified in adopting the system at the present time may be open to question. When the completed classification, indexed, has been printed, I believe there can be no doubt about the practicability of its use by new libraries which purchase the Library of Congress cards, or by such libraries as are being recataloged and classified. As in the use of the printed cards themselves, there is a saving of both time and money, with an increase in the quality and quantity of actual results, so in the use of the classification there is a corresponding economy with a result equally as good as that obtained from other systems. The scheme has been sufficiently tested in the Library of Congress to substantiate this statement.

Furthermore, the experience of the Library of the Naval War College seems to demonstrate that, whether designedly or not, as a matter of fact, the principle of supply and demand operates, both where cards and classification are concerned. The national library being in a period of wonderful growth, and coming in touch through its Card Distribution Section with hundreds of libraries, it is natural that an attempt should be made to satisfy the special needs of the various classes of libraries which use the printed cards. The scope of the stock of cards available, both in actual number and in classes of books represented, becomes constantly more extended. At the same time the classification becomes more expanded in its various classes and more thoroughly tested. Eventually scarcely any library, either special or general in character, will be unable to obtain from the Library of Congress printed catalog cards containing class marks for a majority of its books. When the card supply for a particular library has been exhausted, the printed scheme of classification will offer the same opportunities to the local classifier that any other system can offer. In addition, he will have a large proportion of his library already classified as a guide for a further application of the system.

THE USE OF PRINTED CARDS IN THE NORTHWESTERN UNIVERSITY LIBRARY

By LODILLA AMBROSE, *Northwestern University Library, Evanston, Illinois*

INTRODUCTION.—The Northwestern University was chartered in 1851 and opened to students in 1855. The first expenditure for books for a library was authorized in June, 1856. For many years some professor was appointed librarian. Then a library staff was gradually developed, but the staff has at no time been sufficiently large to cope advantageously with the current work and with the accumulated needs of years. But increasing use and size made at least an attempt at the ultimate organization of the library imperative. Some relief by the use of printed cards seemed a hopeful possibility. January 1, 1904, the purchase of Library of Congress printed cards for books currently ordered was begun, and a study was made concerning the use of these cards in the classification and better cataloging of the library. The cards printed by the American Library Association for certain sets had been taken for some time.

CONDITIONS.—The library was not uncataloged. The first card catalog was probably the one made in Germany in 1870 for the valuable collection purchased in Germany in that year, and since known as the Greenleaf library. That catalog was on cards of twice the area of the 33-size card. The second catalog was on 32-size cards. It came to be known as the "old catalog," after the new catalog on 33-size cards was begun in July, 1898. United States publications were checked up in the printed "Checklist," supplemented by brief entries on slips. For lack of time to carry out full cataloging, state and city publications were listed on slips, as were also other special classes of publications. There was an accession catalog for nearly all the books outside of the Greenleaf collection, but no shelf list.

The problem was the unification of all these catalogs, the replacing of the defective work of early years by proper bibliographical cataloging, and the creation of the permanent classification and shelf list hitherto non-existent. The possible application of printed cards was

twofold, to the cataloging of current accessions and to recataloging.

CURRENT CATALOGING.—After correspondence with the Library of Congress, it was decided to order cards for current accessions by sending a carbon copy of each order letter. These carbons were returned with the cards, and bore checkmarks showing why cards had not been furnished for certain titles. In the case of titles for which cards might be printed later, 33-size slips were returned to be filed in the waiting list. Cards for books received by gift were ordered by author and title on manila slips.

A study of the returned carbons (there is no record of results from the orders on slips) shows the following facts for the years 1904 and 1905:

During 1904 cards were ordered for 727 titles, and were received on the first order for 44 per cent. of them; cards were received for 29 per cent. of the foreign titles and for 59 per cent. of the American titles. In 1905 cards were ordered for 1126 titles, and were received on the first order for 48 per cent. of them; cards were received for 42 per cent. of the foreign titles and for 51 per cent. of the American titles.

The summary of the report on cards not received on the first order by carbon copy is as follows:

	1904	1905
Book announced.....	3	...
Copyrighted books, cards sent without further order.....	4	5
Books likely to be copyrighted.....	13	25
Books for which there is no definite prospect of having cards within 30 weeks...	199	210
Foreign books ordered on the continent...	8	...
Books ordered in London.....	6	...
Books ordered in New York.....	1	1
Books for which cards are temporarily out of print, cards sent without further order.....	18	10
Current non-copyrighted books, already purchased, cards sent without further order.....	7	5
Books recommended for purchase.....	15	14

Titles for which the Library of Congress has not furnished cards, if within the scope of the John Crerar Library, are looked up in its catalog (deposited in this library), the serial

number is written on the order slip, with "J" prefixed, and on receipt of the books the exact number of cards needed is ordered at a cost of one cent each.

Books are not withheld from circulation awaiting cards, but are represented temporarily by a slip, usually the order slip, in the list of uncataloged books.

The formula adopted for all orders of Library of Congress cards was " $3 + s_3$," since changed to " $3 + sa_3$." The "3" indicates one card each for author entry, for official catalog, for shelf list; " sa_3 " means that, if the Library of Congress has assigned subject headings, cards sufficient to make these entries are to be sent, and also cards for added entries; but if the Library of Congress has not assigned subject headings, then three cards for subject entries are to be sent.

RECATALOGING.—The complexity of the recataloging problem has already been hinted at. An additional element of difficulty was found in the fact that during a year of great pressure on the one cataloger author entries only had been made for a large number of books. After some correspondence with the Library of Congress, it was decided to ask for the travelling catalog of all the cards printed up to that date, April, 1904. Stiff manila slips, size 33, were used for ordering cards. "North-western University" was stamped in the lower left-hand corner of each slip, and the cards were ordered by serial number, one number only on a slip. When all the slips had been written, they were arranged in the order of serial numbers, and sent to Washington.

The following routine for checking was adopted and successfully used.

Form of order:

1 — F — 146/7

If a special number of cards is needed, write that number after the serial number, as above, otherwise the regular formula, " $3 + s_3$," is understood.

New catalog.—Look up every author card in the Library of Congress catalog. Look on the back of our card to see whether the work

has been completely cataloged. If it has been, two cards are needed, one for the official catalog, one for the shelf list. Form of order will be: "1 — F — 146/2." If no subject entries have been made, get regular number and discard written author card when the printed author card is received. If the number of extra cards needed can be estimated from the contents given on the Library of Congress card without consulting the book, order them; otherwise order extra cards if found to be needed when the book is in hand for cataloging. If a Library of Congress card is found, write the serial number on a slip in ink and on the back of the author card in pencil. If any unusual entry, corporate and the like, is not found under our heading, look for it under other possible headings. If a Library of Congress card is not found, turn card up on end. When drawer is finished, look up turned cards in the John Crerar catalog. If found there, write number on the back of the author card in pencil with "J" prefixed: "J2378." Ordering John Crerar cards will be left until the book is reached in classification and recataloging and the number needed can be determined.

Reference books.—Go through Library of Congress catalog with alphabetical list of reference books permanently shelved in reading room. Get two extra cards. Write the numbers on white slips, add to the order on the manila slip after the slips are arranged in serial numbers.

Old catalog.—Same routine as for the new catalog with the following exceptions: The regular number is to be ordered for all found. Write the serial number on the front of the card in the lower right-hand corner.

Greenleaf.—Same routine as for the new catalog with the following exceptions: The regular number is to be ordered for all found. Write the serial number on the front of the card in the lower right-hand corner. Turn up only those cards likely to be found in the John Crerar catalog.

Slip lists, and United States checklist.—Same routine as for the old catalog.

Notes.—Make author and title order for any bibliography not found in the Library of Congress catalog.

The result of this checking was that in June, 1904, Library of Congress cards were ordered for 4155 titles, and that John Crerar cards were found to be available for 2727 titles in addition.

CLASSIFICATION.—The Dewey Decimal classification is used, and all choices of alternatives offered have been made with reference to the needs of college instruction and use; for example, the life and works of a public man are classified in the period of history in which he lived. Classification was begun in history, a class where many printed cards had been obtained, and it has been continued in English literature; and economics will be the next class undertaken. As a rule, in recataloging precedence has been given to books for which there were printed cards. To facilitate the shelf arrangement of books classified but not recataloged, such books have been labelled with the class number and the initial of the author's name.

RESULTS.—In considering the work accomplished in 1904 and 1905, it should be remembered that all the preliminary work and checking were done in 1904. One cataloger has given full time to the work and a second person less than one-third time. Alphabetering, labelling and some writing of call numbers have been done by other assistants, and the classification has been done by the writer. The average per year for one cataloger during three and a half working years when no printed cards were used was: titles, 1913; volumes, 4185; cards, 6676. There are some variations in the number of months of actual work in these years and in 1904 and 1905. Further, many cards were written during 1904 and 1905 if printed ones could not be obtained. Therefore, the comparison of these results with those obtained with printed cards is not absolute. Still, considering only the number of cards added to the catalog (including the shelf list), the work of one cataloger giving all her time for the two working years, and using printed cards when they could be obtained, is equal to the work of one cataloger for three years before Library of Congress cards were intro-

duced; and the part time work of the second cataloger during the two years is equal to the whole time of one cataloger for 1.2 years.

The cataloging work of 1904 and 1905 may be summarized as follows:

	Titles.	Volumes.	Cards
Recataloging	3,190	5,828	14,553
Current cataloging	2,392	4,766	8,765
Totals	5,582	10,594	23,318
Shelf list			5,520
Total number of cards			28,838

The totals for recataloging would have been much larger if the amount of the new work since September, 1905, had not been extraordinary. Many of the printed cards obtained in May, 1904, are still filed in the order of their serial numbers waiting until there shall be time to recatalog the books they represent.

The total expenditure for printed cards in 1904 and 1905 was:

Library of Congress	\$295.01
John Crerar Library	29.25
American Library Association	38.95
Transportation on Library of Congress travelling catalog	24.52
Total	\$387.73

The remnant of the old catalog on 32-size cards has been combined with the catalog on 33-size cards. It was discovered that the 33-size card would cover the writing on nearly all the large cards for the Greenleaf collection, and these have been cut down to the 33-size and punched and combined with the general card catalog. Thus two troublesome extra alphabets have been disposed of. It is anticipated that in the course of the recataloging, these old cards (they are chiefly author cards) will be replaced, and that subject and other needed entries will then be made for the books they represent.

The use of printed cards on a large scale is no longer an experiment in this library. It has made possible great advance toward the much-needed unification of the library. The enthusiasm and accuracy of the two catalogers, Miss Adaline Maitland Baker and Miss Olinia May Mattison, have contributed largely to the present progress.

THE PRINTED CATALOG CARDS OF THE LIBRARY OF CONGRESS: FURTHER COMPARISONS OF USE

In the *LIBRARY JOURNAL* for June, 1902 (27: 314-318) there was given a report, based on statements received from 20 libraries of varying size and character, on "The printed catalog cards of the Library of Congress: comparisons of use." The cards had then been available for about six months, and the statements made covered both the use made of the cards and criticisms or suggestions regarding their issue and form. It was pointed out that the system had not been in operation long enough to pass judgment upon its practical advantages in economy of time or of money, but the general opinion of subscribers to the cards was strongly favorable.

It is believed that a further report and analysis of the use made by libraries of these printed cards should be useful. The system has now been in steady operation for over four years, and there has been time to gauge fairly its advantages and compare results of use—particularly with a view to determining what actual saving the cards effect in time or money. That the enterprise has grown steadily in favor is shown by the fact that there are at the present time 740 subscribers to the cards, classified as follows: public libraries of over 100,000 v., 23; public libraries from 25,000 to 100,000 v., 74; public libraries from 10,000 to 25,000 v., 100; public libraries of less than 10,000 v., 231; university libraries, 29; college libraries, 75; high and normal school libraries, 43; libraries of U. S. departments, 32; individuals and firms, 61; miscellaneous libraries, 72. At present the sales of cards average about \$50 per day. Further consideration of the use of the cards is now given in a series of brief statements from libraries of different sizes and character, most of which contributed to the former report, based upon their actual experience with the L. C. cards. These statements are intended to answer as compactly as may be the following questions: 1, Extent and character of use made by library of L. C. cards; 2, Elements of cost (a) in money, (b) in time; 3, What saving do they effect (a) in money, (b) in time—e.g., do they save the salary of one assistant or more? Do they save

salary by permitting an assistant to do other work also, who would otherwise be restricted entirely to cataloging? 4, Can any actual economies be cited as result of their use? 5, What criticisms are to be made regarding issue, form or other details of these cards? 6, Give brief statement of conclusions regarding the card distribution service.

Reports have been received from 23 libraries, ranging from the large university and reference libraries to the public libraries of different cities, such as New York, Chicago, Cincinnati, Hartford, Medford and Salem, and including a few libraries of smaller institutions. While on details opinion is somewhat divided, there is practically unanimous approval of the card distribution work as a service of great value to libraries and of increasing usefulness. On the question of actual economy resulting from the use of the cards the reports vary in degree, but on the whole indicate that their use permits a reduction in cataloging expenses, often slight, but frequently significant.

Columbia University reports that during 1905, 3527 L. C. cards, for English and American books only, were bought at a cost of \$42.35. Dr. Canfield says: "We do not find that, ordering as we do, the use of these cards is any direct saving to us, either in money or in time. But we continue to order because for at least no more than it would cost us to get out the cards here, we get these well printed, accurate and authoritative cards. The gain is in the quality of the card, perhaps, as against those we make ourselves; but I do not think there is any direct saving. We object somewhat to the form of entry for double author, which we think ought to be a double entry rather than a single one; and it seems to us that for the size symbol either the usual letter or inches, or both, should be used with the centimeter indication."

Harvard University Library (Mr. Currier):

Of the 40,678 cards filed in our public card catalog during the year beginning Oct. 1, 1904, 23,211 were written cards, 7981 were L. C. cards, 6026 were printed for us at the college printing office, and 3460 were A. L. A. cards. The percentages are 57.1, 19.6, 14.8 and 8.5 respectively. These cards correspond to a total of 15,231 titles, of which 2650, or 17.4 per cent., were L. C. titles.

The total cost of L. C. cards for the year

was \$88.31, making an average cost of 3 1-3 cents per title. To the actual money cost must be added the expense of ordering, keeping track of orders, cutting the cards down to 32 size, repunching, ruling the subject cards, writing the subject headings and correcting the entries to conform with our cards. As to the last item, we correct the L. C. heading usually only in cases where it is out of the question to attempt to bring our catalog into uniformity with L. C. practice. Slight variations in heading are allowed to go unchanged where they will lead to no confusion in the catalog.

It would be difficult without making somewhat extensive experiments to estimate the actual saving due to using L. C. cards. It varies greatly according to the character of the book under consideration. For current English and American books there is probably a saving over our written card work, though it cannot be very large. The time saved in looking up full names and in revision of work is largely offset by the machinery of ordering and preparing cards for the catalog. In the case of difficult cataloging, as, for instance, the series of Huntington facsimile reprints, the saving could easily mount up to 50 cents or more for some titles, though the average would probably be below this. In the case of our printed work there is of course an appreciable saving in cost of composition, proofreading and presswork—the first and third together amounting to from 15 cents to 25 cents per title.

One advantage derived from the introduction of L. C. work is the possibility of getting into the public catalog a large number of titles, which, with our present insufficient staff, would otherwise be recorded in the official catalog only. Thus we have cataloged this year many older works relating to South America. These titles we have been able to order from L. C. with certainty by using a file of L. C. titles made by cutting up the L. C. proof sheets and arranging them in one alphabetic catalog. This catalog occupies very much less space than a complete set of the L. C. cards (at present 45 trays half or two-thirds full). It is proving itself an indispensable bibliographical tool.

The form of the cards we find satisfactory for our purposes. The fulness of bibliographic detail is very useful for our file of L. C. titles, though sometimes more lengthy than we deem necessary for our public catalog.

We consider the card distribution service excellent. From Oct. 1, 1902 to Mar. 31, 1906, 9452 titles were ordered, about 60 per cent. by serial number. Of the total ordered, 8705, or about 92 per cent., were received. This would probably be increased a trifle by considering the orders out at the beginning and end of the period mentioned. Those ordered and not re-

ceived include titles not falling in scope of stock and titles for which we did not care to delay the cataloging. Cards ordered by number come almost invariably within five days. Frequently the cards come before the book is ready for circulation; but whenever the book is ready for circulation before the cards come it is not withheld, but a memorandum is kept containing the information necessary for preparing the cards for the catalog. In cases where L. C. cannot furnish cards immediately and is instructed by us to hold our order until they can do so, we insert a colored temporary author card in the public catalog to remain until the permanent card is filed.

In the case of all titles which we know have been cataloged by L. C., and of titles of current American and English books well within the scope of stock, we find the service extremely satisfactory. Foreign titles which we do not certainly know to be in the Library of Congress we usually catalog for ourselves unless we are willing to wait as much as three or four months for the cards.

Princeton University Library (Mr. Bishop):

Since December, 1902, the library of Princeton University has been using the Library of Congress printed cards as far as possible for cataloging current accessions. The percentage of use has grown steadily with the recataloging of the Library of Congress until now it reaches 33 1-3 per cent. of our current work, and will doubtless continue to increase. We have not substituted printed cards for old manuscript cards already in our catalog save in a very few instances. As a depository for the complete file of the Library of Congress cards we make very great use of them as a source of bibliographical information. Indeed, this aspect of their use we consider of extreme importance, particularly in our cataloging work, in which we seldom seek further for a form of entry than the one adopted by the Library of Congress.

In 1903 we made a series of experiments to determine the relative cost, to us, in time and money of manuscript cards and of printed cards from Washington. Our final result was that on ordinary books our net saving by the use of Library of Congress cards was 10 cents per title, and on books of more than average difficulty in cataloging decidedly more than that sum. The estimates included every element of cost which we could compute, and did not neglect the time spent in ordering the printed cards. At present the greater familiarity of the staff with the use of printed cards leads us to think that our minimum saving is at least 12½ cents per title.

We also made an experiment in the analysis of three works of some intricacy and length, the results of which are given below. These are in general so nearly those of our average work that they may be of value as showing the saving in the various processes:

Comparison of time cost.			Comparison of money cost.		
Processes	Ms. cards	L. C. cards.	Processes	Ms. cards.	L. C. cards.
Cataloging.....	13 hrs. 50'	6 hrs. 30'	Cataloging.....	\$4.05	\$2.04
Revision of cataloging..	1 hr. 07'	.. 37'	Revision of cataloging..	.75	.49
Copying.....	17 hrs.	4 hrs. 35'	Copying.....	2.07	.65
Revision of copying.....	1 hr. 45'	.. 21'	Revision of copying.....	.83	.33
			Cost of cards....	.39	1.33
Totals....	33 hrs. 42'	12 hrs. 03'		\$8.09	\$4.84

* Saving:—Time, 21 hrs. 39'; money, \$3.23.

* No account has been taken of time or money cost of ordering the printed cards.

The saving over a manuscript or a type-written card is very considerable, as is shown above. The saving over the cost of cards printed by ourselves, of which we make a few, is much greater—thirteen cents (\$.13) per title. It is thus seen that we save at least \$.125 on each title where we write slips and duplicate them by hand, by \$.255 per title where we write slips and duplicate them by printing. A stronger plea for a central cataloging bureau could hardly be made. Could we buy all our cards from such a bureau, we could free nearly half our cataloging force for other work.

We have no serious criticism to offer regarding the issue or form of the cards. The chief difficulty, if it may be called such, which we find is an occasional inconsistency between earlier and later forms of entry for the same author.

The card distribution service is in general excellent. We note occasional clerical errors in filling our orders, rather more frequent of late than formerly. Orders for "series" and "standing orders" are not filled as satisfactorily as the ordinary orders by serial number.

Wesleyan University (Mr. James):

During 1905 the Library of Wesleyan University ordered 2766 L. C. cards for 618 titles, and received 2540 cards for 556 titles, an average of a little more than $4\frac{1}{2}$ cards to a title. Cards for 158 titles, one-fourth of the whole number, were ordered by serial numbers. Of the whole number ordered 90 per cent. were received. The high average of $4\frac{1}{2}$ cards to a title is due to the number of uses to which we put the cards. In addition to the ordinary author, title and subject entries we use them in the shelf list, for series entries, and extensively for author and subject analyticals.

Some time since we had a full set of the galley slips issued by the Library of Congress cut to make cards of standard size, and the galley slips currently received are treated in the same manner. These cards are arranged alphabetically by authors, and this catalog is regularly consulted to determine whether the

Library of Congress can supply cards. This accounts for the large number of titles ordered by serial numbers.

The Library of Congress has promised to send us a set of the 55,000 cards printed before the galley slips were issued. When these cards have been received and arranged we intend to replace the large cards used in our catalog prior to 1899 by cards of standard size, using so far as possible L. C. cards.

The cost per title for printed cards is $4\frac{1}{2}$ cents; for the cards we use in cataloging $1\frac{3}{4}$ cents. It seems hardly fair to add cost of galley slips and of cutting and arranging the cards made from the galley slips, but if this is done, and we estimate the value of the time spent in ordering cards, the cost of cards per title, at our present rate of ordering, must be about 10 cents a title. I think this estimate is too high, as it allows nothing for the future usefulness of a complete set of L. C. cards, a bibliographical tool of great value. Any increase in the size of our orders would result in a decrease in the cost per title.

In a library with a small staff, where a few persons do many things, it is difficult to determine the cost of ordering printed cards, but it is impossible under the same circumstances even to guess at the saving in their use. There is no saving in money in our use of them, but there is a saving in time, because more books can be cataloged in a year. It would not have been possible for us to have cataloged 2600 volumes in 1905 but for the time saved by the use of L. C. cards for 556 titles.

We have no criticism of the L. C. cards save what is favorable. The cards have improved greatly in the past four years in the apparent quality of the stock and in general appearance. There is improvement also in the uniformity of the output. The type at present in use for the heading, the body of the card and the notes are sufficiently distinguished from one another, are perfectly legible, and are a pleasure to the eye. Much to be commended is the relegation to the bottom of the card, and almost to invisibility, of entries which concern only the Library of Congress and the Copyright Office.

Our experience in the use of the cards has been entirely satisfactory. Orders are filled in three or four days and very few errors occur. We are inclined to use the printed cards more freely than we do the written ones. Any tendency to swell unduly the size of the catalog is more than corrected by the fact that a single printed card often contains matter which would require two written cards. In the cataloging of a large collection of books or in the recataloging of a library the L. C. cards will prove invaluable. In our own case we could not contemplate without dismay the recataloging which we now face with calmness. It is a source of keen satisfaction to order all the cards one needs for such sets as the "Quellen und forschungen zur sprach-

und kultur-geschichte der germanischen völker," or the "English garner."

In a word, the card distribution service, because of the legibility, attractiveness and cheapness of its cards, the fulness of the entries, and the promptness of its service, merits and should receive the hearty support of American libraries. The service is now on a self-supporting basis, but at a small increase in expense it could serve many more libraries, and increased patronage might lead to a cheapening of the cards.

John Crerar Library (Mr. Andrews):

The John Crerar Library makes as much use as possible of the L. C. cards. It sends to the Library of Congress a copy of its order sheets and asks for 21 copies of every title, excepting only those for serials and the few English books of which the Library of Congress has American editions. Besides this, it has filed standing orders for all titles of works in series taken by both libraries, and has given special orders for a considerable number of titles of older works obtained either by auction, by purchase *en bloc*, or received as gifts.

The total number of titles received in 1905 were 3311, and 2700 were placed in our public catalogs. The number of titles not used by the library is less than six per cent. of those received and paid for. The cost, therefore, is for 21 copies of 1000 titles \$110 plus six per cent. for the cards found to be useless — \$6.60, and say \$3.40 for postage and stationery—or a total of \$120. The printing of the same number of titles would cost us \$217.50 per M. titles for 25 copies each, or \$207.50 for 21 copies. The money economy, therefore, is \$87.50 per M., or about \$250 per year.

Considerably more important than this, however, is the economy in the work of preparing the titles for the printer, revision and proofreading. This we have calculated to be \$170 per M. titles, leaving a total saving of \$250 per M., or about \$800 per year. It is about one-third of the total expense of preparing the books thus cataloged for the shelves, or over 10 per cent. of cataloging all our accessions. This economy is by no means inconsiderable, and would in itself justify our use of the Library of Congress cards. The gain in our output, however, is a greater advantage, for it would be almost impossible, without a very expensive increase in the staff or considerable modifications of our methods, to put the same number of titles in our catalog.

In almost all matters of issue, form, and other details of the work these cards give entire satisfaction, and the few points on which our opinions differ do not affect the great majority of the titles. We are so desirous of having our own practice conform as far as possible with that of the Library of Congress that we greatly regret the unexpected delay in definitely formulating the cataloging rules of that library.

The most important changes that would increase the usefulness of the cards to this library are: the omission of contents notes from the temporary cards for works in course of publication; the giving to each edition of a work a separate card; the statement on cards for incomplete sets of what constitutes a complete set; and the capitalization of titles in foreign languages according to the generally accepted usage of the languages.

New York State Library (Mr. Biscoe):

Use. The library receives the proof sheets and has also a complete depository set of the L. C. cards. These are both utilized in ordering cards for the regular catalog. The proof sheets as received are looked over and any titles of books waiting to be cataloged are ordered at once. All new books which fall within the scope of the L. C. cards are compared with the depository catalog and cards ordered for such as are found. The proof sheets are also used as a basis for the selection of books to be bought.

The L. C. cards are used for all books for which they can be obtained and also where slight changes can adapt them to our copies; e.g., a change from the English to American imprint, special edition to the ordinary edition, mere change of date, etc. Six copies of all titles are ordered to meet the ordinary requirements of cataloging, and in special cases extra copies, sometimes even 15 or 20 of a single title. Extra sets are also ordered by the sociology librarian for special alphabetic and classed catalogs of legislative subjects kept in that section.

Cost. We have during the past four years received cards as follows:

Year.	No. titles.	Total cost.	Av. cost.
1901-2	891	\$ 46.61	5.2c.
1903	2,459	120.48	4.8
1904	4,054	202.34	4.9
1905	3,347	157.60	4.7
Total.....	10,751	\$527.03	4.9c.

As to the cost to the library of cataloging these books, we have kept no exact statistics. The task of recording the time where the work is divided among a number of assistants is too great to pay for the comparatively small value of the result. We know that it takes less time than it would to write out each card and that the only extra time required is spent as follows: in ordering and checking up the cards as received, which costs perhaps \$200-\$300 a year; in altering the cards to correspond to our form of cataloging, mainly confined to the author headings; and in making such changes in imprint as are necessary to agree with our copies.

Saving. We gain the full and accurate title in place of the shorter written title in which mistakes are liable to be made each time it is

copied. With the ability to obtain extra cards at $\frac{1}{2}$ cent a title we often make additional entries in the catalog which we should not have made if we had been obliged to write the cards. We also find it a convenience in consulting the catalog to have full information on every card representing a title, thus being saved the trouble of referring back to the main entry, as with the written cards.

Criticisms. We have no criticism to make of the issue or distribution of the cards. As to form, the great end is accomplished when full information is given, the spacing on the card or the order of imprint being of comparatively little importance. The great difficulty is with the author headings, which determine the place of the card in the catalog, and this difficulty can never be solved till libraries agree on some rules, and those the right rules. Our practice in regard to government headings differs from the L. C. use. The order of entry on the card should be that which is to be followed in the arrangement, so that a comparatively inexperienced person can file the cards away and the wholly inexperienced reader may not be confused any more than is necessary in his use of the catalog. The full personal names are satisfactory to us and seem to be necessary for the large libraries, and the small libraries can draw a pen through the part they do not wish to use.

New York Public Library (Mr. Bostwick):

We formerly ordered L. C. cards from galley proofs, checking these up with the current book orders. The result was that we missed many cards for books published previous to 1902, the date when we began subscribing for the proofs. For the last three months we have been sending orders on separate slips to the Library of Congress for all titles as the books are ordered, whether they are old or new publications; and we find that in this way we get cards for about twice as many titles as before, although we receive less than half the number asked for, many of the cards not being printed until after the receipt of our orders. If we were willing to wait until the printing of the L. C. cards, as we used to do under the old plan, we should probably get more than two-thirds of our cards in this way. The reason why we do not thus wait is that there is a great objection on the part of the librarians in charge of our branch libraries to leaving the branch catalogs imperfect for such a considerable length of time. We order no cards for use as title cards. L. C. cards are also used when revising old catalogs, making analytics, etc., in which case we get cards for about three-quarters of the titles ordered from the Library of Congress. When a new branch is to be opened a special order is sent for L. C. cards, although we keep some in stock that we know we shall need. The catalogs of the branches hitherto opened have contained on opening about one-third or one-quarter of L. C. cards. This is because the

cards were ordered in the old way. In cases of future openings we shall order them in the new way and shall then expect the new catalogs to contain fully three-quarters of L. C. cards. Our order for cards for these various purposes during the year ending July 1, 1905, amounted to 45,275 cards. Our current orders of duplicate cards are sometimes large, amounting in some cases to more than 100 cards at a time for one title.

In addition to the price of cards, say \$700 a year, the ordering takes about half the time of one assistant in the cataloging department, costing about \$23 a month. To this must be added the time necessary to write in numbers, headings, etc., which except for the union catalog is done at the branches. It is impossible to estimate this time and its value, as the work is done at odd moments in the intervals of routine branch work. If this work were transferred to the central cataloging department, no branch library would be willing to give up an assistant, so that we may say that it practically costs nothing.

Our chief cataloger figures that the type-written cards cost us about 0.9 cent apiece, and the hand-written cards about 1.7 cents, while L. C. cards cost about $2\frac{1}{2}$ cents each on an average. These are prices for the union catalog, not for branch catalogs, since work done at the branches cannot be estimated as noted above. It is very much less, however, in the case of the L. C. cards than of the others. The prices also do not include cost of administration, supervision, and classification, but represent merely the mechanical making of the card. The classification of L. C. cards does not aid us.

Our chief complaint is that the L. C. cards are often not issued until too late to be of practical service in catalogs such as ours. As above noted, we often cannot and do not wait for them; but the cards that we do receive come to us usually before the corresponding book, so that there is no delay in cataloging. In regard to the form, our chief cataloger regards the repetition of the author's name in the title as unnecessary, and objects to the regular omission of the joint author's name in the author line. Otherwise we have no complaints to make.

On the whole we are very much pleased with the L. C. cards, and would not give them up on any account. The cost for union cards is greater than when the cards are written, as shown above, but where duplicates are ordered for the branches the cost of ordering, per card, becomes small, and the excess in total cost must be very little; or possibly there may be a saving, especially if we take into account other work on the cards that it is difficult to include in an estimate, such as looking up full names and pseudonyms, and assigning subject headings. In any case the cards are much fuller than those we should make ourselves and also more compact and legible, and it is on this account,

rather than from considerations of economy, that we prefer them.

Chicago Public Library (Mr. Roden):

This library is a heavy user of Library of Congress cards. Besides ordering for all current accessions, we constantly watch the proof sheets for long contents cards and analyticals for large and difficult sets, and substitute these for our own mss. cards whenever possible. We maintain two complete dictionary catalogs and three author and title lists of new books. Our orders, therefore, average about eight cards per title. The following statement is based upon transactions covering the past four months, Jan. 1 to May 1, 1906. Of current American titles ordered we received cards for 73 per cent.; current English, 48 per cent.; current German, 23 per cent.; French, 35 per cent. Of the current American (cards and books ordered simultaneously) 42 per cent. of cards came before books, and of 47 titles which bookseller has been unable to supply, 26 have L. C. cards, showing among other things that many books which reach the copyright office never arrive in the market. Total number of titles received (averaging 8 cards each) 2137, of which less than one-fourth were current books, the rest used for cataloging nine branch collections, for the Blackstone Library, and for special back work indicated above. Total cost in money for all the above \$127.96. Total cost in time, *i.e.*, in preparing orders and receiving and distributing cards, about one day in four weeks for one assistant. This latter estimate implies the least possible amount of bookkeeping, checking, tracing, etc.

We are convinced that much of the gain in time may be dissipated through too much detail in keeping records of L. C. transactions, and have reduced our practice to the minimum. We send to L. C. a carbon copy of our orders as sent to booksellers and foreign agents, adding serial numbers when found at the time when order card is written. (Proof sheets are carefully examined as received.) We accept the "extra charges" levied for "titles unarranged" and other negligences and ignorances, rather than stop to correct them. We have dropped all secondary transactions, reorders, extension of time limit, etc., as not worth the time they take up. We try to cast the burden of clerical work on the Library of Congress, and estimate that it still costs us nearly two cents per title to order the printed cards. Of course the large number of copies which we require increases very materially the saving in time and money effected by their use. We do not consider that this saving amounts to the salary of one assistant. The saving of time in cataloging a book with printed cards as against written (*i.e.*, type-written) might be expressed by the ratio of 35 to 15.

By way of citing actual economies, we would say that we are now supplying five cat-

alogs with cards for all new books, without delaying unduly the progress of the books to the shelves. We are also making complete dictionary catalogs for six branch reading rooms and three field house libraries with no other help than one extra clerk to add titles and subject headings. The catalog of the Blackstone Branch, now kept up to date, would never have been possible with the staff available, without the L. C. cards. These are the mere material gains, to which should be added the advantages on the score of greater accuracy and the high grade of work done on the printed cards, greater compactness, especially in long contents cards, legibility and general excellence of appearance and workmanship, which cannot be computed, but are of greater importance than the little savings in time and money. But over against these advantages must be set the mass of vexatious detail and the amazing pedantries occasionally perpetrated by our learned colleagues in the name of bibliography, inspiring the thought that the L. C. application blanks should include clear proof of a sense of humor in all candidates for the catalog division. Regarding the distribution section, we take pleasure in stating that its service seems to us remarkably prompt and accurate.

Enoch Pratt Free Library (Dr. Steiner):

After some hesitation, this library began ordering Library of Congress cards in the autumn of 1904. We speedily found that it was necessary to have an adequate and systematic method of ordering the cards, in order to make use of them satisfactorily. This method was established after several visits to Washington. We obtained the galley proof sheets of the cards from the Library of Congress; we also tried the experiment of having two of the travelling card cases sent us from the Library of Congress for use in recataloging, etc. While these cases are useful, we have found that it is much more satisfactory to refer, from time to time, to the cards kept in the library of Johns Hopkins University, which is a depository of L. C. cards. We use all the L. C. cards that we are able to obtain, both for new books and for such portions of the library as it seems wise, from time to time, to recatalog.

It is difficult to tell what the cost of Library of Congress cards has been in the matter of time; ordering them has taken a good deal of the time of the assistant librarian, and the arrangement of the cards has taken some time in the cataloging department. In money we have spent from the beginning of our orders \$375. We find that they effect a decided saving both in money and in time; through them we have been able to accomplish a great deal of recataloging which would otherwise have been impossible. In addition to this saving we have found it possible without increasing our cataloging force to catalog more books in a given time than previously, and to

double the number of cards made for each book, thus establishing for the first time a public card catalog in addition to the official one. We feel that these results have been important, and are so pleased with the cards furnished us, and with the satisfaction we have found from them, that we have no criticism to make at present.

Cincinnati Public Library (Mr. Hodges):

We order cards for all books, except fiction, cataloged in our main library and 13 branches. L. C. cards are used in the branches for all entries except adaptation and picture entries. In the main library colored cards are used for bibliography, biography and criticism. Between July 1, 1905, and May 1, 1906, we received cards for 5283 titles, an increase over the year before. There were 302 titles returned for which no cards could be supplied.

During the same period (July 1, 1905, to May 1, 1906) we received 78,344 L. C. cards at a cost of \$439.99. Time spent in ordering these cards was 465 hours, costing \$109.80, making a total cost of \$549.79. Another element of cost is the time spent in filing the branch cards, all of which cannot be used immediately.

The cost of the same number (78,344) of blank catalog cards would be \$141.02. Time is saved in looking up entries. In case of a new author we accept the L. C. entry. The subject headings suggested are made consistent with what has been done previously. We use the typewriter for all cards other than L. C. cards. The average minimum cost of cataloging a book with L. C. cards is estimated at \$.06, with typewritten cards at \$.23. It is understood that this is merely the cost of cataloging the book. It is not possible to say that the L. C. cards save salary by permitting an assistant to do other work, as in this library no one does cataloging exclusively.

The order for the L. C. cards is sent out at the same time as the order for the book. Delay in distribution of the cards causes inconvenience and expense. If it is necessary to put the book in circulation, the expense of cataloging falls on us and not on the Library of Congress. We make a temporary author slip indicating all the subject headings, practically cataloging the book, so that when the L. C. cards come (or fail to come) the only thing to be done is to put on the call number and subject headings. In these cases the L. C. cards save us only the writing of the secondary cards. The expense of making our temporary slip, revising, filing and withdrawing it, should be added to the cost of the L. C. cards.

Detroit Public Library (Mr. Utley):

Of the 46,460 cards added to our several catalogs (including those of five branches) in 1905, only 4585 were from the Library of Congress. The small proportion is partly explained by the fact that we give no orders for

the branches, nor for French, German or Polish books, nor for the fiction and medical catalogs, which are on no. 32 cards. We do not order for our imported books, having learned by experience that the small number of cards which the Library of Congress is able to supply makes it not worth our while to send in such orders. We do not use the cards for analyticals, preferring the shorter, simpler form which we had long ago adopted, and which we are careful to restrict to such matter as distinctly relates to the subject entry. Neither do we use them for title entries, choosing a brief entry, or one only sufficient to exactly identify the book sought, rather than the cumbersome entry with so much detail entirely foreign to the purpose of a title card. We order duplicate sets for the children's department, as well as duplicates for subjects only, for the reference room catalog. The form of some cards is found on receipt to be so different from that adopted by us that they cannot be used, except by considerable loss of time and great disfigurement, and they are therefore destroyed. Sometimes these misfits come owing to want of detail in making the order.

With the small number of L. C. cards used by us, we do not begin to save the salary of an assistant. In ordering for a large parcel of books it is necessary to examine each one with reference to the scope of cards which can be furnished, also to review each with reference to number of cards needed; then write the order, pack away the books for waiting, and upon receipt of the cards compare, change if necessary for adaptation, fit with our own numbers and adjust to our subject headings. Of course, time is consumed in some of the same processes necessarily attending the preparation of cards ourselves, but there is much less handling of both books and cards.

So far as this library is concerned, we do not see any actual economies in the use of these cards.

Springfield City Library (Mr. Wellman):

This library uses L. C. cards for cataloging all its current books except fiction and all the books which it is recataloging, so far as its books fall within the scope of stock. The cards are also used freely for analyticals, the subject headings being typewritten at the top, and the chapter or essay dealt with underlined in red ink in the contents printed at the bottom of the card. Besides the cards ordered for the two complete card catalogs of the library, a printed card is used for the shelf list and another as copy for the monthly bulletin. Extra cards are ordered also for the juvenile catalog, the special catalog of the fine arts collection, and the special catalog of the genealogical department.

These printed cards cost the library slightly less than two-thirds of a cent apiece. The cost of simply copying these cards in manu-

script would be more than three times as great, to say nothing of the large additional expense involved in looking up the bibliographical data, authors' full names, etc., that are supplied on the printed cards. There is, to be sure, a slight expenditure of time in ordering and handling the printed cards, but this is inconsiderable.

The subject headings suggested at the bottom of certain classes of the printed cards are exceedingly useful, and it would be advantageous to have these headings indicated on as large a proportion of the cards as is possible.

In most instances the cards are received with great promptness. When, as occasionally happens, there is a delay, the book, if in demand, is placed in circulation and a temporary author card is placed in the catalog. The stock for this card is yellow and has printed at the bottom "This book has been received, but has not yet been cataloged."

Utica Public Library (Miss Underhill):

This library makes use of the L. C. cards for the main catalog and also for the catalog in the children's room, adding subject headings and title entries with the typewriter, and when necessary, the titles of analyticals in the form of a note. We do not attempt to make the details of imprint correspond to our previously adopted rules. Notes are frequently used to elucidate any doubtful points.

It is difficult to specify the actual cost and amount saved, but we know that the saving of time and money is very great, due allowance being made for the time spent in making out the card orders and checking them up, etc. This saving of time makes possible more analytical work and at the same time the work is more easily kept up to date. The use of the printed cards relieves the cataloging work of much of its drudgery, making time for the catalogers to do more interesting work in the department, or to find a change of occupation in another department.

From recent orders the following facts appear: About 3000 cards were received at an expense of \$40 deposited and an estimated cost of \$6 for the time spent in preparation of card orders, checking and arranging. This \$46 thus spent saved (1) the cost of cards, \$9; (2) time spent in writing that number of cards, \$40; (3) time spent in looking up full names and revision, \$25; an estimated total of \$74.

The cards are in most instances received promptly, often before the receipt of the book, and very few mistakes are made in filling the orders. Occasionally the cards for books in great demand are not forthcoming for three or four weeks after the order is sent in, even when the cards are ordered almost as soon as the book is issued. Temporary author and title cards are made and inserted in the catalog covering the period of waiting.

We feel that no work in library co-operation is of greater usefulness than this, that the sav-

ing of time and the elimination of much of the routine work are strong points in its favor. As a library of moderate size and moderate income, we would most heartily commend the use of these printed catalog cards.

Salem Public Library (Mr. Jones):

The Salem Public Library, the Essex Institute, and the Peabody Institute, Peabody, share a subscription to the L. C. galley proofs, this library paying \$7.50 a year as its proportion. On receipt of galleys the librarian draws off on "P" slips the titles and serial numbers of books already ordered or which we are likely to buy. These are filed alphabetically by author. When a lot of new books reaches the cataloger she runs through this slip catalog and takes out slips for all titles found. This enables her to order cards for such books by serial number. We also get numbers from the *A. L. A. Booklist* and from other sources. Cards for other books "within the scope" are ordered by author and title on slips. We have kept no record of the number of titles for which cards cannot be furnished within the time limit—in our case four weeks—but the number is now very small and would be smaller if we were less prompt in buying new books.

The financial statement of our printed card account for the last fiscal year, Dec. 1, 1904, to Nov. 30, 1905, is as follows:

839 titles (2578 cards) cost.....	\$27.18
Rebates, 15% on 11.75.....	1.75
	<hr/>
Galley proofs.....	25.43
	7.50
	<hr/>
	\$32.93

The net cost, including galleys, is 3.9 cents per title. The blank cards for the weight used cost \$2.40 per thousand. We, therefore, pay only \$26.73 a year, or a little over 50 cents a week, for the service rendered by the Library of Congress.

It is impossible to make any estimate of the saving in time by the use of printed cards as the cataloger does other work besides cataloging. I think, however, that the saving is very small, if the time spent in going through the galley proofs and keeping accounts is considered. Even if there is no saving in time or salaries, I believe the small extra expense is justified because of the better cards secured for our catalog. Printed cards are more legible than written, and the fact that all the cards for a book agree in all details does away with the careful revision of every card necessary in the days of hand or typewritten cards. Furthermore, for the trifling sum mentioned above we have the services of the highly trained catalogers and the fine bibliographical resources of the Library of Congress. Another advantage in our case is that we are able to place books more promptly before the public. They are shelved as soon as they are accessioned, pasted and shelved, and it is seldom that the printed cards, when received, have to be compared with the books. Some-

times questions of author, entry or subject heading arise, and the cataloger needs to see the books again, but such cases are few.

Some librarians have objected to the fullness of the L. C. entries, but I consider such criticism unfounded. It is manifestly impossible for the L. C. to print two kinds of cards, one intended only for sale, as the only excuse that it can give for doing the work at all is that they simply furnish duplicates of what they are already printing for their own use. This is on the same basis as that on which other public documents are sold. If at any future time such a special cataloging and printing should be undertaken it would, of course, be necessary to include the cost of cataloging in the price of the cards, thereby increasing the cost to libraries. At present we pay only for stock, presswork, and distribution. In cases where I have suggested changes in the direction of shortening and simplification of entry Mr. Hanson has been able to give good reasons for their present practice, and I have decided that changes which suggest themselves as desirable in the cataloging of the few current and comparatively simple books in the English language bought by the average public library are undesirable when one considers the whole range of ancient and modern literature in all languages. After all, I doubt if the public, for whom we make our catalogs, is so much troubled by such matters as we imagine. As for the librarian, he never knows when any information given on the card may be useful.

Hartford Public Library (Miss Crocker):

We order cards for all current books and for all other additions for which we can obtain L. C. cards. We average three cards to a book, and have only one catalog. The orders are made from the books by author and title.

The average cost in money of our cards has been \$25 each year. No account has been made of the time saved, although we feel that there is such a saving. We have only one regular cataloger, an expert cataloger giving us what time she can each year. As we do our work more rapidly with the L. C. cards, we save both money and time by having them. They save salary by permitting the cataloger to do other work also. Time is saved in not having to look up full names for authors and dates for biography headings and in the supplying of names for pseudonymous books. Up to January of this year we have had to use a cutting and punching outfit to reduce the cards to the index size required for our old catalog. In January a new case was added for our catalog, with the large cards, and now that we can file the L. C. cards without cutting them, we find a much greater saving in time.

One criticism is that the cards have much more exact work than we put on our cards, as to paging, etc. When the full cards are used for title and other secondary cards they

are somewhat confusing to the user. We get no help from the cards for books that puzzle us the most as to classification and headings. The simple headings that we would naturally use are always given, but there is no attention apparently given to a book that is at all difficult to decide about and for which we would like some gain in time.

Medford Public Library (Miss Sargent):

The L. C. cards are a great boon to us, even if they should be more expensive than our former method of cataloging, which is not the case. We are not able to employ an expert cataloger, but are obliged to make use of an attendant whose chief accomplishment is penmanship, and the expense is reckoned on her salary and not on that of an expert cataloger.

All cards that we can possibly obtain are purchased from the L. C., but are used only for the public catalog. Cost may be estimated as follows:

L. C. cards		
1002 cards for 324 books.		
a in money.....	\$8.46	
b in time for procuring numbers at the state house and material for slips.....	2.85	\$11.31
Cost if cataloged at library		
1002 cards for 324 books		
Material for cards.....	\$3.00	
Time of writer of cards.....	33.00	
Time of supt. of catalog.....	2.52	
		\$38.52
Saving in money on 324 books.....		\$27.21
On 1500 or 1600 books, the number we usually add, the saving (approximately) would be per year.....		\$136.05

To my mind the advantages besides that of economy are as follows:

No cards are wasted; the errors, if made, come upon the Library of Congress and not upon the individual library. Any errors detected on these cards, which are very few, are rectified by the L. C.

No time is wasted in searching for and verifying names of authors. The L. C. has greater facilities for this work than the ordinary library has.

The subject headings which are suggested on some of the cards are helpful to many.

The dates of birth and death of authors which appear are a valuable help for biographical entries, and also serve as a means of identification of authors having the same name.

The printed card is much more legible than the written one, and on it can be placed more data.

The time saved from the cataloging can be used by the assistant in other necessary work.

St. Louis Mercantile Library (Mr. Gifford):

We began the use of these cards when I became librarian, February, 1904. Our card catalog was inadequate and was not made on cards of standard size. We have bought L. C. cards for all new books for which they were procurable, and we are gradually destroying the old cards, made for books acquired previous to 1904, and substituting those of the

Library of Congress in all cases where they are to be had. When they cannot be had, we use typewritten cards. This library is particularly rich in books relating to the early history of the Middle West, and the L. C. travelling catalog of American history was of great assistance to us. We bought about \$100 worth of cards from this catalog, and we have made considerable purchases from several of the other travelling catalogs.

We have thus far deposited to the credit of our L. C. card catalog account \$375, and the amount still standing to our credit will surely last through the remainder of this year. As I began to use these cards as soon as I came here, I can give no definite statistics as to the saving they effect in comparison with an entirely different method of cataloging. But, throwing aside the great advantage of having printed cards, I know that I am speaking moderately in saying that the employment of two catalogers would not have enabled us to make the progress made thus far. I think the amount of work so far accomplished would have cost five times as much had we not used the L. C. cards.

Among the other reports received, *Pratt Institute Free Library* (Miss Lord) reports that L. C. cards are ordered for all American copyright books and for all books in the "A. L. A. catalog." As the library's cataloging from January to June is done by the library school students, under supervision, the saving, if any, effected by use of L. C. cards cannot be estimated. The form of the cards is regarded as too elaborate for the use of an ordinary public library, but this is not a serious disadvantage, as in consulting the cards the superfluous items are ignored. It is added: "Although I believe the L. C. cards save a certain amount of time, I think their greatest value to a library is in the greater legibility and ease of use by the general public."

Essex Institute reports that L. C. cards are used for the general cataloging of the library. Comparatively few current books are bought. A subject order has been placed for all cards relating to China, and these are used to compile a bibliography. While no definite statement as to amount of money or time saved can be made, it is felt that it is an economy to buy the printed cards both on account of the saving of time and their greater legibility and uniformity.

For *Forbes Library, Northampton*, which was formerly an extensive user of L. C. cards, Mr. Cutter reports that the use of the cards

has been "almost entirely abandoned, substituting for them a much abbreviated entry copied on the typewriter." He says:

"My reasons for abandoning the use of the cards may be stated briefly as follows: The time required in writing the title of the book as an order for the card, and filing the duplicate carbon copy which we use in checking up the receipt of the card, in sorting out the cards to correspond with the books, and in changing the entry on the card to correspond with the variations of the edition, publisher and date, occupies so much time that I am convinced that, under the conditions under which we are working, it is more expensive than our present method of home cataloging. My chief objection to the form of entry of the L. C. card is that it contains so much as to be bewildering to the ordinary reader; that it contains abbreviations which may be mistaken by the reader for the call number in the library; that the subject headings adopted by the Library of Congress often do not agree with our choice of subject headings.

"Please understand that our conditions here are somewhat different from those in many other libraries; that we have a large collection of uncataloged books which must be rendered available as soon as possible, and that we are working with catalogers who receive very moderate salaries, hence can do the mechanical work at a comparatively slight cost; that we are able to use the unpaid services of pupil assistants in connection with our cataloging, rewarding them only by the experience gained. Our author cards in the catalog contain no information with reference to the book except the place of publication and the date, and the statement that the book is illustrated if this is the case. We have abandoned all idea of making a bibliographically correct entry for each book in our library, leaving that to the book collector and the bibliophile. We are forced to use a large amount of help at low salaries by the exigencies of our fund for maintenance. The chief advantage, it seems to me, in the use of L. C. cards is that it makes it possible to obtain a correct entry, legibly made, for the library where there is no trained cataloger, and to obtain it at a fair cost; but, under the conditions existing here, we feel it best to first catalog our library in the simplest possible manner, and, when this is done, to spend our money and time in making analytical entries for such works as need them. We are using the typewriter entirely for our library work, and each cataloger writes her own cards on the machine."

From the *Carnegie Library of Pittsburgh*, which has never used the L. C. cards, Miss Mann sends the following report on its cataloging work in relation to this subject:

The Carnegie Library of Pittsburgh began

the printing of its own catalog cards in 1898, that is to say about four years before the offer was made by the Library of Congress to furnish printed cards to libraries. The details as to form and style of composition were worked out with great care at that time and a card was chosen which should be standard in so far as standards had then been determined. Simplicity was thought to be one of the first requisites for a catalog to be used by the constituents of a public library in a community having the industrial character of Pittsburgh. To accomplish that purpose few imprint items were included on the cards and any unusual characteristics of the book were mentioned in a note and in non-technical terms.

An item that has proved to be one of the most valuable to be included on the card is a note designed to guide the reader in the selection of his books by mentioning the scope and character of the book and its relation to other books covering the same field of knowledge. This feature of our catalog has had a large development and has been greatly appreciated. These annotations are written by persons especially qualified for the task and are regarded as of the highest worth to the users of our catalog. Here is an item in cataloging which few libraries have had to consider, but to this library it is that one which we should be most unwilling to give up.

The face of the cards issued by the Library of Congress is so fully covered by title, bibliographical details, subject headings, etc., requisite to its work, that there is no space left on the majority of the cards for printing our annotation, even if an arrangement were feasible whereby it could be done with economy. When the use of these cards was under discussion by this library, it was suggested, for example, that the note be printed on a second card, but experience has proved that second cards are seldom consulted, and we did not feel justified in thus adding to the bulk of our catalog. In short, no satisfactory solution was found, although numerous attempts were made looking to that end.

As the work is now organized here the same linotype slugs that are used for the catalog cards, including the annotation, are again used at slight cost to print our *Monthly Bulletin*. By any other arrangement the cost of production of the *Monthly Bulletin* would be largely increased and its free use locally considerably circumscribed thereby.

These are some of the considerations that have kept the question of the use of the Library of Congress cards in abeyance. It has been given careful and repeated consideration. Nor is it by any means regarded as a closed question. Indeed, plans are under way at the present moment looking to further experiment, in the hope that advantage may yet be taken of this splendid feature of the work of the Library of Congress.

FURTHER NOTES ON THE NUMBER OF CATALOG CARDS TO A BOOK

In January, 1905, I published in the *LIBRARY JOURNAL* some statistics dealing with the number of cards needed in the author catalog in cataloging a single title. These figures were based on the records of the cataloging work in the Library of Princeton University for 15 months in 1903 and 1904. There was not then available any record of subject cards, and hence the showing was incomplete. Notwithstanding this fact, I ventured to publish the figures in the hope that others might contribute their records to the discussion. The following are the statistics for 14 months (October, 1904, to December, 1905, inclusive, omitting August, 1905).

Total number of main entry cards.....	11,375
Total number of author analytical cards.....	2,640
Subject cards.....	16,807
Editor, translator, and all other reference cards	3,425
Total number of "additions" recorded.....	3,581
Problems requiring study of former entries..	2,105

It will be seen that there were 13,997 main entry and author analytical cards placed in the author catalog to 16,807 cards placed in the subject catalog. This means that there were made 1.2+ subject cards for each author card, and 1.479+ subject cards for each main author entry.* It will be noticed that the number of subject cards per author entry (main and analytical) is low (1.2+). This is the direct result of a consistent attempt to enter under the most specific and definite subject heading possible, rather than the consequence of any policy of limiting the number of subject cards. It is interesting to observe that the effect is very nearly that of the rule obtaining in some libraries of making but a single subject card for an author card. It may be suggested that the purpose of this rigid rule is met almost as well by insisting on the definite, specific subject, as by the Procrustean treatment. The flexibility allowed in the former method has undoubted advantages.

In the 29 months covered by the records given in the former article and those now published there were 23,430 main entry cards made and 6300 author analyticals. The total number of author cards made was thus 29,730. There were 7625 reference cards of all sorts, including all the "added entries" as well as the general references. These are 25.64 per cent. of the combined author entries and 32.58 per cent. of the main entries. (The figures for the first 15 months were 26.67 per cent. and

* It should be said that there were perhaps some 300 author entries which for various reasons were not represented in the subject catalog. This happens in all catalogs more or less, but the number is too slight to affect the general result greatly. Our theory is that every book has one or more subject cards, but exceptions, such as texts of the Bible, etc., occur.

34.78 per cent., respectively.) The author analyticals were 26.8 per cent. of the main entry cards (30.39 per cent. in the first 15 months). Therefore to every main entry made in these 29 months there were 1.5938+ cards in the author catalog, and to every main entry made in the 14 months 1.479+ cards in the subject catalog. The average number of cards to each main entry (or title) resulting from a combination of these figures was, then, 3.0728.

In considering the cost of cataloging it should be borne in mind that the "additions" to sets already in the library and entered (made by binding or by the publication of later volumes, etc.), which are not included in the preceding figures, were 6600 in these 29 months. These "additions" were 28.1 per cent. of the total number of titles, and required no small portion of the total time of cataloging. Finally, 4167 questions of previous entry required investigation and study because of various reasons directly connected with new cataloging. The figures for the 29 months are substantially in agreement with those for the first 15. The chief discrepancy is in the number of author analyticals, which is now seen to have been correctly pronounced high in the comments on the first record. If any marked discrepancy occurs in the records for 1906, it will probably be published, but considering the practical similarity of the figures for the two periods, I regard it as highly improbable that noteworthy differences will be observed. It may be confidently stated that under a system of reasonably full and careful cataloging, involving the analysis of most books which demand separate entries for distinct parts, and insisting on the assignment of definite and minute subjects, there will be in the neighborhood of three cards required in the catalog.

There is a corollary to this proposition of no small importance. Granted the accuracy of the basis of reckoning, it is a very simple matter to compute the growth of the card catalog in its relations to the growth of the library. Few of our newer library buildings seem to have been planned with any very definite views on this point. The amount of floor space and light assigned to rooms intended for the consultation of the card catalog does not seem to have been very carefully worked out on the basis of the library's future growth. This is almost always provided for in the matter of shelving for books, as is well known. Without citing names, it is enough to say that some of our large libraries are already finding themselves hampered for lack of room for the proper consultation under favorable conditions of their card catalogs. Especially are they troubled with regard to proper lighting.

Now the average card catalog tray as made at the present day is 35 cm. long in the clear. 30 cm. is the greatest length that can be utilized and allow the necessary "play" to insure ease of consultation, while 29 cm. would be a much safer basis. Allowing 29 cm., the greatest number of cards of the thickness of those of the Library of Congress stock ("r" weight, of the Library Bureau) which can be placed in a tray is about 940. But guides are needed, and must be of thick cardboard and numerous, and the number practically housed in a single tray is thus reduced to about 800.* The lighter cards in use ("l" weight, L. B.) will average about 1000 to the tray. That is, one tray of the ordinary Library Bureau standard size will provide space for cards for 260.3 titles if "r" weight (Library of Congress or John Crerar cards) are used, and for 322.83 titles if "l" weight cards are employed in the library. Therefore for each thousand titles added to the library, 3.84 trays must be provided if the "r" weight cards are used, and 3.09 trays for the "l" weight cards. Of course it is a simple matter to make the computation for other styles of tray. The relation between titles and volumes is not known to me from any computations on a large scale, but the excess of volumes over titles on the shelves of our libraries can hardly be greater than 20 per cent. So much of the work recorded in the figures given above was recataloging of one kind and another that our accessions for the period covered do not furnish any accurate data to decide this question. Accessions are usually reckoned in volumes. Libraries are usually built to provide shelving for so many thousand volumes, and are so planned as to allow an extension of so many thousand more. For every additional 1000 titles, or about 1200 volumes, provided for in shelving, the architect must provide space in the card catalog room for about three to three and eight-tenths trays, supposing the present size tray to remain the standard. Moreover he must so arrange his windows or his artificial light that these additional trays shall receive good light. This is a most important matter, as the light must penetrate the tray to the bottom of the cards. He must allow considerable floor space for persons consulting the growing catalog. It may be remarked in closing that he will do well not to plan to range all his catalog cases around the walls of the room, but probably had best group them in tiers back to back, after the fashion of the most compact bookstacks, if he is to conserve space and light and promote the convenience of the users of the library.

WM. WARNER BISHOP,
Princeton University Library.

* Mr. Hanson tells me that this is his calculation also.

GREENWOOD'S LIBRARY FOR LIBRARIANS

*From Manchester Public Free Libraries Quarterly
Record, v. 9, no. 3*

THE Manchester Public Free Libraries have recently received from Mr. Thomas Greenwood a most magnificent donation. This gift is "The Thomas Greenwood library for librarians," containing at present nearly 10,000 volumes. It is Mr. Greenwood's intention to provide, by a generous endowment, for the future extension of what is already one of the largest collections of its kind in existence. Mr. Greenwood's idea has been to bring together a library of such books as may be of professional service to librarians. For this purpose he has gathered the writings of the great bibliographers, Brunet, Watt, De Bure, David Clement, and a host of others. Here are not only the extensive writings of Dibdin and Quérard, but smaller monographs, including a long series of the essays in which Gabriel Peignot expended much of his varied erudition. Long sets of periodicals from the severe "Jugemens des savans" to the ornate "Livre" contain a world of out-of-the-way information. There are a great number of bibliographies of individual authors, including Coleridge, Molière, Ruskin, Browning, Rossetti, and others. Various special classes of authors have occupied the attention of bibliographers, and here are lists of books written by Quakers, English Catholics, civil servants, etc. Many authors have tried to conceal their identity by the adoption of fictitious names, or by issuing their books without their names. Bibliographers have always taken a pleasure in revealing such secrets, and here are a score of books in Latin, French, English, Italian, and other languages in which the mask is taken away and the true author revealed. Mr. Greenwood has also collected books like the "English catalogue" and the "Bibliographie de la France," which record the publications of particular countries.

Special efforts have been made to bring together the catalogs issued by the great public libraries, such as the British Museum, the Bibliothèque Nationale, the Bodleian, etc., nor have the smaller libraries escaped attention, as catalogs from Reykjavik, Capetown, and many other places will show. Private libraries are strongly represented, often, it is a regret to notice, by the sale catalogs which record their dispersal. Every question of library economy, foundation, architecture, government, and administration is represented on the shelves of the Thomas Greenwood Library.

Although the distinction between printed and manuscript books is purely formal the distinction is convenient, and, speaking broadly, each appeals to a different class. The

Greenwood Library is rich in its collection of catalogs of mss. A wealth of books about printing, both in its historical and in its practical aspects, has been provided, as also of those relating to engraving and the arts by which books are made beautiful. A number of the volumes have come from famous libraries and bear the ex-libris of Sir Robert Peel, Sir Henry Ellis, and many famous persons. The literature of prohibited books has not been forgotten, and the "Indexes" are here in considerable variety. Almost every kind of literary curiosity is represented, books printed on rice paper, books printed on vellum, great folios like those of Montfaucon, and a tiny volume that ranks amongst the smallest books in the world.

In addition to the classical writers on bibliography, Mr. Greenwood has accumulated many volumes which may be regarded as object-lessons in the physical art of literature. Thus there are specimens of mss. on papyrus, vellum, and paper. Amongst these is a Spanish "Carta executoria de Hidalguia," dated 1586 and containing illuminated miniatures. There is a revolving Sanskrit ms. of great beauty, which is remarkable for the smallness of the characters in which it is written. As a modern example of illumination Frances Martindale's copy of Tennyson's "Lady of Shalott" should be named. In contrast with this is a book of hours of the 15th century with 15 miniatures. A 13th century ms. contains the "Legenda" of St. Bona of Pisa. A Hebrew ms. may also be named. A folio volume has been filled with fragments of ancient writing, including one said to be as early as the "Codex Alexandrinus."

There are curious specimens of early English and Dutch books, with the chains by which they were attached to the reading shelves of the old libraries. A desk has been constructed by which this is exemplified. Mr. Greenwood has included many fine specimens of the bookbinder's art. Amongst modern bindings a copy of Pollock's Dante may be named on account of the water-color drawing which decorates the fore-edge of the volume. There are various specimens of fine bindings, including a copy of Rhodocanakis's "Life of Gorresius," bound by Bedford. The variety of design and execution is noteworthy, and the work of a Persian may be compared with the triumphs achieved by English and French binders.

There are, as might be expected in such a collection, many books that are seldom seen. The rarity of horn books is a fact well known to collectors. There is here a remarkably fine example in ivory. Several folios and quartos have been filled with fragments of early printed books, including many pieces that have been rescued from bindings. There are also specimens from the presses of Aldus

and other famous printers. Some collectors are fond of tiny volumes, and a veritable thumb book is "Les petits montagnards," issued in 1822. . . .

Illustrated books have naturally attracted attention, and there are here Bartsch, Nagler, the publications of the Société Calographique, and many others, to show the course of pictorial art as applied to books in successive ages. A folio manuscript contains "Notes of the career of an artist"—John Wood, a pupil of Lawrence, who has here shown his remarkable skill in calligraphy as well as in water-color drawing. Here also is a large folio of characteristic Indian drawings. Some facsimiles of mss. deserve attention; they range from such specimens of aboriginal art as the Maya Codex to that Grimani Missal which is one of the treasures of St. Mark's at Venice. There are collections of portraits of authors, printers, booksellers, etc. Mr. W. H. Allnutt's materials for a "History of English provincial printing" fill eight folio volumes, and there are other ms. collections of the industrious bibliographer.

REPORT ON DAMAGE TO CALIFORNIA LIBRARIES BY EARTHQUAKE AND FIRE

THE California State Library issues the first number of a bulletin entitled *News Notes of California Libraries*, dated May, 1906, which contains a careful descriptive record, in alphabetic order, of all libraries of California that are free for loan or reference purposes. This record gives brief summary of the destruction and damage caused by the earthquake of April 18, as follows:

Berkeley Free Public Library: Building damaged by earthquake to the extent of \$1000.

Berkeley, University of California Library: 1007 volumes destroyed by fire at the Hicks-Judd bindery in San Francisco and 250 (estimated) in hands of instructors and students.

The following list gives some of the volumes lost, of which other libraries may be able to supply duplicates:

Adjuster. vols. 29, 30, 31.
Architect and Engineer of California. vols. 1, 2, 3, 1905.
California Journal of Technology. Berkeley. vols. 1 to 6, inclusive
California Review. S. F. Nov., Dec., 1903; April, 1904.
Chautauquan. vol. 1.
Bankers' Magazine. New York. Any vols. or nos.
Commonwealth Club of California. Transactions. vol. 1, 1903-05.
Dairy and Produce Review. S. F. vol. 9, 1905.
For California. vol. 1, nos. 2, 3; Jan-Feb., 1904.
 vol. 2, nos. 8, 10, 11, 12; July, Sept., Oct., Nov., 1905.
Insurance Sun. S. F. vol. 17, 1904-05.
Journal of Electricity. S. F. vol. 15, 1905.
Labor Clarion. vols. 3-4, 1904-05.
Literary West. S. F. vols. 1, 2, 3, 4, 1902-04.

Mining and Scientific Press. vol. 91, 1905.
Munsey's Magazine. vol. 13, 1895.
Nurses' Journal. S. F. vol. 1, 1904-05.
Occident. S. F. vols. 47-49, 1904-05.
Pacific Coast Journal of Homoeopathy. vol. 13, 1905.
Pacific Medical Journal. vol. 22 (1879-80) and 48 (1905).
Western Field. vol. 7, 1905-06.

Colusa Free Public Library: 34 v. lost by fire in Hicks-Judd bindery, San Francisco.

Ferndale Free Public Library: Building (rented) damaged by earthquake to extent of \$300.

Hayward Free Public Library: Building damaged by earthquake to extent of \$1750.

Livermore Free Public Library: Building damaged to extent of one fallen chimney.

Los Gatos Free Public Library: Building slightly damaged.

Martinez Free Reading Room and Library: Closed for repairs. Building damaged to extent of \$1400. 50 books lost by fire in Hicks-Judd bindery, San Francisco.

Mountain View Public Library: Building destroyed by earthquake; very little damage to books.

Napa, Goodman Free Public Library: Closed for repairs; seriously damaged by earthquake.

Niles Free Library: Building slightly damaged (about \$20).

Oakland Free Public Library: Building damaged by earthquake to extent of about \$3000; a few books lost that were in San Francisco.

Palo Alto Free Public Library: Building slightly damaged (about \$80).

Petaluma Free Public Library: Closed indefinitely and books stored. The library on the upper floor of the city hall was badly damaged and cannot be used for library purposes, and the new Carnegie building was also seriously damaged.

Redwood City Free Public Library: Carnegie building damaged to extent of about \$5000; books now housed in one of the old school buildings.

St. Helena Free Public Library: 100 v. lost by fire in Hicks-Judd bindery, San Francisco.

San Francisco: Libraries destroyed as reported in May L. J., with exception of Bancroft Library and part of Sutro collection.

San Jose State Normal School: Building damaged to extent of about \$69,000, and a few books injured.

San Mateo Free Public Library: Building condemned after damage by earthquake.

Santa Cruz Free Public Library: Building slightly damaged.

Santa Rosa Free Public Library: Building badly wrecked.

Stanford University Library: 450 v. lost by fire in Hicks-Judd bindery, San Francisco. Old library building, valued at \$150,000, damaged to extent of about \$200. New library building, valued at \$300,000, a complete wreck from earthquake, except the dome.

FINANCIAL CONDITION OF GERMAN LIBRARIES

PAUL SCHWENKE, in the March number of the *Zentralblatt für Bibliothekswesen*, adds an interesting contribution to the literature of library finances in Germany, in a paper on "Estimates for material in libraries and catalogs." The line between "personal" and "material" is not always easily drawn, much personal service, of a lower grade, which is paid by time or "by the job," being paid out of the fund for material. Within this fund for material, the portion set apart for the increase and maintenance of the collections is usually definitely separated from the working expenses. These latter, until a few decades ago, were low, limited mainly to outlays for postage, stationery and heating. Nor has much attention been paid to this matter, energy having been directed mainly toward enlarging the fund for increase. Dr. Schwenke has therefore asked a number of libraries of over 100,000 volumes and at least 15,000 marks increase-fund, for their expenses for material in 1904. Cost of maintenance of building has been omitted. Care of building (heating, lighting, cleaning) in 22 libraries varies between 37 and 29 per cent. (in one case 42.3 per cent.) of the increase-fund. Postage and freight vary from 0.2 to 2.2 per cent.; stationery and printing amount to an average of 3.6 per cent.

The fact is deplored that estimates take note only of cataloging of new accessions. "But every catalog must be renewed at least every 50 years (sooner, if used by the public), and it is poor policy to wait until it is worn to the limit, not to speak of the necessity of revision. When means for renewal are finally allowed, the work brings disorder into the rest of the library's activity. . . ." The estimates should allow for a gradual but complete renewal of the catalogs within a period of 50 years. Many scientific libraries in Germany do not permit public access to their catalogs. Means should be found to provide a second copy for public use. Printed catalogs are needed, and lists of new accessions. They pay, of which fact "the bulletins of American libraries offer the best proof." Present working forces hardly suffice for cataloging new accessions, not to speak of maintenance, revision and printing of catalogs. The engagement of trained catalogers, as in American libraries, is recommended. The creation of a special item for cataloging, in the estimates, is necessary. Co-operative cataloging would diminish cost. The author closes with the suggestion that another application of the same principle would be to allow a definite amount (say, 8-10 per cent.) for cataloging when allowing an appropriation for "filling gaps," or for the purchase of entire libraries. Only in this way is a suitably rapid preparation of such accessions made possible.

F. W.

LIBRARY ASSOCIATIONS IN DENMARK AND FRANCE

AN account of the organization of the Danmarks Folkebogsamlinger, the first association of Danish librarians, is given in *Bogsamlingsbladet* for May, the organ of the new association and of Danish library interests. The association was organized Nov. 25, 1905, at a meeting in Fredericia of 48 library representatives. A directorate of five members was appointed, composed of J. Bjerre, Joh. Gronborg, Otto Henrikson, H. H. Hvass and Rasmus P. Nielson, who later elected Dr. Bjerre, of Lemvig, president, and Mr. Nielson, of Holbaek, treasurer. The association has now a membership of about 200, and is restricted to free popular libraries or school libraries; each library may have but one voting representative at the general meeting of the association, which is to be held biennially in June. Special meetings may be held on call of 25 members. Dues are graded: library membership is 1 kroner per year for libraries containing not more than 500 volumes, and 1 kroner per year for each 500 volumes additional, up to not more than 10 kroner per year; personal membership is 2 kroner per year. The year runs from April 1 to March 31. The management of the association is in the hands of a directorate of five members, who elect their officers. Three members of the directorate go out of office one year and two members the following year, their successors being elected at the biennial meeting. Members of the directorate have their travelling expenses paid and are authorized to employ clerical assistance.

The chief purpose of the association is to obtain better prices for books, and its organization is the first effective step taken in this direction after long effort, particularly on the part of the Danish teachers' association. It has been able to effect an agreement with the Danish booksellers' association (*Danske Boghandlerforening*), by which members of the librarians' association are given a discount of not more than 25 per cent. on library purchases. Such discount applies only to orders sent through the office of the librarians' association and is k'd by its representative. On their side, the librarians' association agrees not to accept orders for second-hand books, to encourage so far as possible the buying of new books by its members, and to print recommended lists of new books in its official periodical.

In France the Association des Bibliothécaires Français has been organized, as already outlined in these columns, with headquarters at 6, Place du Panthéon, Paris, and the following officers: president, M. Deniker, librarian of the Natural History Museum, Paris; vice-president, M. Michel, of the Municipal Library, Amiens, and M. Henry Martin, of the Bibliothèque de l'Arsenal, Paris; general secretary, M. Sustrac, of the Bibliothèque Ste.

Geneviève. The membership is already reported as over 200.

The organization meeting was held on April 22, M. Deniker presiding. At this meeting a committee of 20 members was elected, as provided by the constitution, which committee met a few days later and elected a "bureau" (executive board) of the officers previously named. The committee decided that its first task should be the collection of information regarding all libraries in Paris and the provinces, and that questions should be prepared for this purpose and sent to all members of the association. It was also decided to consider the organization of a bureau of information regarding library vacancies and appointments, so that librarians might be systematically informed of professional opportunities.

LIBRARY AND EDUCATION CONFERENCE AT BIRMINGHAM

IN accordance with recommendations made at the Cambridge meeting of the Library Association of the United Kingdom last year, a further conference between the library and educational authorities of Great Britain was held at Birmingham on May 10. Invitations had been issued to the councils of every county, county borough, borough, and urban district, together with every educational and library authority in the Midland district, to consider the questions of (1) public libraries and public education, and (2) new library legislation. About 180 delegates were present when the conference was opened in the Birmingham city council chamber with the Lord Mayor of Birmingham in the chair. Henry R. Tedder made a brief statement of the work and aims of the library association, and proposed the following resolution:

"That as the public library should be recognized as forming part of the national educational machinery, it is desirable that children from an early age should become accustomed to the use of collections of books in special children's libraries, and that advanced students should be able to obtain in public libraries the principal books recommended by various teaching bodies."

He dwelt upon the importance of the three propositions advanced in this resolution, which was seconded and made the subject of general discussion. It was then unanimously carried. A further resolution was adopted, as follows:

"That this conference is of the opinion that the time has arrived for promoting legislation in reference to the following objects, viz.: (a) to empower county councils to put the Public Libraries Acts into operation and to organize library systems for the areas under their jurisdiction; (b) that, having regard to the increasing demands made upon the resources of the public library authorities throughout the country during recent years for educational work, it is of the greatest importance that the Public Libraries Acts should be amended so as to remove the present limitation of the library rate; (c) to exempt public libraries from the payment of local rates."

COPYRIGHT BILL INTRODUCED IN CONGRESS

ON May 31 Senator Kittredge, of South Dakota, and Representative Currier, of New Hampshire, introduced in the Senate and House, respectively, the copyright bill prepared by the Librarian of Congress, on the basis of the memorandum draft compiled by Thorvald Solberg, Register of Copyright, and the recommendations of the conference on copyright at its several sessions. A public hearing on the bill was given by the patents committees of the two houses, sitting jointly in the office of the Library of Congress, on Wednesday, June 6.

NATIONAL ASSOCIATION OF STATE LIBRARIES

THE National Association of State Libraries will hold its ninth annual meeting at Narragansett Pier, in connection with the annual conference of the American Library Association, June 29-July 6. There will be two sessions, on June 30 and July 2, respectively, for which the program is as follows:

First session, Saturday, June 30, 10 a.m.

Address of welcome, Hon. George P. Wetmore, of Rhode Island.

President's response and address, John P. Kennedy, state librarian of Virginia. In memoriam Leonard Carver, A. J. Roberts, Maine.

Report of secretary-treasurer, Miss Minnie M. Oakley, State Historical Society, Madison, Wis.

Uniformity in preparation of session laws, Robert H. Whitten, New York State Library.

Report of special committee on attendance, James L. Gillis, state librarian of California.

The evolution of the state library, William E. Henry, state librarian of Indiana.

The true work of the state library, Charles McCarthy, legislative reference librarian, Madison, Wis.

Second session, Monday, July 2, 9.30 a.m.

Reports of committees:

Clearing house for state publications, Adelaide R. Hasse, New York Public Library, chairman.

Exchange and distribution of state documents, Charles B. Galbreath, state librarian of Ohio, substitute chairman.

Report of membership committee, John P. Kennedy, chairman.

Special committee to present the essentials which should be incorporated in every state library building, Melvil Dewey, chairman.

State library statistics, William E. Henry, chairman.

Systematic bibliography of state official literature, Adelaide R. Hasse, chairman.

Co-operative work among state libraries, Herbert O. Brigham, state librarian of Rhode Island.

A model state library, Thomas L. Montgomery, state librarian of Pennsylvania.

Comparative legislation in legislative reference work, Robert H. Whitten.

Election of officers.

Unfinished business.

A business meeting of the officers will be held on Saturday morning at 9.30, just previous to the first session.

The headquarters of the association will be the Atlantic House. The officers are: president, John P. Kennedy, state librarian of Virginia; 1st vice-president, James L. Gillis, state librarian of California; 2d vice-president, Mrs. Mary C. Spencer, state librarian of Michigan; secretary-treasurer, Miss M. M. Oakley, State Historical Society Library, Madison, Wis.

LIBRARY ROUND TABLE MEETINGS IN NEW YORK STATE

IN accordance with the resolutions adopted at its last annual meeting at Lake Placid, the New York Library Association has this year replaced its series of library institutes, held each spring, with a series of small round table meetings. Reports from 26 such meetings, held from April 25 to June 8, show a representation of 179 libraries. Deducting 3 Pennsylvania libraries, whose delegates were welcome guests, and 5 libraries attending more than one meeting, the number of New York libraries was 171. An average allowance of five for each of two meetings not yet held will increase this number to 181. The largest number of libraries yet represented at the eight institute meetings of any year was 108, and last year but 93. While making further allowance of 24, for including the territory of Buffalo, Westchester and Long Island in the round table system, it remains true that there is a very decided gain in the larger number of libraries interested this year. The attendance of persons was 352, more than ever before at the day sessions.

One institute district in the western part of the state which in four years has never reported more than 12 libraries and 28 persons at a meeting, has this year been divided into three districts, which show 19 libraries and 42 persons at the round table meetings.

In some places representation was confined to one for a library. In others the local trustees found satisfaction in attending the meetings. Meetings were small, informal and limited to one or two sessions, not exceeding four hours at the outside; usually not more than three hours. Six held one session in the morning; 10 held one session in the afternoon; 10 held two short sessions, one in the morning and one in the afternoon. There was no

attempt at a public meeting or any formal address. Perhaps not very much was accomplished, but some fires were lighted which may spread. Many of the reports are most enthusiastic in expressions of satisfaction with the meetings and the spirit shown by librarians attending.

The following table gives details of the round tables:

NEW YORK LIBRARY ROUND TABLE MEETINGS,
1906

Place.	Date.	Libs.	Persons.	Visitor.
Troy.....	May 15	6	7	C. Bacon
Albany.....	June 2	11	16	"
Chatham.....	" 1	6	20	A. L. Peck and W. R. Eastman
Gloversville...	Apr. 25	6	14	C. Bacon
Herkimer.....	May 17	8	16	"
Rome.....	" 22	6	12	"
Watertown.....	" "	7	14	C. Bacon
Malone.....	" 24	5	6	"
Port Henry.....	" 25	3	8	"
Sidney.....	" 15	3	8	A. Wynkoop
Binghamton.....	" 16	7	19	"
Elmira.....	" 17	7	10	"

Southold.....	" "	"	"	J. A. Rathbone
Bridgehamton.	June 8	5	7	"
		179	359	

A schedule of topics suggested for the round tables was prepared and sent out, and from this local selection of the topics desired was made. The list, with the number of times each topic was chosen, is as follows:

How I select books.....	18 times.
Where we buy books, and how.....	16 "
Recent books.....	" "
New fiction.....	2 "
How to duplicate.....	1 "
Reference books most used.....	12 "
What not to bind.....	7 "
Our new catalog.....	" "
Description of books on catalog cards....	3 "
Printed catalogs.....	2 "
Special subject lists and bulletins.....	2 "
Items needed in accession book.....	2 "
Mending books.....	12 "
Charging by cards.....	1 "
More than one book to a borrower.....	3 "
Rural delivery of books.....	1 "
Branch libraries.....	" "
Circulation of magazines.....	3 "
Fines and penalties.....	3 "
Hours of opening.....	" "
Work with schools.....	9 "
Children in the library.....	14 "
Subject indexes.....	2 "
Library of Congress cards.....	1 "
Methods.....	1 "

AMERICAN LIBRARY INSTITUTE

FOLLOWING a meeting of the Institute Board, held at Atlantic City in March, its list of 53 nominees for additional fellows was sent out to be voted on by the 44 previously chosen. There was some delay in obtaining all the responses, while the voting was so scattered among the entire list that the requisite three-fourths number (33) was given to seven persons only, viz.: Edwin H. Anderson, Mrs. Salome C. Fairchild, Miss Mary Emogene Hazeltine, Gardner M. Jones, Ainsworth R. Spofford, Bernard C. Steiner, and James L. Whitnev. They have now been declared duly elected, bringing the present total fellowship of the institute up to 51. The board is not inclined to take further action in respect to an increase until after the A. L. A. meeting at Narragansett Pier in June, at which time and place it is expected that a meeting of the institute will also be held.

HENRY J. CARR, *Secretary*.

THE READING PUBLIC

W. D. Howells, in Harper's Monthly for June

THE reading public is not the old reading public, with a critical taste of more or less refinement and the wish, more or less conscientious, to read good things. What we have now to satisfy is not a palate, it is a maw, asking to be filled with whatever will produce an agreeable feeling of distention. It hates to be an aching void, as it has been so long; of quality, when it does not loathe it, this maw is insensible; quantity, preferably quantity that looks like quality, is what the maw will and must have. The question is simply of educating the maw. . . . If it were possible to educate the palate, surely it is possible to educate the maw. At present it is filled with the east wind, raw, vaporous, innutritious, but it need not always be so. . . . The public libraries, so far as they supply the latest novels, are public enemies; no fiction less than a year old should leave their shelves, after which most fictions would have dropped from them into the dust.

American Library Association

President: Frank P. Hill, Brooklyn Public Library, 26 Brevoort Place, Brooklyn, N. Y.

Secretary: J. I. Wyer, Jr., State Library, Albany, N. Y.

Treasurer: Gardner M. Jones, Public Library, Salem, Mass.

NARRAGANSETT CONFERENCE, JUNE 29-
JULY 6, 1906

HOTEL RATES

Rates for the conference, including meals, have been secured at the principal hotels as follows: \$2.50 per day each, two in room, double bed; \$2.75 per day each, two in room, single beds; \$3.50 per day, one person, single

room; \$3.50 per day, with bath, two in room; \$6 per day, single room, with bath.

All rooming will be done by an A. L. A. committee and not by the hotels; a limited number can be accommodated at about \$10 per week in smaller hotels and boarding houses. Application for rooms and further information should be sent before June 20, to American Library Association, 10½ Beacon street, Boston, Mass.

RAILROAD RATES

A rate of one fare and one-third has been granted for the round trip on the usual certificate plan, going and returning by the same route, covering all points in the United States east of the Rocky mountains. Tickets at full fare for the going journey may be bought from June 26 to July 1, inclusive, and at the same time a "standard certificate" should be taken showing amount of fare paid and route travelled on going trip. Certificates should be delivered to the secretary of the A. L. A. at headquarters at Narragansett Pier, to be signed by special railroad agent.

A western travel party is being arranged by Mr. C. B. Roden, Chicago Public Library, who will give, on application, information regarding route and plans.

LOCAL TRIPS

Tuesday, July 3, will be reserved for a trip to Providence. Special trolley cars will leave Narragansett Pier at about 8.30 a.m. for Saunderstown, where a chartered boat will be waiting. After a sail up Narragansett Bay, the libraries of Providence will be visited, and luncheon served under the auspices of the local committee. Four hours will be spent in Providence, and then a trip will be made by steamer to a nearby shore resort, where a Rhode Island clambake will be served. The return sail will be by moonlight, reaching Narragansett Pier at about 10 p.m. Cost of the trip will be \$1.50.

On Friday, July 6, a trip to Newport will be made, cars leaving Narragansett Pier at about 1.30 p.m., to connect at Saunderstown with special steamer for Newport. The afternoon will be given to sightseeing, return for those who so desire to be made in the early evening. Cost of the trip will be \$1.75.

POST-CONFERENCE TRIP, JULY 6-11

There will be a post-conference trip to Newport, Fall River, New Bedford and Nantucket. This party will take the general trip to Newport on Friday, July 6, and will spend Friday night in Newport, leaving for Fall River by train on Saturday morning. The Fall River Public Library will be visited, and trolleys taken for the 55-minute trip to New Bedford. Here visits will be made to the Public Library and Historical Society. Dinner will be served at one, and at two o'clock the steamer will sail for Nantucket, where

the party will spend five days. Passage will be taken back to New Bedford, where the party will break up. Cost of the trip will be \$21.25. The party will be limited, so early application is desirable.

FURTHER NOTES ON PROGRAM

In view of the abandonment of plans for the meeting of the National Educational Association in San Francisco, the Library Department of the N. E. A. will hold its annual meeting as a joint session with the A. L. A. on Monday morning, July 2, at 9.30. This session will take the place of the meeting of the Children's Librarians' Section, first session, previously scheduled for that time.

State Library Commissions

INDIANA PUBLIC LIBRARY COMMISSION: Miss Merica Hoagland, secretary, State House, Indianapolis.

The commission issues a bulletin entitled the *Library Occurrent*, of which nos. 1-4 appear as a 12-page pamphlet, under date of April. It is well printed, contains short practical articles, note of A. L. A. and library association affairs, news of Indiana libraries, and is intended as a means of communication between the commission and the local libraries of the state.

State Library Associations

MICHIGAN LIBRARY ASSOCIATION

LIBRARY INSTITUTE

The third of the institutes, under the joint direction of the Michigan Board of Library Commissioners and the Michigan Library Association, was held at Ishpeming May 17 and 18. It was conducted by Miss Mary Emogene Hazeltine, preceptor of the Wisconsin Library School. There was an average attendance of 15 library workers at the four sessions, representing the libraries of Calumet, Escanaba, Iron Mountain, Ishpeming, Marquette, Negaunee and Painsville. In several respects the institute was in marked contrast with those held at Hudson and Traverse City. Practically all who attended were librarians or library assistants; club women were not represented, and only two trustees dropped in for single sessions. School teachers, who were particularly in evidence at Traverse City, had only one representative at Ishpeming, and that for but a few hours. Despite these facts the attendance at Ishpeming averaged larger than at the previous institutes. Moreover, while the programs for the Hudson and Traverse City institutes were arranged beforehand as to details of time, at Ishpeming these were left to the circumstances arising from day to day. The sessions, which were held at the Carnegie Library, began at 8.30 a.m. and lasted until 12.30, being resumed at 2 p.m.

and continuing until the last call for supper. As there were almost no special papers, the various subjects presented were treated in an informal manner and the subject expanded or curtailed according to the amount of interest evinced by the discussion among the attendants. The free and easy discussion of almost every question brought up was one of the delightful characteristics of the meetings. Miss Hazeltine, in her opening address, reviewed the general phases, opportunities and interests of a librarian's work, and later treated the question of book selection and buying and many miscellaneous practical and technical topics. Mrs. Grierson, of the Calumet Library, considered "Assistance to readers" in its broadest interpretation; an illustrated evening public lecture was given by Theodore W. Koch on "Carnegie libraries," and part of a session was devoted to consideration of the Library of Congress cards and other printed cards, introduced by Mr. Koch.

TEXAS LIBRARY ASSOCIATION

President: Mrs. Charles Scheuber, Public Library, Fort Worth.

Secretary: Phineas L. Windsor, University of Texas Library, Austin.

Treasurer: Albert C. Read, Public Library, El Paso.

On the invitation of Baylor University Library, the Waco Public Library, and Texas Christian University Library, the fourth annual meeting of the Texas Library Association was held in the Waco Public Library, Tuesday and Wednesday, May 8 and 9. Twelve librarians and workers came to the meeting from other parts of the state, and the local librarians, trustees and friends increased the attendance at the four sessions to from 20 to 50. Among those present were a dozen Baylor University students and two members of the library training class at the University of Texas Library.

Tuesday morning, after inspecting the new Waco Public Library, the visiting librarians were taken in a special car provided by the local committee to visit the libraries of Baylor University and Texas Christian University. In the afternoon a business session was held, followed by a paper on "The library and the lecture," by Frank C. Patten, librarian of Rosenberg Library, Galveston, which was, owing to his absence, read by Miss Julia Ideson, librarian of the Carnegie Library, Houston, and which clearly stated the aims and recent successes of the lecture department of the Rosenberg Library. Mr. Patten was continued as chairman of the committee on library lectures. Mrs. Charles Scheuber, librarian of the Carnegie Library, Fort Worth, then read a paper on "Library institutes," which constituted the report of the committee on that subject. She described in detail the work of the first and only institute ever held in Texas (see L. J., 31:177) and of the plans

of the committee for the ensuing year. The committee was continued.

Tuesday evening Hon. A. P. Wooldridge, the president, arrived, and after cordial addresses of welcome by Mayor Barker, Dean Kesler, of Baylor University, and Mr. Goldstein, trustee of the Public Library of Waco, delivered his annual address, in which he outlined the aims of the association and made a report of the work attempted during the last legislature for a state library commission. He was followed by Hon. W. J. Clay, commissioner of agriculture, insurance, statistics and history, in whose care the Texas State Library now is, who gave a clear account of the present status of that library, its purposes and what it has accomplished. He expressed his disapproval of the attempt to make a loan or travelling library out of it, though sympathizing generally with the establishment of such a popular library. He was followed by Mrs. William Christian, of Houston, who spoke on "The Women's Federation and libraries." Mrs. Christian is chairman of the federation committee on libraries, has already aroused much interest among club women, and will do much to secure the passage of the bill establishing the library commission this winter.

Wednesday morning Mrs. H. M. Price, of the class of 1903, University of Illinois Library School, now of Paris, Texas, gave a paper on "Cataloging and classification for small libraries." A section of the Library of Congress card catalog was on exhibition. Miss Surratt, librarian of Baylor Library, described the work of the university students in the Baylor bindery (a bindery begun by the students), and quoted remarkably cheap prices on binding. Her talk was illustrated by examples of work done at the bindery, by examples from Chivers and by a bindery exhibit loaned by Newark (N. J.) Public Library. Mr. A. C. Read, librarian Public Library, El Paso, sent a tabulation of facts concerning janitorial service (salaries, hours, vacation, etc.) in Texas libraries, together with comments on the inevitable comparisons, which excited no little interest. Mrs. Scheuber, who presided at this session, then conducted a discussion of various local library problems.

The last session, Wednesday afternoon, was opened by Miss Surratt, who gave an account of the aid given by Baylor University Library to libraries of smaller Baptist schools and colleges of the state. This aid may include the sending of the librarian of Baylor to the smaller college for a week or two to help get the library started, and has been very successful. Then followed three papers which together presented an unusually effective treatment of the relation of the library to children: "Library work with children," by Miss Agnes Edwards, Carnegie Library, San Antonio; "The library and the school, a librarian's view," by Miss Mary A. Osgood, Public Library, Tyler; "The library and the

school, a teacher's view," by Miss Hallie Walker, of the Waco high school.

After discussion the following resolution was unanimously passed:

"Resolved, That the Texas Library Association considers the organization of a Southern Library Association inadvisable at this time."

The committee on revising the constitution and by-laws submitted a report, which was adopted. Among other changes the new constitution changes the name from Texas State Library Association to Texas Library Association. The treasurer reported \$83.83 in the treasury. A legislative committee will be appointed to work for a state law providing for a library commission and for travelling libraries.

In accordance with the report of the nominating committee the following officers for the ensuing year were elected: president, Mrs. Charles Scheuber, Public Library, Fort Worth; 1st vice-president, Mrs. J. C. Terrell, Fort Worth; 2d vice-president, Mrs. William Christian, Houston; treasurer, Mr. Albert Read, Public Library, El Paso; secretary, Mr. Phineas L. Windsor, University of Texas Library, Austin.

The report of the committee on resolutions was adopted and included the following:

"William Lambdin Prather, president of the University of Texas, died at his home in Austin, July 25, 1905. President Prather was one of the founders of the Texas Library Association, was its first president, serving two terms, and always manifested a deep personal interest in its welfare, and in the progress of the library movement in the state. At the Houston meeting, November, 1904, he was elected an honorary member, being the first person whose services to Texas libraries was thus recognized. Therefore be it

"Resolved, That the above statement be entered on the minutes and that the secretary be directed to express to Mrs. Prather the sympathy of the members of the Association."

A delightful drive to the beautiful Waco Country Club and an informal reception tendered the visiting librarians by the local committee and club members ended the busy two days. PHINEAS L. WINDSOR, *Secretary*.

VERMONT LIBRARY ASSOCIATION

President: Edward M. Goddard, assistant state librarian, Montpelier.

Vice-president: Miss Frances M. Pierce, librarian Fletcher Free Library, Ludlow.

Secretary-treasurer: Miss Edith E. Clarke, librarian University of Vermont, Burlington.

The fourth annual meeting of the Vermont Library Association since its reorganization was held in conjunction with the Vermont Library Commission at Brattleboro on the 29th of May, as the guests of the Brattleboro Public Library. An afternoon session and an evening public meeting were held at the Congregational Chapel, opposite the library. The business meeting was opened at 2.30 p.m. with remarks by President Goddard, who presided. Col. C. A. Miles, chairman of the directors of the Brattleboro library, welcomed

the librarians with a brief address. The report of the secretary-treasurer showed a good balance in the treasury and 68 names on the membership list. Resolutions were adopted protesting against the withdrawal from libraries by the proposed copyright bill of the privilege of importing books protected by American copyright.

The meeting then merged into a round table conducted by Miss C. M. Hewins. Miss Frances M. Pierce gave a description, illustrated with models, of the Browne charging system. A paper by Miss Julia P. Parker, attesting its merits, was read in part. This will appear in the June *Bulletin* of the Vermont Library Commission. Miss S. C. Hagar spoke informally, responding to many questions on the choice of children's reading. Mrs. E. S. Truax described the facilities which the St. Johnsbury Athenæum Library gave to the schools and the school children. Mrs. W. P. Smith gave a most interesting account of the use made of circulating pictures to interest children by Miss M. L. Titcomb, a former Vermonter, at Hagerstown, Md.; also of the same librarian's project for a library garden to attract the boy readers during the summer. A talk by Miss Frances Hobart, secretary of the state library commission, on the commission's work, closed the meeting, after which came a delightful social hour at the library with refreshments. The librarians took advantage of the interim to examine the exhibit of children's books published by the Educational Publishing Co., of Boston, and the model of the Browne charging system.

At 8.30 an interested audience of librarians and townspeople listened to Miss C. M. Hewins on "How to make the country library attractive." As the great majority of the libraries in Vermont are in rural communities where \$15, \$25 up to \$100 or \$200 is a fair sum for the town to appropriate for the library's support annually, her account of how to make the most of small resources was very helpful.

EDITH E. CLARKE, *Secretary*.

VIRGINIA LIBRARY ASSOCIATION

President: John P. Kennedy, state librarian, Richmond.

Secretary: Edward S. Evans, assistant state librarian, Richmond.

Treasurer: Miss Mary G. Lacy, Virginia Polytechnic Institute, Blacksburg.

The association held a public meeting on the evening of May 9, when speeches were made urging the need of a public library for Richmond, whether given by Mr. Carnegie or not, and seconding the invitation to the American Library Association to hold its 1907 conference in Richmond. A resolution was adopted declaring in favor of erecting a monument to Edgar Allan Poe, as proposed by the Poe Memorial Association; and Mr. E. S. Evans gave an address on the public libraries of the country, illustrated with stereopticon views.

Library Clubs

CHICAGO LIBRARY CLUB

President: F. L. Tolman, University of Chicago Library.

Secretary: Miss E. G. Smith, John Crerar Library.

Treasurer: H. L. Leupp, John Crerar Library.

The regular monthly meeting of the Chicago Library Club was held April 12 at the Public Library, with the president, Miss Ahern, in the chair. Miss Woodford was elected a member of the club and the following committees were announced by the president: nominating, Mr. Brown, Mr. Hill, Miss Warren; auditing, Mr. Meleney, Mr. Gould. The action of the executive board in appropriating \$25 to the Harper Memorial Library fund was reported. A letter was read from the board of managers of the municipal museum requesting that the club co-operate with them in arranging for a public library exhibit to be held next year. The matter was put in the hands of the incoming executive board to appoint a committee to carry out the plan.

Mr. Wallace Rice was then introduced and gave a most delightful and instructive talk on "Earning a living by literature." He took as his text the long ago saying of Scott that literature does well enough as a staff, but not as a crutch, as a dilettante pursuit, but not as a means of getting one's bread and butter. He contrasted the reporter of to-day and yesterday. They are now university men, young in years as well as experience. The reporter does not write literature, but facts; his principal qualification being spryness in securing items of news, the man on the inside of the office rewriting the facts into "human interest stories." Book reviewers no longer or seldom write book criticisms, but book reports. He spoke of the Chicago book reviewers for the different papers, dwelling on the characteristic style of each. He also described the "method" of reviewing a book, not only fiction, but poetry, science, etc. Besides the books he writes and various newspaper work there are other phases of work by which a literary man may earn his living. One is by giving literary advice, another by reading manuscripts for publishing houses, and still another by giving expert touches to manuscripts. Mr. Rice gave figures of the amounts paid for all this work. He insisted that in the Chicago literary world (excepting McCutcheon) not one made a living by his books alone; indeed the writers would starve except for newspaper work.

The last regular meeting for the year was held May 10 at the Chicago Public Library, the president, Miss Ahern, in the chair.

The reports of the retiring officers were read and accepted. The report of the city charter committee was presented by Mr. Josephson and received as a report of progress.

Reports of the following committees were also presented and accepted: auditing committee, committee on publicity, and committee on children's work in Chicago Public Library.

Announcement was made by Miss Moore of the binding exhibit from the Newark Public Library, planned to be held jointly by the club and the Oak Park Public Library from May 14-26 at the Oak Park library. A special invitation was extended to the club to be present on the afternoon and evening of Saturday, May 19. The president read a letter from Mr. F. J. Teggart, librarian Mechanics' Institute, San Francisco, recounting the library losses experienced there during the recent catastrophe, their needs and future plans. Upon motion a committee composed of the librarians of the Public Library, John Crerar Library, and Newberry Library were appointed to deal with the subject of assisting the libraries in San Francisco.

Miss Symmes, head of the English department of Kenwood Institute, then delighted the audience with a charming story, one about St. Francis of Assisi. The retiring president then presented her address on "Library conditions in Chicago."

The nominating committee submitted the following report: for president, Mr. F. L. Tolman; 1st vice-president, Miss Carrie L. Elliott; 2d vice-president, Miss Renée B. Stern; secretary, Miss E. G. Smith; treasurer, Mr. H. L. Leupp, and the secretary was then instructed to cast the vote for the officers as presented. The nominating committee reported further that it recommended that a program committee of five be appointed to take charge of the programs of the meetings of the club for 1906-1907, the president to be an *ex-officio* member of the committee. This second part of the report was referred by motion to the incoming executive board with power to act. A letter from H. P. Judson, of the University of Chicago, acknowledging the contribution of the club toward the Harper Memorial Library, was read by the president. Upon motion of Miss Warren the following resolution was adopted:

"The club has this year reached the highest point in its history, and since this is mainly due to the great interest and untiring devotion of the executive committee, and specially of the president, Miss Ahern, the Chicago Library Club extends to these officers its sincere thanks."

EVVA L. MOORE, *Secretary*.

LONG ISLAND LIBRARY CLUB

President: Miss Eleanor B. Woodruff, Pratt Institute Free Library, Brooklyn.

Secretary: Miss Mildred A. Collar, Pratt Institute Free Library, Brooklyn.

Treasurer: Miss Mary A. Kingsbury, Erasmus Hall High School Library, Brooklyn.

The May meeting of the Long Island Library Club was held on Tuesday afternoon, May 17, in one of the rooms of the Erasmus Hall High School in Flatbush. In the ab-

sence of Dr. Gunnison, the principal, Dr. Low, of the department of history, welcomed the club. The subject of the meeting—in lighter vein than usual—was "Apologetics." Miss Plummer, who was the first speaker, apologized most ably for one of her favorite writers of fiction, Rhoda Broughton, reading, by way of justification, delightful selections from "Nancy." Miss Sara Jacobsen, head of the Flatbush branch of the Brooklyn Public Library, Miss Anthony, of Packer Institute, and Mr. Bostwick each confessed to some secret "favorite writers" not usually upheld, among librarians at least, and their confessions were good for our souls.

At the close of the meeting coffee, lemonade, and sandwiches were served in an adjoining studio, and the members of the club were invited to visit the library in the new school building which is in process of erection.

MILDRED A. COLLAR, *Secretary*.

NEW YORK LIBRARY CLUB

President: John Cotton Dana, Free Public Library, Newark (*Resigned*).

Secretary: Miss Alice Wilde, New York Public Library, Washington Heights Branch.

Treasurer: Edward Harmon Virgin, General Theological Seminary Library.

The New York Library Club held its 21st annual meeting on the evening of May 10, 1906, in the auditorium of the Charity Organization Society.

The treasurer's report was read and accepted and the committee on union list of periodicals made the following report: "As it was proved, on beginning to get together material for the union list of periodicals for Greater New York that the list would greatly exceed in cost the original estimate of the committee, and as less than \$700 was subscribed to the enterprise by libraries for a publication that would cost about \$3000, the committee decided to ask Mr. Carnegie to guarantee the cost of printing, leaving the sum subscribed by libraries to pay editorial expenses. The chairman of the committee has hoped to be able to get an interview with Mr. Carnegie, but so far has been unable to do so. The committee requests the club either to dismiss the committee or to instruct it to make further attempt in the autumn to get Mr. Carnegie's support for the enterprise." The report was accepted and later in the meeting the committee was instructed to continue its work.

The president then spoke of the good work of the various committees: hospitality committee, press committee, handbook committee, committee on guests (which with all it had done through the year in caring for speakers and guests and extending courtesies of the club to visiting strangers had spent but \$21 out of its appropriation of \$25), committee on permanent meeting place, which was obliged

to report failure; and program committee. The last in arranging the meetings for the year had decided for the May meeting to follow the plan, tried successfully last year by the Long Island Library Club, of procuring the services of some outside speaker at the expense of the club. The executive committee had approved the plan and a friend of the club had offered to contribute \$25. It was moved by Mr. Iles and carried that the club appropriate the entire \$50 needed.

The next business to be considered was the new constitution, which "differs from the ordinary club constitution in providing for an advisory committee (called, for brevity's sake, the council) of 16, who shall meet once a year to discuss club interests. In the opinion of the committee this would be a distinct advantage to the club, since they believe that many members of the club whose advice and interest would be of great value would serve in this body, though most of them cannot give the time to the executive committee. The latter body is, under the new arrangement, reduced to five, a good working number, and they alone would care for the routine work of the club." With three detail amendments, proposed by Dr. Billings and Mr. Nelson, the draft was referred to the executive committee, which after a brief meeting recommended its adoption with the proposed amendments. The recommendation was accepted by the club and the new constitution adopted. It was then moved by Dr. Gillett that to accord with the new plan the nominating committee be instructed to present for members of the council 16 names in groups of four to serve four, three, two, and one years. This motion was carried, the committee's report read, and the following officers elected: president, John Cotton Dana; vice-president, Victor H. Paltsits; treasurer, Edward Harmon Virgin; secretary, Miss Alice Wilde.

The business of the meeting being thus disposed of, the club turned to pleasure, and was well rewarded for its labors by a most delightful paper on "The mission of humor," by Miss Agnes Repplier. Those who know—as who does not?—the charm and distinction of Miss Repplier's essays need not be told of the pleasure that was enjoyed nor the folly any attempt at reproduction or reporting would be.

ALICE WILDE, *Secretary*.

PENNSYLVANIA LIBRARY CLUB

President: John J. MacFarlane, Commercial Museum Library, Philadelphia.

Secretary: Miss Edith Brinkmann, H. Josephine Widener Branch, Free Library of Philadelphia, 1200 N. Broad street, Philadelphia.

Treasurer: Miss Bertha S. Wetzell, Library Company of Philadelphia, Juniper and Locust streets.

The last meeting of the season of 1905-1906 was held on Monday evening, May 14,

in the Widener lecture hall of the Free Museum of Science and Art of the University of Pennsylvania, with Mr. John Ashhurst in the chair. Upon motion the reading of the minutes of the last meeting was omitted. The chairman then introduced the speaker of the evening, Dr. Albert T. Clay, assistant professor of Semitic philology and archaeology in the University of Pennsylvania, who gave an illustrated talk on the work of the Babylonian and General Semitic Section of the Free Museum of Science and Art, with especial reference to the excavations at Nippur, and the antiquities there discovered which are now on exhibition in the museum.

Four expeditions have been sent to Nippur under the direction of the University of Pennsylvania, and the discoveries there made have been very important in enabling archaeologists to reconstruct a very ancient period of Babylonian history, and have shown the existence of a high state of civilization dating back to about 6000-7000 B.C., which is much earlier than any civilization of which anything has hitherto been known. In conclusion, Dr. Clay invited the members of the club to remain to inspect the collections of Babylonian antiquities and of bronzes from Herculaneum in the upper galleries of the Free Museum of Science and Art.

At the close of Dr. Clay's address Mr. Thomson moved that a vote of thanks be given the speaker for his interesting and instructive talk, which was unanimously carried.

Mr. Ashhurst then read the following ballot for officers for 1906-1907, which had been submitted by the nominating committee: president, John J. MacFarlane, Library of the Commercial Museum; vice-presidents, John Thomson, Free Library of Philadelphia, Miss Susan W. Randall, University of Pennsylvania Library; secretary, Miss Edith Brinkmann, Free Library of Philadelphia; treasurer, Miss Bertha S. Wetzell, Library Company of Philadelphia. Upon motion the secretary was instructed to cast one ballot for these names, and they were duly elected to office.

The chairman then read a letter from the president, Dr. Jordan, in which he regretted his inability to attend the meeting, and thanked the officers and members of the club for the uniform courtesy and assistance which they had given him during his term of office. Mr. Ashhurst then resigned the chair to Mr. MacFarlane, congratulating the members of the club on their choice of a president for the coming season.

Mr. Bliss invited the members of the club to attend a library meeting, to be held in the chapel of the Presbyterian Church at Bristol, Pa., on June 9, 1906, under the auspices of the Keystone State Library Association. The meeting was then adjourned, and a pleasant hour was spent in examining the collections in the museum, under the guidance and with the explanations of Professor Kent and of Dr. Clay.

EDITH BRINKMANN, *Secretary*.

TWIN CITY LIBRARY CLUB

President: W. W. Folwell, State University Library, Minneapolis.

Secretary-Treasurer: Miss Clara F. Baldwin, State Public Library Commission, St. Paul.

The fourth meeting of the Twin City Library Club was held Monday, May 7, at the Minneapolis Public Library. Supper was served at 7 o'clock in the new children's room. A brief business session followed, after which the meeting was turned over to Miss Countryman as hostess. Miss Countryman welcomed the club and announced that some of the special features of the library would be explained by heads of various departments. Miss Cloud, superintendent of circulation, gave an interesting account of the system of branches and stations, by which books are made easily accessible in every part of the city; Miss Todd, of the art department, gave a short talk on the building up and scope of the fine collection of art books, which ranks third in the United States, and Miss Patten read a short sketch of the Minneapolis Athenæum, telling of its early history, and the arrangement by which it is combined with the Public Library.

The remainder of the evening was spent in visiting the different departments of the library and the loan collection of original drawings from *Collier's Magazine* on exhibition in the art gallery.

CLARA F. BALDWIN.

Library Schools and Training Classes

CHAUTAUQUA SUMMER LIBRARY SCHOOL

The session of the Chautauqua Summer Library School will be held from July 7 to Aug. 17, 1906. Melvil Dewey is general director, Mary E. Downey, Ottumwa (Ia.) Public Library, resident director, with Miss Harriet B. Peck, of Gloversville (N. Y.) Public Library, and Miss Sabra Vought, of Nashville University, both graduates of the New York State Library School, as instructors. The advance applications indicate a prosperous season.

DREXEL INSTITUTE LIBRARY SCHOOL

On May 2 the students of the library school accompanied by the director made their biennial pilgrimage to the libraries of New York City and vicinity. The following libraries were visited: Columbia University, two branches of the Brooklyn Public Library, the Children's Museum of the Brooklyn Institute, Pratt Institute Library and library school, the Lenox, and four of the circulating branches of the New York Public Library, and the Newark Free Public Library. The visit was made most pleasant by the kindness and courtesy shown to the students at all the libraries.

On June 4 the class visited the Wanamaker

Branch of the Free Library of Philadelphia, and on June 5 the Library of Bryn Mawr College.

On June 7 the commencement exercises took place. The graduates of the library school are: Susan Katharine Beck, Mary Eliizabeth Daigh, Margaret Forgeus, Adelaide Niven Hegeman, Lilian C. Kerr, Agnes Helen MacAlister, Sarah Isabel McFarland, May E. Pearson, Ruby Patience Pegan, Effie Maude Prickett, Edith Krohn Schanche, Helen Liola Smith, Edna Swartz, Irma Augusta Watts, Edith Maddock West, Sara Louise Young.

GRADUATE NOTES

Miss Edna V. Thomas, class of 1904, has been appointed librarian of the Library Association of Friends, Philadelphia.

Miss Mary E. Kaighn, class of 1905, has resigned her position in the University of Pennsylvania Library to join the cataloging force of the Library of Congress.

Miss Agnes V. P. Wright, class of 1905, who has been in the cataloging department of the University of Pennsylvania Library, has left to enter the cataloging department of the Free Library of Philadelphia.

PRATT INSTITUTE LIBRARY SCHOOL

Instead of the usual reading- and reference-lists, the class of 1906 have prepared a number of programs for study-clubs, making their own divisions and subdivisions of the subject, and giving references on each. The selection of books was limited, for the most part, to those in the "A. L. A. catalog" and of articles to those in the magazines and reviews of the last five years. The subjects of these programs are as follows: The American Indian; Comparative religion (outline for course of study); Cathedral towns of England; Early Teutonic literature; The English stage; Factors in the history of education; History of music; History of Scotch literature; Holland; Japan; Italian Renaissance; Mediæval towns of Italy; Florence and Venice; Mohammedanism; The mother as educator; Mythology and mythical legends; New France; Professions for women; Puritan and cavalier: a comparison of Colonial Massachusetts and Virginia; Romance of modern industry and invention; Shakespeare club program; Some problems of the day (Immigration, Labor question, The poor, Negro problem, Liquor question, Suffrage, Municipal government, Corporations and trusts); The South, an attempt to understand her; United States expansion. The number of meetings under a program varied from six to twelve. These are ready for lending to any town library which has study-club patronage and which may wish to look some of them over, with a view to use. There would be no charge except for postage.

The series of lectures for use in normal schools on co-operation between libraries and schools, on children's reading, the selection of

children's books, helpful reading-lists, picture bulletins, and reference-work for children, to be given by Miss Ida M. Mendenhall, of the Indiana State Library Commission, was postponed for two weeks owing to the loss of lecture material by fire in Indianapolis, but was finally given the first and second weeks of May. During her stay in Brooklyn Miss Mendenhall criticised the students' work in bulletin-making.

The visits to local libraries made this term have been as follows: Brooklyn Public Library, Montague and Williamsburg branches; Long Island Historical Society Library, and the libraries of the Girls' High School and the Erasmus Hall High School, Brooklyn Institute, and the Children's Museum Library; the New York Public Library, 23d street, Tompkins square, 96th street, and 110th street branches; Columbia University Library, the Lenox Library, and that of the Museum of Natural History, the Union Settlement Library, and the following out-of-town libraries: Vassar College and Poughkeepsie Public, Newark Public and the New Jersey Historical Society, and the Women's Institute, Hollywood Inn and Public Library of Yonkers.

The members of the advanced class are doing practical work this term in the Columbia University and Lenox libraries, and in the reference and children's departments of the Brooklyn Public Library.

GRADUATES

Miss Elizabeth M. Haskell (1905), secretary of the school, has accepted a position in the library of the University of California, her home being in California; and Miss Emily Turner (1898), formerly librarian of the Oshkosh (Wis.) Public Library, enters upon the duties of secretary July 1. Miss Turner will also give some instruction in the school.

Mrs. Arabelle H. Jackson (1903 and 1904) and Miss Katrine H. Jacobsen (1896) announce their engagement to be married, both leaving their present positions during the summer.

Miss Ida M. Mendenhall (1904) comes to Geneseo, N. Y., in the autumn as librarian of the State Normal School there. Her work will have in part the character of her normal school and teachers' institute work in Indiana.

Miss Horrocks (1905) has been appointed assistant in the East Liberty Branch of the Carnegie Library of Pittsburgh.

SOUTHERN LIBRARY SCHOOL

The students of the Southern Library School attended the opening of the children's department of the Chattanooga Public Library, May 19. The equipment and books of the children's room were presented by the children of the late E. G. Richmond in the nature of a memorial, and are perfect in detail. The class was entertained by Mrs. E. G. Richmond at luncheon at Lookout Inn.

UNIVERSITY OF CALIFORNIA SUMMER SCHOOL

A library summer school will be held at the University of California, Berkeley, beginning June 25, and continuing six weeks. It will be conducted by Miss Mary L. Jones, graduate of the New York State Library School, and for several years librarian of the Los Angeles Public Library. It is intended for librarians and assistants, actually engaged in library work; and besides Miss Jones, the instructing staff includes J. C. Rowell, Miss Helen G. Sheldon, J. D. Layman, H. R. Mead, A. B. Smith, Miss Mabel E. Prentiss, and Mrs. Alice G. Whitbeck.

WESTERN RESERVE LIBRARY SCHOOL

The second semester of the library school has been one of varied activities and interests. Throughout February and March was given the course upon work for children, three lectures being given by Miss Caroline Burnite, chief of the children's department of the Cleveland Public Library, and Miss Euphemia L. Power, instructor in literature for children in the City Normal School, Cleveland. Visits to the Cleveland public schools and to the children's rooms of the library constituted a part of this work. During the course Miss Frances J. Olcott visited the school and spoke upon "Library work with young people" and "Annotation of children's books."

A pleasant incident was the mutual acquaintanceship of students of the Pittsburgh and Western Reserve library schools brought about through the six weeks' visit by members of the senior class of the Training School for Children's Librarians. From the middle of February until April their time was divided between special courses at the school and practice in the children's rooms in the Cleveland Public Library. During this period also Professor Root, of Oberlin, delivered his course on the history of the printed book. The privilege of meeting and hearing in succession the editors of the two library periodicals was one greatly enjoyed. Miss Ahern spoke upon "The business side of library administration" and "The duties of a librarian to the library, to the community and to herself." This was followed by a talk on "Some American librarians of note." Miss Haines spoke on "Library periodicals" and "Discrimination in fiction."

The itinerary of the visit to eastern libraries, April 7-18, followed much the same program as that of last year, the libraries of Washington, Baltimore, Philadelphia and Pittsburgh being again visited. Owing to the absence of the director, on account of illness, Miss Eastman accompanied the three students who elected to take the entire trip. On the return they were met at Pittsburgh by six of the class and several members of the Cleveland Public Library staff. Immediately following the return from the trip the course in

book repair and binding was given by Miss Woodward, of Ann Arbor.

The students' loan practice in the Public Library closed in April. Throughout their course they have been much indebted to the librarians of the branches and heads of departments for the helpful and sympathetic attitude toward them in their efforts to gain a knowledge of the practical working of the library. Record practice, including classification and cataloging, began in January and continued through May. Final examinations will be held in the first week of June and entrance examinations for incoming students will take place June 15 and 16.

It has been decided not to give the senior work during the year 1906-7.

Reviews

JAMES, Montague Rhodes. A descriptive catalogue of the western manuscripts in the library of Clare College, Cambridge. Cambridge, University Press, 1905. 8+51 p. 27.5 cm.

—A descriptive catalogue of the western manuscripts in the library of Queen's College, Cambridge. Cambridge, University Press, 1905. 6+29 p. 27.5 cm.

Dr. James in these two thin volumes has made the most of his somewhat scanty material, the Clare College manuscripts, which he describes numbering but 31, and those of Queen's College 34. The descriptive work is of the usual high order of merit which we have come to look for in these catalogs. The loss of many manuscripts formerly in the possession of the two colleges is noted, and there are the usual tables. Dr. James carries his analysis of contents to the farthest extreme in these volumes, and certainly his work should be the final word on these two small collections. Perhaps his best work is seen in the careful descriptions of the Books of Hours and the Psalters. His catalog of the subjects of miniatures and his notes of the local peculiarities of ritual should prove very useful. There are no indexes in these catalogs, but they are so short that this loss will be but slightly felt. It is to be hoped that in future work of this sort the indexes will not be omitted, and will contain the subjects of miniatures, after the model of the best of Dr. James' previous catalogs. The usefulness of these catalogs, at least to students at a distance from the libraries in question, depends largely on the indexes. For one, I wish to testify to the practical utility which they have been to my own work, and to express the hope that considerations of cost and time may not exclude them from any future catalogs Dr. James may give us. WM. W. BISHOP.

Library Economy and History

GENERAL

Bogsamlingsbladet, the first Danish library periodical, makes its appearance under date of May, 1906, as a 32-page twelvemo pamphlet. It opens with a portrait and short sketch of Dr. A. S. Steenberg, of Horsens, whose earnest and effective work in behalf of Danish libraries is known to many American librarians. The new magazine is issued quarterly from Lemvig, published and edited by the "Danmarks Folkebogsamlinger," a Danish library association organized Nov. 25, 1905. An account of the new association, with its objects and constitution, is given; there is an article on Danish popular libraries by Dr. Steenberg; note of the agreement regarding discounts made between the new library association and the Danish book trade organization; and a recommended list of new books.

BRETT, William H. The school and the library; reprinted from the proceedings of the Michigan Schoolmasters' Club, 1905. [Ann Arbor, Mich., 1906.] 8 p. O.

The *Bulletin des Bibliothèques Populaires* for May has a short article on "Law books in popular libraries," pointing out the unsuitability of most law books for public library use, and indicating half a dozen or more elementary works on the history of French law which are recommended for such libraries.

Ceska Osveta for May (v. 2, no. 8) contains an article on "Women and library work" by J. Dont, and a further instalment of Pospisil's "Notes on the popularization of art in the villages." In the April number Jan Emmler foretold the "New epoch of Bohemian librarianship," for which this little periodical is so earnestly working.

HEYL, W. P. Public libraries: their value from educational and civic standpoints. (*In Municipal Journal and Engineer*, April 4, 1906. 20: 297-301.) il.

A number of floor plans are given of the Newark Public Library and the New York Public Library and illustrations of seven library buildings. The methods and cost of administration are also discussed incidentally.

The Library for April is mainly a Shakespeare number, with articles bibliographical, antiquarian and literary on Shakespearean subjects. Among them, John Ballinger contributes an article on "Shakespeare and the municipal library," describing the Shakespeare collection of the Birmingham Public Library, and other public Shakespeare collections, and indicating works on Shakespeare indispensable in a public library; and Mr. Esdail gives an authoritative record and review of "Shakespeare literature, 1901-1905."

Library Association Record, for April 15, besides the paper by R. W. Mould, noted elsewhere, contains "Some suggestions on the planning of public libraries," by H. T. Hare.

The *Library World* for April contains "Classification guides and indexes," by Ernest A. Savage; "A hitherto unrecorded conversation between Dr. Watson and Mr. Herlock Sholmes," by S. T. Ewart; and notes on the Public Libraries Acts bill, library appointments, etc.

Public Libraries for May contains a paper on "Reaching the people; some methods of popularizing a library," by Purd B. Wright; an interesting study of "Books as merchandise," analyzing the elements that make up the market value of collections of books, by C. W. Andrews; and "Library methods in the business world," in which Dr. Canfield points out the increasing demand for trained library workers in commercial positions.

WISCONSIN FREE LIBRARY COMMISSION. Campaigning for a public library; suggested material for newspaper use and for general circulation. Madison, Wis., May, 1906. 16 p. S. (Circular of information, no. 5.)

Zentralblatt für Bibliothekswesen for April again emphasizes the necessity of bringing out the full usefulness of resources of German libraries. A. Keyser suggests a "Guide" to German libraries, something like the "Manual" of the New York Library Club, perhaps, but more ambitious, more scientific, to supplement the great "Gesamtkatalog." The question of the determination of the sphere of each library's activity, that is, the specialties to which it shall mainly devote its resources, is also considered. Fritz Mikau, in "Zur ausnutzung des magazins," suggests the fuller utilization of space in the stack room by ceasing to build all shelves deep enough to hold folios, quartos and octavos, and dividing the stack room, instead, into three sections for the three sizes, the whole stack in each section being made of the proper depth for books of the size to which that section is devoted. His calculations show a gain of 14.3 per cent. in shelving capacity. This idea, he says, was developed by consideration of President Eliot's recommendations, published in L. J. some years ago, to divide the books in a library into "living" and "dead." The May number contains an account of the monastic and patristic collection of Joseph Gores, by Emil Jacobs; and a memorial sketch of Dr. Hermann Markgraf, director of the state library and archives of Breslau, who died on Jan. 12, 1906.

LOCAL

Bradford, Pa. Carnegie P. L. (6th rpt.—year ending March 1, 1906.) Added 1363, to-

tal 11,435. Issued home use 80,573 (fict. 64.5 per cent., juv. fict. 17.5 per cent.) New registration 1039; total registration 8909, "about one half of the entire population." Receipts \$7326.11; expenses \$5518.85 (books, periodicals and binding \$1757.29, salaries \$2429.06, light and fuel \$347.63.)

There is a decrease in adult circulation, offset by increase in reference use and growth of the children's department. Only 150 new titles of adult fiction were added during the year, these forming "11 per cent. of the books added to supply about 75 per cent. of the demand." "Our most encouraging work is with the children. With them we can really hope to cultivate a taste for the better class of books." During the year Miss Mabel Wann resigned from the position of librarian, in which she has been succeeded by Miss Susan Sherman.

Brockton (Mass.) P. L. (Rpt.—year ending Nov. 30, 1905.) Added 2956; total 49,452. Issued, home use 158,148 (fict. 46.81 per cent., juv. fict. 16.62 per cent.), of which 34,301 were juvenile and 26,214 were circulated through the schools. New cards issued 2240. Receipts \$12,393.29, expenses \$12,393.21.

The year was marked by the resignation of Mr. Robert K. Shaw as librarian and the appointment of Mr. Frank H. Whitmore as his successor. The circulation shows a gain in all departments, and there is considerable increase in school use. Reclassification according to the D. C. is being carried on as rapidly as possible, in intervals of routine and current work.

Brooklyn (N. Y.) P. L. On the evening of May 24 a dinner was given to Frank P. Hill, at the Hamilton Club, by the library directors, in celebration of the fifth anniversary of his administration as chief librarian. In further commemoration of the occasion a silver loving cup was presented to Mr. Hill on behalf of his board.

California State L. The library issues the first May number of a monthly bulletin, *News Notes of California Libraries*. It is a well-printed 48-page publication, containing descriptive record of libraries of the state, record of officers of California Library Association, information regarding the state library, and classed list of recent accessions to the state library.

Camden (N. J.) F. P. L. The Boys' Reading Fraternity, conducted under the auspices of the library, has arranged to take Saturday afternoon trips to the country during the summer months.

Cedar Rapids (Ia.) F. P. L. (9th rpt.—year ending Dec. 31, 1905.) Added 1638; total 13,436. Issued, home use 77,866, of which 32,446 was juv. and 5334 school circulation. Receipts \$26,230.94 (\$13,000 from A. Carnegie); expenses \$24,103.43 (of which about \$18,000 was for new Carnegie building.)

An attractive and interesting report. The great event of the year was the dedication on June 23 of the \$75,000 Carnegie building, which is described in some detail. This has been already recorded in these columns (L. J. 30: 931-932). The death of Mrs. C. D. Van Vechten, president of the library board, was a great loss to the interests of the library. Book purchases have been considerably reduced, owing to increased cost of maintenance. The nucleus of a Bohemian collection was formed, in a gift of 56 volumes made by the Bohemian Reading Society, and the Knights of Columbus have offered to bear the cost of printing a list of all books in the library by Catholic authors. It is planned to publish by instalments in the daily papers a list of the adult fiction in the library. Re-registration was begun with removal into the new building, and during the six months 2455 cards were issued. Special work has as usual been done for students and clubs in the making of study programs and reference lists.

In the children's departments many attractive bulletins have been shown, the Hans Christian Andersen centenary was duly observed, talks have been given by outside speakers, and a story hour has been conducted on Wednesday evenings and Friday afternoons. A notable incident was the story-telling afternoon of Miss Marie Shedlock. School children in small classes accompanied by their teachers visit the library regularly and are instructed in its general arrangement and use.

Chattanooga (Tenn.) P. L. The formal opening of the children's room of the Chattanooga Public Library was held Saturday, May 19, at 3 p.m. The new Carnegie building has been open about a year, and on Saturday the whole building was thrown open to the public. The interior finish, equipment and books of the children's room are a memorial to the late Edward Gould Richmond, given by his two children, Edmund and Ruth. The room chosen by Mrs. Richmond for this memorial opens directly on the street, and is an ideal situation for the children. The main feature of the room is a memorial mantelpiece of white marble. All of the interior woodwork, shelving and technical furniture is of green oak and of the best make. The tables, chairs, catalog and museum cases are specially designed for the needs of the room. The deep window seats are ideal lounging places for small readers. Cork carpet deadens the sound of the small feet, and everything has been done for the comfort of the children. About 2000 well selected children's books have been placed upon the shelves, marked by an appropriate book-plate. This plate was designed by Tiffany, and bears the motto, "Resolve well and persevere." The whole room presents a most pleasing appearance. It is beautiful in proportion and design, its simplicity is beguiling, and its perfection, both from

an artistic and a technical standpoint, represents taste, skill and an unlimited generosity on the part of Mrs. Richmond.

Concord (N. H.) P. L. (Rpt. — year ending Dec. 31, 1905.) Added 1025; total 27,830. Issued, home use 88,369. New registration 703.

This report gives no statistics in tabulated form, these facts being scattered through the librarian's narrative of the year's work. Fewer books were bought, on account of the expenditure of \$400 on a new supplementary printed finding list. The reserve post card system has been adopted, with satisfaction to users. A summer branch was maintained in the adjacent district of Fosterville. Miss Blanchard says: "During July and August a central room supplied with books, seats, tables and pictures was open two afternoons a week, and was filled with Swedish, Irish, Armenian, American, Greek, Italian and Norwegian children. Each afternoon I read aloud a story, and Miss Alcott was soon a favorite." Deliveries of books are sent to West Concord, East Concord and Penacook, and supplementary reading is sent regularly to school rooms. The semi-centennial of the library's establishment was observed on Aug. 25, 1905, when a reception was given at which the staff wore the dress of 1855 and there was an exhibit of old time pictures and furniture.

Connellsville, Pa. Carnegie F. L. Founders' day was celebrated with elaborate exercises on the evening of May 15, when historical addresses were delivered on the founders of the city, and there was music and a general reception. The annual report of the library, read as part of the exercises, gives the following facts: Added 950; total 4987. Issued, home use 32,817, of which 11,539 were juv. (fict. 72½ per cent.) Registration 2645. A children's story hour has been held on Friday afternoons; and the librarian recommends that a series of free lectures and concerts be given to supplement the work of the library.

Dallas (Tex.) P. L. (5th rpt. — year ending April 30, 1906.) Added 2362; total 20,337. Total circulation 78,890. New registration 1896; total registration 11,871. Receipts \$8331.41; expenses \$5887.63 (salaries incl. janitor \$3201.36, books \$1247.35, binding \$365.03, periodicals \$144.48, furniture \$281.50, light \$118.45, fuel \$143.74).

There has been a marked increase in reference use, and a falling off in general circulation. "Talks on the use of Poole's index, the catalog and some of the more important reference books, have been given to classes from the high school, also a number of talks on the library, to pupils from the grammar and high schools who were sent for material for compositions on that subject." The need for more open shelf space is constantly growing, but "experience with the open shelf system in the children's room proves to us that open access

will never take the place of personal service." Publication of lists and notes regarding new books, etc., in the local press has been a constant feature of the library's work. "We have daily proof of the use made of the lists in their presentation at the desk as call slips—sometimes two or three years after publication."

Dubuque, Ia. Carnegie-Stout F. L. "Library day" was observed as usual on Saturday, May 12, when nearly a thousand children were given an entertainment of story-telling, recitations and music. The exercises were arranged and carried through by the Education Division of the Dubuque Woman's Club.

Fort Worth, Tex. Carnegie P. L. (5th rpt.—year ending March 1, 1906; from manuscript.) Added 1700; total 14,353 v., 2167 pm. Issued, home use 60,611 (fict. 68.4 per cent.). New registration 1879; total registration 13,102.

The duplicate pay collection proves steadily popular, and has not only been self-supporting but has brought a net profit of \$153.59 to the library during the year. In the children's room talks on natural history and astronomy were given on Saturday afternoons, and on Friday afternoons stories were told to the children by teachers and students of the Kindergarten College. Books are circulated through the schools, so far as the library's resources allow; more books are greatly needed.

Germantown, Phila. Friends' F. L. (Rpt., 1905.) Added 611; total not given. Issued, home use 15,908 (juv. 3693). New cards issued 443.

Gloversville (N. Y.) F. L. (Rpt., 1905.) Added 625 (purchased 440); total 23,670. Issued, home use 45,738; ref. use 5087. New registration 518.

The library was opened to the public in its new building on Dec. 14. As Dec. 31, 1905, closed the library's 25th year, a brief retrospect of its history and work is given. It was opened, reading room only, Nov. 8, 1880, the circulating department being opened on Jan. 3, 1881. It opened with 3980 v., and the circulation has risen from 10,763 v. to an average of 70,000 a year. During the quarter century but 420 v. have been discarded.

Appended to the report is the usual classed list of accessions for the year.

Grand Rapids (Mich.) P. L. The second annual conference on children's reading for teachers and others interested, was held at the library on May 15. Miss Elizabeth L. Morrissey, principal of the Hall street school, read a paper on "The essentials of a good book for children." She said in substance: "Books selected for children's reading should contain a moral, but it should be so subtly put that the child is entirely unconscious of it. The book should also be attractive with

artistically colored cover. It should contain large, clear type, wide margins, and frequent paragraphing. A child loves color, and when he chooses a book for himself he invariably takes one that is full of colored pictures. It takes too long to read a book of fine type and long paragraphs. The schools should teach a child to appreciate a good book by keeping before him books which contain high ideals and good morals and at the same time suit his childish taste by their beautiful colored pictures, attractive bindings and large type." In the discussion which followed it was pointed out that, in order to develop a child's character, all kinds of good books should be given him. The temperament of boys varies so that what might be recommended to good advantage for one boy would not suit another. He should read good books of history, of travel. A well written biography will interest a boy. In fiction the characters should be real live, strong characters to inspire right thinking and right acting.

The second paper was on "Picture books, good and bad," by Mrs. W. B. Willard, an illustrator of children's books. She said: "There is very little material in children's books to illustrate, and the illustrating is consequently bad. The illustrating should be treated in an attractive way, not by an attempt at an exact reproduction. Walter Crane and Kate Greenaway considered things in the right perspective. The Kate Greenaway books are done entirely in the flat tones with very little regard to any rounding effects. The designs are simple with very little attempt at shading or perspective. If all the details were put in the child would become confused and could not understand the meaning of the pictures. While these children's illustrations are simple from an artist's standpoint, they teach the child to appreciate true art, and as he grows older his taste will develop." Of the Sunday supplements to newspapers it was said that while some of the illustrating was very good, considering the poor quality of paper on which it was done, the literature was generally poor and debasing in tone, and its constant reading would have about the same effect on a child as constant attendance at vaudeville would have upon a grown person.

Mr. C. H. Cogshall, principal of the Turner street school, spoke on the question "Should children be encouraged to read war stories?" He said that as the natural instincts of a child from 11 to 15 or more seem to demand stories of war and action, it is better to guide such reading than to refuse it. Good, authentic war stories often teach patriotism, Christianity and love for peace. In the discussion it was shown that the percentage of material in school histories devoted to war was about 40, but this percentage had gradually been reduced until in the histories of to-day the percentage is only about 24.

Dr. J. R. T. Lothrop considered the question "Are the writings of Mark Twain wholesome for children?" His verdict was in the negative, pointing out that both "Tom Sawyer" and "Huckleberry Finn" were lacking in moral tone, and likely to foster lawlessness and disrespect of sacred things.

A conference for the blind was held at the library on the afternoon of Tuesday, May 22. Seven blind persons were present. The various systems of type for the blind were discussed, and in view of the number of different types it was decided not to purchase any books at present, but to consider borrowing books from the various institutions possessing them. The idea of forming a club for the blind was suggested and discussed, the club to meet each week at the library and the library to provide a reader. The chief difficulty here was that some of the blind are unable to go out without guides, especially the women. The idea of books being sent to their home met with approval. It was decided to meet every Tuesday afternoon and to devote two hours to reading current events, good stories, or other events.

Greenfield (Mass.) P. L. (Rpt.—year ending Jan. 31, 1906.) Added 1064; total 16,683. Issued, home use 47,344 (fict. 65 per cent.). New registration 1214; total cards in force 2819.

Circulation from the children's department was 15,926, of which 53 per cent. was fiction. There are six deposit stations in operation, one being at the high school.

Greensboro (N. C.) P. L. The attractive Carnegie building was formally opened on the evening of Monday, May 7.

Haverhill (Mass.) P. L. (31st rpt.—year ending Dec. 31, 1905.) Added 2583, of which 288 were gifts; total "about 82,000." Issued, home use 169,489 (fict. 64 per cent.), an increase of 16,724, or 11 per cent. over the previous year. New cards issued 1576; total no. cardholders 18,888 out of a population of 37,830. Receipts \$19,624.99; expenses \$18,989.46 (books, periodicals and pictures \$3871.30, current expenses \$13,702.57).

The library is fifth in size among Massachusetts libraries, and ranks as eighth in circulation of books. The year shows marked growth in use, and there have been numerous changes and improvements. Besides an increase of 11 per cent. in home use of books, the circulation of mounted pictures (10,003) showed an increase of nearly 4000, and the percentage of fiction issued was slightly decreased. Sunday opening has been continued from November to May, and two new deposit stations were established. At the main library the delivery room was changed into an open shelf room, with about 1200 new books accessible, the loan desk was rebuilt and enlarged, the card catalog cases were grouped compactly in the middle of the room,

to give needed wall space for open shelves, and electricity was installed instead of gas. The reference room was enlarged by removing librarian's office and catalog room to temporary quarters on the second floor; additional floor space was gained in the exhibition hall by entirely ceiling over the delivery room below; and other alterations have made the building more convenient and adequate. It is not practicable, owing to the construction, to give access to the entire stack, but students are freely admitted on application. It is hoped that funds will soon permit the carrying out of the remaining alterations, and the establishment of proper quarters for the administrative departments. At the Bradford branch open shelves were installed for the entire collection, and the Washington street branch was removed to new and attractive quarters, previously described in these columns.

In the purchase of books large additions were made to the Whittier collection, and small collections of books in Italian and Russian were added, to meet the demands of residents of those nationalities. In the general buying, advantage was taken as often as possible of auction and clearance sales. It is pointed out that book funds have steadily diminished, and that the amount spent for books, periodicals and pictures in 1905 was only 68 per cent. of that spent in 1900. There are now about 9500 mounted pictures, arranged in filing cabinets and classified by subject according to the D. C., except for certain broad classes. "The pictures are now mounted on one size mount, 11 x 14 inches, the larger size, 14 x 18 inches, having been found impracticable in most cases. Pictures form one of the most popular features of the library." Continuous exhibitions have been held, in the main library, children's room or branches.

In the school work, visits were made by the assistant in charge to teachers' meetings, and the schools of the nearby country districts; books were sent monthly to all grammar school rooms of the city, and to the summer schools. The school circulation reached 21,794 v., an increase of 42 per cent. over the preceding year. Reference use of the library, it is pointed out, is growing faster than the circulation of light reading; "in this work the telephones at the main library and two branches play an important part."

In addition to the regular routine of cataloging, the reclassification and recataloging of the great bulk of the collection, the books added before 1899, was carried on as steadily as circumstances permitted; in this work 5493 L. of C. cards were bought, at a cost of \$49.62, and inserted in the card catalog. Mr. Moulton remarks, "Only by using the Library of Congress printed cards is it possible to catalog our new books and a few old ones with our present, small catalog force." The

binding record covers 1714 v., at a cost of \$811.88, or 47 cents a volume. Much has been done to keep the resources of the library before the public, through newspaper articles, book lists and bulletins, the latter being freely distributed to schools, hotels, factories, engine houses, police stations, etc. Besides the main building and four branches, the library had about 66 distributing agencies, including school-rooms, in use during the year.

Hornell (N. Y.) L. Assoc. (38th rpt.; in local press.) Added 812; total 14,355. Issued, home use 25,921 (fict. 22,388); ref. use 1452. Receipts \$1898.29; expenses \$1750.41.

Jacksonville (Fla.) F. P. L. (1st rpt.—year ending Dec. 31, 1905.) This is of special interest as the first report of the first, and as yet the only, free public library in Florida. It is naturally largely a record of organization work, giving evidence of much public interest and large opportunities for future usefulness. The building, which has been fully described in these columns (L. J., 30:861-862), was opened on June 1, 1905, with about 6200 v. on the shelves. In all during the year 8685 v. were purchased, at a cost of \$9055.37. All book purchases were made from funds given for the purpose by citizens of Jacksonville, and no books have so far been bought by city money. The list of donations to the book fund shows seven contributions of \$1000 apiece, and a generous array of smaller gifts. Since the close of the report about \$1400 more has been subscribed, and it is believed that nearly \$2000 more will be available—this being practical testimony to the interest felt by citizens in the development of the library. The library contains 9134 v., and the circulation was 44,011 from the white department, and 2541 from the colored department. There are 3423 registered borrowers in the general library, and 338 in the colored department. "About 15 per cent. of the white population already use the library." The use of the reference department, which contains 475 v., has grown steadily. About 450 reference books, 1000 adult circulating books, and all the children's books are on open shelves, the books for adult circulation being changed from time to time, so that practically the entire collection will pass through the open shelf room. From the children's room 10,774 v. were drawn, or 24 per cent. of the entire issue, and the room is proving much too small. The colored department is quartered in two rooms on the second floor in charge of a colored woman, formerly a teacher in the local schools. It contains 609 v., of which 76 are juvenile and 91 reference. "The colored people have separate magazines, separate books, separate rooms, separate staircase and separate assistant. Those who visit the library are, without exception, quiet, orderly, unobtrusive, and there has been no friction between the races."

Practically all books in the library are cataloged, the L. of C. printed cards having been used so far as possible. "The expense is much less than doing the work ourselves, the appearance of the cards is better, and stricter accuracy is obtained." Copies of the "A. L. A. catalog" are sold to borrowers at cost as a makeshift for a printed catalog of the library.

Lansing (Mich.) P. L. A Maypole dance for the children was given on Saturday, May 5, in the auditorium of the attractive Carnegie building. There was an audience of about 200; the room was decorated with blossoming boughs, and the whole effect was extremely pretty, and much enjoyed by all.

Los Angeles (Cal.) P. L. An "informal housewarming" in the new quarters of the library was held on the afternoon of Saturday, May 19. Five hundred invitations had been sent out, and there was a large attendance of interested persons, who seemed greatly pleased with the attractive arrangements of the various departments.

The building which the library now occupies is centrally located, of fireproof concrete, and equipped with elevators. The elevators open on the second floor into the general library and non-fiction department, and on the third floor into the main reference room. These two rooms are the principal reading rooms, and in addition there are the fiction and juvenile departments on the east portion of the second floor, with the newspaper and magazine quarters to the north. There is a large reading room exclusively for women, connected with the women's section of the roof garden by a private passageway.

The roof garden reading room, which is the special feature of the new quarters, has an area of 6400 square feet and ample seating accommodations. It contains 320 feet of rose hedges, 60 feet of heliotrope, 60 feet of geraniums, a vine-clad arbor 80 feet long, 16 feet wide and 10 feet high, and it is the intention to have a typical representation of semi-tropical trees, such as the orange, golden bamboo, loquat, India rubber tree, Abyssinian banana, *Draecena* palm, and ornamental shrubbery. In the center is a circular fountain 10 feet in diameter. The care of the garden will devolve in a measure upon the library assistants, to each of whom has been allotted a section in which she is to work for at least ten minutes each day. Two-thirds of the roof garden are for both men and women, and the former will be allowed to smoke provided they do not cross the rose barrier into the women's section. None but cardholders are accorded the privileges of the roof garden. There are 30,000 cardholders, and it is thought this restriction will act as an inducement for the increase of responsible patronage.

In a recent newspaper interview Mr. Lummis expresses the conviction that the de-

struction of San Francisco libraries has placed on the Los Angeles library the responsibility and duty of becoming the great reference library of the Pacific coast. He states his intention of asking an appropriation of \$150,000 for next year, to greatly increase the resources of the library in works of reference.

Dr. C. J. K. Jones, director of study and research, failed to pass the recent civil service examination required of library employes, receiving 70.23 per cent. out of a required 75. The failure was in languages and library technique. The civil service rules allow an applicant to take three examinations, and a second one will be later arranged for. In the meantime he has been given an emergency appointment.

Ludlow, Vt. Fletcher Memorial L. (Rpt. — year ending Dec. 31, 1905.) Added 395 (juv. 208); total 8126. Issued, home use 17,648 (fict. 62.70 per cent.; periodicals 10.70 per cent.). New registration 160; total registration 1025; population of Ludlow in 1900, 2042.

There was an increase in circulation of 640 v., all in the children's department.

Lynn (Mass.) P. L. (43d rpt. — year ending Dec. 31, 1905.) Added 3184; total 71,690. Issued, home use 184,326; ref. use 108,961. New cards issued 1586. Receipts \$18,798.17; expenses \$18,798.17 (books \$3685.13, periodicals \$663.89, binding \$936.25, printing \$184.50, salaries \$6695.67, extra help \$2180.95, fuel \$608.49).

In July a deposit station was opened at the library of the General Electric Company, and 1932 v. were used, of which 927 were on industrial arts. About 300 books were sent to the schools, where they had 7305 readers. Use of the reference room shows steady increase, and 17 exhibitions have been held in the lecture room. The room for the blind has been in charge of a volunteer committee of ladies, and three times a week instruction is given in the various types of printing and in musical notation; the collection in this room numbers 153 volumes, including booklets, and these have been issued for home use 266 times; 54 readings were given by volunteer readers.

New Jersey library institute, Summit. An institute under the auspices of the New Jersey Library Association was held at Summit on May 1. Mr. J. C. Dana presided, and the speakers included Ernest D. North and Mayor George Wilcox, of Summit; Miss Campbell, of the Passaic Public Library; W. C. Kimball, of the State Library Commission; Hamilton W. Mabie, and Miss Louise Connolly.

New York City. Gen. Soc. of Mechanics and Tradesmen's L. (120th rpt. — year ending Dec. 31, 1905.) Added 1117; total 100,369. Issued, home use 35,069 (fict. 27.338).

The work of the library has suffered se-

riously on account of the reconstruction of the building, which required the closing of the library in June, July and August. In view of the changing library conditions of the city, special efforts are being made to strengthen the reference value of the library, and to make more available the valuable architectural collection in the De Milt and Slade sections.

New York P. L. Lenox L. A curious incident occurred recently at the Lenox Library when one of the readers found, slipped between the pages of a copy of "Much ado about nothing," a banknote for \$50, accompanied by an envelope on which was pencilled the following message: "As every person—except our commercial, financial and political grafters—is always more or less in need of this wretched thing we call 'money,' I feel sure that this fifty will fall into the hands of one who needs it. With it goes my best wishes. From one who has money to spare and is a lover of Shakespeare. H. G."

The "find" was promptly reported in the newspapers, with the result that for the next few days the various copies and editions of Shakespeare were in demand by a procession of eager treasure-seekers.

New York Society L. (Rpt. — year ending March 31, 1906.) Additions and total v. not stated. Issued 31,497. Visitors 24,234, of whom 8213 were men. There were 596 parcels of books sent for out-of-town delivery, nearly a third more than in the previous year; and city delivery of 26,619 v. was made by messengers, an increase of 5000 v. over the year before.

"The library is now in the soundest and most flourishing condition financially that it has ever been," the annual subscriptions were over one-third larger than any previously recorded.

Newark (N. J.) F. P. L. The fourth annual loan exhibition of paintings was opened in the library art gallery on the evening of Saturday, May 5. It included 42 water colors, most of which were lent by the artists themselves, and was quite generally representative of American water color painters.

A subscription fund is being raised for the establishment of a circulating department of music, for which over \$500 has been pledged.

Newburyport (Mass.) P. L. (50th rpt., 1905.) Added 1199; total 41,806. Issued, home use 54,484. Cards in use 6178. Receipts \$4190.66; expenses \$4190.66.

Mr. Parsons, the librarian, notes the chief events in the half century of the library's existence, which this report marks. The present building, first occupied in 1866, and extended 15 years later by the erection of an annex, is now nearly outgrown, and in a short time the limit of its book capacity will be reached. An adequate reference department and a chil-

dren's department are the most serious deficiencies.

Newton (Mass.) F. L. (Rpt.—year ending Dec. 31, 1905.) Added 1945; total 66,657. Issued, home use 158,318 (91,918 issued from agencies and schools). Re-registration 5216. Receipts \$13,840.74; expenses \$13,840.55 (books \$2196.57, salaries \$6698.82, distributing agencies and express \$1932.95, binding \$747.80, printing and advertising \$645, light \$573.87, fuel \$393.38).

The children's room, which now contains about 2000 v., is proving increasingly popular, and has a daily average circulation of 100, attendance of 70.

Niagara Falls (N. Y.) P. L. (10th rpt.—year ending June 30, 1905.) Added 2593; total 14,113. Issued, home use 80,809. New registration 2918; total registration 8017. Receipts \$8910.43; expenses \$8625.19 (books \$2070.09, periodicals \$264.31, binding \$293.05, salaries \$2677.50, janitor \$645, fuel \$659.50, light and power \$476.67).

A neat and compact little report, showing satisfactory growth and favorable conditions. The new building has passed its first year's test of use with entire success. Work with the children and the schools has been especially developed, libraries having been placed in six schools for distribution in each grade, and the only limitations to the work seem to be in the lack of as many books as could be used. Great care is taken in the selection of juvenile books, and in this class and fiction much weeding out has been done.

North Adams (Mass.) P. L. (22d rpt.—year ending Nov. 30, 1905.) Added 2040; total 26,499. Issued, home use 105,313, of which 14,949 were drawn from the five branches. New registration 782; total cards in force 6760. Receipts \$6303.38; expenses \$6296.30 (books \$1725.34, binding \$338.54, periodicals \$246.21, salaries \$2179.65, coal \$340.70, light \$252.62, janitor \$624).

The library is greatly hampered by inadequate funds. Lack of new and clean books has reduced the circulation, and reference and school work is limited on account of insufficiency of books. The trustees point out the increase in reading population, whose needs should be met, and make earnest plea for the restoration of the previous city appropriation of \$6750, instead of the present grant of \$6000.

Philadelphia (Pa.) City Institute L. (54th rpt., 1905.) Added 1687; total 25,725. Issued, home use 49,935; visitors and readers 102,215. Receipts \$7178.37; expenses \$6057.37.

Poughkeepsie, N. Y. Adviance Memorial L. (Rpt.—11 months ending Nov. 30, 1905.) Added 2229; total 42,169. Issued, home use 84,246 (fict. 54.7 per cent., juv. 20.2 per cent.); school use 9131. Receipts \$10,307.14; ex-

penses \$9277.48 (salaries \$4218.34, books \$2480.34; janitor \$495, binding \$339.15, fuel \$461.25, light \$351.89).

Brief comparison is given of the work done by the library during the five years just closed, during which it has been under control of an independent board and in its own building, and the previous five years when it was controlled by the board of education and quartered in inadequate rooms. The contrast shows how great have been the advantages of improved conditions of administration and equipment.

Santa Rosa (Cal.) P. L. Details of the destruction wrought by the earthquake of April 18 are given as follows, in a letter from Miss Adèle Barnett, the librarian, written on May 9: "I send two little pictures that may give you some idea of the wreck of our building. There was no fire, so the damage is almost entirely to the building and furnishings. The books are intact. The building faces north. The little tower fell into our California room, making it simply a pile of stone and mortar, not a thing to be seen that looked like a book. I was greatly worried for fear our old files of *Sonoma County Democrat* were reduced to atoms, but they were rescued from the pile, battered to be sure, but still whole. They are the only files in town; the others were burned in the offices. The east wall will have to come down eventually. All the plastering will have to be done over, except in the basement, where things are in fairly good condition. It is estimated that it will take \$6900 to put our building back into its former condition. All the furnishings in the California room were ruined; kindling wood was made of the heavy oak tables and chairs. All the stacks except the old wooden shelves in the basement were bent and broken. In the stack-room the shelves were supported from one side and from the ceiling. Probably the weight of the books bent them to the side from which they were supported. All the rods are bent, lots of the castings broken, and many of the shelves are spoiled.

"Tons of loose stones have been removed, holes in the roof boarded up, and we expect to open up the library in the basement by Monday, May 14. Only one stone building in town was less damaged than the library."

Somerville (Mass.) P. L. (33d rpt., 1905.) Added 6346; total 72,239. Issued, home use 391,783 (fict. 71.3 per cent.). Visitors to ref. room 12,338. New cards issued 4902. Receipts \$19,358.22; expenses \$19,358.22 (books and periodicals \$6158.45, binding \$1996.96, salaries \$9388.72, printing \$475.75, agencies \$465.65, express \$414.63.)

In circulation the library ranks as second to Boston in the New England states; the increase for the year was 38,497, or about 11 per cent. During the year 328 vacation cards were issued, on which 1947 v. were drawn,

3284 v. were distributed by the home delivery system, and many of the Sunday-schools of the city drew upon the library for books. The school department reaches children and teachers by mutual visits, and the sending out of school collections; and the work of the children's room has increased steadily. The library maintains six agencies, in addition to its home delivery system, school libraries and other deposit collections. A thorough inventory of the library was taken, with a result of 490 v. recorded as missing.

Mr. Foss compares the growth of the library with the growth of the population; the former shows an increase of over 300 per cent. in five years, the latter an increase of 32 per cent. for the same period. He recommends that as many books of non-fiction as desired be issued at one time to any reader.

Terre Haute (Ind.) P. L. The beautiful Emeline Fairbanks memorial building, the gift of Crawford Fairbanks, was formally opened on the afternoon of April 29.

Toledo (O.) P. L. In the summary of the library's 1905 report, in May L. J., the home circulation was incorrectly given as 227,827 v.; it should have been stated as 246,433 v.

University of Texas L., Austin. (Rpt. — year ending April 10, 1906.) Added 4903 (purchased 1430); total 49,792. Issued for use outside the lib. 15,828; no record is kept of lib. and seminar use, though this forms the chief use of the library. 200 Texan daily, weekly and monthly newspapers are currently received.

Mr. Windsor reports on the library class which he conducts at the university. For 1906-7 the class will be limited to four persons "who are prepared for entrance to at least the junior class in the academic department of this university, who give promise of becoming actual library workers in Texas, and who find it impossible to attend a regular library school."

Additional shelving was installed during the year, but more room for books is still an urgent necessity, and the reading room is constantly overcrowded. Various temporary expedients may be resorted to, but the only real solution of the difficulties must be found in an adequate fire-proof library building.

Winchester (Mass.) P. L. (Rpt. — year ending Dec. 31, 1905.) Added 661; total 16,877. Issued 45,428 (fict. 21,995, juv. 13,649); cards in use 3120. Receipts \$2875.87; expenses \$2693.73.

Circulation has increased over 2000 over that of 1904. Work with schools has continued along the same lines. There have been some changes in details of administration, such as covering of books, time limit for fiction, etc. A reference reading room is greatly needed.

FOREIGN

Cambridge University L. The Worshipful Company of Goldsmiths recently presented £5000 to the university, to be applied to the present needs of the university library.

Glasgow (Scotl.) P. Ls. The Springburn District Library, the eleventh to be completed under the Glasgow corporation library scheme, was formally opened on the evening of May 1, in presence of a large audience. The library, which is situated immediately opposite the main entrance to the Hyde Park Locomotive Works in Ayr street and Vulcan street, is a handsome one-story structure, treated simply in the Renaissance style, and covering an area of fully 1000 square yards. The main entrance gives direct access to the lending department, in which there is accommodation for about 10,000 volumes. Dividing the public space from the book storage is a long counter with a screen, which will be utilized as an indicator for showing the books available. Attached to the screen is a small revolving bookcase in which will be placed new books added to the collection. The general reading room is situated to the right of the main entrance, and has seating accommodation for 80 persons. To the left of the entrance hall is the ladies' room, which has accommodation for 34 readers. The boys' and girls' room is accessible from Vulcan street, and has accommodation for about 100 boys and 50 girls.

Ottawa (Can.) P. L. (Preliminary rpt., Jan. 15, 1906.) This report is issued as a record and description of the library and its handsome Carnegie building, just prior to its formal opening. The librarian, Mr. L. J. Burpee, gives a detailed statement of the organization work, selection and purchase of books, selection of fittings, appointment of staff, arrangements for co-operation with schools, clubs and trades unions, plans for special collections, suggestions for the library building, furniture and card catalog. This report is followed by several appendixes, giving a history of the public library project, the Carnegie library act of 1902, list of library committees 1902-1905, financial statement, list of donors, and examination paper prepared for library assistants. The report as a whole shows excellent preparatory work, and should pave the way usefully for the regular annual reports of the library.

The library, as has been previously noted, was opened on April 30. There was a large audience in attendance, and Mr. Carnegie also was present at the exercises, and made the opening address. He spoke of the educational value of the free library, and its importance as a civic institution, and said: "Our English-speaking race takes to the free library. There is hardly a town in Britain which has not adopted the libraries act and has its free

library or system of libraries. In New Zealand the free library is rapidly spreading, as it has already spread in Canada. My library secretary informs me that we have already given the Dominion 60 library buildings. I hope this number is to be rapidly increased. In the United States we have given 904, and the dear old homeland has accepted 481."

The library building, which cost \$100,000, is built of Indiana sandstone. The entrance opens into a delivery room, floored and wainscotted in marble, with oak woodwork. Back of this extends the stack room, with a book capacity of 30,000 v. To the extreme right is the children's department, a beautiful light and airy room. The main reading room is at the other end, with red oak finish and every convenience of equipment. A bronze and marble staircase leads up to the first story, the staircase landing being illuminated with a beautiful stained glass window with portraits of famous authors and poets. On the first floor is a room for the library board, reference department, a spacious lecture room, and cloak rooms. The top floor will be utilized for the purposes of a museum, while in the basement is an attractive newspaper room.

South Africa. Bertram L. Dyer, librarian of the Kimberley Public Library, sends word of the recent action taken by the Cape government railways, permitting carriage of "printed books of a literary nature" at half parcels rates. This is believed to be a step of much importance in its effect on country subscribers to town libraries, and it is hoped that it may pave the way to reduced postal rates on library books.

Tokio (Japan) Imperial L. The library has outgrown the brick building erected in 1889, and is to be housed in a new structure of steel and stone, after the American method of construction. It is to cover 5760 square feet in Ueno park, and is to be seven stories in height. The finished portion, covering 1290 square feet, is outwardly imposing and inwardly arranged and equipped according to the best ideas of modern library economy. Besides the principal hall for readers, there are reception and office rooms and provision for the work of catalogers, for special researchers and women students. One-third of the building is occupied by the stacks, seven feet high, to which the users of books are allowed free access. The artistic decoration has been done by the Tokio Art School.

Details regarding the library are given in the 31st report of the minister of education, just published. It contains 378,017 v. of Japanese and Chinese works and 59,857 v. of European works—a total of 437,874 v. The public are allowed free access to 222,875 v. During the year 1903-4 there were 144,526 visitors, who read 752,783 v. For home use 17,571 v. were taken out by 3954 persons.

Gifts and Bequests

Rahway (N. J.) P. L. Through the death of Miss Lucy H. Eddy in 1879, and of Mrs. Pollock, her niece, in May, 1903, the library has come into a cash legacy of \$28,000, which has now been paid after a period of legal contests covering the period since Mrs. Pollock's death.

Westboro (Mass.) P. L. Melvin H. Walker, a library trustee and member of the library building committee, has given \$2500 toward the library building fund. This fund now amounts to about \$26,500, nearly all contributed by subscription.

White River Junction, Vt. On May 1 announcement was made that Amos Barnes, of Boston, a former resident of the town, would give to White River Junction a library building, to be known as the George W. Gates memorial library; the building, which will cost about \$12,000, will be erected on a site also given to the town by Mr. Barnes.

Carnegie library gifts

Georgia Normal and Industrial College, Milledgeville. May 20. \$15,000 for library building.

Pennsburg, Pa. Perkiomen Seminary. May 15. \$20,000 for library building, provided an equal amount be raised for endowment fund.

Rockingham, Vt. On June 4, by a vote of 246 to 177, the town rescinded action of a special town meeting held May 15, accepting the offer of \$15,000 for a library building from Andrew Carnegie.

Practical Notes

CARD FILE. (Described in *Official Gazette* of the U. S. Patent Office, March 13, 1906. 121: 419.) il.

CARD-INDEX. (Described in *Official Gazette* of the U. S. Patent Office, March 13, 1906. 121: 420.) il.

This and the entry preceding are assigned to the same patentee, G. A. Wheeler, New York City.

HANDBOOK ON PRINTING; prep. for library school students. [Indianapolis,] Printed by students, Winona Technical Institute, [1906.] 32 p. S.

This little manual, designed for students of the Indiana Library School, presents elementary instruction in proofreading, composition and printing in a compact and practical way. Appended are examples of library labels, notices, and styles of type.

Librarians

BROWN, Miss Edna Adelaide, B.L.S., New York State Library School, class of 1898, has resigned her position as reference librarian and head of the loan department of the Rosenberg Library, Galveston, Tex., to become librarian of the Public Library, Andover, Mass.

BULLOCK, Miss Edna, secretary of the Nebraska State Library Commission since its organization five years ago, has resigned that position, in which she has been succeeded by Miss Charlotte Templeton, formerly a member of the staff of the Omaha Public Library and later librarian of the Oshkosh (Wis.) Public Library.

CORR, Miss Emily S., head of the order department of the Buffalo (N. Y.) Public Library, has been elected librarian of the Warsaw (N. Y.) Public Library, which has just been established in a new Carnegie building.

COLLINS, Victor Lansing, reference librarian of Princeton University, has resigned that position to become preceptor in the department of Romance languages in the university. His place will be taken by William Warner Bishop, head cataloger in the university library.

CRUNDEN, Frederick M. It will be a grief to Mr. Crunden's many friends and associates to know that his illness, noted in May L. J., has proved extremely serious, and that he has for a month past been in a critical condition. Mr. and Mrs. Crunden had planned a European trip, in the hope that it would restore his health, but while in New York City just previous to the sailing date, on April 19, he suffered a severe cerebral stroke, and their passage was necessarily cancelled. Mr. Crunden was removed to a private hospital, and later to a sanitarium in Katonah, N. Y., where he now is. While his condition is considerably improved, it is still serious. This breakdown had been threatened for some time, but it had been hoped that a complete rest would avert it. Mr. Crunden's work and services in the library field are so widely known as to need no reference here; he is the senior ex-president of the American Library Association, and as librarian of the St. Louis Public Library he has for years been a pioneer and leader in the development of the modern public library.

DAVIS, Miss Florence, for nine years librarian of the Rockville (Ct.) Public Library, has resigned that position.

DOREN, Miss Electra C., has resigned the directorship of the Western Reserve University Library School for the ensuing year.

DUNCAN, William H., Jr., for six years librarian of the University Club, New York City, has resigned that position, his resignation to take effect June 30, and will spend a year in study. Mr. Duncan was formerly librarian of the Flatbush Public Library, now the Flatbush branch of the Brooklyn Public

Library, and studied at Pratt Institute Library School, class of 1900. The library of the University Club has been entirely reclassified and recataloged under his direction.

ELLIOTT, Miss Agnes M., Pratt Institute Library School, 1896, has resigned the librarianship of the Carnegie Library, Steubenville, Ohio, to accept the headship of the circulating department of the Pratt Institute Free Library. Before going to Steubenville, Miss Elliott was head of one of the branches of the Carnegie Library of Pittsburgh. She begins her work in Brooklyn on September 1.

FROST, Miss Elizabeth Rollins, of the New York State Library School, 1903-4, has resigned her position as assistant in the cataloging department of the Buffalo Public Library to become assistant cataloger at the Carnegie Library, Pittsburgh, Pa.

GILL, Henry M., professor of history in the boys' high school, New Orleans, La., was, on May 9, elected chief clerk of the New Orleans Free Public Library, succeeding William Beer, resigned. The election was based on the results of a competitive examination, required by the provisions of the civil service. Mr. Gill was born in New Orleans in 1873, educated in the public schools and Tulane high school, and was graduated from Tulane University in 1891. He was then appointed professor of history in the boys' high school, a position which he has since held. He studied law at Tulane Law School and was admitted to the bar in 1895, but has never practiced. He served as a member of the state legislature from 1900 to 1904.

GOODRICH, Mr. Francis L. D., of the New York State Library School, class of 1906, has been appointed assistant reference librarian at the John Crerar Library, Chicago.

LEUPP, Harold Lewis, of the New York State Library School, class of 1904, has resigned his position as assistant reference librarian at the John Crerar Library, Chicago, to become superintendent of and buyer for the retail and library department of the University of Chicago Press.

MCGRAW, Miss Minnie, librarian of the Mankato (Minn.) Public Library, has resigned that position, which she has filled since the establishment of the library twelve years ago. During her connection with the library she has been actively interested in the Minnesota Library Association, of which she has served as vice-president and secretary.

PADDOCK, Miss Leatha, for twelve years librarian of the Terre Haute (Ind.) Public Library, has resigned that position, and on May 4 Mrs. Sarah C. Hughes, first assistant, was appointed as her successor.

VAN BUREN, Miss Maude, head cataloger of Iowa State University Library, and formerly librarian of the Owatonna (Minn.) Public Library, has been elected librarian of the Mankato (Minn.) Public Library, succeeding Miss Minnie McGraw.

Cataloging and Classification

A. L. A. *Booklist* for May contains a list of the publications of the various state library commissions.

BIBLIOTHÈQUE NATIONALE. Catalogue de l'histoire de France. Table générale alphabétique des ouvrages anonymes. I, Table des noms de personnes. Paris, Imp. Nationale, 1905. 672 p. 4°.

The BOSTON BOOK Co's *Bulletin of Bibliography* for April continues George Watson Cole's bibliography of "Bermuda in periodical literature," and gives Miss Wilbur's usual quarterly "Index to reference lists published by libraries."

CARNEGIE L. OF PITTSBURGH. Classified catalogue. pt. 7. Fiction; with a supplement to October, 1905. Pittsburgh, 1906. p. 1722-2068+98 p. O. 25 c.; postpaid 40 c.

The supplement, listing accessions from July, 1902, to October, 1905, will not be included in the completed volume, which runs only to July, 1902, but will be incorporated in the general printed supplement to the whole work. This fiction section is especially useful as an admirable list of novels, representative, and carefully selected. The annotations are excellent; it is only to be regretted that there are not more of them, and that they do not include indication of recommended order of reading of successive volumes for such writers as Balzac, Trollope, etc.

—List of good stories to tell to children under twelve years of age; with a brief account of the story hour conducted by the children's department. Pittsburgh, 1906. 32 p. O.

Of much value to children's librarians, not only in the carefully prepared references for beautiful and delightful stories, but in the simple practical suggestions to the story teller.

DUQUESNE, Pa. Carnegie F. L. Books for mill men: special lists no. 1, April, 1906. 38 p. D.

An extended list, classed and annotated.

INSTITUT INTERNATIONAL DE BIBLIOGRAPHIE.

—The *Bibliographie de Belgique* has still further identified itself with the rules of the Institut International de Bibliographie. Its form has been so arranged that the titles can also be struck off on cards of the American size (125×75 mm.), and the institute offers these title cards at an annual subscription of 20 francs, plus postage. . . . The number has been moved to the end of the title, . . . at the left, in heavy type, is the name of the author (repeated in the title), to the right, in heavy type, the index number

according to the Decimal system; then, at the beginning of the first line of the title, the date, again in heavy type. It cannot be said that this typographical arrangement makes a very satisfactory impression. The Decimal index, with its four to eight or even more figures, is obtrusive, and the date as well. . . . Full names are not given, and anonymous works have no catchword. Nevertheless, the experiment is interesting, . . . even if only to show that it is not well to try to kill too many birds with one stone. — *Zentralb., May.*

LIBRARY OF CONGRESS. Publications, spring, 1906. [Washington, 1906.] 32 p. D.

Lists the publications of the library since its removal to the present building in 1897, and several now in press. Interesting indication of the extent and variety of the library's bibliographical work.

MOULD, Richard W. Wanted — a classification: a plea for uniformity. (*In Library Association Record*, April 15, 1906. p. 127-147.)

Points out the great variety in classification practice; "out of 35 libraries in various parts of the kingdom from which replies have been received, 12 are classified on the Dewey system without modification, 9 on a modified Dewey scheme, 3 on Brown's plan, 1 on the Quinn-Brown, 1 on Cutter's system, 2 on home made systems, and 5 on what are described as 'rough.'" Characterizes the various systems, and gives opinions of librarians concerning them. Mr. Mould points out that these extracts indicate "that the Dewey system holds the field," but in conclusion submits a suggested scheme of his own, based on 99 sections "logically arranged in the natural or evolutionary order," capable of subdivision into 26, symbolized by letters of the alphabet, and of further subdivision into 99, with indication by numeral. Thus "between division 1, section A, sub-section 1, and division 99, section Z, subsection 99, you would have more than a quarter of a million places, or to be exact, 254,826, with a notation no more complex than 99 Z 99."

NEW BEDFORD (Mass.) P. L. is printing serially in its *Monthly Bulletin* "Manuscripts of local interest preserved in the library."

NEWCASTLE-UPON-TYNE (Eng.) P. Ls. Catalogue of fiction (in English) in the Central Lending Library; ed. by Basil Anderton; comp. principally by J. Walton and W. H. Gibson. Newcastle-upon-Tyne, 1906. 17+295 p. O.

Records 6775 v. (or, excluding duplicates, 4293 separate works) in single line entries, running across the octavo page. The "present book number" is given in the left hand

column; "future book number" in right hand column, and users are instructed to use only the former until duly notified. The effect of the page is thus somewhat confused, and there is great wastefulness in the practice followed of giving a full line entry to every duplicate. The extent of this is indicated by the fact that there are 170 headed line entries of "*Another copy*" under Dickens, 120 under Braddon (whose record fills four pages), 120 under Lytton, 104 under Mrs. Henry Wood, 96 under Lever, 80 under Marryat, and so on; these duplicates are also entered in the same way in the title catalog. The catalog is prefaced by a chronological table of authors, arranged in quarter-century periods according to dates of birth, which it is thought may lead readers to observe the historical development of the English novel. In a preface Mr. Anderton refers to various changes in arrangement—the restriction of indicators to fiction and juveniles, the adoption of a new system of book numbering, and revision of the entire stock of fiction. As soon as the new book numbers are fully available, it is intended to print a second edition of the catalog, omitting the left hand column of numbers.

PEABODY INSTITUTE CATALOG. The issue in 1905 of the last volume of the "Second catalogue" of the Peabody Institute Library marked the completion of one of the most notable cataloging enterprises undertaken in this country. The final volume contained an "Explanatory postscript," summarizing the plan and scope of the work, which is of interest to all concerned with cataloging work. The first catalog was begun in 1869 and its first volume was issued in 1883. The printing occupied 12 years, the fifth and last volume appearing in January, 1902. The catalog is described as a dictionary catalog of semi-synthetic character, with both alphabetical and classed subdivisions under countries, cities, authors and subjects; its minute analytical character is well known, and it is widely used for reference and as an example of this kind of work. "The largest and most exacting labor in the preparation of the catalog was the analyses of the collections of the Greek and Latin fathers of the early Christian Church, edited by the Abbé Migne. Taken together they formed 389 volumes, and it is estimated that about 10,000 references were copied from them. After being arranged under the general title these were distributed throughout nearly every letter of the alphabet, and the amount of research required to secure the correct names of the monks and others who edited and annotated these writings was so large that more than a year was required to correct and prepare them for printing. Next in extent may be mentioned the long series of the *Memoirs of the history of Gaul and France*, from before the time of Charlemagne to that of Louis XVI., such as Bouquet, *Recueil des historiens*

des Gaules et de la France, 23 volumes, folio; Buchon, Petit et Monmerqué, Guizot, Leber, Salgues et Cohen, Michaud et Poujoulat, and Michelet, *Collection des mémoires relatifs à l'histoire de France*, 276 volumes, 8°. Besides these there were hundreds of volumes relating to the French Revolution. Other extensive works were those of Graevius, Gronovius, and others, *Thesaurus antiquitatum et historiarum Italiae*, etc., 78 volumes, folio; Muratori, *Antiquitates Italicae*, etc., 38 volumes, folio; Pertz, *Monumenta Germaniae historica*, 31 volumes, folio. A large and significant assemblage of the Anglo-Saxon and Early English classics were, also, treated in full analysis, as were likewise, the monumental remains of the Romance literatures. Nor were the Greek and Latin classics omitted. Many of the academies of science and letters were represented by their long series of memoirs and transactions; from these were copied the titles of many thousands of articles, and only, for want of assistance and time, the scientific divisions were deferred. The invaluable historical collections, published by the Master of Rolls, and by the Record Commission of England, as well as the official documents of the British Parliament were treated in a similar manner, and supported by cross-references." The five volumes of the first catalog covered 5015 pages and included 357,429 references. Immediately upon its completion work was begun upon a continuation, which, after ten years' labor, was completed last year as the "Second catalogue," in eight volumes, covering 5422 pages and 300,535 entries. "It is the natural successor of the first and follows mainly the same fundamental lines of development; but differs therefrom in placing at the head of all comprehensive subjects an alphabetical index of their divisions. Arrangement of contents of collections was changed so as to place the references under subjects instead of the names of authors. An especially distinctive feature of this catalog may be seen in the large body of scientific literature which it contains."

The SALEM (Mass.) P. L. *Bulletin* for May devotes its special reading list to "Some good novels."

VICTORIA P. L. OF WESTERN AUSTRALIA. Catalogue of books. pt. 7, [Jamieson-Lytton.] Perth, [1906.] p. 485-564.

This part concludes the first volume of the catalog, covering A-L. With it is sent out title-page and prefatory pages, including synopsis of the scheme of classification and notation. This is a fixed location system, of 25 main sections, indicated by letters, with numeral indication of case, shelf and book. The title-page gives the name of the library as "Public Library of Western Australia," the word "Victoria" having been removed by resolution of the library committee in April, 1904. The catalog, when complete, will record about 65,000 v.

Bibliography, p. 55-60; thesis for the doctorate, medical faculty, Berlin University, 1905.

SURGERY. Helfreich, Friedrich, comp. Literaturübersicht zur geschichte der chirurgie. (*In* Puschmann, Theodor. Handbuch der geschichte der medizin. 3 v. Q. Jena, 1902-05. v. 3 pref. p. 11-32.)

TIME (*in music*). Prätorius, Ernst. Die mensuraltheorie des Franchinus Gafurius und der folgenden zeit. Leipzig, 1905. 55 p. O.

Bibliography: p. 2-8; Berlin University theses for Ph.D. degree.

TISSUE. Neumann, Rafael. Die transplantation nicht Vöstartiger gewebe. Berlin, 1905. 29 p. O.

Bibliography: p. 27-29; Berlin University theses for Ph.D. degree.

TUBERCULOSIS. Isaakowitsch, Predrag. Der heutige stand der frage über die verwandschaft zwischen rinder- und menschen-tuberkulose. Berlin, [E. Ebering], 1905. 34 +2 p. O.

Bibliography, p. 31-34; Berlin University thesis for the doctorate, medical faculty.

UNIVERSITIES. Paulsen, F. The German universities and university study; trans. by F. Thilly and W. W. Elwang. N. Y., Scribner, 1906. 1 p. l., v-xvi, [2] 451 p. 23cm. Bibliography: p. 437-441.

VIOLIN. Bonaventura, Arnaldo. Saggio di una bibliografia del violino e dei violinisti. (*In Rivista delle Biblioteche e degli Archivi.* 17: 1, gennaio, 1906, p. 1-9.)

Anonymous and Pseudonyms

The following are supplied by Library of Congress, Catalog Division:

Golder, George A., 1875-, is author of "Modern shorthand."

Hetterich, Gustave J., 1868-, is author of "The polite pupil."

McCormick, Frank Joseph, 1871-, is author of "Mr. Durbar's toast."

White, Herbert Brigham, 1874-, is author of "Robert Ellsworth, his book."

Notes and Queries

VOLUMES OF "MONTHLY WEATHER REVIEW" FOR LIBRARIES.—The editor of the *Monthly Weather Review*, Washington, D. C., would be glad to hear from any librarian who wishes to complete his set of *Monthly Weather Reviews*. The Weather Bureau has a few copies of back volumes and numbers, and wishes to distribute them as discreetly as possible.

WISCONSIN BROADSIDE FOR DISTRIBUTION TO LIBRARIES.—The Wisconsin State Historical Society Library has come into possession of a number of duplicates of a newspaper broadside (printed on both sides) published 15 years ago, arraigning the Wisconsin legislative apportionment act of 1891. It was the precursor of the famous Wisconsin "gerrymander" suits of 1891-92. It is an able document from both an historical and a legal point of view, and has much more than local value to any large reference library collecting material upon political science. Librarians wishing this broadside will be accommodated until the supply is exhausted.

R. G. THWAITES,
Madison, Wis.

INFORMATION DESIRED REGARDING "LONDON PUBLIC LEDGER."—I should be glad to receive information regarding the *London Public Ledger* of Jan. 4, 1775, and would ask any librarian or bibliographer who knows of its existence to communicate with me. This paper contains an important article on the "Riot at Annapolis, Md., Oct. 19, 1774." I am informed by the *Ledger* office that their files do not run so far back, and they write me from the British Museum that they neither have nor know of a copy.

RICHARD D. FISHER,
1420 Park ave., Baltimore, Md.

BULLETINS ON BOOK BUYING.—Bulletin 25 (May) of the A. L. A. committee on book buying is devoted to extracts from an editorial on "The second hand booksellers' sources of supply," in *Publishers' Weekly*. April 7, giving suggestions for purchase of books by auction and otherwise. The advice given, it is pointed out, is valuable to librarians as well as to dealers. The bulletin closes with the following note: "London dispatches to the daily press state that the *London Times*, in connection with its circulating

library scheme, is offering for sale 600,000 nearly new books at about 10 per cent. of list price. Ask your importer to look into this."

"NEW SHAKESPEAREANA" AND PERIODICAL AGENTS.—We issue a quarterly, *New Shakespeareana*, at \$2.50 a year. This morning we got a letter from a library that had paid us promptly for five years that sum in advance, signed by a new librarian, asking us why we had raised our price for subscription. With the naïveté of a newcomer he lets the cat out of the bag. He says that the library's books show that it has been paying different sums per year for our quarterly—\$2.35, \$2.25, and even \$2 per year. The explanation is, of course, that, in their eagerness to get business the "periodical agents" are deliberately losing themselves money, trusting to make good in some other direction. If the libraries of the United States are aware of this sort of thing (which we cannot believe) then, of course, they are putting themselves in the hands of persons who may be watching for opportunity to recoup on them, in some lapse of attention on the library's part, and ought to be warned by somebody to look sharp.

It may be thought remarkable if we get (as in this case) our full subscription that we should concern ourselves sufficiently to call attention to the matter. The explanation is this: We are only distributors of the publications of the Shakespeare Society of New York. Like all learned societies, said society only issues its publications to parties interested enough to pay for them. It has never gone to the trade, and would consider it beneath its dignity to pay commissions to anybody, which would look like an effort to force its publications upon a market, and is, in short, impossible. The society does circularize those whose subscriptions it cares for, and—now and then—to reach subscribers whose addresses it has lost, it inserts an announcement in the *Publishers' Weekly*. But an examination of such announcements will show that these are invariably directed to subscribers and not to the trade or to general purchasers.

The society, therefore, proposes to do what it can to keep its publication records appropriate to its claims. In one solitary case—the case of the Bankside Shakespeare, a unique edition in 21 volumes, of which but 500 numbered sets were issued 20 years ago and of which there have been no sets for sale for at least 18 years—the society was unfortunate enough to lose control of a certain number of sets, and these were ruthlessly handled by certain "book slaughterers." But the society has done all in its power to locate and regulate the prices of—if it could not repurchase—these, and has omitted no opportunity of making this explanation. It is therefore our instruction to endeavor to stop underselling on the New York Shakespeare Society's quarterly *New Shakespeareana*. We therefore appeal to the LIBRARY JOURNAL

to assist us. The matter is really of more interest to libraries than to ourselves. For *New Shakespeareana*—like all the publications of the New York Shakespeare Society—is published from a fund contributed by members of that society and nobody is solicited to subscribe for it, except as above—and he or she is not asked a second time.

THE SHAKESPEARE PRESS,
Westfield, N. J.

Humors and Blunders

READER—Can you tell me how to find the name of an author in this catalog?

LIBRARIAN—The catalog is arranged alphabetically. Whose name do you wish to find?

READER—Maree Corell.

LIBRARIAN—We have none of her books in the library.

READER—Gee! What kind of books do you have in this library, nothin' but business books?

A SAD REVELATION.—Mr. Henry James' discovery that the Boston Public Library is "practically without penetralia" comes with crushing force, just at this time, when our faith in sacred things is being so severely tried. But though the mind reels, yet hope still mounts. Is it not possible that the walls of the structure are sufficiently strong to permit of the addition of a few penetralia of modest dimensions? We seem to recall, without vainglory, now, that the Boston Public Library is the building for which a most magnificent frieze has been getting itself made. All this will seem pretty trivial, without suitable penetralia to set it off. We shall have an unpleasant spectacle, indeed, if a community of cultivated taste, who have set out in good faith to hang the expense, must needs end with having to hang their civic head.—*Life*.

LIBRARY CENSORSHIP.—The following letter which appeared recently in the *New York Mail and Express* is interesting in its indication of popular conceptions of library affairs: "To the Editor of *The Evening Mail*:

"Sir—Some time ago I went to the Carnegie branch of the ——— Public Library, and asked for a book called 'God's good man,' by Marie Corelli. I was informed by the young woman in charge that the library did not keep her works. On my asking 'Why' I was told they were not considered 'Proper,' and could obtain no other answer.

"On speaking to some one on the subject they told me that they had been informed at the library that the Pope of Rome had seen to it that these books should not be allowed to be in any public library in this country. Will you kindly tell me through your much-read paper if this is a fact, and, if so, what has the Pope to do with this country?"

"AN AMERICAN WOMAN."

SCENES AT NARRAGANSETT PIER, JUNE 29-JULY 6, 1906.

THE LIBRARY JOURNAL

VOL. 31

JULY, 1906

No. 7

No previous conference of the American Library Association has shown so clearly the extent and growth of library development as the Narragansett Pier meeting just closed. Though the attendance numbered less than at Magnolia four years ago, it reached a total of over 900, and in its general character it was more representative of types of libraries from every part of the country than was the Magnolia meeting. Crowded though the week was with general and special sessions, with meetings of allied organizations, library school reunions, association and other activities, the general impression that remains is one of systematic and orderly work. The program was of unusual interest, both in the technical subjects presented and in the number and distinction of the speakers from outside of library circles, and President Hill's high executive qualities were revealed to a marked degree in his handling of the sessions and in his compact presentation of business. It may be fairly said that this was the best conference the Association has yet held, bearing witness to a year of development and vigorous effort. The reports of committees especially were notable for their interest and freshness of tone. The secretary's report pointed out the new paths now opening before the Association, and paved the way for the announcement that sufficient funds are available to permit the establishment of permanent headquarters and that steps to accomplish this will be promptly taken. So far as headquarters plans were outlined, they indicate that Boston will for the present be continued as the location, in connection with the work of the Publishing Board; and the formal appointment of Mr. E. C. Hovey in charge of the headquarters is recognition of his work in raising the funds that have made this step possible. The resignation of Mr. Jones from the post of treasurer, which he has held for nine years, was received with sincere regret, and it is only fitting to express here the appreciation that all members of the Association feel for his painstaking services and continued devotion to the best interests of the Association.

A NEW line of policy for the Association was indicated in a recommendation of the Council approving plans for district meetings to be held under the auspices of the A. L. A. in parts of the country which are not largely represented at the annual conferences. As an experiment it was suggested that such a meeting should be arranged during the coming year for the Southwest, including Texas, Oklahoma, New Mexico, Arizona and the adjacent country, to be presided over by a representative of the A. L. A. and to be held, it was hoped, with the co-operation of the Texas Library Association. There seems no question that by some such method as this the influence of the Association may be most helpfully extended in states where libraries are developing with a rapidity that is not generally recognized. In Oklahoma, for instance, library development has been marked, largely with the aid of the women's clubs, and elsewhere in the Southwest some means of bringing the national association into closer relations with those who are working for libraries is extremely desirable. The A. L. A., as has been said before, is the *American* library association, with a membership that reaches over the entire country; its interests concern every library, however remote it may be from the centers of library activity. The meeting a year ago in Oregon showed how broad is the field before it, and how fertile; and the conference just closed showed still more clearly how many and varied are the demands that the Association will be called upon to supply as it grows in numbers and in activity.

INDIVIDUAL branches of library work were represented at the conference to a degree hitherto unprecedented. There were, of course, extended meetings of the affiliated associations—the National Association of State Libraries and the League of Library Commissions. The Bibliographical Society of America held several sessions; and two new organizations were formed—an American Association of Law Librarians and a Library Copyright League, the latter as the result of

the call previously issued by Mr. Cutter. There was talk of organizing additional sections of the Association and of still further differentiating branches of library work. How far this process of splitting up should go is a question. For example, it would seem as if the law librarians might find their interests fully represented in the National Association of State Libraries, or even as a section of the A. L. A., without having recourse to a separate organization of their own. There is already a considerable framework of library association machinery, and there are distinct advantages in concentrating interest and effort in a few strong organizations, rather than in multiplying agencies all working toward the same end and differing very little from one another in their interests and membership.

THAT the long-expected "Portrait index" is now passing through the press and will be published during the summer was a welcome announcement made at Narragansett Pier. It will make a volume of over a thousand pages, to be issued for the A. L. A. Publishing Board by the Library of Congress, which will sell copies practically at cost price: The "Portrait index" is one of the library aids long ago suggested, and discussed in earlier volumes of the JOURNAL; its actual preparation, under way in the Publishing Board for the last four or five years, has been based on material supplied by co-operation, and has involved time and labor on the part of the editors that can only be appreciated by those familiar with the minutiae and difficulties of similar bibliographical undertakings. Whatever may be the shortcomings for which the editors frankly ask indulgence, there can be no question that the "Portrait index" will be a tool of the utmost usefulness to all the larger libraries and to many smaller ones, as well as to users in other fields, and we feel assured that its value will be more than sufficient to warrant its cost in time and money and to prove that in its preparation the Publishing Board has performed a service of great importance to all libraries.

AN important step forward in national cataloging has been made by the Library of

Congress through the Copyright Office, which with the first week of July begins a new series of the *Catalogue of Copyright Entries*, in which the material on the Library of Congress card is given in full as the basis of the entry. This full entry is supplemented by an index, alphabetical by author, giving the card number, which furnishes an easy clue to the full entry. It is proposed to cumulate this index, on just what plan is yet to be determined. The actual type used for the card is, we understand, re-used in this catalog, so that the card catalog of a library may now be supplemented by a chronological weekly record, on which books in the library may be indicated by shelf number or otherwise. So far the support of the catalog from libraries has been very meager, but the new form should commend the publication for practical library use, and it is to be hoped that it may receive increasing library support, although it cannot be expected that this issue, any more than that of the catalog cards, may be made self sustaining. It is not improbable that this publication may cause a considerable modification in the private enterprises now covering this field, as foreshadowed in the preface to the first volume of the American Catalog, 1900-04.

THE death of Henry L. Elmendorf will be learned with regret by all who have known his admirable work as librarian of the Buffalo Public Library, and especially by those who have known also of his brave battle for life. Indomitable will alone enabled Mr. Elmendorf to continue the struggle for so long, and the last year of his life was a wonderful illustration of the way in which the spirit may hold the frail body to its task. As librarian of the Buffalo Public Library from its reorganization as a free public library, Mr. Elmendorf proved himself a vigorous executive, broadminded and original; and he has made that library an example to others and a center of good work in its community. In all his work and interests he had the help and inspiration of his wife—herself one of the women who have helped build the public library of to-day—and to her in these sad days will go out the sympathy and affection of her many friends in the library world.

PRACTICAL BIBLIOGRAPHY: NOTES ON THE MAKING OF PRINTED BOOK LISTS*

By AUGUSTA H. LEYPOLDT, *Editor "Publishers' trade list annual index," etc.*

FROM my earliest childhood I was "seen and not heard" among many wise men of great learning, driven to this country by the historic German upheaval of 1848. My father and uncle then controlled the foreign booktrade in New York, and to their stores all literary exiles drifted and were warmly welcomed and hospitably invited to Sunday dinners and holiday festivities. It was a desultory and most erratic education to hear these theorists, idealists, reformers, scholars, and authors give of their best to one another. I became a voracious reader, but the names of authors and publishers, sizes, dates, and bindings never occupied my mind for a moment — what was on the next page was the one absorbing item of interest.

After thirty-three years of such desultory, unmethodical mind training fate decreed that making book-lists should be my life work. Until then I had only made the paste needed in old-time list-making and fed the workers gathered often at my home, because there were found more space and quiet than in the place of business. For many years bibliography had surrounded me, but I had such a high conception of the science that I never dreamed I could learn to write a title.

Every list I have yet been called upon to make has been needed for some definite, practical purpose, to be finished in a given time, and here has been my one strength, for like little Phœbe in Hawthorne's "Seven gables," I "received [also] as exclusive patrimony the gift of practical arrangement."

These personal details are given merely as the quickest way of showing how totally unfitted I was for the work of a skilled, scientific bibliographer, when by force of circumstances practical bibliography was thrust upon me. I had been forced many times before to turn my slim and most unbalanced education to heterogeneous tasks, and had won the reputation in my family of being born for emer-

gencies. And where can more emergencies arise than in practical bibliography? Every gift of every kind, every grain of information, every lesson learned in the dear school kept by Experience, may be used with advantage; but the two factors that tell more than all others in the peculiar demands of practical bibliography are knowledge of human nature and good health.

The first practical thought in cataloging and list-making (bibliography by courtesy) must go to the constituency for whom the special work is intended. If it is to be a practical working tool for booksellers, for instance, the details of authors' names and pseudonyms, popular references and cross-references, entries of titles under catchwords instead of accurate title, must all be considered. Book-trade bibliography has claimed most of my attention. The American bookseller is not learned, and he needs to get at the information he seeks as quickly as possible. A customer will ask for Miss Braddon's "Infidel." There is no need that he should turn to Braddon and there find "*See Maxwell, Mrs. M. E. B.,*" and turn again. If he could forget who wrote "*The history of David Grieve*" he would probably turn to "*David Grieve*," forgetting accurate title, and he should find it there as well as under "*History of*." And under subjects he must find the subject as it occurs in the title, not under a classification of which his general education gives him no idea. The workings of an average mind must be kept constantly before the cataloger, and he must allow sins of omission and commission that would mean nervous prostration, trained nurses and a possible sanitarium to the true bibliographer.

The next practical thought goes to whether the bibliography under way can be made complete for all time, needing only chronological additions from time to time, or whether the intrinsic character of the list will necessitate entire remaking at intervals no matter how

*Read before New York Library Club.

well made originally. "The trade-list annual index," for instance, must be made new at least every five years if it is to be a reliable index to the books in the catalogs of the publishers, for the books go from one publisher to another and publishers' firm names change or firms go out of business, or books are entirely dropped from the lists. If a catalog can remain valuable, more labor, time and money may be given it. There is not the same great need of speed in publishing, for it will not lose market value by every day's delay. But weekly, monthly, and annual lists of current American books must be compiled on time, keeping in mind always the printers' work and time, and many things must be taken for granted regarding details that ought to be verified, but in which a chance error will not impair the value of the catalog, provided it is published on time.

These considerations of constituency and finality or recurrent remaking seriously affect the next practical thought, which is given to necessary finances for the undertaking. How much will the plan outlined cost? How much can the work bring in if supported by its constituency? If estimate of cost is outrun, will there be any fund to fall back on, or must the work stay within the estimate? If the latter, a closer figuring is needed and the plan must be remodelled so it cannot possibly outrun the means. This must be carefully done before beginning, and not in the middle, when remodelling will make the work inconsistent or cast it wholly out of perspective and give just cause for severe criticism.

At this item of cost the ways of scientific and of practical bibliography part. It has led to more invention, makeshifts, originality and hard, grinding work than any other one consideration. Some of these inventions will be described further on.

Having decided on character, method and means for the work, the next practical thought goes to the selection of help. And here a book might be written that would need classification under almost every branch of human learning. After working for many years with trained and untrained help (all women) I can find no standard of comparison to make intelligent criticism and decision. The worth of the help in practical bibliogra-

phy does not rest in the training or inexperience, but in personality, and this is common to both. In broad general lines it may be said trained help is slower, the trained helpers are less healthy and lose more time through illness, and naturally their minds are so staggered by some of the makeshifts proposed, that they spend valuable time grieving before they begin "to do it all wrong," as they say. Inexperienced help is more obedient, quicker, and works harder, but needs more watching and always keeps the mind of the master in fear of egregious blunders. The great trouble here is that the help the means will buy, as a rule, lacks general education and doesn't know that it doesn't know, and therefore does not go to proper sources to find out.

A case in point occurred in compiling the index to the "Annual American catalog" for 1895. In reading the proof I found classified under Medicine:

"Parry, Edward Abbott, *M.D.* Katawampus: its treatment and cure. \$1.25. Macmillan." Katawampus seemed a new and strange disease, and I thought it would be well to ascertain whether it affected the head or the feet and make some added reference. The book was sent for and turned out to be a delightful juvenile. Katawampus was bad temper with which a family of children were affected.

Almost any girl, trained or untrained, provided she has amenable personality, can be put to use in practical bibliography. Each one must be studied and her talents used in the right place. Here the trained hands make most difficulty. They do not like to go from one kind of work to another, nor even from one seat to another. One girl is a good alphabeter and poor proofreader; one classifies well, but is inaccurate in writing titles; one writes quickly and is accurate, but cannot alphabet at all. The trained help did not do the best proofreading. They are so intent on items of literary importance that they too often overlook little flaws. The best alphabeter I ever had was an illiterate expressman's daughter, who separated titles and divided them by letter with both hands, worked with fabulous quickness and almost without error. Her mind was never distracted by her material, for she had not the faintest idea what it was all about, and worked only as a machine.

I grew very much attached both to the trained and untrained. We were forced into close quarters and all learned to be amiable and not to mind little things, and all absorbed much unorthodox instruction from a practical bibliographer who learned more than they suspected from them.

Practical thought, after it has gathered help, must be given to a careful weighing of plans for saving work. Nowhere is it possible to waste more time than in clever inventions for saving it. These inventions generally come from clever brains which have thought it all out theoretically and have made neat-looking schedules of plans on patient paper. The planner has too great a brain for the practical, physical work of handling, boxing, alphabetizing, or details generally. His little neatly drawn schedules of plan, figurings of time, systems of boxing, colored stationery, use of material that has served before, etc., etc., are all very clever, but—they won't work. The operation was highly successful, but the patient is dead. The practical must be kept in mind. What saves one person's time wastes another's, and to be truly practical you must make use of every individual peculiarity of every individual who does your detail work. I have seen hours wasted in keeping a schedule of time day by day, showing how many titles could be written, how much proofreading done, how much work printers could do, when pages would go to press, etc., etc. No one could possibly judge these details ahead, and the little theoretical schedule, so beautifully kept, and the obstreperous, untrained, practical details managed to separate by almost six months before the work was done. Intelligent help will generally contrive a practical time-saving scheme for the special work with which it is entrusted. There is no time-saving scheme that works better than to let the help have all the liberty possible in details. This promotes interest and spurs ambition and vanity—all useful qualities in practical bibliography. It is well to get on with as little help as the time allowed makes practicable. Every new hand increases the practical editor's anxiety and responsibility.

"The index to the Publishers' trade-list annual" called for more practical bibliography in a given time than any work with which I have

been connected. This was an index to the catalogs of between three and four hundred publishers, which would be bound together and must be published in August, 1902. The publishers would not have their catalogs for 1902 ready until the spring of 1902. The only practical plan was to index the catalogs for 1901 and trust to the publishers to send in their lists of new books as soon as they were sure of them themselves. In October, 1901, the work was started. All the force of the office was needed for the regular routine work, so that wholly new help must be brought in. Among the time-saving schemes suggested for this work was to persuade the publishers to index their own catalogs on uniform slips provided by our office. Several publishers kindly consented to do this for us, but with two exceptions they turned in absolutely useless material. Through Dr. Billings I obtained three trained helpers, and three untrained girls who needed work were also taken. Besides this staff kept in the office, many catalogs were given out to be done at home, as speed was the greatest of all requisites. I trust there are no publishers here present, for it must be stated that the greater part of the catalogs of publishers are wonderfully made, to say the least. Many were not in any alphabet, and when a title was to be verified it was almost impossible to find it without reading a catalog almost through. Sometimes it was necessary to submit to the publishers questions beyond the puzzling of practical bibliography. When these questions were made simple enough for babes and sucklings, they often conveyed no idea to the reader, and answers wholly wide of the information sought were received nine times out of ten. One new publisher who had been asked how many books he would have in his list said he had published 25,000 books. He naturally meant *copies* of about 18 or 20 books. Much dead wood was found in the catalogs, and many publishers knew nothing of many titles found in their lists. If ever a catalog was shaped out of chaos, it was "The index to the Trade-list annual." It ran to 33,260 entries, which were kept in 18-inch boxes requiring constant realphabetizing and shifting of contents, as the new material came to hand helter-skelter day by day. On June

15, 1902, we were obliged to begin to print, and the last "copy" could not go to the printers until August 8.

The index was intended wholly for booksellers and was made on the simplest of plans. In alphabetizing under Bible, Shakespeare, United States, and other large subjects, a strict alphabet was followed, as no two minds work in the same way for subdivision alphabetizing, and the average bookseller is anything but a learned man. With so many hands to do the work the comparing and proofreading had to be done by one person, or there would have been worse jumble of styles and inconsistencies than the index now shows. Like Topsy, it "just grew" from day to day, for every day brought new difficulties and emergencies and utterly unforeseen and unpreventable quandaries. There was one satisfaction in the work. Through the whole year there was not an unpleasant word exchanged between the practical bibliographer and the staff. Two of these worked under the disadvantage of seriously complicated love affairs, but none of them ever suffered from Katawampus.

The practical bibliography of the United States has been done chiefly in the office of the *Publishers' Weekly*. The first and greatest work was "The American catalogue," dated 1876, which was almost five years in making. The history of that catalog cannot be told on an evening devoted to pleasant sociability. It is written in blood in the annals of American bibliography. The catalog aimed to include all books published in the United States which were in print and for sale to the general public on July 1, 1876. Where and what was the material for such a catalog? Roorbach and Kelly's valuable catalogs had been given up. Roorbach was dead and Kelly disheartened by the lack of support. Trübner, of London, also was showing no sign of reviving his admirable "Guide to American literature." The impracticability of reworking this previous bibliographical material was soon realized, and it was decided to rely entirely on direct information from the publishers. Names of publishers were gathered from every discoverable source, and circulars and letters sent them over and over again. And when lists were gathered after much hard work and at great expense they were found incomplete and in-

accurate beyond all imagination. The collecting and verifying of this material necessitated correspondence of appalling magnitude, and the practical bibliographer went through agonies of mind before he was finally forced to accept the records of the publishers as authoritative. The books on record in the first "American catalogue" were traced to about 900 publishers, and they necessitated upwards of 70,000 entries. Less than 25 of these entries could be made from the books themselves. Imagine the state of mind of the bibliographer! The work was begun in 1876, but it was 1880 before it was finished, and it had outrun all estimates of time and cost. It cost \$27,622.46. In December, 1886, it had all been sold except a few copies of the subject volume, many sets at double the original price, and it had brought in only \$27,321.21, a deficit of \$301.25.

At five-yearly intervals volumes of "The American catalogue" have been published, each one of which has had a history worth telling, and each one of which has led to new discoveries in practical bibliography. In 1886 it was decided to bridge over the five-yearly intervals between the "American catalogues" by "Annual catalogues" containing the full "weekly records" of the *Publishers' Weekly*, with descriptive notes in one alphabet and an index by author, title and subject, giving the date of publication of the title, which was approximately the date of publication of the book. None of the material of the records had been kept in type when the 1886 "Annual catalogue" was planned, and practical bibliography had to step in with a vengeance. The cost of resetting the material was prohibitive, and Mr. Growoll, the managing editor of the *Publishers' Weekly*, turned practical bibliographer and invented an ingenious scheme. He cut up the records for the 52 weeks of the year, alphabetized them and pasted them on cardboard cut to the size of the catalog page. This material was then photographed on a gelatine plate by a lithographic engraving and printing company and the cost of metal entirely saved by printing direct from the hardened gelatine plate. The "copy" for the monthly indexes had been kept, and this was thrown into one alphabet and entirely reset for the catalog.

In 1887 and 1888 Mr. Growoll again devised

an ingenious plan, hoping to give a more finished outward appearance to the annual catalogs. The "weekly records" were electrotyped from week to week, each title sawed apart and alphabeted, and then these titles were tacked through provided perforations on wood-blocks the size of a page. The practical work on this plan was staggering, and Mr. Growoll each time did it all with his own hands.

In 1889 the plan of 1886 was tried again, but the work was done by a better engraving company, and the gelatine plates were electrotyped into metal before being used.

After this a plan was devised to keep the "weekly records" and monthly indexes standing in type at the printers, but this has also proved very costly. Corrections to bring entries into proper relation, and the time of the printer who does this careful work of insertion and alphabeting are great items of expense. The entries of books increase year by year and the support remains about the same. The linotype process now in use is specially expensive, for the smallest correction means a whole line thrown out and reset.

These "Annual catalogues" were published until 1900, making 15 volumes. Then it was planned to save money by getting up only the indexes cumulated from year to year. These indexes give the books by author, title and subject in one alphabet, the author entry giving the date of original entry in the *Publishers' Weekly*. The size given by letter (Q, D, S) shows the book has been received and the *Publishers' Weekly* can be consulted for the notice. When size is given by figure (4°, 12°, 16°) the book has not been received and no notice will be found. Some publishers say they sell out all they publish every year and they do not care to have their books on record. It saves them the trouble of answering letters. Many important books are entered in the "weekly record" without descriptive notes, and to those who do not know the true inwardness of the failure to notice such books, this omission must seem unjustifiable. Do you think a conscientious, practical bibliographer does not mind? We try, we implore,

we urge. We regret such apparent carelessness more than any one, but it seems better sometimes to get even an imperfect record than none at all.

The five-yearly cumulated volume of these annual indexes was published in June of last year at great expense, and it is now proposed again to go back to the "Annual catalogs" with descriptive notices of the books, as the library constituency prefers this style.

A practical bibliographer learns to struggle with every complication, and generally finds a way out of all difficulties but one—the cost of his undertakings. More books are published each year and more and more knowledge is gained in perfecting catalogs. But the supporting constituency does not grow. It is a very serious question how long practical bibliography can hold its own except as a government institution. The great trouble is that the people who need the works produced by practical bibliography also have little money. Bookselling is almost a lost art, and libraries are not rolling in wealth and must practically consider cost. It is against this rock of cost that the ideals and plans of practical bibliography are shattered. With the greatest ambition, the most untiring work, the most earnest desire to make every new undertaking what it ought to be, the most careful study of the latest knowledge available, a bibliographer must fall short of his hopes and dreams. It is discouraging when the spirit is so truly willing and in so many instances so well prepared to battle with the untold intricacies of bibliography, that the practical execution should always fall so far short of the dream dreamed unknown to those who see only the outward, wayward way of a catalog completed by practical bibliography. With a disappointed heart and a most critical knowledge of its shortcomings the practical bibliographer puts his work upon the market. Still, it is better to do something and to keep cheerful about it. Our catalogs and book-lists have been a help to many. If we waited to produce a perfect work we should be like George Eliot's Casaubon, sick in body and mind, with mountains of unused material about us.

REMARKS ON THE ART OF USING A LIBRARY*

BY LOUISE CONNOLLY, *Superintendent of Public Schools, Summit, N. J.*

THE subject of this talk is the art of using a library. I have been carefully trained to speak under topics and subtopics, and I have even been furnished with an elaborate scheme by means of which the logical heads of my discourse may be made patent to the eye by the use of the capital and small letters of the alphabet, and of the Arabic and Roman numerals. So I shall divide my discourse into three parts: How I have used libraries; How libraries have used me; How to prepare young people to use libraries. And I shall beg permission to talk about the second subject first. It contains considerable advice and criticism which I have long desired to give and to make, and for which the present occasion affords a gratifying opportunity.

How libraries have used me. There are certain historic periods which stand out markedly as possessing certain great characteristics. These periods are often separated from each other by what are called periods of transition, during which one can see old things give place to new. In library administration I have lived through a transition period. The library of my childhood, which flourished a certain number of years ago, was markedly different from the library of to-day.

In the first place, the old library was dusty and musty. It had dark and gloomy recesses, into which the librarian poked with a lamp. It exhaled an odor of tanned leather which became agreeable by association, but was at first rather depressing in its moral effect. It was rarely lighted, never convenient; and one always had a feeling that one was invading it, and that the librarian was its keeper.

The library of the present is often architecturally beautiful, is generally sweet and clean, and seems to have been built for the convenience of its users. It would be temerity to say that it is well ventilated, for nothing in America is that, except the sea front and a

few tuberculosis sanatoriums; but it is generally breezy in one sense or the other.

But the librarians have changed more than their libraries. In my youth the librarian was old. He may once have been young, but that period of his career was always shrouded in mystery. He never appeared professionally until age had mellowed, ripened and even withered him. In the second place, he was learned. I am not indulging in contrasts, understand, but in comparisons, which involve likeness as well as difference. Hence, I merely note the fact that the librarian of old was always very learned. I do not think that this impression of mine was due to youth alone. Like most people, I have visited in maturity the old country home where my childhood was spent, and have found all its dimensions strangely dwarfed by the process of time. But, as I remember, all the scholarly old folks believed in the learning of the librarian. His knowledge was wide, well classified, and, though little of it was gained at first hand, not shallow. He bristled with dates, names and figures, and the latest discoveries of the laboratory were his by hearsay. He thought it his business, like Lord Bacon, to make all knowledge his province, and on the rare occasions when he felt doubt of the fact for which you asked he would at least put his finger at once on the proper authority.

Thirdly, the librarian of the past was absent minded. No wonder with such vast realms to wander through that the mind sometimes wandered from the present. He walked about gazing at abstractions with unseeing eyes, and muttering to himself strange lore. When you accosted him, if you could get up your courage to do so, he came back to the present from shadowy realms of erudition. He was the only man whom I ever forgave, in my childhood, for not appreciating my age. He insisted on showing you his watch when you were doing examples in longitude and time, yet he explained problems to you by means of ordinate and abscissa when you were still struggling among the interior angles of a plane triangle.

I am sorry to say that the librarian was

* Part of address before Library Meeting, Atlantic City, N. J., March 10, 1906. Miss Connolly's remarks were delivered from notes, without manuscript, and she kindly consented to write them out from those notes, preserving so far as possible the freedom of manner of the extempore address.—ED. L. J.

mussy. His mental kingdom he kept in order, but the kingdom of things about him was generally in a whirl. I have seen one ancient and able gentleman occupying a chair in a famous library pile the books and pamphlets in behind himself until they literally pushed him from his stool; and then stand in the midst of his work really barricaded from the public, but quite unconscious of the confusion around him.

And, lastly, the old librarian was born. The finger of destiny was laid upon him in his cradle, and he was marked out as a defender of books. He had to be discovered. In those days, when the librarian was discovered the place was made. In these days, so I understand, when a place exists the librarian is looked for. I confess that the older plan seems to me best.

The modern librarian is young; indeed, perennially young as becomes her sex. For the modern librarian, as this audience proves, is largely *she*. She is young; she is cheerful; she is tidy. She wields the duster; she lets in the light, and sparkles in its rays. Curiously enough, in spite of the fact that she is *comme il faut*, she carries with her the distinctive atmosphere of the library; but how changed is this. Time was when I could tell a Methodist by his fervor, a Presbyterian by his cold, calm austerity, an Episcopalian by his assured correctness; but in these days barriers have broken down, lines have disappeared and we have cold Methodists, zealous Presbyterians, and austere Episcopalians. But there are certain professions that carry with them a certain manner. I confess that in my own profession I can generally discover the kindergartner. She is bubbling with mirth. She exhales joy and gladness and an almost exaggerated interest in very small matters. Gradually the professional kindergartner is becoming aware of the exaggeration to which she is inclined, and many of our best kindergartens are run under moderate pressure, but the tendency to exaggerate does exist and betrays itself in the professional manner.

Do not misunderstand me. I have no intention of being jocose over the librarians' professional schools. They doubtless have more virtues and less faults than ours. But it seems to me that many well trained librari-

ans have an air of interest in intellectual pursuits, an air, I should say, combining sweetness and light. They seem imbued with the missionary spirit, which has largely, at least in its sentimental aspects, disappeared from the Christian church; and seem bent on feeding the public with a mental pabulum which will do the public good.

And, lastly, the modern librarian is bred. There may be as many librarians born per thousand or per hundred thousand in these days as in the past, but a larger number is needed to fill the requirements of the present day, and hence the librarian is trained. Indeed, almost anybody can be trained to fill some position in a library. We all, doubtless, remember Dr. John Lord's anecdote of the young lady who recognized Webster as "that great statesman who wrote a dictionary and killed a man." But she could have been a librarian—if you put her into a good school, teach her the Dewey system of classification, give her a round vertical handwriting, and urge her to love her fellow men.

The variety of librarian of the present day may be due to a change in the philosophy underlying library management. The old librarian preserved the books. The new librarian serves the reader. And this is because in the older days we believed that wisdom was great, but that man was a fallen creature; that only by turning to the wisdom of the ages, conserved in libraries, could an ignorant and degenerate modern gain light. Knowledge was the great *product* of civilization, and that knowledge was laid by in books. To-day, we think that the knowledge in the book is but a by-product, and that the intellectual power of the reader is the chief product of modern advanced civilization. Not the knowledge but the knowing is revered to-day.

How I use libraries. The first topic of my discourse was the art of using a library. I confess that I know little about it. An art demands constant practice on the part of him who follows it. Few persons ever use the library so constantly as to make their skill anything beyond the understanding effort of the amateur.

My art has been a simple one. In the first place I choose my library. If there is only one, and I must live in that city, this is easy. But where any prolonged use is intended I

try to go to a metropolis which gives me a choice. I choose the library, of course, chiefly because it contains the books I want. But, other things being equal, I always go to the library with open shelves. Whether I am more suspicious than most people I do not know, but I cannot bear to feel that there may be something concealed in that stack which would just suit my needs, but which even the best librarian has not had the judgment to give me. And I confess, also, that I do not like to acknowledge to a librarian the lowness of my taste. Whatever my library, the chief art which I exert is in my choice of the librarian who is to serve me. I look about for a person combining four qualities: wisdom, gumption, sincerity and good humor. I want wisdom because I am myself lacking in that article; and scholarship is necessary in one who is to supplement my equipment. I once asked a man in a library for the latest monograph on the causes of the tides. He brought me with cheerful alacrity Maury's physical geography, published in 1859. Maury was a great scholar in his day, but this choice did not reflect credit on the scholarship of the librarian.

As to the second quality, gumption, by this I mean that good sense which will know when to help me and when to leave me alone, which will respect my ignorance. I think it is Dr. Crothers who says that every person's mind is either a vast field of knowledge with spots of ignorance, or a vast field of ignorance with spots of knowledge. My own is of the latter kind, and I want tender handling. The librarian should have tact; he should know what to give and what to refrain from giving; he should know what a good salesman knows. The tactful salesman knows what to offer, in what tone to talk, how to advise. So a tactful librarian knows how to discuss the choice of a book.

As to sincerity, I want to be served by a librarian who recognizes that I am at the moment the central figure; that her inclinations, desires, aspirations, and tastes are of no moment to me. I do not wish to be flattered or to be patronized. I want, in fact, a neutral tone in the person who serves me, and above all no affectation. There is no profession which demands so fine a quality of self-abnegation as that of the librarian.

And as to good humor, it is needed by every

librarian who serves me. For I confess that the art that I exercise is not the art of use, but the art of abuse. And I believe I am no greater sinner than most of my neighbors. We all cheat the public library. I take more books than I have a right to, and keep them longer than I should. I impose in every way on the good nature of the library. Now I want the librarian to be good-natured over my many misdemeanors. He must have rules; I will break them; I want him to forgive me. See how beautifully this works in the Christian creed: the law, its violation, forgiveness; the result is a combination of reverence and love. So in the library we should have rules; the violations will take care of themselves; then we should have pardon. The result in my breast, I assure you, is both reverence and love for the institution and its officers.

How to train children to use a library. On this topic alone I am well informed. Last year during my work in the public schools of Newark, in connection with the Public Library at Newark we gave a double training to the school children, tending toward a free use of the library. We desired to create the habit of reading good books and of going to the library for them; we wished also to give the power to use reference books in the reference department of the library.

In order to create the habit of reading, from the first grade upward, the children were given books to keep in their desks which are attractive and easy for them to read. They are allowed to read these books between lessons and after the accomplishment of tasks. They are encouraged to appreciate and discuss them. Secondly, collections of books from the library are kept in the schoolroom for a similar purpose. Thirdly, the children are given books from school libraries to take home and read. Finally, they are introduced to the children's room at the library, where they are prepared to handle books in the stacks and to use a simple catalog.

In order to create power to use the reference library, the steps are carefully graded. In the fourth grade the children are taught to analyze the chapters in a simple text-book, so as to get its meaning. Later they are trained to use the index and contents of the book, then to use the index in each of two or more similar volumes and to make from these

several sources a sequential statement. Then they are given a set of encyclopedias and are trained to hunt down a question, choosing the proper volume, and arranging the material as a sequence. Incidentally, here they learn the sequence of the alphabet. They are now ready to go to the library, where the assistant in charge of this work has a series of some six lessons to give them. They are taught how to use the diagram of the library, and are given an outline of the classification. They are shown how to use the subject and author catalogs. They are given another lesson on the use of cross references, and they are finally trained in the use of Poole's index to periodicals. Each lesson given at the library is outlined in such shape that the teacher or principal who accompanies the class may be able to repeat the lesson. At the end of each lesson is given a practical test in what has been learned, the pupils going to find the volumes, answering certain test questions that are given and receiving credit for the accuracy and speed of their work.

Of course, all this is valueless if the teacher is not sufficiently *en rapport* with the purpose and value of the work to demand that the powers thus gained shall be used in future lessons. But we made a good beginning, and feel that we have proved to ourselves and to several appreciative teachers that all this work can easily be done in elementary schools. The reason for putting it all here is that so large a per cent. of the pupils do not go to the high school and need to make use of this other branch of secondary education. For, in reality, the library is a great secondary school for the country. Librarians are, indeed, my fellow teachers, and I, myself, am a failure as a teacher if the pupils whom I train are not led to your door. What boots it if I teach a child to read if I do not also teach him how to choose what to read?—if the end of elementary education is that the pupils buy yellow-covered books at the corner and pass by the open door of the great university established for their use? Then, indeed, has the public school failed in its purpose.

THE BUSINESS END OF A LIBRARY*

By ANNIE ARCHER POLLARD, *Second Assistant Librarian, Grand Rapids (Mich.) Public Library*

WHAT has business to do with a public library? Is not a library's business the spread of intelligence? And if a librarian knows books, how to record, care for and circulate them, what more does he need? In the days when books for circulation were given out but once a year and reference books were chained to desks, the librarian perhaps had no need of business methods. In the present-day library, however, he needs all the qualifications that any business firm would require in its manager; those that will enable him to meet the patrons acceptably, to deal with the employees of the library efficiently, to meet the selling world whose wares he must buy (from books to cleaning powders) cautiously and wisely. He should be able also to carry out loyally the policy inaugurated by the board, and to co-operate with them in every way so that the library may give the tax-payers value

received, and be to the city government a well organized unit in the whole scheme of city management.

If a librarian shuns, dislikes, or does not know how to meet people, he cannot be in sympathy with them, and therefore cannot plan intelligently for their needs and wants. The attitude of the librarian to his assistants reacts upon the public also, for if he does not keep them contented and happy, with thought for their physical comfort and professional advancement, their discontent will be passed on by them to the users of the library, who will not come unless impelled by habit or necessity. If he buys incautiously he is sure to become a prey to the subscription book agent and all other kinds of agents, who will flock to his library like tramps to the hospitable kitchen door. The valuable time these people consume will be a direct loss to the legitimate work of the library, not to mention the loss to funds which may be involved.

*Read before Michigan Library Association, Battle Creek, June 1, 1905.

The manager of a business should meet criticism squarely, knowing that when met thoughtfully, with a view to determining whether it is merited or not, it will be a wonderful help in growth and improvement. A woman librarian, especially, needs to learn the value of criticism. She is too apt to take it all personally, as a blow from some antagonist directed against her personally, instead of from the public which regards her (and rightly) as its servant, not as an individual, and which regards the library as an institution of its own, and therefore has enough interest to see that it is managed properly. A librarian who spends all of her time avoiding criticism is barely keeping her library going, and will soon find that it is behind in the march of libraries in the spread of intelligence. For a real womanly woman, psychologically made as she is, this value of criticism and opposition is hard to learn. But practice and effort accomplish wonders. However, very few are able to reach the stage where they can enjoy the sound of conflict coming from afar and where they can sniff with delight the approaching battle, as do men generally.

The manager of a business is responsible to its patrons for the mistakes that occur by reason of his careless employees. If a delivery man delivers goods carelessly to the wrong address and they are lost or confiscated in the delivery, the buyer seeks redress from the manager, not from the delivery man. The manager may dismiss or otherwise punish the offender, but to the buyer he must make good. So with a librarian; he should hear and investigate the grievances that arise, for he is responsible for the working out of the policy of the library. He may deal with the source of the trouble, but so far as the patron is concerned the library is at fault, and an apology is due from him—its representative—and reparation as far as possible. A manager of a business sees to it that there is no discrimination in the treatment of its patrons—rich and poor, proud and humble alike. So also in a library a uniform treatment to all with no special favors to individuals helps to keep the public generally satisfied.

That library is fortunate whose librarian is respected as a business man in the business world in the midst of which it is. In this

most ideal of all business callings there should be the highest standard of business ethics. Open dealing, justice, and keeping one's word are as becoming in a library as in a business firm.

The librarian should learn to know whether he is getting value received. He must not only know what books to buy, but of whom, when, and for how much. He should buy with an eye to the benefit of the library solely, remembering that it is the library's interest with which he is intrusted, and that the institution is not a charity organization society for all the deserving poor who come with inferior articles for sale.

In buying, an attitude of skepticism rather than of admiration on the part of the librarian saves much imposition. When a subscription book agent calls, do not be too sure that, although there is a phalanx of editors on the title-page (and some of them well-known men), these have had very much to do with the actual writing or editing of the book. Be slow about crediting the fact that there never were such fine illustrations. They might be from old plates touched up in colors by hand. Also insist upon seeing one or more volumes rather than specimen pages with all the illustrations of the work. Scrutinize the binding for imperfections. Disabuse the agent's mind of the idea that fine leathers are suitable for a library. Look carefully at the paper; nothing is so deceiving as paper, it may not be very good even though it is heavy. If the work is encyclopædic in character turn to some subject familiar to you. It may be you can find an inaccuracy with which to floor your interviewer. Tell him you are sure the price is too high, and remind him of the fact that subscription sets are constantly being offered at half or less than half price by purchasers who find the work of no value to them. Do not inform him of persons who may possibly buy the book, if you value keeping your friends.

Here again, in the librarian's connection with various dealers, the feminine and personal relations should not enter. A business-like demeanor, dignified and courteous, which does not allow familiarity, should be striven for. The social element also should be eliminated from business transactions. All ap-

proach even to a private understanding with a dealer before the board has a chance to pass upon matters should be avoided.

The board of directors expects a manager to carry out its policy loyally, not mechanically, but putting into it all of his genius. The rulings of the board may be at times disappointing and in opposition to the ideas of the librarian. The wisest course for the librarian then is to wait patiently, bringing more light to bear upon his position. It is hardly becoming to make a difficulty over a difference of opinion. Library boards are like our relatives; we must love them, at least we must learn how to get along with them. If we cannot, we may as well move along.

The librarian should be allowed by the board to be in reality its business manager, to be the one who actually does the business, gives out the orders, signs the contracts, and receives the goods. The librarian is in the best position to see that contracts for work, supplies, material, etc., are properly carried out. If he knows nothing of the terms except through a third person he is not in a good position to insist on the proper filling of the contract. If both board and librarian attempt to buy, confusion is likely to occur. If the librarian is allowed no part in business transactions he becomes extravagant and incompetent, like the housekeeper who has nothing to do with the actual handling of money for her household. All bills, claims, etc., against the library should be sent to the librarian for investigation and by him passed on to the board.

The librarian should arrange all details for board meetings. Members of the board should not be asked to take charge of any of these routine matters. They are busy men whose advice alone is worth much if reckoned by money value. The librarian should be ready with accurate information of work done, statement of condition of funds to date, etc. This is the time to get the approval of the board as to further important expenditures and their sanction of any change in management. The success of this board meeting and the regularity of the attendance of the board rests largely upon the shoulders of the librarian. If there are no reports ready, no plans to discuss, members will soon lose their interest in attending.

The librarian should keep records of all business transactions, so that their history can be looked up at any time. The treasurer of the board or the city treasurer may have charge of all funds and see to all payments, in which case he will probably desire to keep all receipted bills. The librarian, however, should have in his office some equivalent of the claims allowed, so that he may know just what has been spent and what is still on hand.

Statistics carefully kept are most useful. If month by month a gain in the use of the library is shown, petitions for more funds, books, or assistants are more apt to be heard.

At times troubles arise and the librarian is uncertain what to do. Then is the time to get expert counsel. The library board usually consists of professional or business men of high standing, and their advice in 99 cases out of 100 is worth seeking. What they suggest may not be what other librarians have done in similar situations, but it will probably be good common sense and may safely be followed; thus, the school board member will help in all relations between the library and the schools, the lawyer member in dealing with people who refuse to abide by the regulations, and so on.

Here again in her relations to the board her sex should not be present with a woman librarian. "Dissociation of a personality" is a good phrase to use in this connection. To be treated frankly as men treat men should never hurt her sensibilities. As the chosen officer of the board she has no time to be offended if a board member does not remove his hat or cigar in her office, and if she does not receive those little gallantries which are so dear to the feminine heart in the home and in social life. In making a point she should try to avoid the attitude of the woman worker according to "A self-made merchant's letters to his son," where it is said, "If her case is weak, she adds her sex, if it is strong she subtracts it."

The librarian and the board should keep ever before the minds of the representatives of the city's government the use of the library, else the support of that institution is apt to be variable. Like Mahomet, go to the mountain, if the mountain will not come to you. If these people cannot be persuaded to

come to the library, take it to them by constant offers of useful books, which will help in working out the problems for the public welfare of the whole city.

For example, a city is about to build a new hospital or a new bridge. The library has perhaps just bought new books on both these subjects. The health officer and city engineer will be thankful enough to be informed of these purchases.

The librarian should remember that in the name of good citizenship he should enforce all laws in regard to carelessness or lawlessness, and should comply promptly and carefully with the regulations laid down by the city as to the method of recording expenditures, etc.

Let me emphasize the economy of time and the advantages generally of writing letters to settle important orders and record decisions. To get out a letter, perhaps you will say, takes so much time, especially if one has to do the manual labor (the actual writing of it) oneself. It is so much simpler to have a personal interview or to telephone. But is it? Perhaps your board has decided for good and sufficient reasons not to allow the ladies' literary society of your town to meet in your one little vacant room. With how much more tact, precision and fairness can you inform the society of this decision through a letter to the president or secretary, carefully choosing your words to allow of no misunderstanding, than is possible when in one's own office with a committee of irate and disappointed ladies! Again, possibly your board decides that a collection of books may be placed in some business house. Write to the firm of this decision and the plan for its working out and the conditions relating thereto. If the members of the firm are not at home or are too busy to pass upon the matter immediately, there is the letter waiting as a reminder with all its explanations before them when the time comes for it to be attended to.

Perhaps you telephone an important order involving many dollars or the conditions under which some work is to be done. How can you get redress or righting if the wrong things are received or work done other than it should have been? You have nothing by which to prove your point, having nothing to show. If you had written a letter and kept a

copy of it, all would have been well. Therefore, first write letters, and then keep copies of them. One of the most important of all office records is the letter file. If one has no typewriter it seems troublesome to keep a copy of every letter, but the money and time it saves in the end more than make up for the extra labor in the beginning.

Carbon copies of letters on second sheets of inexpensive copying paper, if you have a typewriter, are the best for filing. If you have no typewriter, write with a copying ink and use a duplicator, and in only a few minutes of time you can obtain a second copy. Or, there is the letter-press book on whose thin leaves a copy may be produced with the aid of wet blotters. With the book should be a careful index, but with the duplicator there is a loose sheet for filing.

In letter writing the superscription should be considered carefully with a view to filing. Letters to associations and firms, even though addressed to the secretary or to some individual, should start with the name of the association or firm, as this will bring all letters to the association or firm together in the file. In filing letters to other libraries, file according to cities (the regular cataloging rule). Some letters may be filed according to subjects. Letters from applicants for positions, for instance, may be filed under "Applicants." A sensible rule to follow in filing is this: "Put in the most convenient place for finding."

Have the whole address in the superscription and then your letter file will be a complete and useful reference for addresses.

Make your letter full enough so that in referring to it three months hence you will know what was being written about, especially necessary when money orders or checks are sent. Do not say "Enclosed please find money order in payment of enclosed bill," but rather "Enclosed please find money order for \$3.50 in payment of enclosed bill of May 1 for magazine binders." Thus your letter file will be a useful record of money sent by mail. Be careful to have all letters dated.

When the copy is on loose leaves pin the letter received to the answer, and the whole thing can be filed together.

A small library need not have a fine filing cabinet. A large pasteboard box will do,

with the letters lying flat in alphabetical order. Our own library is only just now buying a cabinet, having kept our letters for years in letter case drawers and boxes. Vertical filing cabinets, where there are vertical folders to hold each person's correspondence and guide cards to direct one, are of course very convenient, but every library cannot afford them. With these, invoices can also be kept in the same drawer with the letters, folders of a different color being supplied to hold them in their alphabetical order before or after the letters.

The librarian should keep close tab on the library's accounts, even though he does not have direct charge of the funds, being able to give accurately the amount in each at a moment's notice. A monthly statement of expenditures according to class of purchase (whether for supplies, binding, books, salaries) should be kept. From this a recapitulation for the year can be made, showing just how much the library has cost and how much will be needed for the coming year. A daily record should be made of all fine money received and all petty expenses paid directly from the office. From this a monthly and yearly record also should be kept. In libraries where money orders are often sent by mail, the little receipt pinned to the copy of the letter kept in the office is a useful precaution.

Methods of sending books, parcels, etc., are convenient to know. Books sent by express cost more than by freight, and freight by water routes is less than all rail. Express prepaid costs less than when paid on receipt. Book rates for express when prepaid are less than for merchandise prepaid.

Rates for postage are well to know; whether it will cost more to send a book by mail or express.

If the library is not too large the librarian should give personal attention to everything which comes into it—books, supplies, gifts, and mail. He is the one who did the ordering and therefore should check up the purchases to see about quality, quantity and price. He is the one also from whom the acknowledgment of gifts should come.

A librarian necessarily does more or less printing of forms, annual reports, etc. A little knowledge of proofreading rules would be great help. To print forms and blank

books that are in constant use is cheaper than hiring extra attendants to rule up and write. Exactness, lucidity, and brevity as to matter are always essential. In printing, the exact name of the library should be on all forms used in the home town, the name of the city and state on all printed matter sent out of town. It is hard to determine whether pride or carelessness are responsible when an annual report is sent out entitled only "Annual report of the Public Library of Smithville" (no state given). If Smithville is in Massachusetts we conclude it is pride. On forms, the meaning should not be imbedded in too great a mass of words.

Besides printed forms there are many time savers which save money in the end, though they may seem quite an expense at first. A typewriter is one of these. All cataloging, lists of new books, shelf-listing on cards, correspondence, report work can be done on one, thus saving much extra assistance.

Mr. Dewey recommends stenography for librarians. This certainly would be a great time saver in making notes, etc. A journal recording daily events, suggestions, or observations as they occur is a useful thing for a librarian who wishes to sum up her work in a monthly report to the board.

A librarian should buy supplies in small quantities, or perhaps in sample lots, until he is sure of what is just right. When this is determined purchases of large quantities (say for a year ahead) will save in time and money.

A record of supplies on cards, when they are bought from many dealers, is a convenient thing in watching that prices are not raised. Put on the card first the name of the article, then date, dealer, quantity, and price. Where supplies are obtained from one firm only, that firm's bills, of course, would be enough of a record.

The income for libraries in the United States during 1903 (according to the report of the Bureau of Education) was over \$10,000,000. An expenditure of this amount of the people's money should certainly be attended with care, method and judgment on the part of librarians and boards. This is no small sum to be expended lightly, and a little thought as to business methods and a little common sense is all that is needed.

BOOK LISTS AND BULLETINS IN THE CHILDREN'S ROOM *

PRINTED book lists are a great aid in any library. The form that Mr. Dana uses at Newark is cheap, simple and convenient, serves as a reminder to a short memory and carries with it no advice or coercion. How often we hear, "Have you a list of electricity books?" "Have you a list of school stories?" Several sets of book-mark lists as, "Ten good bear stories," "Ten Indian stories," "Books for boys on electricity," etc., will fill a place that the catalog, be it ever so well made, will not. Children love to get something with their book, if only a bookmark. If then the bookmark contains a few titles, so much the better. It does not carry with it the desire to suggest to so great a degree as does the list or the bulletin. It seems a more impersonal way of suggesting. One advantage in the book-mark list lies in the possession—the taking it away and looking it over afterwards. The lists on the bulletin do not always make much impression. For that reason it is well often to have a bulletin with no lists printed on it, but with the books illustrating the bulletin near by. Perhaps there may be a distinction between the bulletin with cut-out scrap pictures and lists and the exhibit of pictures without lists, but it is simpler to call them all bulletins. A collection of the Elson prints of Shakespeare and his country artistically arranged needs no list at all; in fact, one would spoil the harmony of an artistic grouping. However, on a table or shelf near by I should place all that I thought desirable—"Shakespeare, the boy," "Will Shakespeare's little lad," "Master Skylark," Lamb's tales, and a few volumes of the Rolfe edition.

In an Indian display that was a great success, the wall space was filled with the bright colored Rhinehart Indians, a few Indian curios and baskets. Lists were neatly typed on different slips and placed on tables nearby, with the books. This method has proved, with me, more successful than to have the lists printed ever so neatly on the bulletin. However, it is well to change and vary the method as subject and material demand. In all cases it is better to have books illustrating the bulletin on a shelf underneath or on a table nearby. In my own room, whenever I have enough material to warrant it, I make the subject the *motif* throughout the room. In the case of Dutch pictures, I had posters, pictures, post-cards and art pictures sufficient to fill the room; all the books relating to Holland were on one table and mounted scrap-pictures of interest on another. The kind of books to bring forward will depend upon your resources. It would be useless to make a King Arthur bulletin with but one or two

King Arthur books; or a bulletin on ice yachts, in a California town. Do not have all your bulletins too utilitarian or practical. Once in a while vary them with a display which is truly beautiful. Trust a little to the influence of the good and the true in art even if a book list is not attached.

Many children come to the children's room with the supplementary reading list given them by their teacher and either hunt out the books for themselves or ask the librarian. Observation has impressed me more and more with the value of well compiled reading-lists. I find upon inquiry that some towns have no supplementary reading-lists, some few recommend a list, but it is not at all compulsory, and a few others are examined or report upon the list read. Children will read for their teacher, for she is in authority, while the librarian plainly has no authority at all to ask them to read a book or given list of books. Therefore great influence can be brought to bear on the child from the school side. For the two higher grades, the seventh and eighth, I should recommend as little fiction as possible; the scholars will find it and read it in any case. The grammar grade girl should not have the late novels suggested to her, even if they do illustrate an epoch in history, as "The crisis," or a character in history, as Hamilton in "The conqueror." It is in the grammar school years that the girl needs the most guidance; the boy, as a rule, is all right, with a more healthy appetite—a mixture of Henty, Munroe, Tomlinson, Brady, electricity, inventions, outdoor handy books, animal stories, Robin Hood and King Arthur stories. The high school work checks to a degree so much reading. It is in the grammar school that the teacher can have the most weight.

Besides practical working methods of leading the child to the best in the library, there is another influence—that of the personal element that we put in our children's rooms. Better than all lists or means we may adopt to lure our children to good books is the atmosphere we create, the homelike appearance, as far removed from the schoolroom as possible, the choice of pictures, the touch of ferns or flowers, the ability to inspire children with our own love for the true and the beautiful in books and art. Be so thoroughly at home with your books that you are able to annotate as you take them down: "This is a story of a young man who was kidnapped in 1719 and carried to the plantations of Virginia, a very good pirate story." "This is a story of Custer's last rally in the valley of the Little Big Horn; it tells about the heroism of the Indians as well as the white men." "Here is the story of a poor Scotch gardener's son who shipped as a common sailor and commanded a ship by the time he was 20," and so on. You cannot know your books too well, and let me add that happy should be the children's librarian who can catalog her own books and

* Part of paper read before California Library Association.

while making the analyticals and subject headings, study them over for future reference. Try to keep in memory the books others like; once in a while ask a child's opinion of a book; get hold of the tastes of as many individual children as you can without quizzing or intruding. When a child asks you for a book, take down a few, annotate them if you have time, then leave him to make his own choice. Never try to force a book or an opinion upon a reader; imagine your own feelings if told in the adult department that you *ought* to read this or that book. A very tiny boy one day took out a very thick Henty book, and as I charged it I casually said, "Is this for your brother?" His eyes twinkled as he said, "Oh, no, it's for me; I just *love* them." We talked a few minutes, and I found out that he had read any number of Henty books; that, in his opinion, they were the very best boy's books written; that he had a contempt for the ordinary boy's stories, and did not like United States war stories, or Indian stories. A little later he asked me of his own accord to find him a book as good as Henty. I gave him several to choose from, and he selected "In the days of William the Conqueror," and had the graciousness to tell me that he liked it very much. Since that time, he has read "Boy life of Napoleon," "In the days of Alfred the Great," "Boy's Froisart," "Master of the strong hearts," and many others, always making his own selection from a number submitted to him.

A majority of the children find their own books easily and recommend to others. The whispered comments, "Say, this book's keen," "This is a dandy book," go farther than any recommendation the librarian may give. When the 12 to 14-year-old girl comes to the librarian and says in a weary manner, "I've read most all the books in the room, please tell me a good one," then is the time to suggest some good boy's book, one of Barbour's perhaps. If she will not read athletic, or Indian, or adventure stories, try her next with some good biography, Helen Keller, "Famous women," "Historic girls." Do not give up until you find that she is absorbed in "The masquerader," or "The house of mirth."

If a children's room is kept orderly and clean, not once a day but all day, with absolute prohibition of all eating, the librarian will find that the children will reflect her own attitude and bearing toward her room. The librarian's attitude, not the janitor's labors, will keep the tables neat and the room attractive. If the room is harmonious to the eye and the mind as well, and if the librarian by her love for children and for the true and beautiful in literature and art, is able to gain the children's confidence and respect, will not they unconsciously be led to love what she loves?

ALICE G. WHITBECK,
Children's Librarian, Berkeley (Cal.) Public Library.

UNITED STATES PUBLIC DOCUMENTS AND THEIR CATALOGS

It is now some 15 to 20 years since the organized efforts to make the United States public documents available for use, which have borne fruit in the present methods of listing and distributing them, were set on foot, mainly at the solicitation of the librarians of the country, guided by the public spirit and energy of Mr. John G. Ames, then, as now, in charge of documents in the Interior Department. Some retrospect and critical review of the present results of these efforts may now be timely.

In 1892* Mr. Ames issued his "Check list of public documents . . . 1st-53d Congress." Its usefulness is attested by the issue of a second and a third edition. To the latter was appended also an index whose size, in view of the fact that it covers 76 years, is in itself an indication of inadequacy. In 1894 Mr. Ames's "Comprehensive index, 1889-93," appeared. A fundamental defect of this work, which seriously impairs its usefulness, is that its title-a-line index form of entry, desirable as it is for compactness and brevity, precludes the bibliographical description and exactitude which are as indispensable for government publications as for all other classes of books in a library where government and all other classes of publications are handled altogether and without discrimination.

Jan. 12, 1895, the printing law, as now in force with only slight amendments, was enacted. Under this law has been established the present series of guides to the documents, as follows: (1) the *Monthly Catalogue*, including all United States publications, entered under the departments and bureaus issuing them, the latter arranged according to their organization in the government; (2) the large, full catalog of the public documents of the United States, by subjects and authors, or "Sessional catalogue," including all publications of the period of a single session, later of a single Congress. This is after the most approved dictionary model. (3) The "Document index," including only the Congressional set of documents and in title-a-line index form. The "Document index," I may say, existed long before the law of 1905 was enacted, as the index, of which a copy was bound in the front of each volume of the Congressional set. After the Office of Documents was created its preparation was made a duty of that office, and it was changed to be a separate index volume for each session.

It is the function of the *Monthly Catalogue* to give timely notice of publications issued and available. This notice is more or less timely according to the promptness of issue of the catalog. It was the experience of the present writer when connected with government document cataloging that the material

* Date taken from first preface in second edition.

to be listed could not all be obtained so that "copy" could be put into the printer's hands earlier than the sixth or eighth day of the month following that which the catalog covered. The printer then always took till between the 20th and 30th to complete the catalog for issue. Thus the reader received the catalog nearly a month after the publication of even the later published documents listed in it. In December, 1897, there was appended to this catalog an alphabetical index. This was made cumulative in July and December. This index supplies (1) a key to the arrangement under departments and bureaus; and (2) a page reference to material on a given topic in every one of the 12 yearly numbers. The hunting up every one of these unspecific page references to find the special publication needed has been found by the writer most laborious, the very last number on the list usually yielding up the material sought. However, by means of it one can run down with absolute certainty every publication on a given topic.

Beginning with January, 1906, the present acting Superintendent of Documents has made five changes in this *Monthly Catalogue*. I give them in the order of their importance. He has (1) omitted contents; (2) omitted private bills; (3) referred the subscriber to the Library of Congress for printed catalog cards for documents, giving the L. C. numbers—decidedly an advantageous measure; (4) discontinued the alphabetical index; and (5) rearranged the entries, still keeping each publication under its government bureau author, alphabetically by such government authors. (I use bureau here to denote every division of government, be it called survey, commission, department, office, or any other name.) In a circular letter he explains that he aims to follow the methods and promptness of publishing firms in advertising their output; that private bills and contents are stricken out for economy; that he has dropped the index because its preparation prevented prompt issue; and that the alphabetical arrangement by government authors would be found to answer almost every purpose that the index did.

To speak first of these two most sweeping changes, to the writer an alphabetical arrangement under government author seems the blindest and most hopelessly unusable, by every one except the document experts, that could possibly be adopted. Although the inverted form is used, as Interstate and Foreign Commerce Committee, Agricultural Department, etc., yet, the index gone, what is there to tell the uninstructed reader to look for hearings on railroad rates under the one, or for directions for making butter contained in a farmer's bulletin under the other? Who, except those who have worked among documents, knows that the national banks' reports must be sought under Comptroller of the

Currency, and the tests of metals under the Watertown Arsenal? A note under the larger division says, "For bureaus under this department see names of bureaus." Consider for a moment that it is an "off" year that does not see a change in the name or existence of one or a dozen government bureaus. Consider, again, that it is the very ignorance—quite excusable, indeed—of the average citizen as to how the government is organized, and of the names and functions of these same departments and bureaus, that makes government publications such a tangle to him. Under these considerations the reference quoted would seem from the point of view of the average reader to be insult added to injury.

The old arrangement, where all the bureaus of a department were grouped together under that department, had two advantages: (1) any one who had an inkling that a certain department issued a publication, though ignorant which bureau or of the names of its bureaus, could glance over the entire set of titles under that department, and by chance light upon the one wanted; and (2) the economist, the agriculturist, the engineer, the military man, could each see the publications of the department in which he is interested all together in one group. This former classed arrangement combined with the alphabetical index supplied every clue needed.

Revision of present methods among the documents conducing to economy and less duplication can undoubtedly be made. But it should be sought in large measure by dealing with the subjects of publication, preservation, and cataloging of government documents as a whole and altogether, rather than in such changes as are here noted.

EDITH E. CLARKE,

Library of University of Vermont.

BOOKS OF 1905 RECOMMENDED FOR A VILLAGE LIBRARY

THE following list is a summary of the popular vote on books for a village library, from the New York State Library's tentative selection for 1905, presenting the books of 1905 having highest votes in various classes:

Reference books

- Ringwalt, Briefs on public questions
- Readers' guide to periodical literature (cumulated) v. 1, 1900-4
- Newark (N. J.) Free Public Library, A thousand of the best novels
- Carnegie Library of Pittsburgh, Children's Department, Annotated catalogue of books used in the home libraries and reading clubs conducted by the children's department

Philosophy and Ethics

- Wagner, On life's threshold
- Billings, and others, The liquor problem
- King, Rational living

Religion

- Grenfell, Harvest of the sea.
- Parsons, Christus liberator
- Houghton, Telling Bible stories
- Peabody, Jesus Christ and the Christian character

Sociology

Long day (The)
 Washington, *ed.*, Tuskegee and its people
 Marden, Choosing a career
 Howe, The city, the hope of democracy
 Sage and Cooley, Occupations for little fingers
 Willoughby, Territories and dependencies of the United States
 Alexander, The life insurance company
 Terhune, Everyday etiquette
 Seligman, Principles of economics
 Zueblin, Decade of civic development
 Beebe, The home kindergarten
 Harper, Trend in higher education

Natural science

Harwood, New creations in plant life
 Peterson, How to know wild fruits
 Long, Northern trails
 Duncan, The new knowledge
 Roberts, Red fox
 St. John, Real electric toy-making for boys
 Schillings, Flashlights in the jungle
 Shaler, Man and the earth

Useful arts

Saint Maur, A self-supporting home
 Fullerton, How to make a vegetable garden
 Call, Freedom of life
 Bashore, Sanitation of a country house

Fine arts

Caffin, How to study pictures
 Sturgis, Appreciation of pictures
 Ely, Another hardy garden book
 Isham, History of American painting
 Daniels, An American girl in Munich
 Elson, *ed.*, Folk song of many nations

Amusements

Roosevelt, Outdoor pastimes of an American hunter
 White, Child's rainy day book

White, An only child.....	5

"LIBRARY WEEK" OF NEW YORK LIBRARY ASSOCIATION

THE annual meeting of the New York Library Association will be held as usual during the last week in September, beginning Monday, Sept. 24. In view of the work done by the committee on institutes, in the 26 round table meetings, which have reached 179 libraries in the state (L. J., June, p. 276), it was decided by the executive committee that a meeting place more central and accessible than Lake Placid would be desirable this year, in the hope of bringing the small libraries of the state into closer touch with the association. This decision of the committee was discussed at an informal meeting of members of the association, held at Narragansett Pier, on July 4, and the proposal to call the meeting in a more central part of the state was unanimously approved. Announcement of the place of meeting will be sent out later. The officers of the association are: Miss Mary W. Plummer, Pratt Institute Library School, president; Asa Wynkoop, New York State Library, vice-president; Mrs. Adèle B. Barnum, Niagara Falls Public Library, secretary; Edwin W. Gaillard, New York Public Library, treasurer.

The chief subjects chosen for the program are: "Civil service in its effect upon library efficiency," "The love of books as a basis for librarianship," and "Women's clubs and libraries in New York state." There will be two round-tables, one on "New ideas, methods and devices" and one on "The encouragement of library work."

HEARING ON THE COPYRIGHT BILL *

THE report of the first public hearing on the copyright bill now pending in the Senate and House has been published as a government document, of interest to all concerned in the question of importation of books by libraries. The joint committee on patents held four sessions, June 6 to 9, and heard a large number of opponents and advocates of the bill.

The first session was opened on June 6 with a statement from Herbert Putnam, Librarian of Congress, setting forth the history and purpose of the bill, and analyzing its fundamental provisions. Mr. Putnam read President Roosevelt's utterances on the pressing necessity for a general copyright law to take the place of the fragmentary and inadequate provisions of present statutes. He reviewed the conferences on the subject which began in June of last year, when, besides the special interests represented, the free assistance of the American Bar Association and the Bar Association of New York had been availed of, and the National Educational Association and the American Library Association were represented. The result of the first conference was a bill of 16,000 words; the second conference reduced this to 11,000 words, and the bill, as finally introduced, contains eight chapters, aggregating 8000 words. The body of the present copyright law comprises 4000 words. The provisions of existing law which are abrogated are very few, but the phraseology of existing law is only here and there recognizable in the bill. Mr. Putnam explained that this is because the bill attempts to be systematic and organic, and because it has sought general terms, rather than particular specifications. The clauses relating to importation of books by libraries (given in L. J., April, p. 171-172) were referred to by Mr. Putnam, who stated the approval of those clauses by the American Library Association, officially, and the opposition to them by a number of librarians, who object to any diminution of present privileges.

The American Library Association was represented at the hearing by Mr. A. E. Bostwick, who was obliged to leave before formal presentation of his argument; the opposing libraries were represented by Mr. W. P. Cutter, Forbes librarian, Northampton, Mass.

A statement in advocacy of the bill was made by Col. Stephen H. Olin, counsel for the American Publishers' Copyright League. He said, in part: "The bodies who have authorized me to speak in their behalf in this matter are the Academy of Design, the Fine

Arts Federation, the American Publishers' Association, the American Publishers' Copyright League, which two bodies include practically all the publishers of the United States; the United Typothetae, which include all the great employing printers of the United States; the Music Publishers' Association, some 42 music publishers who, by habit, not only represent themselves but those musicians who rely upon them for protection; the Photographers' League of America, the Print Publisher's Association, which two bodies represent largely the illustrating interests of the country; the International Typographical Union, which, as the committee knows, represents the typesetters and printers; and finally the American Library Association, wish me on their behalf to say that this bill in its present form has their substantial approval. It is understood that suggestions of modifications as to detail may be made by these organizations individually through the Librarian of Congress; and I submit their signed paper to that effect to the committee."

In regard to the provision relating to importation of books by libraries, Mr. Olin stated that this was an extension or modification of the present rights of the copyright proprietor as against the public. "As the law stands to-day the importation into this country of a book which is copyrighted here is prohibited, and there are certain exceptions, in the first case, of certain libraries and colleges who may import not exceeding two copies in one invoice, and individuals who may import not exceeding two copies in one invoice. This bill makes a modification of the present rule. . . . So far as it goes, the privilege of importation is an inroad on the rights given to the copyright proprietor. It is an inconsiderable inroad so far as most popular books—novels and the like—which have circulation are concerned. The few hundred books that come to individuals here amount to not a very substantial burden upon the proprietor of such copyrights. But there are certain classes of books, expensive to produce, and with a very limited circulation—books of a scientific character, books illustrated with plates—and they circulate among the precise classes; that is, the libraries and the colleges and these individuals who are particular about their libraries, the precise individuals who import books under these exceptions; and there were instances brought before the conference where publishers here had declined to undertake a book which would have been valuable to the public, which would have been valuable to the typesetter to set up, and the American publisher to bring out, and to the American bookseller to sell, for the reason that the very limited public which these books addressed would all, in the natural course of events, have their demands filled through these exceptions to the prohibition of importations.

*ARGUMENTS before the committee on patents of the House of Representatives, conjointly with the Senate committee on patents in H. R. 19853, to amend and consolidate the acts respecting copyright, June 6, 7, 8, 9, 1906. Washington, Gov. Print. Office, 1906. 206 p. D.

"That did not hurt the libraries or the individuals who habitually get English editions. It did hurt, we maintain, the American public, the reading public, and a great many individuals among the American producing classes. So that there was a modification requested of the present rules, and the modification in regard to the libraries is this: There is to be not exceeding one copy to be introduced on an invoice, the privilege is not to relate to books which have their origin here in America. With your permission, I will briefly explain those two points. In the first place, ordinarily a library or a college needs only one book at a time. If it needs another copy of the same book it is not too much to ask that it make another importation to bring it in. Under the present rule, while delicate and careful men would not take advantage of it, it is constantly a temptation to a librarian who can import free of duty and free of the copyright proprietor's claims, two copies of a book from England, to import one for the legitimate use of the library and one for some other use. The effect of that influence can not be particularly measured.

"The other point is one which can be clearly understood. It is now the right of colleges and libraries, an important right, that in case of an English book they should be able to get the English edition, which in some instances is more complete or for other reasons better than the American edition. But it can almost never be an important right to obtain the English edition of an American book since the American edition is almost always more complete, or equally complete. So that the right to import the foreign edition of an American book, a book of American origin, would ordinarily be confined to the Tauchnitz and the like editions with which the gentlemen of the committee are all familiar, where a continental publisher publishes English and American books for the benefit of travelers, and they are not allowed to be reimported into England or America. It seems to the publishers fair that the same rule which applies to every Englishman and every American as to such Tauchnitz editions should be applied to libraries; that is, that they should get the American edition, and not the other, of which the only advantage is cleanness, arising from its special purpose.

"Whether or not these are reasonable changes has been very largely passed upon, it seems to me, in the controversy that has gone on with the American Library Association, which is a very powerful and very diligent and active association, and which has been very much interested in these matters; and in laying before you their approval of the bill in its present shape, it seems to me that as to this clause it must establish in the minds of the committee a clear *prima facie* case, at least, that this compromise that is agreed upon is a reasonable compromise.

There are gentlemen here who represent certain libraries who, I understand, think that it is not a reasonable compromise. They object that this compromise goes too far; and all that we can reasonably ask the committee at this moment is that if it occurs—if it seems to the committee that what this minority of librarians have to say overcomes the presumption of fairness that arises from a compromise satisfactory to the majority—that then the publishers may have their opportunity of showing to the committee that it is a fair compromise and a reasonable disposition of the matter."

Mr. W. P. Cutter stated that his argument in opposition to the importation clauses was not made in behalf of an association or of himself personally. He said: "I claim to represent only the public libraries of the following cities: Chicago, St. Louis, Baltimore, Louisville, Pittsburgh, Newark, Minneapolis, Los Angeles and Springfield, Mass. Also the libraries of the following universities and colleges: Yale, Cornell, Colgate, Wisconsin, Michigan, Amherst and Brown; the New York State Library and the Connecticut State Library; the Western Massachusetts Library Club, comprising a membership of 40 libraries, and the Connecticut Library Association, representing the organization of libraries in Connecticut."

Mr. Cutter stated that the existing law allows public libraries to import two copies of any book without any restriction as to what the book shall be. In reply to questions by the chairman, he said that under the existing law libraries might import unauthorized editions, or fraudulent reprints—that absolutely no restrictions existed. Objection to the proposed importation clause was based partly on the reason that "in importations for large libraries—it does not apply to small libraries which import only a small number of books—a case of books will come in from abroad, books that are not copyrighted in this country, English books. One book in that case might, by a mistake, be one which was copyrighted here, printed in England, and containing no notice of its copyright in the United States of America. If that fact was discovered it would send all of that box of books to public store; it would place all the box of books, as I understand, in danger of being destroyed; and it would place the librarian who did the importing in danger of having to show the Secretary of the Treasury, under this law, that he was not guilty of trying to import that book illicitly." Mr. Cutter continued: "Our objection to that is the fact that libraries in these days must have at their disposal as quickly as possible the printed thought of foreign countries. If there is any delay in our obtaining the book (and those who have had experience, as I have for thirteen years, in importing books for libraries in this country, know that there is often six months' delay

in getting a box of books through the custom house where there is the least question as to any of them) it would mean, practically, that our reason for buying the books at that time had disappeared. We want the printed English thought as quickly as possible.

"Now, my other reason is a commercial reason, and in order to state it I shall have to go somewhat into ancient history. About the year 1901 certain publishers of this country formed an association called the American Publishers' Association, and, in conjunction with the American Booksellers' Association, entered into an agreement to control absolutely the selling price of books in this country. It was an agreement among the publishers that they would not furnish books to booksellers who did not agree to sell the books at a standard price—in other words, a trust proposition. The libraries were granted a ten per cent. discount from the price of the class of books affected by this agreement, so-called net price books. We discovered, however, on examination, that these new prices which were fixed were so much higher that the net result to us was an advance of 25 per cent. in the price of the book; and we found that the majority of those books were not books written by American authors, but they were books written by English authors and copyrighted in this country, and that there was difference in price amounting to the 25 per cent. tariff on printed books. So that this question, gentlemen, is a question of trusts and a question of tariff.

"Now, the librarians have been getting around that by importing English books, because the same book printed on the other side is sold in the case of these expensive books at a very much reduced price compared with the price on this side. If—I am going back now to my first position—if I am prevented, by the difficulties in getting through, by accident, a copyrighted book, from getting at the non-copyrighted book so long, then I will be forced to go to Mr. Scribner who will buy the books for me abroad at his price against my interest.

"Now, I am connected with a library that spends \$12,000 a year for books in a country town. Of this sum \$5000 is spent for English books. I am a representative of a city government which taxes itself to a certain extent to educate the people in its community; and I object seriously to paying \$1000 of that \$12,000 to American publishers as a tax. That is my point." In reply to questions, Mr. Cutter suggested the entire elimination of section 30 of the bill, after the first use of the words "United States," which he thought would be satisfactory to all librarians. The limitation of importation to one copy at a time he did not object to. He also spoke briefly on behalf of the firms importing books in this country which he said were not represented in the discussion of the proposed bill. He said: "A great many of our libraries

have to import books through these men because they get a cheaper rate of importation through them than through some of the firms that are also publishers of books. This would prevent the importation of some of these books through those firms. It would practically ruin their English business, largely ruin it; and on behalf of a library that uses that method of importation largely, it seems to me that some provision might be made for other importers than those who are publishers of books." He therefore suggested an amendment to the clause reading "When imported, not more than one copy at one time, for use and not for sale, under permission given by the proprietor of the American copyright," by leaving out the consent of the American copyright proprietor. "That changes existing law only in this particular—it allows the importation of only one copy instead of two copies, as the existing law does. It gives the importer who has established a business here based on legislation, and who is closely in touch—the firm that I speak of serve libraries and learned men mostly with expensive books, and have practically no sale to the ordinary public—it would give them an opportunity, and it would give a scholar in this country who wants a book for a particular purpose for his own use and not for sale, an opportunity to import it."

Mr. Cutter's statement that the existing law permits importation of unauthorized editions or fraudulent reprints was later taken up by the committee, and referred to Thorvald Solberg, Register of Copyright, for a statement as to existing practice. Mr. Solberg said that this was a question of the interpretation of a complex statute, and later presented the following communication on the subject to the chairman of the committee:

"DEAR SIR: I ask to be allowed to file for the printed report of the hearing on the copyright bill the following, in addition to my answers to the questions you asked me on Friday, June 8, in relation to the importation of copies of unauthorized editions of American books:

"1. It is fundamental to the protection of copyright that all unauthorized reprints of copyrighted books shall be prohibited importation into the country of origin. It is therefore provided in all foreign copyright legislation that such unauthorized copies shall be prohibited importation. Such copies are treated as fraudulent copies, and I know of no provisions in any foreign legislation which permit importation of unauthorized copies either by individuals, educational or other institutions, or libraries.

"In the copyright legislation of the United States prior to 1891, the provisions prohibiting importation dealt only with unauthorized copies and these were prohibited importation, except with the direct consent in writing of the author or copyright proprietor.

"2. The act of March 3, 1891, introduced an additional prohibition of importation, namely, of copies of authorized editions of foreign copyrighted books, or of authorized foreign reprints of American copyright books, unless printed from type set within the limits of the United States or from plates made therefrom.

"To this prohibition of importation certain exceptions were enacted in favor of private book buyers, educational institutions, and libraries; and some paragraphs of the free list of the act of October 1, 1890 (permitting importation without the payment of duty) were taken over into the copyright law to insure that the articles named in these paragraphs should be included in the exceptions to the prohibition of importation of copies of authorized editions of books.

"It was not supposed that Congress intended that these exceptions to the prohibition of importation should apply to unauthorized editions, but upon the matter being submitted to the Department of Justice an opinion was filed by the solicitor-general ruling that the exceptions did extend to unauthorized reproductions of American books. (See Opinion of Holmes Conrad, April 19, 1895; Synopsis of Treasury Decisions for 1895, pp. 495-498.)

"3. In the provisions of the new bill dealing with importation a careful distinction has been maintained between unauthorized (fraudulent) copies and copies of authorized editions not printed from type set within the limits of the United States.

"In the case of all unauthorized reprints of books the prohibition of importation is absolute, and any such copies introduced into the United States are subject to seizure, forfeiture, and destruction. (See sections 26 to 29 of the bill.) In the case of copies of authorized editions not set in the United States, such copies if imported are seized and exported, but not destroyed. (See copyright bill, sec. 31.)

"All exceptions, therefore, to the prohibition of importation of authorized editions in the bill concern only authorized copies, and there is no permission in favor of any one to import any unauthorized, pirated copies.

"THORVALD SOLBERG,
"Register of Copyrights."

The sessions were very largely taken up with arguments of representatives of "sound record" manufacturers, who opposed vigorously the clauses extending copyright protection over mechanical reproductions of music. At the close of the hearing it was authoritatively stated that the bill would not be reported until the following session of Congress, which opens in December next. The Senate committee will continue its hearings during the recess, and the House committee will meet again on the first Monday in December to hear further argument.

DR. RICHARD GARNETT

G. K. Fortescue, in Library Association Record, May.

If it could be truly said of any man that he was a heaven-sent librarian, that man would be Richard Garnett. To the powers of a marvellous memory he added a natural instinct for the selection of what was soundest and most practical in the innumerable volumes which came into his hands. Like Johnson he had the faculty of tearing the heart out of every book he read, and without consciously committing to memory any passage of prose or poetry, all that he thought worthy of remembrance remained stored in his brain, ready for accurate and apt use when the right moment for reproduction arrived.

For many years of his early official life Dr. Garnett was entrusted with "placing books," that is to say, deciding upon the exact spot where each new book should be arranged on the elaborately classified shelves of the library. During these years it was his duty, as well as his pleasure, to master the subject and often the contents of the many books which daily passed through his hands.

When in 1875 he received his first substantial promotion and was appointed superintendent of the reading-room, only a few of his personal friends and colleagues knew how vast a store of knowledge he had been acquiring during these quiet years of silent work. But from the day of his appointment and of his sudden introduction to the thronging crowd of questioners and seekers for light in the reading-room his reputation was made. There seemed to be no subject which he had not studied, and few which he had not mastered, and to all who asked he distributed information as practical as it was accurate and critical. Nor was he a mere walking encyclopædia, a cold abstraction of the essence of books. On the contrary, there was a kindness and cordiality in his manner, a vivacity and energy in his speech, a constant half-suppressed humor in his conversation, combined with a total absence of red tape or of the insolence of office, which attracted all who came within his influence. He was, moreover, endowed with a warm and sympathetic nature, and there are many who could tell pathetic stories of help of one sort or another which they have received from his open heart and ready hand. In no way did his genius for librarianship show itself more clearly than in the vigor and energy with which he embraced and executed the great design, originated by his then chief, the late Sir Edward Bond, K.C.B., of printing and issuing to the world the entire "Catalogue of printed books." The inordinate and threatening growth of the transcribed catalog furnished an excellent reason for printing, but in the minds of both Sir Edward and Dr. Garnett another advantage weighed still more heavily in favor of their scheme. They were conscious of the

fact that the "Catalogue of printed books" is the largest and fullest list of authors and their works in existence, and they foresaw the great benefit which it would confer on students throughout the world to have access to its contents without being compelled to visit the Museum.

ASSOCIATION OF LAW LIBRARIANS

PURSUANT to a call in which 24 law libraries joined, there was formed at the conference of the American Library Association at Narragansett Pier, June 29 to July 6, 1906, the American Association of Law Librarians.

The purpose of this new organization is to develop and increase the usefulness and efficiency of the law libraries of the United States and Canada.

Those interested, to all of whom the membership is open, are invited to assist in the work by sending their names and addresses to the secretary-treasurer. It is proposed to hold meetings each year at the same time and place as the conferences of the American Library Association. Printed circulars outlining the program for the coming year will be issued shortly and forwarded to any address upon application.

The officers are: president, A. J. Small, Iowa State Law Library, Des Moines, Ia.; vice president, Andrew H. Mettee, Library Company of the Baltimore Bar; secretary-treasurer, Franklin O. Poole, Association of the Bar, 42 West 44th street, New York City; executive committee: president *ex officio*, vice-president *ex officio*, secretary-treasurer *ex officio*, Frank B. Gilbert, G. E. Wire, Frederick W. Schenk.

LIBRARY ASSOCIATION OF THE UNITED KINGDOM, ANNUAL MEETING, 1906.

THE 29th annual meeting of the Library Association of the United Kingdom will be held at Bradford, Eng., Sept. 4-6, 1906. The provisional program just issued gives an outline of the proceedings and papers, as arranged. The president's address, by Sir William H. Bailey, of Manchester, will be followed by descriptive local papers on the public library movement in Bradford and on the Bradford libraries, and the first subject for general discussion is "Village libraries, with special reference to Yorkshire," by Joseph Daykyn, organizing secretary of the Yorkshire Union of Institutes. One afternoon session is to be devoted to the subject "Education," with consideration of the "Relation of public libraries to the present system of education," by Councillor Robert Roberts, chairman of the Bradford Education Committee; and "Libraries for secondary schools," by Miss A. S. Perry, of the Education De-

partment, West Riding County Council. Other sessions are given to "Legislation," with papers on "Library legislation for county areas," by H. J. Tennant, and "The present position of London municipal libraries, with suggestions for increasing their efficiency," by John McKellop; "Cataloging and classification," with papers by Ernest A. Savage and Thomas Aldred; "Book production," with a lantern lecture on bookbinding by Cyril Davenport and discussion of "The leather question," by Dr. J. Gordon Parker; and "Education of the librarian," with papers by Henry D. Roberts, E. A. Baker, Ernest Axon, and E. Wyndham Hulme. There will be an exhibit illustrating a model bindery for a library and the usual display of the best books of the year.

American Library Association

President: Clement W. Andrews, John Crerar Library, Chicago, Ill.

Secretary: J. I. Wyer, Jr., State Library, Albany, N. Y.

Treasurer: George F. Bowerman, Public Library, Washington, D. C.

28TH ANNUAL MEETING, NARRAGANSETT PIER, R. I., JUNE 29-JULY 6, 1906

The 28th annual meeting of the American Library Association at Narragansett Pier, during the week June 29-July 6, proved second in point of numbers to the Magnolia, Mass., Conference of 1902, but in variety and sustained interest of the program, and in the representative character of the attendance it set a standard never before reached. As it is hoped to publish the volume of "Papers and proceedings" at an early date, only a summary need here be given of a week filled to overflowing with pleasure and profit; business and professional discussion; general, special and affiliated meetings; class, state, and school reunions; recreation and excursions. At no other conference within the observer's recollection have so many persons seemed to be so wholeheartedly satisfied and interested. Narragansett Pier proved a delightful meeting place, with ample hotel accommodations, and the cool breezes and attractions of the shore made it again evident that a summer resort conference has distinct advantages, so far as the interests of the Association itself are concerned, over a city meeting place. There were about 930 persons in attendance and the advance attendance register showed a strikingly large representation of chief librarians, heads of departments, and others having authority, bringing together library interests from every section of the country. The Mathewson House was headquarters, and the general sessions were held in its large ball room, which, however, proved insufficient to comfortably

seat the full audience. The National Association of State Libraries and the League of Library Commissions held their sessions in Atlantic House, and the Bibliographical Society of America met at the Atwood House, while sections and round table meetings were assigned among all three hotels.

The official program opened on Friday, June 29, but the general sessions of the Association did not begin until Saturday afternoon. On Friday there were meetings of the Executive Board, Council, and committees, and in the evening an informal reception at the Mathewson brought together the throng which had been coming in throughout the day by train, boat and trolley.

Saturday morning activities began with the first session of the National Association of State Libraries, and at three o'clock in the afternoon the first general session of the American Library Association was called to order by President Frank P. Hill, who then yielded the chair to Harry L. Koopman, librarian of Brown University, and president of the Rhode Island Library Association. Lieut.-Governor Frederick H. Jackson welcomed the Library Association on behalf of the state; greetings on behalf of the local committee were extended by Hon. Rowland G. Hazard, with grace and humor; and Mr. Koopman gave the welcome for the Rhode Island Library Association, remarking that Rhode Island had two places to which it could have welcomed the Association, but of these two Narragansett Pier had been chosen, so that all that remained for him to do was to urge the members to enjoy themselves at their present meeting place, and to invite them now and for the rest of the season to Watch Hill! President Hill, thus introduced, responded to these greetings, which had made assurance of welcome triply sure, and referred especially to the delightful paper on "Library progress in Rhode Island," prepared for the conference by Mr. Koopman, and printed in advance for distribution at the meeting.

Mr. Hill then delivered his president's address, on "One phase of library development." This was a compact statement of the changes in the librarian's duties and qualifications brought about by the expansion of the public library system and the corresponding increase of the librarian's duties as administrator. The librarian of the large public library is now necessarily an executive officer; he "has taken on duties formerly borne by the trustees, and, through force of circumstances rather than inclination, he is obliged to devote much of his time and attention to the business management of the institution." The place of the modern library in the city educational system was outlined, the development of branches and the corresponding increase of administrative machinery, and it was pointed out that the supply of

books to the schools, other than textbooks, was distinctly the function of the library. In conclusion Mr. Hill said:

"But with all this attention to administrative details we must not lose sight of the fact that the library is an educational institution. We do not believe that the business manager can ever supplant the scholar in the library, the school or the college. The ideal librarian undoubtedly combines the strong points of both, but such a combination is rarely found, because the qualifications of the one are, in a measure, antagonistic to the other. No one man is capable, either physically or mentally, of meeting all the requirements for the successful administration of the library. To reach the highest degree of perfection the great public library must have not only its executive whose guiding hand will steer the craft through all kinds of business dangers, but also scholarly, studious men and women who know books and how to use them. Both are necessary to the welfare of the large library. The wise administrator is the one who, while keeping his eyes upon the needs of the whole system, has the ability to discover the specialists who are needed to round out the work of the library and to place each in his own particular niche."

Reports of officers and committees followed. The report of the Council announced decision to meet at Asheville, N. C., in 1907, provided suitable railway arrangements can be made. Mr. Gardner M. Jones, treasurer, reported balance on hand Jan. 1, 1905, \$1628.17; receipts January to December, 1905, \$6260.21; payments January to December, 1905, \$4342.48; trustees of endowment fund \$100; refunds on account Alaska excursion, \$20; balance, Dec. 31, 1905, \$1797.73. From January to June 23, 1906, the receipts were \$4760.65, expenses \$1764.66, leaving a total balance of \$4783.72. In closing the report Mr. Jones presented his resignation from the office of treasurer, in which for nine years past he has rendered painstaking and unselfish service to the Association.

J. I. Wyer, in his secretary's report, gave a forcible statement of the activities of the Association during the year, and of the new ways that are opening before it—in the plans for headquarters, the centralization of administrative work, and the inevitable passing of the old order of volunteer service with the coming of increased membership, income, and opportunities. On June 14, 1906, there were 1841 members in good standing, the largest number in the history of the Association. C. C. Soule, for the trustees of the endowment fund, reported total funds in hand as \$108,591.97. The session closed with reports from the committees on bookbuying, title-pages to periodicals, and bookbinding and book papers. It may be said here that a special feature of this meeting was the high character of the

various reports presented, and the evidence they gave of vigorous work and live currents of interest throughout the Association. In the evening the Catalog Section discussed advanced problems in subject headings, and a first round table meeting for small libraries considered "How the small library can increase its efficiency by outside aids."

Sunday was a day of rest and perfect weather. The churches, the bathing beach, and the country side all held attractions, and walks or drives were popular. The evening was given over to singing, authors' readings, and stereopticon views, the best entertainment of the sort that the Association has ever enjoyed. While most of the readings were general in character, Mr. Koopman's poem, "The librarian of the desert," set forth the power of the book from the standpoint of Oriental philosophy; and Sam Walter Foss made all realize what joy it is

"to see the library staff perpetually jogging.
And to see the cataloger in the act of cataloging."

Stereopticon views of scenes at the last 12 conferences followed, displayed with running comment by F. W. Faxon, and held a large audience intent until nearly midnight.

On Monday morning the general session was designated a joint meeting of the A. L. A. and the National Educational Association, represented by its president, Dr. Nathan C. Schaeffer, of Pennsylvania. Dr. Canfield presided; Dr. Schaeffer made a notable address; and papers on children's work were read by Miss Clara Hunt and Miss Stearns. In the afternoon meetings of the Trustees' and the College and Reference sections were held, and the evening session was opened with discussion of "The public library as a municipal institution," in papers by David A. Boody and H. G. Wadlin. An account of the destruction of San Francisco libraries by fire and earthquake was given by Charles A. Greene, of Oakland, and committee reports were presented.

Tuesday was "Providence day," devoted to visiting the libraries of that city, and to a clambake at a shore resort on the return trip. Special trolley cars took the members to Saunderstown, where the steamer *Warwick* was chartered for the sail to Providence and return. Luncheon was served at Sayles Hall, in the university campus, and every possible arrangement had been made by the local committee for the convenience and pleasure of their guests. The Public, Brown University, John Carter Brown, Athenæum, Historical Society, and State libraries were visited, and the clambake at Rocky Point will long be memorable in A. L. A. annals.

Wednesday was July Fourth, celebrated with patriotic devotion to business. The Catalog Section held a session in the morning,

on "Elementary problems," set forth by Miss Agnes Van Valkenburgh. In the afternoon there was a general session of the Association, with a most interesting array of speakers from outside the library ranks. Governor George H. Utter, of Rhode Island, spoke on the history of that state in educational progress, and on the place of libraries in public education. President Faunce, of Brown University, made an address full of suggestion and interest, pointing out defects and tendencies in present-day culture. Owen Wister, introduced as "The Virginian," was received with great applause, and read a forceful and suggestive essay on "Subjects fit for fiction," setting forth the foundations upon which a novelist's creative work must be based. Brander Matthews, of Columbia University, followed with an address upon the influence of the present vast influx of immigrants upon American life and character, thoughtful, and striking a high note of hopefulness and tolerance. Committee reports followed, among them that of the ways and means committee, for which Mr. Hovey reported that funds of \$5950 were available for the establishment of permanent headquarters, and called upon the members of the Association to contribute to their further support and maintenance. The publicity committee report, made by Mr. Dana, showed a great amount of energetic work, which has borne fruit particularly in the unusual attention given to this conference by the public press.

Thursday morning was devoted to meetings of the College and Reference and Children's Librarians' sections, and to other meetings. In the afternoon a general session was held, the subject being "Planning and construction of library buildings," considered in papers and discussion by architects and librarians. This was a most practical and useful session, followed with close interest. The evening brought the second round table meeting for small libraries, under direction of Miss Downey, of Ottumwa, crowded to overflowing; a largely attended round table meeting for proprietary libraries, conducted by Charles K. Bolton, of the Boston Athenæum; and a meeting of the Council.

On Friday morning the final session was held, lasting well over the noon hour. It was devoted to "The library in relation to special classes of readers," covering books for the blind, books for the foreign population, supply and use of technical and industrial books, and libraries and settlement work. There were special speakers and general discussion for each topic, and the presentation of ways and means by which the public library is reaching into varied fields of work was most impressive. During this session the result of the election of officers for the ensuing year was announced, as follows: president, Clement W. Andrews, John Crerar Library, Chi-

ago, Ill.; 1st vice-president, Edwin H. Anderson, State Library, Albany, N. Y.; 2d vice-president, Miss Katharine L. Sharp, University of Illinois Library, Champaign; treasurer, George F. Bowerman, Public Library, Washington, D. C.; recorder, Helen E. Haines, LIBRARY JOURNAL, New York City; trustee of endowment fund, D. P. Corey, Walden, Mass. The secretary, J. I. Wyer, Jr., has still another year to serve of his three-year term. Councillors were elected as follows: George S. Godard, State Library, Hartford, Ct.; Theodore W. Koch, University of Michigan Library, Ann Arbor; Herbert Putnam, Librarian of Congress; Miss Alice S. Tyler, Iowa State Library Commission, Des Moines; Purd B. Wright, Public Library, St. Joseph, Mo. The Council, in its closing report, recommended that a district meeting be held during the coming year under the auspices of the A. L. A., for the southwest region of the country, including Oklahoma, Texas, Arizona, and other states seldom reached by the annual conferences of the Association. It was announced also that funds sufficient to establish headquarters were available, that a beginning in that direction would be promptly made, and that Mr. E. C. Hovey had been elected in charge of the permanent headquarters.

Promptly upon adjournment the exodus began, many departing by train on Friday afternoon, while about 300 set off for a post-conference visit to Newport. A number remained at Narragansett Pier over Sunday, but in a few hours the rush and activity of the week at the headquarters hotel were at an end, and the conference of 1906 had been successfully closed.

ALLIED MEETINGS

The National Association of State Libraries, the League of Library Commissions, and the Bibliographical Society of America, all held well attended meetings of several sessions each during the A. L. A. week, reports of which will be made later. The National Association of State Libraries elected the following officers: president, J. L. Gillis, State Library, Sacramento, Cal.; 1st vice-president, Thomas L. Montgomery, State Library, Harrisburg, Pa.; 2d vice-president, Herbert O. Brigham, State Library, Providence, R. I.; secretary-treasurer, Miss M. M. Oakley, Wisconsin State Historical Library, Madison. Miss Alice S. Tyler was elected president of the League of Library Commissions, succeeding H. E. Legler. Of the Bibliographical Society of America, W. C. Lane was re-elected president, and W. Dawson Johnston, of the Library of Congress, was chosen as secretary. A Library Copyright League was organized July 4, with Bernard C. Steiner, of Baltimore, as president, and W. P. Cutter, of Northamp-

ton, Mass., as secretary-treasurer, and with 18 vice-presidents representing libraries in all parts of the country, its purpose being the guarding of library interests regarding the importation of books as provided by the pending copyright bill. An organization meeting of an American Association of Law Libraries was also held.

POST-CONFERENCE TRIP

A party of nearly 300 spent Friday afternoon in Newport, where the Redwood Library was visited, and a long drive was taken. The majority returned to Narragansett that evening for final departure, but about a hundred spent the night at Newport and set out on Saturday by trolley to Fall River. From Fall River they went on to New Bedford, visiting the libraries in each city, and dropping members of the party along the way. A post-conference visit of four days was made to Nantucket by a party of 50, who enjoyed to the utmost this quaint "island home," and found a needed rest after the strenuous life of conference week. H.

EVENINGS AT NARRAGANSETT

Long strolls beside slow-winding Indian streams,
Rich talk in rosy meadows by the sea,
Slow lingering sunset on the windy lea,
Music and moonlight beautiful as dreams.

J. RUSSELL HAYES.

THE FAR NORTHWEST*

The committee (J. C. Dana, Mary W. Plummer, Theresa Hitchler) appointed by the A. L. A. conference party to the Pacific coast last summer has just issued, under the title "The far northwest," the illustrated record of the A. L. A. travels of 1905, which they were commissioned to prepare and publish. It is a paper bound volume, mainly composed of views lent by designated railway and steamship companies, with a few reproductions of photographs taken by members of the A. L. A. party. The text is a composite, chiefly taken or made up from the report of the trip given in the A. L. A. proceedings; the attendance register of the A. L. A. Portland conference is given, with the full itineraries for the trip, and a good map. The volume bears a totem pole design on its front cover, and the emblem of the Northern Pacific railway on the back cover. About 200 copies were subscribed for at \$2 each, but two copies have been supplied to each subscriber instead, in return for the amount subscribed. Copies may be bought at \$2 each, postage paid, on application to J. C. Dana, Free Public Library, Newark, N. J.

*THE FAR NORTHWEST: being the record, with pictures, of a journey over the Canadian Pacific to Alaska, to California, to the Yellowstone, and home by the Northern Pacific, in July, 1905. Newark, N. J., Published for the travelers, 1906. 40 p.+ 62 pl. map. 1. O.

State Library Commissions

LEAGUE OF LIBRARY COMMISSIONS: Miss Alice S. Tyler, secretary-treasurer, Des Moines, Ia.

The League of Library Commissions issues its year-book for 1906 (64 p. D.), compiled by Miss Clara F. Baldwin. This well printed pamphlet sets an admirable standard for the league's future publications in compactness and comprehensiveness; and it has permanent value as the first thorough summary of the growth and present condition of state library commission work, and of the organization and activities of the various commissions. It contains an historical summary of the growth of commission movement; account of the league, with its constitution; outline of the work and list of publications of each commission; classified record of the activities of each commission; a table of travelling libraries, and directory of commissions. It is a thoroughly practical and useful little publication.

GEORGIA LIBRARY COMMISSION: Miss Anne Wallace, secretary, Carnegie Library, Atlanta.

On June 2 Governor Terrell appointed five members of the Georgia Library Commission, as follows: Miss Anne Wallace, Atlanta; Mrs. J. K. Ottley, Atlanta; Hon. Bridges Smith, Macon; C. B. Gibson, Columbus; Hon. W. W. Brooks, Rome. Each member serves a three-year term. A meeting of the commission was held on June 15, when plans for library extension work through the state were discussed, and Mrs. Percival Sneed, of Atlanta, was elected state library organizer. Mrs. Sneed is a graduate of this year's class of the Pratt Institute Library School.

MICHIGAN STATE BOARD OF LIBRARY COMMISSIONERS: Mrs. Mary C. Spencer, secretary State Library, Lansing.

The 6th report of the board of commissioners for the year ending Dec. 31, 1905 (40 p. O.), notes the appointment of a library organizer, and the arrangements made for four library institutes, in connection with the state library association, which were held during the present year. It is planned also to introduce, under the auspices of the board, some elementary library training in the county normal training schools and the county teachers' institutes, in the hope of improving the care and use of the district school libraries. The report contains notes and statistical table of libraries in the state, reports from the library committee of the state federation of women's clubs and from local committees, and an address on "Public libraries," by W. F. Lewis, superintendent of schools, Port Huron.

State Library Associations

CALIFORNIA LIBRARY ASSOCIATION

The first meeting of the third district of the association was held in the Fresno Public Library, May 31, 1906. The subject was "Making the most of a small library." The following program was given:

Address of welcome, District-president Jean D. Baird, Free Public Library, Fresno.

Roll call. Each member present responded by giving a report of her library.

Luncheon.

Sewing and mending of books, Miss Sarah E. Bedinger, Beale Memorial Library, Bakersfield.

Government documents in the small library, Miss Margaret E. Dold, Free Public Library, Hanford.

Question-box, Miss Nellie Strother, Free Public Library, Fresno.

Miss Bedinger's talk was especially instructive and helpful, being illustrated by work on her machine. All the papers and discussions awakened interest and the association is gratified with the success of the first meeting held under the new plan of districting the state.

On June 8, 1906, the first meeting of the fourth district was held in Santa Ana. The program was as follows:

Welcome, Dr. D. C. Ball, president of Santa Ana Library Board.

Response, District-president Antoinette M. Humphreys, A. K. Smiley Public Library, Redlands.

Extension department of the state library, Miss Mabel E. Prentiss, library organizer.

What a library board expects of a library, Mr. K. H. Field, trustee, A. K. Smiley Public Library, Redlands.

Luncheon.

Business.

Public documents for a small library, Miss Mamie Bennett, Public Library, Los Angeles.

Self help vs. dependence for library patrons, Miss Jane L. Shepard, A. K. Smiley Public Library, Redlands.

During the business session the 12 trustees present held a meeting of their own in an adjoining room, and formed a Trustees' Section of the California Library Association. This action is only one of the many signs of the awakening interest in library matters in the southern part of the state, an interest which was further evidenced by the large attendance and the enthusiasm that prevailed throughout the sessions.

At a meeting of the executive committee of the California Library Association, held in Oakland, June 12, 1906, the question of raising the A. L. A. dues to new members was discussed. The secretary was directed to

express the feeling of the committee against such action. The following letter was accordingly sent to the secretary of the A. L. A.:

"Mr. J. I. WYER, Jr., Secretary,
American Library Association.

"DEAR SIR: At a meeting of the executive committee of the California Library Association held at the Oakland Public Library, June 12, 1906, it was agreed that in the opinion of the committee it would be a grave mistake to raise the dues of new members of the American Library Association.

"The committee believes that such action would work a hardship upon the younger members of the profession and that it would result in loss of membership and consequent decrease rather than increase of income of the A. L. A. If the dues are raised the committee feels that it will be practically prohibitive of new memberships in the West, and that indirectly much harm will be done to the growing spirit of awakened library interest in this part of the country.

"Very truly yours,

(signed) "J. L. GILLIS, President.

"MARY L. SUTLIFF, Secretary."

CONNECTICUT LIBRARY ASSOCIATION

President: George S. Godard, state librarian, Hartford.

Secretary: Mrs. Belle H. Johnson, Public Library Committee, Hartford.

Treasurer: Miss Esther B. Owen, Public Library, Hartford.

The May meeting of the association was held on Wednesday, May 24, at the Silas Bronson Library, Waterbury. About 70 members were present when the meeting opened at 10.30 a.m. Lewis A. Platt of the board of managers of the library welcomed the visitors in a brief speech, and Miss Helen Sperry, the librarian, also spoke a few words of welcome.

The morning session was devoted to the reading of reports and to a question box on library methods used in the state.

H. M. Whitney, of the Blackstone Memorial Library, at Branford, outlined the plans for the coming meeting of the American Library Association at Narragansett Pier in a brief speech, and W. A. Borden, librarian of the Young Men's Institute, New Haven, read a paper on "Library building." He dwelt particularly on simple and inexpensive buildings for small libraries, and pointed out how a small village library with a capacity of 6000 volumes could be enlarged gradually, showing also how buildings of various kinds could be transformed into libraries. The arrangement of the interior proved the most difficult problem, but careful study had made it possible to turn almost any kind of a building into a library which would not only accommodate stacks but also allow for comfortable reading rooms and places to use reference books.

At one o'clock the delegates were the guests of the Bronson Library board at luncheon at The Elton. Miss Lavinia S. Rose, of Granville, Mass., told at the afternoon session of

"The origin and development of a Massachusetts village library." Two other papers were to have been read, one by Miss Julia Swift, of Windham, on "The origin and development of a Connecticut village library," and the other by George A. Parker, of Hartford, on "Public libraries and village improvement," but owing to business engagements the speakers were unable to be present and the time was given over to other subjects. The next meeting will be held in October in a place to be decided upon at a later date.

ILLINOIS LIBRARY ASSOCIATION

President: Charles J. Barr, John Crerar Library, Chicago.

Secretary: Miss Frances Simpson, University of Illinois Library, Urbana.

Treasurer: Miss Jane Hubbell, Public Library, Rockford.

The 11th annual meeting of the Illinois Library Association was held in Springfield, May 22-24, 1906, with an attendance of about 100 members. Besides the meetings there were three interesting libraries to visit—the Lincoln Library, in a very handsome new building, and the state historical library and state library, both housed in the state capitol. Meetings were held both in the Lincoln Library and in the rooms of the state library, in order that all might have the opportunity of paying several visits to each. The staffs of all three libraries united in their efforts to give a cordial greeting and provide entertainment. The opening reception, the visit to the vaudeville entertainment, the drive about the city and the final reception by Governor and Mrs. Deneen all bear witness to the hospitality with which the delegates were welcomed to Springfield. An interesting feature of the meeting was the bookbinding exhibit, lent by the Newark (N. J.) Free Public Library, which was studied by many and proved of great practical value.

The meeting opened on the evening of Tuesday, May 22, in the lecture room of the Lincoln Library, with a reception, tendered by Henry C. Remann, city librarian, Miss Thayer, assistant state librarian, and Mrs. Weber, librarian of the state historical library. A short opening session followed. In the absence of the president, Miss Mary B. Lindsay, of Evanston, the chair was occupied by the vice-president, Dr. Carl E. Black, of Jacksonville. The address of welcome was made by General Alfred Orendorff, who told a new story of Abraham Lincoln, saying that during the three sessions of the legislature that Mr. Lincoln attended at Vandalia, he spent much of the day and as much of the night as was at his command in the state library, which was well equipped with standard books. He was there so much that the underpaid librarian used to turn the key over to him and leave him in charge, so that he became *de facto* state li-

brarian and might claim brotherhood with the librarians now forming the state organization.

In replying to the address of welcome, Vice-president Black made special reference to the need of a more thorough and systematic method of cataloging current medical literature for the use of the profession. The man who is in full daily practice needs to have the latest writings on medical subjects at his command so that he can make use of them at any time, and to do this he needs the assistance of the professional librarian and cataloger.

Wednesday morning session was held in the state library at the capitol. This was the business session of the meeting and reports of officers and committees preceded the papers. The secretary's report was read. The treasurer reported a balance in the treasury of \$85.46 and in the institute fund of \$8.46. The report was referred to the auditing committee. The report of the committee on institutes was read by the secretary in the absence of members of the committee and was referred to the incoming council. It stated that one institute had been held at Mattoon, April 6-7, and that the institute committee had visited three small libraries, at Carrollton, Griggsville and Pittsfield. It was recommended that institute work be carried on in three parts of the state, possibly in four districts. The expense involved might be met either by appropriation from the association or by charging a fee of \$1 for all librarians registered in the institute, such a fee to be defrayed by the library board. It was felt that the work done in visiting small libraries was the strongest argument for the need of a state library commission.

The committee on library statistics (Miss Sharp, chairman) reported that the history of Illinois libraries was finished last December and given to the University of Illinois for publication. "The manuscript was so much more extensive than the university expected that it asked for subscriptions to meet a part of the expense of publishing. So few responses were received that nothing was done until May 1. Since then part I. has gone to press with the promise of being out by July 1. This part contains the summary of statistics and tables for public, college and private schools, special and institution libraries, as well as such gifts, buildings and associations. The map is also included. It seemed the most useful part to issue if the whole could not be published. Part II, consists of histories and statistics of individual libraries, past and present, and may be consulted in manuscript at the state university. There are no funds now to print."

The first paper on the program was presented by Miss Ange V. Milner, librarian of the State Normal University, Normal, on "Inexpensive resources in a small library." She

referred particularly to the great amount of excellent material which may be procured from the advertising or passenger agent of the railroads, and also from many of the large manufacturing firms of the country. In general, this literature is reliable and well worth placing in any library, and as it is distributed free it is of invaluable help in furnishing a small library in an inexpensive way. Alfred Bayliss, state superintendent of public instruction, then spoke on "Libraries in the country schools," suggesting that city libraries extend courtesies in the use of books to teachers in the country schools, and that they also give to such teachers helpful advice on the selection and care of books. He stated that in Illinois there were more than 4000 immature teachers who had not the equal of a high-school education, and had not the knowledge to properly select a library. There are 91 schools in the state with less than five pupils; 524 with less than ten pupils and 1197 with less than 15 pupils. Nearly 5000 schools have as yet no library, although in the last seven years there have been 4128 established, a growth of nearly 500 a year.

Mr. J. H. Burnham, director of the Illinois State Historical Society, read a paper entitled "Can libraries aid historical societies?" Mr. Burnham gave the history of the formation of the state historical society and its object; also of the county and local historical societies of the state. In some parts of the state very much has been accomplished by old settlers' meetings, but in most instances the affairs are too social. The aim should be to put work into written form capable of transferring historical information to future generations. Military records will generally be found the best foundations on which to build a country history. Biographies of a county's most eminent statesmen, legislators or politicians must be included in the collection; with pictures of pioneers, of brave soldiers, of early houses, and anything which will help show the varying phases of our early and later civilization must be liberally secured. All that can be told of past settlers should be gleaned. The association followed the suggestion found in Mr. Burnham's paper and passed a motion that the whole question of co-operation with the state historical society in its work of organizing local historical societies and preserving historical material be referred to the council.

The afternoon session was held at the Lincoln Library. The program included three papers; one by F. K. W. Drury, order librarian, University of Illinois, on "Recreations of a librarian," another by Caroline Burnite, children's librarian, Cleveland (O.) Public Library, on "Good and poor books for boys and girls," and the third Mr. Frank G. Browne's paper on "The essentials of a well made book," read by Mr. Roden. While this interesting program was being enacted in one lecture room,

in the other one on the opposite side of the hall a practical exemplification of modern library work with children was being given by Miss Edna Lyman, children's librarian, Oak Park Public Library, who gave a "story hour" to two groups of children—the first group the "little ones" and after that children from ten to twelve years of age.

Wednesday evening was devoted to the inspection of the Newark Public Library binding exhibit, and later the party gathered to attend a vaudeville performance in the Gaiety Theatre.

Thursday morning the meeting was again held at the state capitol in the state library rooms. Miss M. E. Ahern presided over the session which was devoted to five minute talks and discussions. "Best method of putting out new books" received at the library was discussed by Mrs. Alice Evans, of Decatur. The one room library and its possibilities was treated by Miss Maude E. Henning, of the Plano Public Library, and by Katherine Stiles, of the Hoopeston Public Library.

Quite an animated discussion was started by Mr. E. S. Wilcox, of Peoria, who had the subject "Some non-essentials in library work." In the course of his paper, after speaking of the great essentials as the building up and running of a library, he criticised the plan of having a "story hour" at the library. He considered this was not library work, but work more suited to the kindergarten. The "story hour" was warmly defended by Miss Moore, of Oak Park, and Miss Sharp. Mr. Wilcox thought that all extra work took unnecessarily the time of the librarian, who should be most well informed on every subject and have a thorough knowledge of all the books. Mr. Roden, of Chicago, disagreed with this, contending that a librarian should not necessarily be familiar with all the books, believing that he should rather possess the executive ability to produce good management and to direct the public what to read. Other subjects discussed were "Students' privileges," by Miss Jeanette Drake, of Jacksonville; "Readers' cards," by Miss Harriet Lane, of Freeport; "Care of periodicals," by Miss Fanny R. Jackson, and "The library and the working man," by Miss Maude Parsons, of the Steel Works Club, Joliet, who said the library could help working men by putting before them the best and as many as possible of the current periodicals and letting them circulate. In a town where one branch of industry is carried almost exclusively the library should specialize in that branch; printed lists and newspaper lists and open shelves have all their place, but an interested, sympathetic librarian can bring better results than all other efforts. The text books of correspondence schools, especially those of the International or Scranton school, were commended as reference works for the uses of workmen. Miss

Jane P. Hubbell's paper on "Time and other limits" brought out discussion, in the midst of which Governor Deneen entered, and made a short speech of greeting. Secretary Rose, who is *ex officio* state librarian, also spoke, referring to the place of the state library in relation to the other libraries of the state. After brief consideration of the question box, resolutions of thanks were adopted, invitations from Bloomington and Champaign for the next year's meeting were read, and election of officers was announced as follows: president, Charles J. Barr, John Crerar Library, Chicago; vice-president, Henry C. Remann, Lincoln Library, Springfield; secretary, Miss Frances Simpson, University of Illinois; treasurer, Miss Jane Hubbell, Rockford Public Library. Council: Miss Lillian Miles, Aurora Public Library; Miss Jeanette Drake, Jacksonville Public Library.

In the afternoon the members met at the Lincoln Library and were driven about the city, visiting the parks, Lincoln's monument and state fair grounds. Returning at four o'clock, they were received at the executive mansion by Governor and Mrs. Charles S. Deneen.

MASSACHUSETTS LIBRARY CLUB

President: George H. Tripp, Public Library, New Bedford.

Secretary: Miss Louisa E. Hooper, Public Library, Brookline.

Treasurer: Miss Mary E. Robbins, Simmons College Library Department, Boston.

The annual meeting of the club was held at Narragansett Pier on July 5, in connection with the conference of the American Library Association. No program was offered, and the meeting was devoted only to the election of officers for the ensuing year. In addition to the officers named above, the following were elected: vice-presidents, George E. Nutting, Fitchburg Public Library; Robert K. Shaw, Worcester Public Library; Miss Harriet Sornborger, Bancroft Memorial Library, Hopedale; recorder, Miss Gertrude E. Forrest, Milton Public Library.

MICHIGAN LIBRARY ASSOCIATION

President: Samuel H. Ranck, Public Library, Grand Rapids.

Secretary: Miss Katherine G. Ling, Public Library, Detroit.

Treasurer: Miss Nina K. Preston, Public Library, Ionia.

On May 31 and June 1 the Michigan Library Association held its 16th annual meeting at Battle Creek, in the Willard Memorial Library Building. The first session was opened by Dr. Eugene Miller, chairman of the Battle Creek library commission, who said that Battle Creek continually entertained conventions, many of them much larger than this one, but none of them intrusted with interests so vital as are given into the keeping

of this small but influential body. The welcome was responded to by the president, Samuel H. Ranck. Then followed reports of the secretary and treasurer. The secretary repeated her recommendation of last year, that inter-library pass cards or other forms be issued to reliable library patrons as they go from place to place about the state. The treasurer reported ten new members and a balance on hand of \$18.91.

Miss Walton, librarian of the State Normal College of Ypsilanti, and Mr. Koch, librarian of the University of Michigan, reported on the library institutes as they had been conducted during the year by the association, speaking in the highest terms of the instruction given by Miss Doren, Miss Burnite and Miss Hazeltine, and presenting a hopeful view of the influence of the institute but somewhat regretting the small attendance.

The discussion of these reports, opened by Mr. H. R. Pattengill, of the state board of library commissioners, occupied much of the afternoon and brought out interesting criticism and valuable suggestion. Mr. Pattengill commended the institute work as of the right character but criticised the attendance. He thought it had made the good librarians better, but had not reached the poor librarians. He also spoke of the plans of the state board in regard to instruction in library work at the various summer normals that will be conducted in Michigan during the coming year.

Mr. Koch stated that the good done to the library cause was not represented merely by the number of librarians present. The number at the public meetings in each place and the very definite good done at Traverse City, where several members of the city council pledged themselves to the adequate maintenance of the library, should not be overlooked. Mr. Ranck thought that it was largely a question of how to get at the librarians of small libraries. Personal work would have to be done before they would be aroused to the point of going 20 or 30 miles at their own expense, or the authorities would allow them to go at the expense of the library. He spoke of the plans of the state board in regard to having a library organizer, which have for the present fallen through on account of some legal difficulty.

The discussion of institutes was followed by Miss Hoagland's account of the work of the Public Library Commission of Indiana. After outlining methods of institute work, she emphasized the mistake inherent in library courses at normal schools as being an attempt to make librarians of teachers instead of broadening the teachers.

A roll call of libraries was then taken, a representative of each library being called on to report briefly on progress made in his library since the last meeting of the association. The session closed with an attendance of 67.

The evening session was devoted to the

"Work of the library trustee;" a paper "From the trustee's point of view" being presented by the Hon. John Patton, of Grand Rapids; "From the public's point of view," by Burr. tt Hamilton, Esq., Battle Creek; "From the librarian's point of view," by Henry M. Utley, Detroit. Discussion upon these points of view was opened by Judge Jason E. Nichols, of Lansing, who spoke of the necessity of a library board hiring a good librarian and then standing by him. Other speakers were Mr. Bement, president of the board of education of Lansing, and Mr. Jenks, of Port Huron. In the course of the discussion it was thought interesting to know how many different methods of electing library boards were represented at the meeting, and the representatives of the different boards were asked to explain their methods. The reports from various cities were as follows:

Port Huron has a library commission of five members appointed directly by the mayor; in Lansing the library is under the care of the board of education whose president appoints a library committee of three members; Battle Creek Millard Memorial Library is under the board of education, three members of which board constitute a library committee; Detroit has a library commission of six, one member being appointed by the board of education each year for a term of six years; Grand Rapids has a library commission consisting of five members elected by the people, one each year, and the superintendent of schools *ex officio*; West Bay City, Sage Library, has a large board with various kinds of membership. Three members are appointed, one each by the president of the board of education, the superintendent of schools and the mayor. The pastors of several churches in the city are always entitled to membership in the board. Besides all these, five prominent citizens were selected originally by Mr. Sage as members. These five select their own successors.

At the close of this largely attended session a delightful reception was given in the rooms below by the local library board and staff.

Friday morning, June 1, "Relation between the public library and the public schools" was discussed in papers, "From the librarian's point of view," by Miss Louise M. Converse, Mt. Pleasant; and "From the school's point of view," by Superintendent W. G. Coburn, Battle Creek. The point made by Mr. Coburn in closing was that "it is not of so much account what a child knows when he leaves school as what he loves." Mr. Coburn reviewed the various methods of supplying school children with books, urged close sympathy between teachers and librarians, and paid a warm tribute to the work and influence of the children's room. Discussion was opened by Mr. B. A. Finney, of Ann Arbor, who suggested that librarians would find much help in reading educational journals. He de-

plored the fact that so many high schools in Michigan have so little in the way of reference books and suggested that something be done in the way of a list of annotated reference books for the use of schools. This suggestion was referred to the committee on resolutions. Mr. Ranck spoke of the instruction in the use of the library given to pupils of the Grand Rapids public schools, about 10,000 of whom have received such instruction during the year. Many others spoke, and varied methods of inducing the children to care for the better and then the best books were mentioned by different librarians.

Miss Annie Pollard, of the Grand Rapids Public Library, gave a paper on "The business end of the library," which will be found elsewhere in this issue (p. 311). Some phases of reference work as related to clubs" was made entertaining by Miss Ling, of the reference department of the Detroit Public Library, and a discussion followed, participated in by club women and librarians. The question arose as to how frequently the practice of paying for the preparation of club papers had come to the knowledge of those present. Although the librarians from the larger cities knew of occasional cases among the club women where this had been done, it was agreed that this custom was largely confined to college students and other professions. Prices for this work varied from one to five dollars.

At noon the audience scattered, to meet again soon at the Sanitarium, where, through the courtesy of Dr. Kellogg, they were shown through the building, and where an elaborate luncheon was served to 55 members of the association and their guests. The last session opened on Friday afternoon with the vice-president, Theodore W. Koch, in the chair. The question box was first taken up under direction of Miss Hoagland, and after the practical problems it presented had been provisionally solved, the reports of the committee on resolutions, and the auditing and nominating committees were read and accepted. The secretary was instructed to cast one ballot for the following officers: president, Samuel H. Ranck, Grand Rapids Public Library; 1st vice-president Theodore W. Koch, University Library, Ann Arbor; 2d vice-president, Mrs. Kate T. Douglas, Calumet Public Library; secretary, Miss Katherine G. Ling, Detroit Public Library; treasurer, Miss Nina K. Preston, Ionia Public Library.

After the appointment of a committee to report at the next meeting on the feasibility of printing lists of reference books for small school libraries and the practical details of library "pass cards," an invitation from the League of Michigan Municipalities was read by Mr. Utley, urging that the next annual meeting of the association be held with them in 1907 at Detroit. After an expression of thanks, the matter was referred to the executive committee for decision. The vice-

president then expressed the appreciation and thanks of the association for the cordial welcome which had been extended during the meeting. The 16th annual meeting of the association then closed, having had nearly 300 persons in attendance at its various sessions. After adjournment some took the time to examine more carefully the Newark book binding exhibit, which was displayed in the library, while others were conducted to the home of Dr. John H. Kellogg, president of the Sanitarium Association, where they were entertained and shown Dr. Kellogg's library, which is one of the largest private libraries in the state.

Library Clubs

WESTERN MASSACHUSETTS LIBRARY CLUB

President: W. I. Fletcher, College Library, Amherst.

Secretary: Miss Frances E. Haynes, Mt. Holyoke College Library, Mt. Holyoke.

Treasurer: Miss Martha F. Gere, Clarke Library, Northampton.

The eighth annual meeting of the club was held at the Carnegie Library, Turner's Falls, on June 4. Beautiful weather and an attendance of about 100 persons made the meeting most successful. The annual reports of the secretary and treasurer were read and accepted, officers were nominated by a nominating committee, and were elected as follows: president, W. I. Fletcher, librarian of Amherst College; vice-presidents, Miss Mabel Temple, librarian, North Adams, and Mrs. O. C. Hunn, of East Longmeadow; secretary, Miss Frances E. Haynes, of Mt. Holyoke College Library; treasurer, Miss Martha F. Gere, of Clarke Library at Northampton.

The meeting opened with an address of welcome by W. H. P. Gilmore, chairman of the board of trustees of the Turners Falls Library. He briefly outlined the history of the building, Mr. Carnegie's gift of \$12,500, the town's appropriation of \$7000, and the interest of the people generally. The library contains about 6000 volumes, and has a capacity of 25,000. Mr. Gilmore felt that they had the requisites for successfully carrying on their work, namely, the card catalog, free access to the books, an ideal librarian, a responsive public and an ideal building.

Under "Business methods in the library" H. H. Ballard, of Pittsfield, spoke on the necessity of the card catalog, pointing out its advantages of ready duplication, easy handling and elasticity. Mrs. B. H. Johnson, of the Connecticut Public Library Committee, gave some valuable hints from her experiences among the smaller libraries of that state, saying that a simple classification and catalog are possible for all, and that the first essential is for a librarian to know her books. Charles D. Hine, also of Connecticut, spoke of the importance of the librarian's personal work; and open shelves were discussed by

Miss Kate Armstrong, of Montague, and Miss Mabel Temple, of North Adams.

During the intermission luncheon was served at the Hotel Vladish, and the visitors were taken to see the dam and through the establishment of a large cutlery company. At the afternoon session Miss Anna G. Rockwell, librarian at New Britain, Ct., read a paper under the title "What's the use?" touching brightly on many library problems. Frank G. Willcox, of Holyoke, spoke on "Ideals in library work," and the program closed with an address by W. I. Fletcher on "The public library the public's opportunity."

Library Schools and Training Classes

CARNEGIE LIBRARY OF PITTSBURGH TRAINING SCHOOL FOR CHILDREN'S LIBRARIANS

Dr. E. B. Huey, professor of psychology and education, Western University of Pennsylvania, has given a series of lectures on "Principles of education." The talks have included "Methods of studying children," "The main results of child study," "Imitation and the formation of character."

Other recent special lecturers have been Miss Irene Warren, librarian of the University of Chicago School of Education, who gave an interesting talk May 12 on the work of her library, and Miss Caroline Crawford, instructor in Teachers College, New York, who lectured May 15 on "The biological development of literature."

In connection with the lectures on social conditions and betterment, the students have been visiting the public and private kindergartens of Pittsburgh and Allegheny, the bath houses and social settlements, the juvenile court, the county jail, the penitentiary, the reformatory at Morganza and the county poorhouse. The superintendents at all these places took great pains to explain in detail the workings of the various institutions. The importance to the children's librarian of a knowledge of social conditions is emphasized throughout the school course.

During the last week of April the training school had a most interesting exhibition of 213 picture bulletins, in connection with the course on bulletin work given by Miss Charlotte Elizabeth Wallace, librarian of the East Liberty branch. In addition to bulletins from the Carnegie Library, the collection included examples from the public libraries of Brooklyn, Buffalo, Cleveland, Detroit, Milwaukee, New York and Newark, and the library schools of Drexel Institute, New York State Library, Pratt Institute and the University of Illinois.

The school closed for a week June 16, the work of the summer term beginning June 25.

PRATT INSTITUTE LIBRARY SCHOOL

Eighteen members of the present class have joined the A. L. A.

The following students have made library engagements:

Alice S. Cole, cataloger, Mt. Vernon (N. Y.) Public Library.

Maud Durlin, librarian, Oshkosh (Wis.) Public Library.

Edith Dwight, assistant, Hampton Institute (Va.) Library.

Besse R. Griffin, assistant, Library of American Society of Civil Engineers, New York.

Julia W. Heath, substitute, Pratt Institute Free Library.

Louise M. Kirkpatrick, assistant, Aguilar Branch, New York Public Library.

Blanche Lowe, substitute, Pratt Institute Free Library.

Jessie E. McBride, reference librarian, Cedar Rapids (Iowa) Public Library.

Ethel R. Sawyer, substitute, Tottenville Branch, New York Public Library.

Beatrice Schummi, assistant, Osterhout Library, Wilkes-Barre, Penn.

Catherine F. Tracey, acting librarian, Pequot Library, Southport, Ct.

Anna C. Tyler, assistant, Pratt Institute Free Library.

Sloane D. Watkins, librarian, Furman University, Greenville, S. C.

Other positions will be reported next month.

The school enjoyed a visit on May 22 from Dr. Paul Trommsdorff, of the Royal Library of Berlin, who is making a tour of American libraries. Dr. Trommsdorff talked to the school about the Prussian gesamt-katalog now in preparation.

SOUTHERN LIBRARY SCHOOL

The Southern Library School closed its first year's work June 1, when certificates were issued to the following graduates: Miss Eloise Alexander, Atlanta, Ga.; Miss Mattie G. Bibb, Montgomery, Ala.; Miss Florence Bradley, Atlanta, Ga.; Miss Marion C. Buchler, Decatur, Ga.; Miss Lila M. Chapman, Macon, Ga.; Miss Carrie Dailey, McDonough, Ga.; Miss Jessie Hopkins, Athens, Ga.; Miss Louise McMaster, Winsboro, S. C.; Miss Sara L. Manypenny, Chattanooga, Tenn.; Miss Mary E. Martin, Easley, S. C.

Nine of the ten students have accepted positions in library work, which shows the demand for trained library assistants in the South.

Entrance examination for the class of 1907 was held in the class room of the Carnegie Library June 2.

UNIVERSITY OF ILLINOIS STATE LIBRARY SCHOOL

Commencement exercises were held in the armory, June 13, with an address by Baron Herman von Speck-Sternburg, ambassador from Germany to the United States. The fol-

lowing students received the degree of bachelor of library science: Marian Cinderella Bell, A.B. (University of Nebraska) 1904, Florence Baxter Currie, Olive Ermengarde Davis, Mattie Pauline Fargo, Elizabeth Forrest, Lily Gray, A.B. (University of Chicago) 1876; Mrs. Ida Angeline Kidder, A.B. (University of Illinois) 1905; Lucy Mae Lewis, Josephine Augusta Meissner, Leila Maude Wellepp, Ola May Wyeth, A.B. (Cornell University) 1904.

The school has just received as a gift from Mr. John Starr Stewart, of Springfield, Ill., his private collection of book plates, numbering about 500 and including many of value because of owner, engraver or style.

The faculty regrets to lose Miss Harriet Howe, who goes to the University of Iowa as head cataloger and instructor in the Iowa summer school next year. This summer Miss Howe continues her school at the University of Washington.

The record of appointments made during the year, which is kept at the school, gives the following statistics: During the year 62 positions were filled, in 18 states or 42 cities. Of these, 20 were in colleges or universities, 7 in normal schools, 6 in state libraries or commissions, 2 in special libraries, and 27 in public libraries. Classified by positions, the record show 17 librarians, 4 assistant or substitute librarians, 19 assistants, 9 catalogers, 9 organizers, and 4 library school appointments.

KATHARINE L. SHARP, *Director*.

WESTERN RESERVE UNIVERSITY LIBRARY SCHOOL

LIST OF STUDENTS, CLASS OF 1905-06, WITH POSITIONS.

Bessie Smith Claypole, assistant, Cleveland Public Library.
Elizabeth Marian Comings, librarian, Young Men's Reading Room & Library Association, Norwalk, Ohio.
Blanche Joanna Dissette, assistant, Cleveland Public Library.
Harriet Anna Gage, assistant, Cincinnati Public Library.
Alice Gertrude Gaylord, assistant, Cleveland Public Library.
Mrs. Amy Sturtevant Hobart, assistant, Cleveland Public Library.
Frances Charlotte Hunter, assistant, Dayton Public Library.
Mabel Newhard, librarian, Carnegie Public Library, Carey, Ohio.
Rena Richards, librarian, Clyde (O.) Public Library.
Jennie Ellen Roberts, assistant cataloger, Iowa State University Library, Iowa City, Iowa.
Mary Scott Wallis, assistant, Cleveland Public Library.

Reviews

MEYER, A. B. *Amerikanische bibliotheken und ihre bestrebungen*. Berlin, R. Friedlaender & Sohn, 1906. 8+80 p. 8°.

Dr. Meyer continues his efforts to set forth to his countrymen the activities and aims of our American libraries. While his other volumes have consisted of detailed and critical descriptions with illustrations and plans of some of the largest of our libraries and museums, the present brochure is rather an effort at an interpretation of the American library spirit and a statement of its results. It is avowedly written with the purpose of directing public attention in Germany to the work of American libraries. No one could ask for more favorable judgment and more ardent admiration than Dr. Meyer displays. In fact his pages seem to give almost too rose-colored a view of our results. But his praise is discriminating, and is in general based on personal knowledge of conditions. He has evidently read widely and to good purpose with a view to supplementing the information derived from his own observations.

It is hardly too much to say that this book is the best summary of American library progress and purpose yet written. There are certain limitations inevitable in the view of any foreigner who has not tarried much longer with us than did Dr. Meyer. And yet he has somehow succeeded in reaching the root of the matter in most cases. Perhaps his greatest failing is his lack of acquaintance with what is after all the most characteristically American portion of our library work, the activities of our smaller libraries in our smaller communities. These libraries do not publish extensive reports and statistics. They are not as a rule housed in particularly interesting buildings. But they are probably more nearly in touch with the American people than our larger and more imposing institutions. A wider knowledge of their work would have furnished Dr. Meyer with abundant material in illustration of those aims which he seeks to make effective in his own country.

An excellent view of Bates Hall, of the Boston Public Library, serves the little book as frontispiece. In the preface the author states that his purpose in writing the work is to urge the Germans to emulate the English and Americans in founding and improving public libraries. There are two parts to the body of the work; the first is devoted to the aid received by American libraries from the federal government, the state governments, local governments, the community at large, and from organized societies, and finally from individual benefactors. The array of figures and statistics and the account of libraries supported by these various agencies

is truly imposing, while the data are in general accurate and well presented. There is a little too much reliance on reports, and a somewhat too formal arrangement of sources, but these are infelicities of method rather than errors.

The second part of the book discusses various phases of library work and the methods by which American librarians have sought to meet the demands and opportunities of all portions of their public. The list is so suggestive that it must be given *in extenso*: library buildings, branch libraries and delivery stations, libraries in parks, etc., abandonment of troublesome formalities and unnecessary obstacles to the easy use of books, hours of opening, length of time books may be kept out, access to shelves, children's libraries and their relation to the schools, libraries for the blind, annotated book-lists, lectures and exhibitions in libraries, women in libraries, travelling libraries, libraries and museums, library schools. This list of topics of itself is a summary of library problems, in solving all of which America has made decided progress. The summary of American library ideals under these heads is on the whole excellent. Dr. Meyer's attitude toward our results is enthusiastic, and we may be pardoned if on reading his pages we congratulate ourselves that we have done at least so much as arrive at substantial accord on most of these matters.

The conclusion is perhaps the most interesting part of the book. According to our author, American libraries present the following exceptional advantages to readers: 1, the longest practicable hours of opening; 2, attractive and inviting reading-rooms; 3, attendants who are entirely at the service of the readers; 4, catalogs both excellent and easily consulted; 5, easily understood systems of classification; 6, ease of securing books, especially the privilege of admission to the shelves; 7, freedom with which books are loaned without undue difficulties in connection with registration, guarantees, etc.; 8, travelling libraries; 9, children's departments and their relations to the schools; 10, library schools. He concludes: "Solche Einrichtungen kennen wir, von einzelnen Ausnahmen abgesehen, in Deutschland so gut wie gar nicht, ja, wir ahnen sie kaum."

A list of sources, numerous notes, written more especially for librarians, and an index complete this most interesting little volume. The author appears to have caught the spirit of the best American librarians. That spirit is one of service of the people, and nobly have the people responded to their efforts. This is his great achievement. Any diligent student of journals and reports could have compiled the facts and figures he has given. An unfriendly or even an unsympathetic critic could have found much to ridicule, much to ignore, much to distort in his sources. American li-

brarians will owe to Dr. Meyer in a small way the debt which all Americans owe to Mr. Bryce. He has revealed our best qualities to ourselves and to the European world. And he has kindly, perhaps too kindly, passed over our defects.

WM. WARNER BISHOP.

STATE PUBLICATIONS: a provisional list of the official publications of the several states of the United States from their organization; comp. under the editorial direction of R. R. Bowker. Part 3, Western states and territories: Minnesota, Iowa, Missouri, Kansas, Nebraska, So. Dakota, No. Dakota, Dakota Territory, Montana, Wyoming, Colorado, Utah, Nevada, Idaho, Washington, Oregon, California, Arizona, New Mexico, Oklahoma, Indian Territory, Alaska, Hawaii. New York, Office of the *Publishers' Weekly*, 1905. 2+p. 287-605. O.

Part 1 (1899) of this work, listing in 100 pages the publications of the six New England states, and Part 2 (1902), in 185 pages, covering the publications of the states of New York and Pennsylvania, west to Wisconsin, averaging but 23 pages each for eight of the oldest and richest states in the Union, have been reviewed in *LIBRARY JOURNAL*, 25: 299 and 28: 78. Part 3, now before us, averages 14 pages to each of the 23 divisions which include the newest states, all the territories, Hawaii and Alaska. Either the work of compilation has grown much in zeal and thoroughness as the enterprise progressed or the far western states have exhibited a much greater printing activity than their eastern sisters. That the first surmise is right seems to be shown by a few comparative figures. The publications of each of the states of California, Missouri, and Kansas fill more pages than those of Massachusetts or Pennsylvania. Those of either South Dakota, Montana, Wyoming, Utah or Nevada are as numerous as New Hampshire. These figures indicate that as a check list the latest parts of this work show greater completeness than the earlier. The editor recognizes this expansion of the work in his prefatory remark that the limit originally planned for the entire work (3 parts, perhaps 400 pages) has been already far exceeded, with the 15 Southern states left to be treated in Part 4, which will swell the volume of the completed work to near twice what must have been first contemplated. The arrangement and grouping of material follow Parts 1 and 2, and have been described in detail in this journal for February, 1903, 28: 78-80. The material has been gathered by enlisting the co-operation of state librarians or other officials and supplementing the material thus secured locally, by reference to metropolitan collections of state documents,

especially that in the New York Public Library. The resulting mass of data then required harmonizing, comparison, annotation, and the thousand and one painful and laborious editorial attentions which have been so intelligently and carefully bestowed by Mr. W. N. Seaver, whose services through the entire time of work on this part have contributed greatly to its technical perfection.

The editor complains of the difficulties arising from the chaotic conditions prevailing in collections of printed state documents (with which alone the list is concerned), and of the failure to secure the co-operation which might reasonably have been expected from those in charge of state libraries. Both the conditions complained of are so notably and regretably prevalent that the results embodied in Mr. Bowker's "Provisional list" are a surprising testimony to editorial diligence and persistence.

Noticeable, too, are the differing sorts of work seized from gratuitous co-operators, among whom willingness oftener than high ability, constituted the chief qualification, though that both were sometimes happily united is proven by such lists as those of Missouri and Kansas, which two states show more publications than New York and Pennsylvania together. On the other hand, it seems certain that a full list of the publications of Indiana and Iowa must be far more extensive than here given, where they number little more than those of either Nevada, North Dakota, or Washington.

That the chief use of "State publications" will be as a check list and by libraries in building up collections (it is probable that these printed lists are complete for any given state than the collection in any single library in that state), or by catalogers in determining complete sets, is recognized by the publisher in the provision of half-page margins for additions and corrections. It has, too, its distinct value as a subject catalog, for while its arrangement and classification are the only subject index provided and its use in this way is therefore sharply limited, nevertheless, for many historical and economic topics, it serves to-day as the best guide to all the material (often rich and valuable) found in the reports and publications of the numerous commissions and bureaus of our states, and must remain of use in this connection until the same material is adequately indexed by subjects.

Those who appreciate the difficulties which beset the pioneer who blazes the way through such a wilderness will cherish a lively gratitude for the present work now so near completion; a gratitude not unmixed with regret that the certain financial loss incident to such a work, due to the small circle to which it appeals, must often deter competent workers with more zeal than means from similar undertakings.

J. I. WYER, Jr.

Library Economy and History

GENERAL

ASSOCIATION DES BIBLIOTHECAIRES FRANÇAIS.

Compte rendu de l'assemblée générale constitutive du 22 avril, 1906; extr. du *Bibliographe Moderne*, nos. 1-2. Bésançon, Typ. et Lith. Jacquin, 1906. p. 155-179. O.

Ceská Osveta for June is devoted to the discussion of travelling libraries, in several articles. There is an extended account of the development of the system in this country, by L. J. Zivny, with illustrations; an article on the Raknovik travelling libraries, by V. Bauer; and a review of the economy and importance of the travelling library system, by J. Dont.

CRUNDEN, F. M. The public library and civic improvement. (*In Chautauquan*, June, 1906. p. 335-345.)

FISHER, C. P. Some points in the interior arrangement and construction of a building for a special library. (*In Medical Library and Hist. Journal*, March, 1906. p. 107-112.)

Presents essential requirements of a building intended for medical society and library use.

The *Library Assistant* for June contains the 11th annual report of the Library Assistants' Association, recording an increase of 60 members for the year. One of the principal events of the year was the decision not to accept the invitation to affiliate with the Library Association of the United Kingdom. "The matter received the gravest deliberation, and in the end a plebiscite of the membership was taken with the result that the proposal was negatived by a small majority."

Library Association Record for May contains Harry Farr's address on "The libraries and the counties," previously noted in these columns; and suggestions for "Library planning," by T. J. Burgoyne.

Library World for May describes more or less briefly "Bookbinding, a suggestion" (by John W. Singleton), "The library inventory," "The librarian as a 'handy man,'" and the late Dr. Richard Garnett.

WHITNEY, Henry M. The public library and its critics. Connecticut public library document. no. 1, 1906. [Hartford, Ct.] 1906. 12 p.

A vigorous and broadminded statement of the public library's work and ideals, as against current criticisms that have appeared in various books and magazines. In conclusion, Mr. Whitney says: "No library trustee, no librarian, high or low in position, should

fail to consider deeply the criticisms that are made, however carelessly or unjustly, upon their ideals, their methods, or their results. These things are at least signs that the world realizes that the library is an agency of enormous potency for good; and criticisms are answered best by achievement."

LOCAL

Aurora (Ill.) P. L. The new Carnegie building was formally opened on the afternoon of May 23, when a public reception was held. Dedication exercises were held in the evening.

Bangor (Me.) P. L. (23d rpt., year ending Dec. 31, 1906.) Noted when printed in local press, *L. J.*, Feb., 1906, p. 91.

Brooklyn, N. Y. Pratt Institute F. L. The library recently displayed in its exhibition gallery an exhibit of "Some examples of modern printing." This included books from the De Vinne Press, the Gilliss Press, the Riverside Press, the Heintzemann Press, and other well-known American presses, with a few examples of English work. On the walls was a collection of examples of announcements, title-pages, invitation cards, programs, etc., from the presses mentioned, and also a selection of modern German work. The exhibit was intended to be of special service to those having occasion to print anything, from an announcement card to an annual report, and it showed examples of many kinds of work. A brief list of recommended books on printing and of periodicals on this subject was posted in the gallery, and was later printed in the July number of the library's monthly bulletin.

Camden (N. J.) F. P. L. The Carnegie building of the East Side branch of the library was opened on the evening of June 19.

Charleston (S. C.) L. Soc. At the 158th meeting of the society, held June 12, the librarian's report was presented, showing accessions of 1137 and a total of 26,161 v. cataloged. The circulation was 41,702, of which 31,085 were fiction. The total membership is 634.

A valuable collection of over 400 v. relating to the history of Charleston and of South Carolina has been given to the library by the Hon. William Ashmead Courtenay, who also presented eight portraits of distinguished citizens of Charleston.

Chelsea, Mass. Fitz P. L. (36th rpt. — year ending Dec. 31, 1905.) Added 1167; total 21,416. Issued home use 85,333; school use 1412; lib. use 6593. New registration 1029.

"To test the popularity of the open shelves, a separate record was kept, and the result shows that over two-thirds of the books loaned from the fiction class were selected from those shelves."

Chicago P. L. In the *Chicago Daily News* recently J. R. Patterson, superintendent of the library's binding department, described the disposition made of worn out volumes. On an average over 5000 books a year are condemned as unfit for further use, and nearly all of these are sent to the local house of correction, or Bridewell, as it is popularly known, where they are available to 1900 prisoners, made up of 1400 men, 150 women and 350 boys.

The Bridewell library is made up of about 15,000 books, distributed in different parts of the institution. They are chiefly circulated from the prison central library, where 7500 volumes are stored on the shelves; but there are also smaller collections in other divisions of the prison, 1000 being kept in bookcases in the women's building, 2500 in the school and smaller numbers in the various cellhouses. The general distribution is made regularly Sunday morning from the central library, the books being conveyed in baskets, the rule permitting each prisoner one book a week. However, great leniency is shown in the use of the cherished volumes, for the prisoners freely exchange their books with other borrowers.

"Requests made by the prisoners for certain books are carefully noted. There has hitherto been no printed catalog, but one has been begun and will be published by the prison department. Considering the lack of trained librarians and other obvious shortcomings the library is very well arranged. One difficulty in this part of prison management lies in the short terms of the librarians as well as of all the other prisoners. The average term is from two to six months, and only men of some learning and book knowledge are selected to do the work. All authors are arranged alphabetically on the shelves. Cards bearing the names of those most numerous represented being tacked to the shelves render rapid and accurate service possible. Many exceptions to the rule of 'one book a week' are made to prisoners working near the central library, and the two convict librarians are kept fairly busy recording the returning and outgoing books.

"Reading for recreation is the rule, but there are many calls for books on chemistry, history and the practical arts. There are enough German and Scandinavian discarded volumes from the public library to satisfy the readers of those languages, but there is a lack of literature for Italians, Polish, Russians and French."

Cincinnati, O. Library institute. Under the direction of the Cincinnati Public Library a successful institute was held at the Walnut Hills branch, Friday and Saturday, June 15 and 16. This branch, the first of the larger ones to be opened in Cincinnati, has been in operation since April 10. In architecture and arrangement it is well fitted to serve as a model small library, though its connection

with the larger library made impossible demonstration of certain points in library administration which might have been useful. Forty persons were in attendance, four states (Indiana, Iowa, Kentucky and Ohio) being represented. Among those from outside of Cincinnati were Miss Merica Hoagland, secretary of the Indiana Public Library Commission; Miss Alice Mann, of the Iowa State Library Commission; Miss Matilda Light, secretary of the Ohio Library Association; Miss Grace Prince, treasurer of the Ohio Library Association, and representatives from the libraries at Dayton, Franklin, Glendale, Lebanon, Sidney, South Salem, Troy and Wilmington, Ohio, and Covington and Louisville, Kentucky. The lecturers were Mrs. E. W. Jewell, secretary of the board of trustees of the Carnegie library, Norwood; Mr. W. T. Porter, president of the board of trustees of the Cincinnati Public Library, and Mr. Hodges, the librarian, and members of the cataloging department of that library.

Three sessions were held, with practical instructional addresses and general discussion, and on Saturday afternoon a special trolley car trip was taken to the library of the University of Cincinnati, the library of the Historical and Philosophical Society of Ohio, and the North Cincinnati, Norwood and East End branch buildings of the Cincinnati Public Library, which are now in course of construction. Those who remained over Sunday spent the afternoon at Cloverbrook, formerly the home of Alice and Phoebe Cary, now the Cloverbrook Home for the Blind.

Cincinnati (O.) L. Soc. for the Blind. (Rpt., 1905.) "The library was started with about 100 v.; it now contains about 1000, and since the books may be sent free through the mails, people living in Ohio, Kentucky, Pennsylvania, West Virginia, and even Texas, have been able to enjoy them." Thanks are again extended to the Cincinnati Public Library "for its care of the books and subscriptions to the magazines, and for the room provided for the use and comfort of the blind."

Cleveland (O.) P. L. At the June meeting of the library board a plan was approved for co-operation with the Western Reserve Library School in training library assistants. In return for instruction by members of the library staff in the library school, the library board will be given the right to nominate 20 students, who will receive instruction at the library school free of tuition charges. Such students would naturally be given preference in appointments to the library staff.

Erie, Pa. Library institute. The second institute for library workers of northwestern Pennsylvania was held at Erie, June 7-8, with Miss Mary Weis, of the Warren Public Library, presiding as chairman.

Mrs. Jean Hard, Erie's librarian, opened the meeting with a few cordial words of welcome, and presented the Hon. J. F. Downing, president of the board of library trustees, who delivered a formal address of welcome. The other speakers were Miss Linda Eastman, vice-librarian of the Cleveland Public Library, on "Things that help to make a library successful;" Miss Waterman, of the Benson Memorial Library, Titusville, on "Advantages of open shelves;" and Miss Williams, of Corry, on "Management of small libraries."

The evening session was marked by the presence of Mr. Montgomery, Pennsylvania state librarian, who delivered an address on "Duties of the state in providing literature for its citizens;" and Miss Brooks, reference librarian of Erie, spoke on "Reference work." Friday morning, after examining the library, the visitors were taken in automobiles for a ride around the city, and to Waldermeer, Erie's beautiful country resort on the bluffs above the lake. Here they were served with a picnic luncheon by the Erie library staff, and here later the afternoon session was held. Mrs. Hard spoke on "Training new assistants," and Miss Alice Hazeltine, of Oil City, on "Work of the circulating department," and there was general informal discussion. Before the institute closed, Miss Hazeltine was elected chairman for next year's meeting, which will be held at Warren.

Fairhaven, Mass. Millicent L. (Rpt. — year ending Dec. 31, 1905.) Added 851; total 17,108. Issued, home use 46,401 (fict. 58.2 per cent.). New cards issued 380; total registration 2562. The percentage of registration to the population of 4200 is 49, "which is hardly surpassed in the country."

The fiction collection was carefully revised by the librarian during the year, about 4350 v. being handled and examined with a view to their merit, condition and degree of use. The "literature" section of the "A. L. A. catalog" was distributed as a popular finding list of the classes covered, and besides the four regular bulletins a series of cumulative bulletin sheets of new additions was issued. The latter series, however, was not found sufficiently popular to warrant the expense it involved, and has been discontinued.

"The high loan desk has been replaced by a fine table, 42x70 inches, such as might be used in a private library. By this change a passage is gained on either side of the loan table directly to the stack which is open to all readers. The formality of a high desk barring the room gives way to an appearance of simple, hospitable welcome, and the architectural beauties of the central ceiling and arches are greatly enhanced. The rearrangement of small tables for the display of recent interesting books, and of the card catalog thus made possible, has added very much

to the ease and rapidity with which the public finds the books it wants, and the staff accomplishes its work."

Mr. Hall refers particularly to the large use of the children's room, and to the dangers of over-reading and evening use of the library by children.

Freeport, Me. B. H. Bartol Memorial L. The Carnegie library building was dedicated on Saturday, May 26, in the presence of a large audience. The address of the day was delivered by Dr. Henry M. Chapman, of Bowdoin College, and a dedicatory poem by H. L. Koopman, librarian of Brown University, was read by Miss Annette Aldrich, the librarian. The new building, which is of brick with granite foundation, is one storied, with a basement, 40 feet in front and 45 in depth. The main part consists of one large room, the central corridor being separated from the stack room on one side and the reading room on the other, by two supporting columns. There is a big fireplace in the reading room, and the exterior finish, book stacks and delivery desk are of cypress. The library contains 2150 v. It is named in memory of Barnabas Henry Bartol, born in Freeport in 1816. It was first started as a library association, and the heirs of Mr. Bartol in Philadelphia offered \$1000 for the purpose if the association would name it the Bartol Library, so it was incorporated under that name. Shortly afterward, Mrs. Harriet Bartol Curtis, Mr. Bartol's sister, gave \$1000 toward the building fund. Finally \$3500 was collected, nearly all of the residents of the town contributing. When it was found that all the money possible had been raised, the association appealed to Mr. Carnegie, who offered to give \$6500 toward the library upon his usual conditions. Mr. Carnegie's offer was accepted on March 31, 1905. The library was made a free public library by the town in 1903.

Indiana State L. A legislative reference department has been provided for as a department of the library to go into operation on August 1. The general duty of this department will be to secure, digest and tabulate official and scientific data from other states and foreign countries as an aid to official betterment in Indiana. Its special duty from its inauguration to the close of the next session of the General Assembly will be to secure and organize such data as shall be of especial service to the members of the legislature in the way of better planned and more carefully digested legislation. The department will be in charge of Mr. Clarence B. Lester.

Manchester (N. H.) City L. (52d rpt.—year ending Dec. 31, 1905.) Added 1774; total 53,469. Issued, home use 67,107 (fict. 73 per cent.). New registration 635; total registration 16,015.

There has been an increase in registration and in the use of books for study. The reading room and central part of the building were cleaned and redecorated, and made much more attractive and convenient. The public documents were systematically arranged, and many missing sets completed. The fiction percentage of the circulation shows a slight but continued decrease.

New Britain (Ct.) Institute L. (52d rpt., 1905.) Added 2383; total not stated. Issued, home use 118,197. New registration 1412; cards in use 9898. Receipts \$10,109.89; expenses \$9579.52 (salaries \$3459.67, janitor service \$1126.98, books \$1908.82, binding and printing \$927.24, newspapers and periodicals \$394.13).

There is considerable gain in reading room attendance and in the general use of the library.

New Brunswick (N. J.) F. P. L. (16th rpt., and 23d rpt. of Free Circ. L.—year ending March 31, 1906.) Added 2108; total 21,490, of which 9423 are on loan from the Free Circ. L. Issued, home use 63,240 (fict. 40,237, juv. 11,587). New cards issued 599. Receipts \$5132.41; expenses \$4772.34.

The number of books added and the circulation of books are both larger than ever before. The children's room is particularly successful.

New York P. L. On June 11 reading room service between 9 and 10 p.m. was discontinued at the Bloomingdale and 96th street branches, on account of insufficient attendance. Sunday afternoon service now prevails in 11 branches.

The open-air reading room, or "roof garden" at the Rivington branch has proved so successful and is so greatly appreciated by the people of the neighborhood that this feature is being incorporated in the plans of three new branch buildings, now in the hands of the architects. The new "roof gardens" will be somewhat larger than the one at Rivington street and more convenient. The book-lift will be extended to the roof, and shelter will be provided for magazines and papers in case of a sudden shower. These open-air reading-rooms increase the cost of construction of a building by several thousand dollars.

New York State L. On June 1 the governor signed the bill (chapter 678 of the laws of 1906) for a new state library and museum building, at a cost not to exceed \$4,000,000. It carries an immediate appropriation of \$400,000.

Northampton, Mass. Forbes L. The library has just had painted a portrait of the former librarian, Charles A. Cutter, to be hung in a suitable place in the building. The artist is Mr. W. H. W. Bicknell, of Boston,

Mass., who had the advantage of personal friendship with Mr. Cutter, and whose work is regarded as remarkably effective. The portrait is painted from photographs, and resembles, in general position, the portrait of Mr. Cutter which was printed in the *LIBRARY JOURNAL* soon after his death.

Portland (Mich.) P. L. The Carnegie building was dedicated on June 8, with an address by President Angell, of the University of Michigan. The building cost \$10,500, and is built of field stone, with interior finishing of oak. Mr. Carnegie's gift for the purpose was \$10,000, the \$500 additional being the contribution of the local Ladies' Literary Club; the site was given by S. E. Jarvis.

Providence (R. I.) P. L. In honor of the A. L. A. conference at Narragansett Pier the library issued its July *Quarterly Bulletin* as a "Narragansett Pier number," containing a detailed and instructive account of "The Providence Public Library, its building and its work."

Rock Hill, S. C. Winthrop Normal and Industrial College. The \$30,000 Carnegie library building was dedicated on the afternoon of Monday, June 4.

Wesleyan University L. Middletown, Ct. (Rpt. 1905; in *univ. Bulletin*, May.) Added (accessioned) 3147; total 73,000. Issued, home use 6593; reserve use 1069.

Among the gifts received during the year were the 3336 v. and 2208 pamphlets belonging to the Van Benschoten collection.

"Several large collections of books presented in recent years have been necessarily left uncataloged. In response to a statement of this fact the finance committee of the board of trustees has appropriated enough money to employ an additional cataloger for two years."

Wilkes-Barre, Pa. Osterhout F. L. (17th rpt., 1905.) Added 2901; total 36,842. Issued, home use 100,313 (fict. 66.61 per cent.). New registration 2684.

There has been a decrease of two per cent. in the circulation of fiction. "It is especially encouraging to know that non-fiction books are in demand and that the public is, in a measure at least, satisfied if all, so called, popular works of fiction are not added to the library continually."

The work of guiding children in their reading has been most encouraging.

Of nearly 1000 v. added to the children's room a large proportion were replacements or duplicates of standard works. "It has seemed best to keep to the well known and familiar authors rather than to wander too widely in newer fields."

Library privileges have been extended to residents outside of the city living within a five-cent car fare limit.

"At Christmas time 12 books of 'pieces to speak' were prepared to meet the extra demand which comes at this season. The books contained five or six poems, suitable for the youngest speakers, printed by hand on white paper, and tied in bright red cardboard covers. On each cover was pasted a Christmas picture of some kind, and the little books were attractive and very popular."

Wilmington (Del.) Institute F. L. (12th rpt.—year ending Feb. 28, 1905.) Added 4309; total 56,677. Issued, home use 227,024, of which 196,768 were issued from the central library (fict. 49.42 per cent.); issued through the schools 18,506. New registration 4285; total registration 14,422. Receipts—\$20,779.01; expenses \$20,500.96 (salaries \$8123.02, books \$3242.18, binding \$1909.28, periodicals \$650.63, printing and stationery \$608.72).

The children's room is very inadequate both in shelf room and seating capacity; its circulation averages about 45 per cent. of the total circulation of the library. The use of books in the schools was larger than at any time since the system was inaugurated. The head of the children's department visited several schools and spoke to children and teachers on the use of the library, and to this a decided increase in circulation is directly traced.

"During the year a systematic effort has been made to induce the workmen of the city to use the library and especially to use the books that might help them in their own lines of work. Most of this work has been done through the newspapers which have freely opened their columns to communications from the librarian. It is hard to estimate the result of this effort. There has been, however, a decided increase in the circulation of the books classified in useful arts. Last year the circulation was 2360, and this year it is 2764. Last year the circulation of books in useful arts was exceeded by that of fiction, juvenile works, sociology, fine arts, literature, history, travel and biography; while this year it is exceeded by fiction, juvenile works, literature and biography, the latter with a small margin of only 14 volumes."

Mr. Bailey considers at some length the question of rebinding, giving a summary of information received in answer to circular inquiry of other librarians. It was decided to give up the former practice of binding periodicals in half American Russia, and to adopt a half duck binding which "will last practically forever" and costs 15 cents a volume less than formerly.

Bodley Club service was discontinued during the year owing to failure to receive popular books as promptly as desired.

Worcester (Mass.) F. P. L. (46th rpt.—year ending Nov. 30, 1905.) Added 6622; total 153,176 (circulating dept. 67,168). Issued, home use 257,395; ref. use 101,435. New

registration 4619; cards in use 24,139. Receipts \$44,513.83; expenses \$44,447.78 (books \$8980.31, binding \$2965.07, salaries \$16,425.30, janitors \$2487.57, extra service \$1588.60, cataloging \$2254.75, coal and wood \$1553.94, gas \$1016.20).

Use of the library shows a steady gain, particularly in the reference and children's departments. There has been considerable repairing and improvement of the building, for which a special appropriation of \$3000 was granted. At the close of the preceding year the position of assistant librarian was created, which was filled by the appointment of Robert K. Shaw, then librarian of the Brockton (Mass.) Public Library. Work with the schools has been, as usual, steady and satisfactory, the issue of books on pupils' cards having been transferred from the general circulating department to the children's department; 7134 v. were issued on these cards. It has been decided to make provision in the children's room for little children, and experimental opening of this department on Sundays and holidays was tried with satisfactory results. Mr. Green says: "I have been trying certain experiments regarding influences on children by means of pictures. Besides having some really good pictures framed and placed around the children's room, I have had a frame made with a movable, back and supplied with mats of different sizes to use in displaying pictures. The plan is, when not showing pictures called for by especial occasions, to exhibit several of the works of a single artist in succession, keeping a picture long enough in sight to make an impression and hoping that some aesthetically susceptible children may by seeing the same artist's work, in different manifestations, for a considerable length of time, learn to distinguish some of the characteristics of the artists. It is intended also to have the children's librarian give talks about the pictures and artists. We have a collection of 4000 fine photographs. It is the intention, of course, only to display masterpieces."

From the eight delivery stations a total of 10,622 v. were issued. Among the exhibits held at the library was one devoted to books for the blind, which excited wide interest in this department of library work.

Appended to Mr. Green's report are reports of the various library committees and heads of departments.

FOREIGN

Battersea (Eng.) P. Ls. (19th rpt. — year ending March 31, 1906. Added 1410; total 54,300, of which 15,675 are in the ref. dept. Issued, ref. dept. 60,638; lending dept. 214,092; branches 74,221 and 59,621 respectively. "A scheme for reorganizing the school libraries in the borough has been prepared by the librarian and approved by the library committee, and it is now under consideration by the education committee. In the meantime, fa-

cilities are being given to such schools as may desire it for meeting the wants of scholars not provided for by the school libraries, and in general for carrying out the suggestions made at the conference with the teachers in 1898."

Bodleian L. (Rpt., 1905; in *Oxford Univ. Gazette*, May 8, 1906.) Added 79,539 printed and ms. items, the highest total on record. Of these, 53,431 were received under the copyright act, 11,279 were new purchases, and 14,430 gifts or exchanges. Among the gifts were 21 mss. and 127 blockbooks purchased in Tibet, presented by the Indian government. "The Bodleian already possesses considerable modern Tibetan collections, but nothing to compare in antiquity and curiosity with what has now been presented. The volumes consist of sutras, histories of kings and lamas, manuals of worship, treatises on literature, grammar, poetry, and 'prajna paramita' (transcendental wisdom)." Another important gift was the Homeric collection of Dr. Monro, the late provost of Oriel, purchased and given to the library by his friends, on condition that they be kept together as the Monro collection. The collection comprises 1084 v.

Electric lighting has been installed in the Radcliffe camera, with highly satisfactory results.

Hawarden, Wales. St. Deiniol's L. DREW, Mary. Mr. Gladstone's library at St. Deiniol's, Hawarden. (In *Nineteenth Century*, June, 1906. p. 944-954.)

An account, by Mr. Gladstone's daughter, of the library collected by him, and presented to the students of Great Britain, and since 1902 housed in the building erected by the nation as a memorial to him.

Japan, Libraries in. The 31st report of the minister of education of Japan, published in English (Tokio, 1906. 6+174+78 p. O.) gives information regarding the libraries in the kingdom. These include 1 government, 28 public and 57 private libraries. For the government library, the Imperial Library of Tokio, statistics were noted in June L. J. There was an increase of 8 public and 11 private libraries during the year. In the 85 public and private libraries there are contained 770,266 v., of which 734,643 were Japanese and Chinese works and 35,623 European works. The libraries were open 19,652 days and had 420,065 visitors, a daily average of 21.38. All the statistics show very large increase over the previous year.

Manchester, Eng. John Rylands L. (Rpt., 1905; in *library Bulletin*, May, 1906.) Added 8926, of which 3644 were purchased; total "upwards of 100,000." Important accessions are noted. The most considerable gift was

from Mrs. Rylands, a collection of Dante literature of about 5000 v. It was formed by Count Passerini, of Florence, the eminent Dante scholar, and is rich in early editions of the original text. Taken with the other Dante editions formerly owned by Lord Spencer, it "gives to the library the distinction of possessing a collection of the 'Divina commedia' which is almost unrivalled." It is intended to prepare and publish an adequate catalog of the collection.

Announcement is made that the governors of the library have decided to undertake the publication of a series of facsimile reproductions of some of the more interesting and important of the unique and rarer books and prints in the collection. The series will be known as "The John Rylands facsimiles"; reproductions will be made with the utmost accuracy and care, and there will be a bibliographical introduction to each volume. Editions of each work will be limited to 250 copies, of which 100 copies will be reserved for distribution to the great libraries of the world. The remainder will be sold at a price likely to cover cost of reproduction, probably not more than five shillings for the smaller works. Sales agents for the volumes are Messrs. Sherratt & Hughes, University Press, 27 St. Ann St., Manchester. It is proposed to publish the first seven works during the present year. A list and description of the seven works chosen are given. These include the Caxton tract, giving the oration pronounced by John Russell, garter king at arms, on the investiture of Charles, Duke of Burgundy, with the order of the Garter, in February, 1469; a grammatical tract, "Treatise called puula," printed by Nicole Marcant; a fragment of an edition of Cato's "Distichs," printed at Utrecht between 1471-73; a unique edition of the treatise "Ars moriendi," printed by Wynken de Worde, about 1498; and the unique copy of the Latin edition of Pfister's "Biblia pauperum."

Practical Notes

SINGLETON, J. W. Bookbinding: a suggestion. (*In Library World*, May, p. 289-290.)

An argument "in the interests of economy" against the practice of buying books bound from the sheets, as recommended by Mr. Chivers. It is pointed out that the binding is often too good for the book, and that many books, even fairly popular ones, will last from two to three years in the publishers' covers and after that a cheap cloth case will serve; by "cheap" is meant "anything up to a shilling." Recommends that publishers be formally urged to issue a library edition of popular books, based on direct notification from libraries of the number of copies required.

Gifts and Bequests

Leominster (Mass.) P. L. The library recently received a gift of \$500 from the estate of John C. Stratton, a former resident of Leominster.

Union Hill (N. J.) F. P. L. A bequest of \$500 has been received from the estate of the late Dr. A. W. Warden.

Librarians

EVERY, Maurice H., B.L.S., New York State Library School, class of 1905, has been appointed assistant in the Smithsonian division of the Library of Congress.

CORT, Miss Emily S., of the Buffalo (N. Y.) Public Library staff, is classifying and cataloging the Warsaw (N. Y.) Public Library, but has not been appointed librarian, as was erroneously stated in these columns. The librarian is Miss Helen M. Cameron.

COMPTON, Charles Herrick, of the New York State Library School, 1905-6, has been appointed librarian of the Y. M. C. A., Albany, N. Y.

EATON, Miss Annie T., of the New York State Library School, class of 1906, has been appointed assistant at the Pruyn Library, Albany, N. Y.

ELMENDORF, Henry Livingston, librarian of the Buffalo (N. Y.) Public Library, died at his home in Buffalo on July 8, after two years of ill health. Mr. Elmendorf was born in Brooklyn, N. Y., on Oct. 10, 1852, the son of Anthony and Sarah C. Elmendorf, and was educated at the Brooklyn Polytechnic Institute. His first library work was done as assistant in the Gardner Sage Library, New Brunswick, N. J., in 1877. Later he engaged in business, but in 1892 was appointed librarian of the St. Joseph (Mo.) Public Library, succeeding Henry J. Carr. This post he held until the autumn of 1896, when he became London agent of the Library Bureau. He spent several months in London in this capacity, and in June, 1897, was elected librarian of the Buffalo Public Library, succeeding J. N. Larned. The library was then in process of transformation from a subscription library to a free public library. Its formal opening as a free library was held in September, 1897, and in all the work of organization and development of the new institution Mr. Elmendorf showed high executive qualities and a broad conception of the field before the library. Through the nine years of his administration these qualities were evident, and the library has become a center of the city's educational life and a model for other communities. The development of an open shelf room, as a compromise between complete access to

shelves and a few open rows of books; and the establishment of grade room libraries in the public schools, were special features of the work of the Buffalo Public Library that have awakened interest throughout the country and been widely adopted in other libraries. Mr. Elmendorf believed thoroughly in library extension, and his dominating purpose was to bring the library into the closest possible touch with the people. Mr. Elmendorf had been a member of the American Library Association since 1893. He was elected secretary of the Association at the Denver Conference in 1895, and first vice-president at the Cleveland Conference in 1896. He was active in library interests in New York state, having served as president of the New York Library Association, of which he was a leading member. He contributed largely to the periodical press on library topics and was effective in making the work of public libraries better known to the general public. In October, 1896, he was married to Miss Theresa Hubbell West, then librarian of the Milwaukee Public Library. No record of his library work can be adequate without recognition of her high ability and devoted participation in all his professional activities, which have been also in large measure her own. At a meeting of the directors of the Buffalo Public Library, July 9, resolutions were passed, appreciative of the services of Mr. Elmendorf, "to whose devoted and masterful work is due the common success of the library, which he has left in the front rank of the great public libraries of the country." It is added: "The library has ever been his greatest, and in fact, his only interest during these years, and his fondest hope and ambition was to make the library a means of happiness and comfort, a source of the best knowledge, to all the people of the city. We hereby faintly express our admiration for his ability and success in his profession, and his high integrity and faithfulness to his trust, which has commanded, at all times, our entire confidence."

FLINT-JACKSON. Mrs. Arabelle Horton Jackson, of the Carnegie Library of Pittsburgh Training School for Children's Librarians, was married on July 9, at Westerleigh, Staten Island, N. Y., to William Parker Flint, of Pittsburgh.

GAMWELL, Miss Lillian M., of the New York State Library School, class of 1906, has been appointed librarian of the George Maxwell Memorial Library, Rockville, Ct.

HENRY, William E., state librarian of Indiana, has resigned that position to accept appointment as librarian of the University of Washington, Seattle. His resignation will take effect in September. Mr. Henry has been state librarian of Indiana for nine years, and has done a great deal for the development of library interests in the state. He has brought the state library to a high de-

gree of efficiency, systematized and built up its collections, and done effective work in strengthening state bibliography. He has been actively identified with the work of the National Association of State Libraries, and is a member of the Council of the American Library Association.

HILL, Frank P., chief librarian of the Brooklyn (N. Y.) Public Library, and president of the American Library Association 1905-6, received the honorary degree of LL.D. from his alma mater, Dartmouth College, on June 28.

HILLIS, Miss Julia E., of the New York State Library School, 1905-6, has been appointed assistant in the New York State Education Department, Division of Visual Instruction.

HOLDING, Miss Anna L., of the New York State Library School, 1905-6, has been appointed temporary assistant at the East Liberty branch of the Carnegie Library, Pittsburgh, Pa.

LATHROP, Miss Helen, of the New York State Library School, 1905-6, has been appointed assistant to the director of the Training School for Children's Librarians, Carnegie Library, Pittsburgh, Pa.

LICHTENSTEIN, Joy, assistant librarian of the San Francisco (Cal.) Public Library, has taken a year's leave of absence from the library force and entered business.

MULLIKEN, Miss Clara, of the New York State Library School, class of 1906, has been appointed reference librarian and head of the loan department of the Rosenberg Library, Galveston, Tex.

PUTNAM, James B., for twenty years state librarian of Oregon, has resigned that position, in which he is succeeded by E. N. Gillingham, of Salem, Ore., who has for the past three years acted as assistant librarian.

RUPP, George Peabody, librarian of the Masonic Temple, Philadelphia, Pa., died at the Jewish Hospital in that city on July 3. Mr. Rupp had been librarian of the Masonic Temple for the past ten years, having before that time been librarian of Girard College.

SOLIS-COHEN, Leon M., B.L.S., New York State Library School, class of 1905, has been appointed assistant in charge of the Brownsville branch of the Brooklyn (N. Y.) Public Library.

THOMSON, O. R. Howard, librarian-in-charge of the Wagner Institute branch of the Free Library of Philadelphia, has been elected librarian of the James V. Brown Library, Williamsport, Pa., recently established.

WRIGHT, Miss Jane, of the New York State Library School, 1905-6, has been appointed librarian of the Art Library connected with the Cincinnati Museum Association.

Cataloging and Classification

BIBLIOTHÈQUE NATIONALE, Catalogue général des livres imprimés de la Bibliothèque Nationale. Auteurs. T. 25, Cau-Chailly. Paris, Imprimerie Nat., 1906. 8°.

JAMES BLACKSTONE MEMORIAL L. *Branford, Ct.* Bulletin no. 8: Additions, May, 1905-April, 1906. 28 p. O.

CINCINNATI (O.) P. L. Annual list of books added, 1905. Cincinnati, 1906. 84 p. Q.

DISTRICT OF COLUMBIA P. L. Reference list no. 1: Fine arts, Washington, D. C., June, 1906. 16 p. T.

The FITCHBURG (Mass.) P. L. *Bulletin* for March-June is a "Browning number," with a classed reference list on the poet's works.

The JOLIET (Ill.) P. L. *Bulletin* for May has a short list of "Some books on domestic science."

LIBRARY OF CONGRESS. Special rules on cataloging: to supplement "A. L. A. rules—advance edition," 1-21; issued for the use of the Catalog Division of the Library of Congress. Washington, Gov. Print. Office, 1906. 26 p. O.

This supersedes the previous issues of May, 1903 (1-2), and March, 1905 (1-11), and includes also corrections and amendments affecting the rules so far issued on cards. There will be further publication from time to time of special rules supplementing Cutter and the A. L. A. rules. One copy of each on cards and in pamphlet form are sent free to subscribers to the L. C. cards; additional or other copies are sold at two cents for cards and five cents for pamphlets. The special rules here given deal with collation, series note, call numbers, annotation, recataloging, added entries, geographic headings, treaties, transliteration, imprint, dissertations, monasteries, etc., Indian schools, societies, atlases, titles and title pages in different languages, agricultural experiment stations.

LOUISIANA STATE L. Catalogue of the law department; comp. by Albertina F. Phillips, librarian. 1905. 200 p. O.

Records reports, digests, laws and similar works in rather crude fashion, giving United States first, with other states following in alphabetical order, then foreign and miscellaneous divisions. A glossary of law abbreviations covers 57 pages.

The NEW YORK P. L. *Bulletin* for June prints several letters from the correspondence between the Duke of Newcastle and Admiral Lestock and General St. Clair, relating to the

expedition against L'Orient in 1746, from its contemporary transcripts.

OREGON L. COMMISSION. List of books for school libraries, March, 1906. Part 1, Books for elementary schools (grades 1-8); Part 2, Books for high schools. 2 v. Salem, Ore., 1906. 32+112. 54 p. O.

Carefully prepared lists, giving price, publisher and well chosen annotations. Part 1 is prefaced by full explanations regarding care and maintenance of school libraries in Oregon.

PITTSBURGH CARNEGIE L. *Bulletin* for May contains a four-page list of "Stories about dragons," intended to be told to children.

JOHN RYLANDS L., *Manchester.* Bulletin, v. 1, no. 1, May, 1906. Manchester, Sherratt & Hughes, [1906].

"Some recent additions to the library" are listed, p. 192-261.

The SALEM (Mass.) P. L. *Bulletin* for June devotes its special reading list to "Literature of power."

SCRANTON (Pa.) P. L. *Bulletin.* ser. 2, no. 15, 1906. [Books added, April-June.]

Contains a reference list on Shakespeare.

U. S. DEPARTMENT OF AGRICULTURE L. *Bulletin* no. 59, Accessions to the department library, January-March, 1906. Washington, Gov. Print. Office, 1906. 78 p. O.

Bibliography

ALCHEMY. Ferguson, J. *Bibliotheca chemica: a catalogue of the alchemical, chemical and pharmaceutical books in the collection of the late James Young, of Kelly & Durris.* Glasgow, J. Maclehose & Sons, 1906. 2 v. fronts. (ports.) 26½ cm.

This collection was bequeathed to the chair of technical chemistry of Anderson's College, incorporated in 1886 with the Glasgow and West of Scotland Technical College.

AMERICAN LITERATURE. Evans, C. *American bibliography: a chronological dictionary of all books, pamphlets, and periodical publications printed in the United States of America from the genesis of printing in 1639 down to and including the year 1820; with bibliographical and biographical notes.* In 5 or 6 vs. v. 3, 1751-1754. Chic., privately printed for the author by the Blakely Press, 1905, [1906.] 14+447 p. Q.

Contains titles 6624 to 9890.

ANGLO-SAXON INTERESTS. Library of Congress. Select list of references on Anglo-Saxon interests; comp. under direction of A. P. C. Griffin. 2d issue, and additions. Washington, Gov. Print. Office, 1906. 22 p. O.

BACTERIOLOGY. International catalogue of scientific literature. 4th annual issue [1904]. R: Bacteriology. London, 1906. 8°.

BIBLIOGRAPHICAL SOCIETY OF AMERICA. Proceedings and papers. v. I, part I, 1904-1905. New York, Printed for the Society, 1906. 106+6 p. O. [300 cop.].

Contains constitution, by-laws, officers and members of the society; an historical sketch of its organization by Carl B. Roden, the proceedings of the organization meeting at St. Louis and later meetings; and account of the formation of the Chicago chapter, which was the forerunner of the present national body. The papers include: Annual address of the president, W. C. Lane; Bibliography of American music, O. G. Sonneck; Bibliographies in literary history, Elcanor P. Hammond; Gadesden's "Rosa Anglica," B. A. Finney; Theory and history of botanical bibliography, J. C. Bay; Material for United States naval history, C. H. Lincoln; *In re* a bibliographical institute, A. G. S. Josephson; European historians of the Turks, A. L. P. Dennis. A department of "Bibliographical notes" calls attention to various bibliographies now in course of preparation. The volume is finely printed and a most creditable production.

BLIND, Books for the. New York Public Library. Classified list of books for the blind, in the circulating department. 20 p. O.

—New York Public Library. List of music for the blind, with some works on study, history and theory, in the circulating department. 8 p. O.

BOHEMIA. Zibert. Bibliografie české historie. Svaz. 2. (Politická historie 1526-1590.) Prague, Bursik & Kohut, 1905. 5+241-480 p. 3.20 kv.

The BOSTON BOOK CO. *Bulletin of Bibliography* for July contains among other features a first instalment of a bibliography of prose fiction, by Nathaniel L. Goodrich; and a continuation of George Watson Cole's record of "Bermuda in periodical literature."

CERAMICS. Trenton (N. J.) Free Public Library. List of books on ceramics. Trenton, 1906. 30 p. S.

CHILD LABOR. Library of Congress. List of books (with references to periodicals) re-

lating to child labor; comp. under the direction of A. P. C. Griffin. Washington, Gov. Print. Office, 1906. 66 p. O.

ELECTRICITY. Pratt Institute Free Library. Books on electricity: an annotated list. Brooklyn, N. Y., April, 1906. 36 p. D.

An excellent list, especially in the annotations, which indicate compactly the character and scope of each work and its degree of helpfulness to student, mechanic, or general reader. The collection is not highly specialized, but is a good general and technical collection; its practical usefulness will be greatly enhanced by this list, which should be valuable also to other libraries. Editions will be supplied to other libraries, without change, at \$12.50 per 1000; if imprint is changed cost will be slightly larger.

EMPLOYERS' LIABILITY. Library of Congress. Select list of works relating to employers' liability; comp. under the direction of A. P. C. Griffin. Washington, Gov. Print. Office, 1906. 26 p. O.

ENTOMOLOGY. U. S. Department of Agriculture L. Bulletin no. 55: Catalogue of publications relating to entomology; prep. under the direction of the librarian. Washington, Gov. Print. Office, 1906. 562 p. O.

FRENCH BIBLIOGRAPHICAL SOCIETY. A Société Française de Bibliographie was organized in Paris, April 27, 1906. Its object is "to complete and perfect in France by all the means in its power the bibliographical equipment" ("l'outillage bibliographique"). Its first efforts will be devoted to, 1, the improvement of the tools of general current bibliography; 2, the continuation and improvement of the "Repertoire des revues françaises," published from 1899 to 1901, by D. Jordell; 3, to establish, with the co-operation of the public authorities a bibliography of official publications. Meetings of the society will be held from time to time, at which reports will be made on the undertakings in progress, and on the advance of bibliographical science in France and elsewhere, and there will be discussion of such questions of library economy as are intimately connected with bibliographical questions. The first meeting of the society was held at the Cercle de la Librairie, 117 Boulevard Saint-Germain, Paris.

GEOLOGY. International catalogue of scientific literature. 4th annual issue [1904]. H: Geology. London, 1906. 8°.

GERMAN LITERATURE. Hinrichs' fünfjahrs-katalog der im deutschen buchhandel erschieneren bücher zeitschriften, landkarten, usw. Titelverzeichnis u. sacherregister. bd. II, 1901-1905. Lief. I. Leipzig, Hinrichs, 1906. 48 p. 2.40 m.

ITALIAN HISTORY. *Annuario bibliografico della storia d'Italia dal sec. iv dell' e. v. ai giorni nostri*; dir. da A. Crevellucci, G. Monticola, e F. Pintor. Pisa, Spoerri, 1906. 84+566 p. 18 l.

LIBRARY WORK: a bibliography and digest of current library literature. v. 1, no. 2, July, 1906. Minneapolis, Minn., H. W. Wilson Co. p. 25-48.

MECHANICS. International catalogue of scientific literature. 4th annual issue [1904]. B: Mechanics. London, 1906. 8°.

MOLIÈRE. Harvard University Library. Bibliographical contributions, ed. by W. C. Lane, librarian. no. 57: Catalogue of the Molière collection, acquired chiefly from the library of the late Ferdinand Bôcher; comp. by T. F. Currier and Ernest L. Gay. Cambridge, Mass., 1906. 148 p. O.

An interesting and careful piece of work. The appendices include a study and review of portraits of Molière, list of English imitations and translations of Molière's plays, outline of the shelf arrangement of the collection, and a tabulation of the tables of contents of the editions and translations of Molière's collected work. The collection here recorded comprises 1793 v.

NARRAGANSETT COUNTRY. Brigham, Clarence S. A bibliography of the Narragansett country. (*In Bulletin of Bibliography*, July, p. 117-118.)

Reprinted from the handbook issued by the local committee for the A. L. A. Narragansett Pier conference.

—The Narragansett country: a few selected references. (*In Providence Public Library Quarterly Bulletin*, July, p. 52-54.)

NATURAL SCIENCE. *Bibliographie der deutschen naturwissenschaftlichen litteratur*. Hrsg. i. A. des Reichsamtes des Innern vom deutschen Bureau der internationalen Bibliographie in Berlin. Bd. 8. Nr. 1-3. Berlin: H. Paetel, 1906. 248 p. 20 m., Schöndruck-Ausg., 24 m.

NEGRO SUFFRAGE. Library of Congress. List of discussions of the 14th and 15th amendments, with special reference to negro suffrage; comp. under the direction of A. P. C. Griffin. Washington, Gov. Print. Office, 1906. 20 p. O.

PSYCHOLOGY. Psychological index, no. 12: a bibliography of the literature of psychology and the cognate subjects for 1905; compiled by Howard C. Warren and others. 8+192 p. 8°.

This well known bibliography contains no new features this year. 2727 titles are listed.

RUSSIAN ZEMSTVO. Karavaev, V. F. *Bibliograficeskij obzor zemskoj statisticeskoj i ocenocnoj literatury so vremeni ucreszenija zemstv., 1864-1903 g. Vyp. 1.* S. Petersburg, M. P. Frolova, 1906. 7+426 p. 2 rubles.

SABIN'S BIBLIOTHECA AMERICANA. Work on the continuation of Sabin's "Dictionary of books relating to America" was begun in May under a grant from the Carnegie Institution of Washington, by Wilberforce Eames, Lenox librarian of the New York Public Library, and two assistants. It is announced that the work will be completed within two years.

Notes and Queries

BULLETINS ON BOOK BUYING. — Bulletin 26 (June) of the A. L. A. committee on book buying appears in an octavo sheet instead of in card form. It is a plea to librarians to co-operate by becoming members of the A. L. A. and by joining in any general movement to unite library book buyers for definite action. Enclosed with the circular is a return postal card, listing "books reported out of print" and "poorly made books." Librarians are asked to check any titles of the former books that they would buy, if reprinted, and any titles on the latter list that they consider poor in printing, paper, presswork and binding, and to return the card to the chairman of the committee, A. E. Bostwick.

WEBSTER'S DICTIONARY, WARK EDITION. — An edition of Webster's dictionary with the title "Webster's universal dictionary" and the imprint Philadelphia, Henry Wark, 1905-06, has been brought to the notice of Philadelphia librarians by the agent for the book. It is an Ogilvie dictionary with a separate title-page bearing the Wark imprint. At first sight the dictionary appeals to the librarian because there is no appendix as in the Merriam "International," but on examination it is found to be based on the International but revised so that new words such as automobile, X-ray, radium, etc., appear in their proper alphabetic place. The definitions are not the same as those in the International and the illustrations are different. The editors' names are obscure ones. The Ogilvie dictionary which is now selling throughout the country — the Wark imprint being used chiefly in the Philadelphia district — is the one about which there is at the present time a lawsuit brought by Merriam to ascertain whether or not Ogilvie has the right to use the name of Webster. On the whole the Ogilvie dictionary offers no advantage over the "International" except in the one alphabet of words, while the authoritative editing of the "International" outweighs this one advantage.

ALICE B. KROEGER.

WORCESTER PUBLIC LIBRARY FINDING LIST OF MUSIC. — It seems a long time to wait until now to make a remark about a book notice in the JOURNAL of March. I refer to the notice of the "Finding list of music" issued by this library. Of course, it should be understood that we have not aimed to make anything like a complete list of books of music, and that we buy but few books about music or musicians in other languages than English. The reason I write is that I fear that the libraries other than very large ones will conclude that our collection is not selected with especial regard to the actual needs of this and similar communities. On the contrary, I think that other communities can get valuable suggestions from the use of our finding list. In regard to the plan of the list, there is room for differences of opinion. We like the form used.

SAMUEL S. GREEN, *Librarian*.

The author of the finding list wishes to add the following words about scores: As Mr. Green has made the foregoing remark, I will add that I am uncertain whether the criticism on "I pagliacci" and "Cavalleria rusticana" is directed toward my use of the term "score," or toward my classification of the operas in question. Presuming now the latter to be the case, I will say simply that certain persons of my acquaintance, whose musical knowledge is respected, agree with me that these two works might reasonably be classified with light operas.

ROBERT K. SHAW, *Assistant-librarian*.

"NEW SHAKESPEAREANA" AND PERIODICAL AGENTS. — I have read with interest and amazement the communication from the Shakespeare Press, of Westfield, N. J., published in the June number of the LIBRARY JOURNAL. I unblushingly confess myself to be the "new librarian" who, "with the *naïveté* of a newcomer," has dared to question the methods of the Shakespeare Press, as well as their presentation of the facts in this case.

The facts are as follows: Our former periodical agent having retired from business, we found it advantageous to place all our American subscriptions with a local dealer. The latter sent the Shakespeare Press a statement to this effect, and intimated, I suppose, that he expected the usual trade discount. The Shakespeare Press thereupon sent us a note stating that they allowed no discounts and that they objected to dealing through agents. We then asked them to send their bill to our agent for the full amount; but they simply sent us a new bill with postage added (to cover the cost of the correspondence, as they explained later) and appended this note: "If Mr. ——— obtains any new subscription for us he will be entitled to twenty-five cents discount on same, and fifteen cents on renewals." As this seemed inconsistent with their claim in a previous letter (and now clashes with their boast in the L. J. that the Press "would consider it beneath its dignity to pay commissions to anybody") the head of our order department asked for an explanation and once more requested them to send the bill to our agent, whom of course we had already paid at the beginning of the year for the entire amount of all our American subscriptions. Not being able to understand such a transaction, the Shakespeare Press wrote in high dudgeon to the president of the university, and also eased their feelings by sending a communication to the columns of the L. J. This communication seems to contain several contradictions: the writer first claims that for the last five years we have paid them the full amount in advance, and then he goes on to complain that we have been paying less than the subscription price to agents. As the magazine has been running only five years one or the other of these statements must be wrong. We need not point out such other facts as that we never claimed to have paid as low a price as we are quoted as having paid; that we have records of all such transactions, and that we trust them in preference to the memory of the Shakespeare Press (for the latter say that they cannot afford sufficient clerical assistance to keep track of all these details). Suffice it to say that we do not find any cause for mistrusting our agents, with whom we have the pleasantest and most cordial relations.

University of Michigan Library.

CONFERENCE OF LIBRARIANS

NARRAGANSETT PIER, R. I.

JUNE 29-JULY 6, 1906

ADDRESS OF THE PRESIDENT: ONE PHASE OF LIBRARY DEVELOPMENT

BY FRANK PIERCE HILL, *Chief Librarian of Brooklyn (N. Y.) Public Library*

THE problems which confront librarians appear in a kaleidoscopic arrangement, year after year, in new relations to each other. Fixing our attention upon them at these annual conferences we find that by the shifting of time certain topics which in previous years received our consideration have been moved aside, and form a background, as it were, for that particular phase of library development or economy which, for the time being, has assumed the most prominent position among the subjects demanding attention.

The presidents of the American Library Association have represented different kinds of libraries—subscription, proprietary, university, public. This year, speaking for the large public library, I wish to present one effect of their growth and some of the contributing causes. I shall hope to show how the expansion of the public library system has imposed new duties upon the librarian, increased his responsibilities and made it necessary for him, in the organization and conduct of his library, to follow the methods of the business world.

This is a subject which should appeal to librarians of all public libraries regardless of their size, for it is true that the librarian of the small library is called upon to meet, only in a less degree, the same problems that confront the librarian of the large library.

Times have indeed changed. There are those who claim that the old style librarian who knew books has disappeared and his place has been taken by the modern librarian, who acts as the executive officer of the institution. Such critics sigh for the library of old, with its musty tomes and its air of seclusion and repose; they long for the return of the librarian with his quiet, dignified, studious

air, and they resent the change to the utmost. There is some foundation for this criticism. Since that body of enthusiastic, tireless, indomitable workers founded the American Library Association in Philadelphia, in 1876, and adopted as their motto, "The best reading, for the largest number, at the least cost," a new kind of librarian has appeared. He is no better than the old; but he is different. We believe that the difference is due to the effort to live up to the principle embodied in the motto of the association.

The librarian of a generation or more ago had many advantages over his successor. He was always with and among his books, his desk was in the midst of them, and his work directly in touch with them. He had little to do with the details of the management of the library. In those days the initiative in all progressive schemes was taken by the board of trustees or committees of the board, and it usually happened that a policy would be adopted, or action taken without consultation with the librarian. In some libraries, even in large cities, the librarian did not attend the board or committee meetings. He was merely a "keeper of books," and being thus permitted to pursue his studious ways, his character and mind were enriched from his long and intimate association with books, and he became, as some one has described him, "a living catalog and a walking encyclopædia."

The modern librarian, from the standpoint of personal gain, has undoubtedly lost much of the joy of being a librarian. He has a private office away from the collection, or he may be unfortunate enough to have his office altogether outside of the library building where the good smell of old books never reaches him. That man deserves pity. So

situated, he is likely to get out of sympathy with the needs of the public whom he is trying to serve.

The present-day librarian has taken on duties formerly borne by the trustees, and through force of circumstances rather than inclination, he is obliged to devote much of his time and attention to the business management of the institution.

The increase in the appropriations made to libraries, and the amount of work which an up-to-date library is expected to perform, have made it necessary for a librarian to become more of a business manager than his predecessor. He must see that the income of the library is wisely and economically expended, and that the needs of the institution are so represented to trustees and the city officials as to secure sufficient money to carry on the work. He must keep in contact with the busy workers and professional men of the community, so that he may be prompt in seizing every opportunity for extending the usefulness of the library.

Trustees have realized that better results are obtained when the librarian is really the active executive head. They expect him to make recommendations, and after they, as a legislative body, have accepted and adopted them, to see that they are carried into execution.

The spirit of expansion and progress which has characterized the age has been caught by the library profession. By the formation of the American Library Association the librarians who constituted that association were banded together for aggressive work, and it is because of the unity of their action and the earnestness of their purpose that so much has been accomplished in the short space of thirty years. As a result of the interchange of ideas which these conferences have encouraged, those who have been most progressive in the profession have been able to influence their more conservative co-workers to reach out and extend their field of operation. Experiments tried in one place with success have been adopted elsewhere.

We have worked to secure the establishment of libraries upon a sound basis. Laws

providing for their maintenance have been enacted in one state after another. Organized aid for towns and cities wishing to establish libraries has been provided. The arranging and cataloging of books has become a science.

All of these things and many others the American Library Association has accomplished through committees and individuals. "The library movement," says a recent report, "has now reached a stage in its development at which it would seem that present methods may be modified, with great gain in efficiency, and a relatively diminished expenditure." The early workers in the modern library movement saw the desirability of a unification of library interests and methods, and did all they could to secure that end.

Before much more can be done, organization must extend to the association itself. It is to be hoped that the American Library Association committee on ways and means will report such a sum of money on hand for the purpose of establishing permanent headquarters as will justify the Association in making a start in this direction, even if it be of the humblest character.

In these days system and organization are indispensable in library management. The labor saving devices which have been invented for the modern man of affairs have not resulted in giving him more leisure, but have been designed to make it possible for him to accomplish more work in a given time. The librarian has studied business methods only that he, like the business man, may save time in one direction to expend it in another. The library which is not well organized will meet the same fate as the commercial house which has an incompetent head.

Not only libraries, but other educational institutions and systems have been established on such a large scale that it has been necessary to adopt modern methods so that the best results and the most economic administration might be secured. What is said of the college or university applies with equal force to the public library, that for their successful administration the scholar is not so much needed as the man of practical ability.

We are following in the footsteps of the development of the school system, with which our growth may very well be compared.

Although the truism that "knowledge is power" had been accepted by people of all ages and all stages of progress, it was long before the belief developed that even the common people might be educated, and that the safety of the nation would depend upon the intelligence, not of the few, but of the whole community. The rapid spread of this idea and the results which followed the quickening of the minds of the common people is one of the most interesting pages from the history of the civilization of man. But even after this wonderful awakening of the people to the realization of their power it was some time before it was admitted that it was the duty of the state to educate the young and prepare them for their responsibilities as citizens, and further, that all the people should be taxed to support this work. As soon as the need of general education was fully understood, and after the people of the country had declared that "schools and means of education shall forever be encouraged," it is not surprising that the conception of what constituted education should expand. In this country the public schools at first provided only the most elementary instruction, while students who wished academic or college training must procure it at their own expense. It was not until the middle of the 19th century that Horace Mann began to urge the necessity for free high schools. The establishment of these schools was rapid. Then followed the state university for higher education. The library has practically followed the same lines. Although libraries had been established in America by the colonists, they were in most instances accessible only to subscribers, members of certain societies or a limited number in the community. As the high school and state university were the outgrowth of the academy and college, so the public library, maintained at public expense, has been the natural outcome of the subscription and proprietary library. The state thus assumed the responsibility of providing public libraries as an additional means for the education of its people.

For the first time in the history of the American Library Association we have with us the president of the National Educational Association, and others who are directly interested in the work of the schools with the libraries. We bid them a hearty welcome, and express the hope that the result of the joint session which is to be held on Monday morning may be of lasting benefit to both associations.

Without anticipating the work of that day, it seems peculiarly fitting at this point to consider briefly the relations which the schools and libraries should bear towards each other.

The public library must acknowledge its indebtedness to the public schools, first, because the latter have paved the way for the former, and made possible the rapid growth and development of the library movement in this country, and second, because librarians as co-workers in the great cause of education can learn so much from the example and experience of the public school.

One of the most important questions for school and library authorities to agree upon relates to the purchase and distribution of books not directly connected with the school studies.

In some cities the board of education by supplying to the pupils of the schools books for home circulation is undertaking a work which properly belongs to the public library; while in other cities the books to be used in this way are furnished by the public library even though distributed through the public schools. The latter seems to be the proper division. The library has been established to furnish books for home reading for people of all ages. Would it not be a fair apportionment for the board of education to supply in addition to text books reference books and required supplementary reading, and the library books intended merely for circulation?

It is contrary to our ideas of political economy that two departments deriving their income from the same source should attempt to do the same work. Libraries might just as fairly start kindergartens, and ask for money from the city to support them, as for the board of education to buy, control, and distribute books for circulation among pupils

without any co-operation with the local library.

Dr. Harper, in "The trend of higher education," says: "It is pitiable to find that many graduates of our best colleges are unable in taking up the more advanced work in divinity or any graduate courses to make good use of books. They can find nothing; do not know how to proceed to find anything. No more important, no more useful training can be given men in college than that which relates to the use of books." If this is true of the college graduate, how much truer it must be of the man whose school life has not extended beyond the grammar or the high school.

A recent article in one of the magazines has deplored the fact that public libraries are so infrequently used by men. Dr. E. A. Birge, in an article which appears in the May *Library Journal*, deals in detail with this subject. Is it strange that if a man who has had the advantages of what we term the higher education has failed to appreciate the value of books—as tools, the artisan or mechanic should be slow in discovering their value in his work? Isn't this an opportunity for the closest co-operation between the schools and the library, and does it not emphasize the necessity of training children at an early age to use books?

At a recent meeting held in behalf of technical and industrial education, Prof. Charles R. Richards said: "When we face the question of training the actual hand workers in any industry, we face the problem of gaining time for instruction for those who cannot afford to be without means of support for any great length of time beyond the compulsory school age. Any real solution must consist in reconciliation between these two elements of instruction and support."

The public library cannot give the boy or man the *instruction* he desires, but it can give him books from which he may gain for himself, if he has the perseverance, the knowledge he covets. Men who seldom use the library are slow to take advantage of what the library offers. In fact unless natural students they are not likely to turn to the library for help. We believe that the boys who to-day use our

children's rooms with such a feeling of personal ownership and pride will, as the men of to-morrow, be the most loyal supporters of the library and the most appreciative patrons.

The public library has been called "the people's university." It was supposed to take up the work of education where the schools left off. The establishment of children's rooms in the public libraries has made necessary a modification of this statement. Educators are coming to realize that the library is not only a supplement to but an adjunct of the public school.

One difference between the school work and library work is this—that up to a certain age school attendance is made compulsory, while from the very beginning the library merely invites the child to come within its doors. The aim of the library is to lead the child so that he may gradually form not only the reading habit, but the library habit, and continue the use of books after he leaves school.

The importance of work with children in the immediate future is even greater than that with adults, because those of us who have had experience know how difficult it is to direct the adult to any line of study. The child and the youth, on the other hand, may be taken at an age when they can be guided and directed until they become men and women. After such a training, the child who becomes a mechanic, an artisan, a clerk, a manufacturer or student in a learned profession, knows how to use the tools at his hand in the most satisfactory way. If the best results are to be obtained it is essential that the public school and the public library—the two great factors in the educational work of the city—shall work in the utmost harmony. The adjustment of matters pertaining to the relations of the schools and library requires tact and judgment on the part of the representatives of both systems.

To return to the comparison of the development of the two systems.

Step by step the requirements for the school teacher have increased, until no one is eligible for appointment in the public schools who does not have a diploma from a training school for teachers. To-day a similar prep-

aration is essential for the library assistant, and the day is not far distant when no library will accept as an assistant one who has not made a special study of library economy in a recognized school.

By the development of branch systems the administrative duties of the librarian, like those of the school superintendent, have become more arduous and complex. Instead of one building, for example, to look after, he has many—often at great distances from each other. Their equipment and management demand much care and thought. Different sections of the same city may have different needs. These must be carefully considered so that the library may not fail in its mission, and yet so that one section may not be favored above another.

As the time when one school was sufficient to meet the demands of the town has passed, so it is rapidly approaching when not only each town and city will have a public library supported by taxation, but each city of considerable size will have libraries in different sections. It will no more think of compelling all of its inhabitants to go to one central point for books, than of compelling all of the children of school age to go to one school. During the past ten years the number of branch systems has steadily increased and we do not see the end.

The chief librarian, like the school superintendent, finds as his system grows that it will be necessary for him to sub-divide his work in order that he may be freed from too close attention to details and may be enabled to view and direct the work of the system as a whole.

Methods of work which are unquestionably good in a small library, under one roof, may be wasteful if carried on in twenty or more branches of a system. The librarian, like the business man, must constantly ask the question, "Does the result justify the expense involved?" and if he finds that it does not, the work must be simplified.

This question of expense, however, is one which is not always understood—especially by city officials. A word on this subject may not be out of place.

Some one has said that "Between the reader and the book stands the librarian, and the librarian is more the friend of the book than of the reader." Such a comment causes us to pause and ask if we are paying too much attention to the book and too little to the reader. It is generally thought that the cost of cataloging books, circulating them, and maintaining the library is too great in comparison with the cost of the books themselves, or, to put it in another way, that the amount appropriated for books is not in proportion to the total amount of the library appropriation. Possibly there has been too great a tendency toward details in certain directions, but it should be remembered that the cost of a library is more like that of the school system, and entirely different from a commercial venture. Take, for instance, the bookstore and newspaper. The first outlay is the principal item. The newspaper receives its income from advertisements and from circulation—the bookstore from profits on the sale of books. The library, on the other hand, has no income to depend upon except the appropriation which is given it by the city, or the interest on its endowment. In a word, it uses its capital for educational purposes, and no financial return is expected.

By outsiders the cost of cataloging is considered out of all proportion to the cost of the book. A student was once asked by a schoolmaster: "With what feelings ought we to regard the Decalogue?" The answer came from one who had no very clear idea of what was meant by the Decalogue, but who had a due sense both of the occasion and of the question—"Master, with feelings of devotion mingled with awe." Too many of us assume this attitude of devotion toward the catalog, and seem to feel justified in expending any amount of money by going into the most elaborate details. Possibly the pendulum has swung too far in the direction of details, but there are healthy indications of its coming back in the direction of less elaborate methods. This may be attributed in a large measure to the work which the Library of Congress has done in printing and distributing catalog cards.

Another indication of economy is the limitation of the size of branch buildings. The value of books at a branch is not in the number of volumes on the shelves, but in their usefulness. As a general thing a branch is built with a limited capacity, without any provision for future growth, the consensus of opinion being that a branch should contain not more than 25,000 volumes of live, active books.

Dr. Charles W. Eliot, at the Magnolia conference, drew the attention of librarians to the Quincy (Mass.) method of weeding out books seldom used, as first recommended by Charles Francis Adams. The necessity for this "weeding out" is first felt by branches. Librarians are giving serious consideration to this subject, and it is quite likely that some libraries will adopt the method of taking from the branches books which have not circulated for a given time—say two, three or five years, and sending them to a storehouse—whether that be the central library or some other building.

The question of what shall be done with the collection at the central building is likely to be worked out on a modification of the plan suggested by President Eliot.

A most potent factor in the changed conditions in the library world is the money, amounting to over \$40,000,000, which Andrew Carnegie has given toward the erection of library buildings. The story of Mr. Carnegie's boyhood resolution, to establish free libraries, if wealth ever came to him, and the reason which prompted it, is too well known to need repetition. Mr. Carnegie in explaining his reason for having decided upon the building of libraries as the field for the distribution of his money said: "I think it fruitful in the extreme because the library gives nothing for nothing, because it helps only those that help themselves, because it does not sap the foundation of manly independence, because it does not pauperize, because it stretches a hand to the aspiring and places a ladder upon which they can only ascend by doing the climbing themselves. This is not charity, this is not philanthropy, it is the people themselves helping themselves by taxing

themselves." "It is not what I am able to give, but what I am able to induce others to give, which does the real good which I seek to accomplish."

What greater good can man do?

Only last year one of the prominent literary magazines said: "Carnegie would have done a far greater service had he put into model tenements or hospitals the money he has invested in libraries." Even so brilliant a man as District Attorney Jerome, of New York, denounced Mr. Carnegie's gifts in these words: "I for one believe that it is unwise to take millions from the pockets of the toilers down in Homestead and build useless libraries. Better forget the name of Carnegie and leave that money with the men who earned it, and make their homes happy. I believe in law and order, but if I lived in one of those miserable hovels in the iron and steel district and needed money for a loved one, I should not view the founding of these libraries with complaisance." Mr. Jerome went further, and said that the Carnegie libraries in New York City were not used and never could be. These are strong words from a gifted man, but statistics showing the use of the new buildings as compared with the old indicate that he has not investigated the subject with legal thoroughness. We as librarians know that Mr. Carnegie's gifts have stimulated library endowments, library appropriations, library architecture, and library activities all along the line. It is not for us to say whether the money given in this way could have been more wisely expended, but whether we as trustees have made the best possible use of it.

It is probable that the community which provides its own building holds its head higher than the one which has received an endowment, but the fact remains that hundreds if not thousands of communities in this country and in the old world still be without public libraries to-day were it not for the generosity of Andrew Carnegie.

As a consequence of the growth of library building, due so largely to Mr. Carnegie's munificence, librarians have taken up the study of library architecture and building

construction in order that they might lay a solid foundation of information and knowledge for future use.

The librarian thus grounded is prepared to tell why certain features are practicable and certain others undesirable. He is able to render assistance to trustees in selecting a site, in choosing an architect, in reading plans and specifications, in obtaining estimates, and in awarding contracts. In a word, he is enabled to see that the interests of the library are properly protected on all sides.

Every librarian has a strong, well-defined, and laudable desire to plan a library building according to his own ideas of what it should contain and how it should be arranged. No one can tell how soon he may have an opportunity to do so, and unless he has obtained at least an elementary knowledge of architecture he cannot be certain that suggestions he may make are feasible and practicable.

The interest in the subject of library architecture has become so keen that the program committee has decided to devote an entire session to the consideration of this subject, so I have only touched upon it here. We hope that the discussions at that session will be suggestive, alike to those who have had considerable experience in library building, and those who have just begun the study of the subject. If as a result of this meeting, architects and librarians can agree upon some method by which plans can be purchased from one architect and used by another we shall feel that the discussion has indeed been worth while.

We have thus noted a few of the prominent causes which have called the librarian from his life of quiet and seclusion to take his place among educators and business men. We have endeavored to show how the transformation of the library from a storehouse for books to a vital educational force in the community has called for a corresponding change in the librarian to enable him to meet the responsibilities which the changed conditions have placed upon him.

But with all this modern rush and worry and attention to administrative details we must not lose sight of the fact that the library is an educational institution. We do not believe that the business manager can ever supplant the scholar in the library, the school or the college. The ideal librarian undoubtedly combines the strong points of both, but such a combination is rarely found because the qualifications of the one are, in a measure, antagonistic to the other. No one man is capable, either physically or mentally, of meeting all the requirements for the successful administration of the library. To reach the highest degree of perfection the great public library must have not only its executive whose guiding hand will steer the craft through all kinds of business dangers, but also scholarly, studious men and women who know books and how to use them. Both are necessary to the welfare of the large library. The wise administrator is the one who, while keeping his eyes upon the needs of the whole system, has the ability to discover the specialists who are needed to round out the work of the library, and to place each in his own particular niche.

The public library is no longer a luxury; it plays an important part in the making of good citizens. It is as essential to the welfare of the nation as the public parks, public playgrounds and public schools.

In the early days of the new library movement we were led by Winsor, Poole, Cutter, Green and Dewey. They were the pioneers, and as such did splendid work. We cannot do better than to keep close to many of their methods. The spirit of '76 is still abroad. Co-operation between libraries grows stronger each year. So much earnestness, zeal and readiness to accept new ideas as is manifested by the profession cannot fail to have its effect. We face the future with a feeling of confidence in the further development and progress of the library and with the belief that the advance in the years to come will be even greater than in the past.

LIBRARY PROGRESS IN RHODE ISLAND

By HARRY LYMAN KOOPMAN, *Librarian Brown University, Providence, R. I.*

PUBLIC LIBRARIES

AMONG the first settlers of Rhode Island were not only readers of books, but also writers. They were dependent, however, for several generations upon the presses of London and Boston for their printing, and upon private libraries for their reading matter. The first public library in the colony was founded just as the seventeenth century was passing over into the eighteenth. It was one of the parochial libraries sent to America through the efforts of the Rev. Thomas Bray, and was established in Newport in 1700. It consisted of about a hundred volumes and as many pastoral letters, and was strictly religious in character. The second Rhode Island library was also founded in Newport, and fortunately still exists to reflect honor upon the city and the state. In 1730, about the time that Franklin was organizing his famous Junto, which soon developed into the Philadelphia Library Company, there was formed in Newport a literary and philosophical society, of which Bishop Berkeley was a member during his stay in America. Edward Scott, a granduncle of the novelist, was also a member of the society. In population and commercial importance Newport was at this time superior to New York, and ranked with Boston and Philadelphia. The books brought over by Berkeley for his college in the Bermudas were placed at the disposal of the society, but its members soon found that further material was necessary to furnish a basis for their discussions; and in 1747 the gift of 500 pounds from Abraham Redwood for the purchase of books gave rise to the reorganization of the society as the Redwood Library Company. Five thousand pounds was collected in subscriptions for a building, which was erected in 1750. In accordance with the taste of the age the books chosen were chiefly on classical and theological subjects, and such was the fame of the library that it attracted to Newport the learned Dr. Stiles, afterwards president of Yale College, who served for 17 years as its librarian. It is an interesting his-

toric fact that the attraction of the Redwood Library was one of the influences that early made Newport a favorite place of resort for strangers, who came even from the Carolinas and the West Indies.

Three years after the Newport library had been established in its beautiful home, that is in 1753, prominent citizens of the rival, though less wealthy, town of Providence, inspired by the example set, founded the Providence Library Company. Five years later its books were destroyed by fire, but in 1768, as we learn from its printed catalog, the collection numbered nearly a thousand volumes. The library continued to exist under varying fortunes until 1836, when it was incorporated with the Providence Athenæum. The books of the company were first placed in the Town House, afterwards in the State House, but since 1838 the combined collection has occupied the beautiful ivy-clad building of the Athenæum on College street.

The next library founded in the state belonged to the type that preceded all others in America, the college library. Rhode Island College was founded in 1764 in the town of Warren, and was removed to Providence in 1770, when its first building was erected, the present University Hall, of which in 1787 Barlow sang in his *Vision of Columbus*:

"While o'er the realm reflecting solar fires,
On yon tall hill Rhode Island's seat aspires."

A beginning was made in the formation of a library as early as 1767, but the growth of the library, like that of the college, was slow, and in 1772 it contained not more than 250 volumes. About this time several important gifts of books were received from England. But from 1776 to 1782 the college building was occupied for military purposes, and the library was removed for safe keeping to a neighboring town. Soon after the establishment of peace a subscription made possible the sending of an order to London for 1400 volumes; and from this time onward, through gifts of books and money, through the establishment of funds, and through appropriations

from the college treasury, the library has grown steadily, until it now numbers nearly 150,000 volumes. As regards its dwelling places, the collection, like many another college library, has been decidedly migratory. It first occupied a room in University Hall; then, during the Revolution, it was exiled to Wrentham, Mass.; later, in 1835, it was removed to the first floor of Manning Hall; and in 1878 it was transferred to its present building. But this has long been outgrown, and it is now waiting until the new John Hay Memorial Library shall be built for its occupancy.

It is a striking testimony to the permanence of American institutions that the three public libraries established by the people of Rhode Island before the Revolution are all entering upon the twentieth century in vigor and usefulness. At this point I will venture the prophecy that the proprietary library, to which type two of them belong, is destined not to disappear in competition with the free public library, but to come again into favor in our cities and larger towns during the century before us. For instance, in the last ten years the number of shareholders of the Providence Athenæum has increased 10 per cent., and its circulation 33 per cent., with a falling off of 13 per cent. in fiction. At least seven other libraries were founded in Rhode Island during the eighteenth century, of which the first is still in existence. They are the library of the Friends' School, in Providence, founded in 1784; the Cumberland Society Library, 1792; the Gloucester Union Library, 1794; the Johnston Library, 1794; the Cranston Library Society, 1797; the Potter Library, in Bristol, 1798; and the Warren Library, 1798.

After the opening of the nineteenth century the new libraries established within the state become too numerous to receive mention in a sketch like this. Many of them "had their day and ceased to be" when the first enthusiasm of their founders died away. Still, of those that came into existence in the first half of the century, eight are in active condition, the most important being that of the Rhode Island Historical Society, which was founded in 1822. In 1840 the legislature of the state empowered the committee of each school district to appropriate ten dollars a year from the school funds for establishing and maintaining a district school library. Henry Bar-

nard, the first school commissioner of Rhode Island, was active in promoting the formation of these libraries. In 1867 the legislature gave the towns authority to establish public libraries, and two years later it empowered two towns to combine and establish a library jointly. In 1875 a free public library law was passed, which permitted any town or city to levy a tax of two and a half mills on a dollar of valuation for the establishment of a library, and two-tenths of mill annually for its maintenance. The board of education was at the same time authorized to pay for the purchase of books for such libraries a sum not exceeding \$50 for the first 500 volumes in the library, and \$25 for every additional 500 volumes; but the limit to any library is \$500 a year. Any town establishing or accepting a free public library is required to appropriate for its use at least as much as the amount received from the state. It is needless to say that this legislation has been the chief factor in the development of public libraries in the state during the last thirty years.

The most important library in the state that has been opened since the passage of these laws is the Providence Public Library, which was first made accessible to the public in 1878. So great has been the influence of this library throughout the country as well as in Rhode Island that one realizes with difficulty that the period of its activity has been less than thirty years. The success of its administration has been the more remarkable since until 1900 it was confined in utterly inadequate quarters. Mention should be made of the important work with schools carried on by this library from the beginning. In the Providence Public Library was first successfully embodied the idea of a "standard library," or a collection of the great books in the world's "literature of power," arranged in a room of its own as a library of pure culture. Another library which has exerted an influence far beyond the borders of our state is the Pawtucket Free Library, founded in 1852 and adopted as the town library in 1876. The work of this library was under great disadvantages of location until in 1902 it came into possession of its new building. This library was a pioneer in the development of work with schools, and also in the open-shelf movement. On the latter point, Mrs. Sanders, at the Thousand

Islands Conference, in 1887, in giving the result of ten years' experience at the Pawtucket Public Library, spoke these words: "Believing that the first entrance into a library should bring with it that most delightful sensation, the companionship of books, we have at our own library, contrary to the custom which now obtains, thrown open our shelves to the public." At the present time there are in Rhode Island 89 libraries of over 1000 volumes, the statistics of which are appended to this paper. Of these libraries two have over 100,000 volumes each, one has between 50,000 and 100,000, three have between 25,000 and 50,000, thirteen between 10,000 and 25,000, sixteen between 5000 and 10,000, and fifty-four between 1000 and 5000.

PRIVATE LIBRARIES

On one of the journeys which Samuel Sewall, of pine-tree shilling memory, made to the Narragansett country, in which we are now met, he stopped for dinner at a Newport inn, and while the cloth was being laid he regaled himself with reading a folio volume of Ben Jonson that belonged to his host. This occurred in 1706, and is a fair illustration of the kind of "profane literature"—a phrase now fortunately antiquated—that was to be found in the private libraries of the colony at that period. Newport undoubtedly took the lead of all the other towns in the number and importance of its private libraries. The inventories in various wills preserve for us the titles of many of the books imported by the colonists, who read all the more eagerly, and perhaps the more selectively, because their books were necessarily few. In one Newport library dispersed in 1733 we find in the midst of much theology titles like the following: "Quarles's poems," "Paradise regained," "Samson agonistes," "Plutarch's lives," "Sandys' Divine poems," "Butler's Hudibras," and "Howell's Letters." Many of these early collections were bequeathed to the Redwood Library.

Turning to the Providence town of the eighteenth century, we find the Brown family laying the foundations of that famous collection now known as the John Carter Brown Library. The earliest recorded purchase for this collection is that of Sewall's "Apocalyptic," made by Nicholas Brown in 1769. In

tracing the career of that great Rhode Island statesman, Stephen Hopkins, we find the influence of his grandfather's and his father's private libraries; he himself began early to collect books, and formed a library which was pronounced "large and valuable for the time." One who knew him in his later years declared that "he had never known a man of more universal reading." Says Mr. Sidney S. Rider, referring to the library of Governor Hopkins's grandfather, which was placed at the disposal of the neighborhood: "In these early years there came from this region very well educated and very able men; may we not reasonably infer that it was from this source that their learning came? They had not schools, they must have read these books, and thinking did the rest." After two hundred years it is still thinking that has to do the rest. Stephen Hopkins, it should be added, was one of the prime movers in founding the Providence Library Company. In the will of John Merritt, who lived in Providence from 1750 until 1770, is given a list of 250 books which represent, along with the inevitable theology—which occupied in the minds of our fathers the place that science and sociology do in ours—the best English literature up to that date. We find in the list, for instance, the writings of Bacon, Shakespeare, Milton, Addison, Shaftesbury, Cowley, Gay, Young, Thomson, and the Restoration dramatists, and the standard translations of the classics. The library contained also the contemporary cyclopedias, dictionaries, atlases, and maps. I venture to say that this collection has stood the test of a century as regards its choice of books quite as well as our "A. L. A. catalog" will stand it. In the Narragansett country were notable early libraries. Matthew Robinson, of "Hopewell," owned a rich collection of English, French, and classical literature. Some of the ancient folios which dignified the library of the Rev. Dr. MacSparren are still preserved in the neighborhood. The books of Col. Daniel Updike and his son, still largely in the possession of the family, were, as we are told, "marvels in their day, and would be treasured in any day."

The private libraries of Rhode Island in the nineteenth century are both too numerous and too important to receive adequate treatment

here. Eight of them are described in the late Horatio Rogers's beautiful volume, "Private libraries of Providence," published in 1878. Of these libraries, two, those of John Carter Brown and Sidney S. Rider, the latter unique in the rarity of its material on the history of Rhode Island, have come intact into the possession of Brown University; of Joseph J. Cooke's library one half was divided among the principal libraries of the state; the portion of C. Fiske Harris's library devoted to American poetry and plays came to the university, the portion dealing with slavery and the Civil War to the Providence Public Library; John R. Bartlett's library came in part to the Rhode Island Historical Society; those of Royal C. Taft and Judge Rogers remain intact. A brief sketch of the most important of these libraries, that of John Carter Brown, must suffice for all.

This collection, which now occupies its own beautiful building on the campus of Brown University, was begun before the Revolution as a general library, and was so developed until the second quarter of the nineteenth century, when it came into the hands of the collector whose name it is forever to bear. Mr. Brown began by collecting specimens of early printing, but before long he centered his interest upon books relating to the history of North and South America printed before 1800; and this broad subject still remains the specialty of the library, the department in which it stands without a peer. For fifty years Mr. Brown, as Henry Stevens said, "enjoyed the first pick" of the books, maps, prints, and manuscripts collected by him in the markets of the Old World; and Mr. Brown himself has asserted that in all these years of competition with collectors from every part of the world, he never lost a book which he had made up his mind to acquire. It is therefore the aim of this library to possess every early work pertaining to the discovery, exploration, settlement, and colonial history of all parts of the two Americas. It is no exaggeration to say that it is already the one library in the world that must be consulted by every first-hand investigator in these fields; and with its endowment of half a million dollars, it may be expected to maintain the supremacy which it has won. The books of the John Carter Brown Library

number about 15,000; a conservative estimate of their present market value is a million dollars.

Dealers in second-hand books tell us that the ordinary home library of the twentieth century is below the standard that held good a generation ago; but the extraordinary home library—the rich collection of general literature gathered for the love of it—still flourishes among us, undiminished in numbers or quality. We have also private collections of specialties, among which the cynosure is the wonderful Shakespearean library formed by Marsden J. Perry, of Providence. This collection ranks in point of rarity and value of its treasures easily the first among the private Shakespearean collections of the world, and is surpassed, if indeed it is surpassed at all, by the British Museum alone. For example, it has absorbed entire the Halliwell-Phillips Shakespeare collection. Mr. Perry has also, as an aside, the finest collection of Kelmscott books extant, consisting throughout of Mr. Morris's own copies.

SUBSCRIPTION LIBRARIES

A type of library that has for two centuries played an important part in supplying reading matter to the people of Rhode Island is the subscription or circulating library. Apparently the character of the books furnished has never varied greatly, except as the character of the novel has varied from the sentimental to the romantic, from the romantic to the realistic, from the realistic to the sociological. It was from this unfailing fount that the American Lydia Languishes of the eighteenth century drew "The man of feeling" and "Tears of sensibility," from which our great-grandmothers obtained "The illuminated baron" and "The magnanimous Amazon," their daughters "The false heir" and "Hope Leslie," our own mothers "The lamp-lighter" and "Ten nights in a bar room," and after that—the deluge. During the eighteenth century plays shared with novels the favor of those who patronized the subscription libraries. These collections were apparently never the owner's only stock in trade, but were kept along with drygoods or even the miscellaneous outfit of the country store. An interesting example of this class of libraries is the one kept by Mr. Hammond, of

Newport, during the earlier part of the nineteenth century. For many years Providence has enjoyed the services of several subscription libraries. The invasion of the Book-lovers' Library and the Tabard Inn Library have produced little effect upon their rivals already in the field, and the old-fashioned subscription library bids fair to last until real life becomes so interesting that mankind (particularly womankind) will no longer crave the stimulant of fiction. It is doubtful if we have ever given to this class of libraries the credit which they deserve. They draw off from our public libraries the very demand that we are least willing to satisfy; and some of us would even say that we have no business to enter into competition with them in the field of pure entertainment, but should collect fiction simply as a branch of literature, leaving amusement in reading to be paid for like any other amusement.

BIBLIOGRAPHY

The first published catalog of a Rhode Island library is that of the Redwood Library issued in 1764, and representing over 1500 volumes. The first catalog of the Providence Library Company was printed in 1768, with entries of over 900 volumes. Brown University, or rather Rhode Island College, comes next with its catalog issued in 1793, recording nearly 2200 volumes. These were mere short-title lists, of the crudest sort, in which the books were arranged, not by authors nor by subjects, but, as the custom still is in English auction catalogs, by sizes. In passing to the dignified volume which forms the Brown University Library catalog of 1843, we find a change that is not greater in size than in character. This is an author catalog in which full names and sometimes brief biographical notes are given; before each title is its number on the page, and after it the shelf number; at the end of the volume is a subject index, with references to the page and the title number, but not always to the author. This volume was the work of the librarian of the university, Charles Coffin Jewett, afterwards librarian of the Smithsonian Institution, and later the superintendent of the Boston Public Library. The Providence Athenæum catalog of ten years later was a volume of almost exactly the same size, and was made on the same plan, except that the shelf numbers are

omitted; a supplement was published in 1861. The Redwood Library catalog of 1860 followed much the same plan, but its shelf symbols are combinations of letters and figures and are printed at the left of the title. The index is a close approach to the modern subject catalog form, except that the author's name follows the title, and the imprint is omitted.

In 1891 the Providence Public Library issued a dictionary catalog "Finding list" of 534 pages; and with this volume our larger libraries may be said to have passed, so far as their general catalogs are concerned, from the rigidity of the printed page to the flexibility of the card system.

The most distinguished printed catalog issued in Rhode Island is undoubtedly the "Eibliotheca Americana" of the John Carter Brown Library, published in 1870-1882, in four stately volumes, enriched with numerous facsimiles. It was printed in such a small edition that it has since become itself one of the rarest of rare books. Its compiler was Hon. John Russell Bartlett, to whom we owe also the "Bibliography of Rhode Island," 1864, and the "Literature of the Rebellion," 1866. His successor in the librarianship of the John Carter Brown Library, Mr. George Parker Winship, published a "Cabot bibliography" in 1900, and has issued other bibliographical works of less extent. To Mr. Clarence Saunders Brigham, librarian of the Rhode Island Historical Society, we owe the "Bibliography of Rhode Island history," appended to Field's "State of Rhode Island," 1902, and a "Report on the archives of Rhode Island," 1904. Mr. William Eaton Foster, librarian of the Providence Public Library, has written among other important bibliographical works "The literature of civil service reform in the United States," 1881; "References to the history of presidential administrations," 1885; "References to political and economic topics," 1885; and "References to the Constitution of the United States," 1890. He edited *Monthly Reference Lists*, 1881-84, and the *Monthly Bulletin of the Providence Public Library*, 1895-98. Miss Agnes C. Storer has issued "A list of publications relating to Charles Carroll of Carrollton," 1903; Mr. Hamilton B. Tompkins, a "Bibliography of George Henry Calvert,"

1900; Mr. J. Harry Bongartz a "Check list of Rhode Island laws," 1893; and Mr. Charles E. Hammett "Contributions to the bibliography and literature of Newport," 1887. Mr. James M. Sawin, principal of the Point Street Grammar School in Providence, edited 1880-91 twelve issues of his "Annual list of books for young people, with brief annotations." In the later years the edition published was 20,000. Mention should also be made of the modest but invaluable "Index to American poetry and plays in the collection of C. Fiske Harris," 1874, and of the more ambitious "Anthony memorial," 1886, a catalog of the same collection at a later period, compiled by John C. Stockbridge. Three contributions to other departments of bibliography are: "The librarians' manual," 1858, by Reuben A. Guild, librarian of Brown University, a comprehensive work, which deals, as Mr. Fletcher unkindly says, "with a primeval period in American library history;" "Libraries and readers," 1883, by Mr. Foster, a book which the years have not robbed of its pertinence or its value; and "The mastery of books," 1896, by the present librarian of the university.

LIBRARY BUILDINGS

Rhode Island library architecture began with the beautiful Doric building designed for the Redwood Library in 1748 by Peter Harrison, assistant architect of Blenheim house; it lingers for the moment over the Ionic temple dedicated in 1904 to receive the John Carter Brown Library; between these there is much important history, and not a little contribution to library design. Manning Hall, at Brown University, the second home of the college library, was erected in 1834, and was designed to be an exact reproduction, doubled in size, of the Doric temple of Artemis Propylea at Eleusis. The Providence Athenæum, another Doric building erected four years later, encloses within the sternness of its granite walls an interior that in genuine library charm is without a superior in America. Like its predecessors, the Athenæum consists virtually of one large room divided by bookcases into alcoves, —glorious retreats, either for browsing, for study, or for *lête-à-lêtes*. In these alcoves Poe and Mrs. Whitman carried on their literary courtship; and in those of Manning Hall

half a century ago nestled the slender student whose name and fame will crown the next library of his university, the John Hay Memorial. Another early library building is that of the Rhode Island Historical Society, which was erected in 1844, and enlarged in 1892.

The present library building of Brown University is an interesting because an extreme example of the old college library type. It is Venetian Gothic in style, and is charmingly adapted for its original purpose, to supply the casual wants of a few book-loving professors and students, as could easily be done in the hours from ten to four. But an unkind fate has compelled this building, with its narrow windows clouded by stained glass, its numerous alcoves, and its tiny reading room, to serve the needs of a university, with students crowding into its encumbered spaces at all hours from nine in the morning until eleven at night. It should be judged, however, not by its present inadequacy, but rather by its successful adaptation to needs which now seem archaic, but which were all that had appeared above the horizon thirty years ago. Many other libraries in the state have their own buildings, which are used only for library purposes, or for the purposes of a library and a museum combined. Notable examples of this class are the libraries at Bristol, East Providence, Peace Dale, Warren, and Westerly. Other libraries own their buildings, but derive an income from the rent of portions of them. The best examples of this class are the Harris Institute Library at Woonsocket and the Olneyville Free Public Library. Still other libraries, like those of Barrington and Watchemoket, have quarters assigned to them in the town hall, an arrangement which would be ideal if libraries would only stop growing.

But there are three modern library buildings in the state that must not be passed over without particular mention. The new building of the Providence Public Library has satisfactorily stood the test of six years' occupancy. It is a pure example of the Italian Renaissance style of architecture, and is built of light Roman brick with limestone trimmings. The aim in planning the building was to provide individual accommodations for the individual needs of the library; we therefore do not find the building composed of a few large rooms indicative of large and simple

wants, but of many rooms each adapted to a special use. The shelf capacity of the entire building is 225,000 volumes, but the plan admits the construction of two additional stack buildings. Among the features that should not be overlooked by the visitor are: the position of the delivery room with reference to the stack; the plan and fittings of the standard library; the relation of use to accessibility in the assignment of the rooms to the different floors; the map room; the special library rooms; the design of the stack; the ventilating and dusting arrangements; and the heating plant. The Deborah Ccok Sayles Public Library, in Pawtucket, dedicated in 1902, is one of the most beautiful library buildings not only in Rhode Island, but anywhere. It is built of Maine granite so white as to have the appearance of marble. The architecture is Greek, and the main doorway, one of the glories of the building, is an exact copy of that of the Eretheion at Athens. A feature of the building that arrests every eye is the series of six panels designed by Laurie, which extend across the front, and represent the great civilizations of the world. The building is in the shape of a cross, and the simple masses of the exterior are indicative of the large divisions found upon entrance. At the junction of the cross is the delivery room; to right and to left are the reading room and the children's room, and behind is the stack. These four rooms are all really one, being separated only by Ionic columns. Behind the two front rooms are more retired rooms for reference and administration, and in the basement are halls and a newspaper room. The whole building is pervaded with that spirit of open shelves, of which its accomplished librarian is one of the foremost champions. One more building claims our attention, that of the John Carter Brown Library, which is the chief ornament of the campus of Brown University, as its contents are the University's richest treasure. The architecture is a somewhat ornate example of the Ionic; the material is Indiana limestone; the plan is a highly successful embodiment of the museum library idea. The interior consists of one splendid main room devoted to the principal subject of the collection, and provided with cases for exhibition

purposes; subordinate to this room are four small rooms devoted to minor subjects, and the librarian's room; in the basement is a bindery. The building and all its appointments are of the most substantial character, and are well fitted to preserve for centuries the unrivalled collection which is entrusted to them.

THE RHODE ISLAND LIBRARY ASSOCIATION

Ever since the founding of the Massachusetts Library Club in 1890 the librarians of Rhode Island have had the privilege of membership in that body, a privilege which they still highly value; they have also had the honor of contributing to the club two presidents and four vice-presidents. While they would have preferred a single organization, it was found impossible to care for the library interests of Rhode Island through an organization bearing the name of another state and necessarily occupied for the most part with the libraries of that state; so, not in any spirit of secession, but simply in order to be able to carry out at home the purposes of the elder organization, the libraries of Rhode Island in March, 1903, formed their own association. The object of the association is "to promote the library interests of the state of Rhode Island." Its membership has no local limitations, and already includes librarians in Massachusetts and New York. It usually holds two meetings a year, and it has held joint meetings with the Massachusetts and Connecticut organizations. Its meetings have been well attended, and the discussions have awakened an interest which is possibly easier to arouse in a neighborhood organization like this than in a larger and more varied body. It is perhaps too early to expect any tangible results from the association's activity. But it has certainly made the librarians of the state acquainted with one another. It has also secured a needed revision of the rules under which books supplied through state aid are purchased by the libraries, and it has begun a system of registration of library workers, which is expected to be of benefit both to the persons and to the institutions concerned. It receives the hearty recognition of the state board of education as one of the important educational forces of the state.

LIBRARIES OF RHODE ISLAND

LOCATION	NAME OF LIBRARY	DATE OF FOUNDING	VOLUMES	ADDED IN 1905	CIRCULATION IN 1905	NAME OF LIBRARIAN
Anthony	Free Library	1872	3557	1088	4469	Myra S. Anthony

THE LIBRARY AS A FACTOR IN MODERN CIVILIZATION

BY WILLIAM H. P. FAUNCE, D.D., LL.D., *President of Brown University*

WE have long been accustomed to speak of three great factors in modern civilization—the school, the church, and the home. Must we, in view of such a significant meeting as this, add a fourth factor—the library? The modern library has in some places become a true school; in other places it has radiated something of the refinement for which we once looked to the home, and something of the idealism which is the peculiar gift of the church. The library is vastly more than a collection of books: it is a social, civilizing, moralizing force. We expect to find the library building in every city and town as much as to find the spire of the church or the flag of the schoolhouse. The visitor to Boston to-day finds the public library as commanding a pile as Trinity Church, and far more imposing than any schoolhouse. The visitor to New York finds the new public library building climbing into a mass and dignity as great as that of any cathedral. No smallest village is now complete without its library, and when some future Goldsmith shall sing the praise of another “Deserted village,” he will point out not only the “noisy mansion” of the school-master, not only the church adorned with the meek and unaffected grace of the rural pastor, but the loaded shelves, the catalogs and reference lists, the chairs and tables, and the zeal unaffected, though not always meek, of the modern librarian.

These libraries have sprung into being throughout the land without specific legislation and without deliberate propaganda. The church missionary societies of the country have adopted the avowed policy of planting a church in every community, and appointing superintendents of missions to see that this is done. Every state in the Union has its laws for the establishment and maintenance of schools. But these multiplying libraries have come into being without enactment of law or

the preaching of any crusade. They have spread from sea to sea by a happy contagion, they have become a noble American epidemic. The great inarticulate thirst for knowledge has demanded satisfaction, and created its own supply. Our wisest directors of public sentiment and philanthropic endeavor have realized that through the library may come a charity that does not pauperize, a help that induces self-help, light to irradiate the dark places of civilization, inspiration for every calling, and access and power to every worthy institution and noble cause. What then is the specific function of this new and powerful institution in modern life? What is the contribution of the library to civilization?

The library makes to the nation three gifts: the gift of knowledge, the gift of perspective, the gift of ideals. Putting the matter in another way, we may say it gives us facts, relations, values.

The library is primarily to conserve and disseminate knowledge. Indeed, the old conception of the library was purely that of a place of storage for written or printed material. No one thought of taking out a book from a mediæval library any more than of removing a statue or painting from an art gallery. And still to-day the function of the library as a storehouse is most important. Modern democracy holds that knowledge is not for a few bright minds of each generation, not for an intellectual *élite*; but all that is knowable is to be made accessible to all that desire to know. If we allow knowledge to come only to a chosen few of each generation, how can we know that we have chosen the right ones to receive it? The genius who might turn the stream of history may be born in the lowliest cabin on the prairie, or in the darkest tenement of the great city. There may not be a village Hampden in every village, but there may be an Edison, a Fulton, an Eli Whitney, an Andrew Carnegie, a Carl Schurz

in any village in America. Only when we make knowledge accessible to all shall we know what minds and hearts are among us.

But we must discriminate. The books which no longer convey knowledge, which state theories no longer held, and propound as facts things no longer believed; in other words, antiquated books of knowledge should be sharply separated from books abreast of modern thinking. Those books which have ceased to be of any use to mankind (except for antiquarian purposes) or which never were of any use to mankind — and their name is legion — have their place in a museum, but not in a working library. In an arsenal we keep only weapons now serviceable in actual war, and relegate flint-locks, catapults, and bows and arrows to the museum. No arsenal in the world would be large enough to accommodate weapons for a modern regiment mingled with all the weapons of all past generations. It is time for some one to say frankly that there is no inherent sanctity in paper and printer's ink. It may have been true in Milton's day that a book was usually the precious life-blood of a master spirit; but to-day a book is often the product of the least erected spirit that fell. An almanac put forth to advertise some nostrum, or a novel prepared purely as a piece of merchandise, does not acquire dignity or value simply because bound in leather and placed on the shelf with "Paradise lost."

We must apply to our libraries some higher standard than that of size. We never estimate the Uffizzi or the Louvre by the number of paintings they contain, yet we continue to grade modern libraries by the number of volumes groaning on dust-covered shelves. A library of five thousand well selected books may be of far more service than one of one hundred thousand composed largely of books outgrown and forgotten. Our public libraries must distinguish sharply between the library and the museum, to the advantage of both.

Secondly: Perspective. The library aims to show us facts in their large and permanent relations. There is no virtue in mere knowledge of facts (any more than in vast numbers of volumes). Most facts are not worth

knowing, still less worth preserving. Doubtless the letter "p" occurs a certain definite number of times in the "Idylls of the king," and it may be that some deluded mortal in prison or asylum has ascertained that number; but we do not care to know that fact or have any one else know. The exact number of grains in some ant-hill is doubtless discoverable, but only a lunatic would care for the discovery. Most facts in nature and in history are in our present stage of development without value. Only when these facts are collected, classified, seen in relation, and translated into truth do they become of value to men.

For this reason the library must encourage slow, patient, thoughtful reading. We have long been told that a taste for reading is worth ten thousand a year. Whether this is true or not depends altogether on what sort of reading is referred to. The habit of letting the mind lie passive while some scribbler plays upon it is not worth ten thousand a year. The habit of letting the mind become a waste basket for sensation and scandal is not worth ten thousand a year. The habit of reading as a substitute for thinking is worth nothing, but is sheer damage to mental fibre. The university library is even more important than the university laboratory. In the laboratory we verify the theory which is far more likely to be discovered in the library. The new discovery is a new combination of old ideas, and such mental combination comes to us more easily when we are dealing with thoughts than with things.

Our students need to use books not only as tools, but as friends. In the old days, when the reading of college students was far more promiscuous than to-day, they were accustomed to regard books almost as personal acquaintances, and there was a genuine exchange and reaction of writer and reader. Such reading was indeed very desultory, but, as our professor of English literature is accustomed to say, "it was immensely fattening." Now, on the other hand, the college student goes to the library with a list of references, using many books, but becoming really acquainted with none. He opens one work

at volume 2, page 193, another at volume 4, page 315, and, having extracted the precise bit of information he desires, has no further use for the author in question. This modern method of reading is far more accurate and definite than the older method, and is obviously effective in securing results. But it must be supplemented by the "browsing" of former days, by the large horizons which come from being set free in the companionship of great minds.

Thirdly: Ideals. Our libraries must be not only storehouses of knowledge, but reservoirs of power. The great books of all time give us contact with inspiring personalities, shining examples, with the great leaders of men. The trophies of Themistocles will not suffer

us to sleep. When such books come to many a shut-in life, to many a boyhood, cabined and confined, the limitations of the farm and the factory are forgotten, the mind expands to a kinship with past and future, and the reader in some village library may become the prophet of the new century, and the leader of the modern world.

More than that: the literature of power creates the climate in which we live. It shapes our ideals of success, of power, of beauty, of goodness. Fiction and poetry, if they thus create aspiration and give us standards, may be more useful than all encyclopedias or text-books, for they deal with the sources and the goal of all human action.

SUBJECTS FIT FOR FICTION

BY OWEN WISTER, *Author of "The Virginian," "Lady Baltimore," etc.*

THE considerations to which I have the honor and the pleasure of drawing your attention—these considerations, and the conclusions that follow from them—need a long book, and not a short essay, to set them adequately forth. Therefore we find ourselves reminded of Napoleon's remark, that "The history of France should be written in two volumes or a hundred;" and we accordingly renounce elaboration, we renounce detail, we renounce every one of those explanatory qualifications and corollaries which are essential to a grave demonstration, if such demonstration is to be built symmetric, complete, and impregnable like a fortress. We must simply read our Declaration of Independence—for a Declaration of Independence it is—confining ourselves to a few facts which lie in the knowledge of all civilized and instructed people. And since we cannot build our fortress in a hundred volumes, or even in a hundred minutes, we shall lay its corner-stone and nothing more: content if the quarter of an hour, which must suffice for this ceremony, shall show us clearly and once for all what the corner-stone is.

And so we come at once to the question, What subjects are fit for fiction? and at once we answer it, All subjects are fit for fiction. This is our Declaration of Independence, the Independence of Literature; and we may be sure that it sounds as revolutionary to certain large classes of ears as did our Declaration of 1776 sound to the ears of George the Third. All subjects are fit for fiction. This is the corner-stone; and if a nation's literature rest not upon this, believe me it is builded upon sand. Many there are in our country who would reject this stone; and without pausing to name them all, we recall among them readily the parent to whom any book is merely one of the toys with which his daughter plays when she is tired of tennis or golf; and we remember those many parishioners of dogma who love liberty so long as it belongs only to themselves. This is no new state of things, this denying the liberty of the book; and the world, having seen it often, is likely still to see it sometimes; but let us remember that we call ourselves the Land of the Free, and that since we proclaim liberty to all, we must not deny it to the author.

But here on the very threshold of our demonstration we have already reached a chance for misunderstanding. There is not one of us but has argued for a whole hour with some unconvinced adversary, to find at the end that their disagreement at the beginning was only a question of the meaning of words; so let us define clearly what we mean by "All subjects are fit for fiction." What, in the first place, is a Subject? and in the second place, what is meant by Fiction?

A Subject is anything containing the seed of dramatic growth. A landscape and nothing more, is therefore plainly not a subject within our chosen meaning. A field, a stream, a forest, a tree, a rock, a wave breaking on the sand, any of these may be enough for a picture, or for a sonnet, but they are not enough for Fiction, because they contain no seed of dramatic growth, suggest of themselves no action, are, so to speak, stationary; and though they can form the basis of a mood, an impression, a reverie, they cannot form the basis of a story. Leaving nature, and taking other examples, we see in the same way that a colonial house, or a railway train, or a woman sitting in a garden, are likewise no subjects for fiction, although out of these also may be made a picture, or a set of lyric verses; and the right artist, whether an artist in paint or an artist in words, can make out of them almost anything that his imagination pleases; can picture the landscape, the train, the colonial house, the woman, so as to make us feel gay or sad, or thoughtful, or troubled, or merely agreeably contented, as we ponder and dwell upon his work. But now observe: if to the landscape we add the threat of a great storm, or a great drought; if we place a little old lady in the colonial house; if we fill the heart of the woman in the garden with some keen retrospect or anticipation; if the railway train is rushing toward a burning bridge, then, although these subjects have not yet passed wholly outside the domain of the painter, they have already entered the domain of the teller of tales, because each one of them contains the seed of dramatic growth: suspense is now a part of them.

We choose purposely such simple instances,

in order that our definition of the term "Subject" be at once clear, comprehensive, and fundamental. When we examine such a work as "Vanity Fair" we find that its vast cubic capacity holds several subjects, among which the ambition of Becky Sharp is undoubtedly the principal one; while, if we examine such a work as "The scarlet letter," we find a single theme, ancient as mankind: a woman and two men. And with this triangle, which forms the base of many thousand romances remembered and forgotten, which gives us Helen of Troy, Iseult of Brittany, Guinevere, Desdemona, with this same triangle Hawthorne has made his Puritan drama. These illustrations of "The scarlet letter" and "Vanity Fair" serve by their very contrast to show what we mean by a "Subject." Thackeray's book contains a number, Hawthorne's only one; but in all of them we find the seed of dramatic growth. And we may notice here how pointless is that favorite remark of those clumsy counterfeits who would pass for critics; how often we see them write, and hear them say, "The plot of such and such a book or drama is 'not original'!" Thackeray uses the same triangle as Hawthorne; Becky is the woman between the two men, Lord Steyne and Rawdon Crawley. It is the different treatment given the triangle, difference in the characters, difference in time, difference in place, difference in cause, difference in consequence—it is all this and only this which matters; the fact that the same triangle lies beneath both structures is not of the slightest importance. We cannot bear too heavily upon this; having now clearly seen what a "subject" is, we cannot next see too clearly that it is not the seed itself, but the manner in which the gardener causes it to grow, that lies at the bottom of our whole enquiry. Our enquiry holds for us no surprise, no paradox, "nothing new," to quote the phrase of the counterfeit critic; it will merely remind us of existing facts, it will merely turn our eyes upon things which stare us in the face—as soon as our faces, and not our backs, are turned to them. And in order to press the point we have reached a little further home, let a third great book be named—"Anna Karenina." Here again is

the triangle; here again, like Thackeray, like Hawthorne, Tolstoi presents to us the case of a woman and two men. The world has accepted these three books. We cannot say whether or not they will be known in a thousand years; nor need we say anything so useless. It suffices to keep within our knowledge, and remember that the judgment of the civilized world has placed these three books upon the shelf of Greatness. There they stand, accepted, crowned, acclaimed; and yet, is it because of their subject? is it because of the triangle? Why, every one of us, most likely, has read other stories built upon this same triangle, and dropped them because they were dull, or flung them down because they were vile! Thus it becomes plain to us that one gardener may take the seed and so nourish it that it becomes fruitful and beautiful, while from the same seed another gardener may produce an ugly, withered stalk, its leaves blighted with bad taste, its roots cankered with insincerity. Yet most often in such cases the properly disgusted, but wholly unthoughtful, reader declares that the subject was not fit for fiction.

And next, what is Fiction?

For the purpose of our demonstration we need dwell much less upon our chosen meaning for "fiction" than we have dwelt upon our definition of "subject." The ultimate and philosophic meaning of fiction would indeed lead us far afield; and it may be doubted if we could more than approximately reach any statement of it; but here it simply means those compositions in narrative or dramatic form which are products of the imagination: "Marmion," "Silas Lapham," "David Copperfield," "Camille," "Macbeth," "Don Quixote," are all works of fiction, differing merely in their scheme of composition; while Boswell's Johnson, Kant's "Critic of pure reason," Milton's sonnet on his blindness, and Macaulay's history of England do not fall within our definition. These examples ought to show accurately enough that by "fiction" we mean certain kinds of composition in prose or verse, constructed either for the solitary reader, or the gathered audience, and roughly described as tales and plays.

But even now we have not quite done with definitions. In our statement "All subjects are fit for fiction" there is still room for confusion, because we have assumed that we all mean the same thing by the word "fit." And although our explanation why a landscape is not a "subject" necessarily infers that by "fit" we mean fitted, appropriate, available, nevertheless, we must pause here for a moment because we continually hear it said around us, and have sometimes said ourselves, that such and such a book is "not fit to read," which yet may have a subject entirely "fit for fiction;" let us firmly bear in mind that a good seed may have a bad gardener. There remains one possibility of confusion lurking in our word "fit," which it is mortifying and humiliating to be obliged to mention. It is to be feared that almost every one of us has at some time heard objection raised to some book being on the shelves of a public library because it was not "fit" for the young. This is by no means what is meant by "fit" in our present demonstration. If a material simile may be permitted, it would be as reasonable, as intelligent, to exclude lobster salad from the bill-of-fare of a great restaurant, because it was unwholesome for the young. We who understand that a public library is the safe deposit vault of all literature of all the ages, where the serious student may find all the documents necessary to any complete investigation he desires to make—we who understand this, will not mistake a public library for a children's nursery.

It is the province of parents, teachers, and guardians to regulate both the diet and the reading of those committed to their care; it is the province of the public library to furnish every work of literature to every reader who is fit to read it.

And now it is to be hoped not only that our proposition, "All subjects are fit for fiction," conveys clearly the meaning we intend, but also that by the mere process of defining our terms we have arrived close to the end of our demonstration. For, as was said at the beginning, we confine ourselves to a few facts which lie in the knowledge of all civilized and instructed people; nor shall we presume

to offer any opinion of our own in support of the proposition — any more than we should if we were undertaking to demonstrate that twice two equals four. And, moreover, we believe that "All subjects are fit for fiction" is (once we understand it) as indisputable a truth as the mathematical one we have just instanced.

Let us suppose that a young friend who wishes to be an author came to us and said: "I have a plot, and I want your opinion of it. My only doubt is whether it should be a novel or a drama. A husband and wife, after many years of happy marriage, discover that they are mother and son. The horror of this causes her to kill herself, and him to put his eyes out. What do you think of that?"

Should we not beg our young friend to choose something else? Should we not both remonstrate against the dreadfulness of his theme, and also point out its great improbability?

"Well, then," he might say, "what do you think of this one? A man is shipwrecked on a strange coast, and returns home after many years of absence."

It is likely that we should tell our friend to try again; or at any rate recommend him to develop only a short story from so slender and limited a subject. Again, he might say, "Here are two more. A son discovers that his mother has connived at his father's murder, and has married the murderer, who is his uncle. In carrying out his revenge, he is killed; but not before his mother has drunk poison and he has stabbed his uncle." Again we should be likely to object to the violence and crime involved in all this. And similarly in the case of our young friend's final offering: "A black man marries a white woman. His enemy deceives him into suspecting her fidelity, so that he murders her and kills himself."

By this time at least some of us would say: "My dear young friend, it required a Shakespeare to write 'Othello.' Do not you venture there. And you had best not try to make a new version of Hamlet either. For although the story of the son and his mother and his uncle was by no means Shakespeare's own invention, any more than Othello was; and al-

though it was already familiar to the Elizabethan public both as a story and as a play, and consequently Shakespeare undertook to write a new version of it at his peril — since his new Hamlet might have turned out inferior to the old one — nevertheless, since Shakespeare's time no one has ventured to write Hamlet again. It is not likely that you will be able to surpass him."

That is what some of us would probably say to the young man. But we should scarcely say that Hamlet was not a subject fit for fiction. And we should remember that from the man shipwrecked on a strange coast De Foe made Robinson Crusoe, which is not a short story, but a book of several hundred pages. And those of us who recall our Greek literature, recognize in the plot of the married couple who discover that they are mother and son what is acknowledged the world over as one of the greatest of the Greek tragedies, *Œdipus the King* — nay, thought by some to be the very greatest of all, and certainly thought by none to be an unfit subject.

Of "subjects" we have now named four. Stated in their simplest terms, in their seed form, they sound unpromising enough. Three of them could fairly be called unclean and revolting, and one — Robinson Crusoe — could be called dull and meagre. And yet the youngest of them, De Foe's tale, will presently be two hundred years old; while the Greek tragedy of *Œdipus* is more than two thousand years old. It has withstood all the storms of war, all the wreck of kingdoms, all the changes of taste, morals, custom, and religion, and still stands to-day superb, unquestioned, magnificent in beauty, symmetry, and strength.

And why does it so stand? Is it because of the seed? We believe that it is now plain to all that it is because of the gardener who made the seed grow. Sophocles was a great poet, a great artist, and a sincere workman; therefore in his hands the seed became a thing of beauty, and not a withered stalk.

We need cite no further examples of "subjects" which in their seed-form look forbidding, or unworthy, yet have been made into classics. They are to be found in every literature. We can perform the analysis for our-

selves, and find that at the core of a large proportion of the world's masterpieces is a "subject" which, did we not know better, we should condemn at once as being altogether unfit for fiction. But it is fairly to be presumed that the four famous cases which we have quoted are demonstration enough; that in view of *Cædipus*, and *Hamlet*, and *Othello*, we cannot make a classification, we cannot lay down rules of exclusion and inclusion; we must allow the author full liberty to choose what subject he sees fit, for we recognize that some of the greatest works of fiction have been drawn from sources which seem the least inspiring; and we are forced to conclude — there is no escape from concluding — that there is no limit save humanity itself; that the field of fiction is the field of all human experience, of all human emotion, of all human thoughts, deeds, fancies, and dreams. If we cannot see this, we merely resemble those provincials who would turn a public library into a nursery.

But, in making our Declaration of Independence, in giving the author his liberty, we have by no means relieved him of responsibility. We have merely said to the gardener: Take any seed you please; but if you do not make it grow into a thing of beauty, if you produce from it a withered, ugly stalk, we reject you. We do not wish to dictate to you what you shall tell us; therefore remember that the burden is upon you. Remember that if you choose to tell us about a husband and wife who discover that they are mother and son, you do it at your peril. Remember that whenever you choose something which in itself is revolting and painful, you do it at your peril. Win us over to it if you can, and if you do yours is the greater glory, for out of apparent ugliness you will have distilled beauty. We only wish to warn you of the seriousness and the difficulty of your task; we by no means wish to bind chains upon your gift, nor can you measure your own strength until you have tested it. Go forward, therefore, fearlessly, but soberly; for every dangerous thing you try, you try it at your peril.

Although at the beginning we said that we should renounce all explanatory qualifications, there is one of such great importance that brief allusion must be made to it.

It must have been the experience of many of us to read some work in a foreign language, and say to ourselves while reading it: "I do not object to this as it stands, but if it were translated into English I should find it unpermissible."

At first sight it seems mysterious that we should find any book acceptable only in a foreign language. But the matter is a perfectly simple one. In reading the Elizabethan authors, we come upon very coarse language, which we pass over; while if a contemporary author were to use the same language we could not endure him. Why? Not because the Elizabethan author is dead, and the contemporary author living; but because the Elizabethan author was writing in the convention of his own day. If we choose, we may put it that "he knew no better." And so it is with a foreign author whom we should dislike in English. While reading him in his original tongue, we in a sort unconsciously adopt the convention of his fellow countrymen, which is different from our own. But as soon as he is translated, our own convention surrounds him, and he becomes offensive through breach of it.

This, therefore, is the only corollary to our main proposition to which we would draw notice. Any Subject is fit for Fiction, and its treatment must lie in the convention of its time and place.

Let us hope that the above considerations and examinations of certain facts of literature have enabled us to see that there can be no doubt All Subjects are fit for Fiction. The doubt will always be, Is the man fit for the subject? And nobody can answer this but himself; he must undertake the adventure at his own peril. Sophocles could write *Cædipus*; Shakespeare could write *Hamlet*. Could any of us?

But no law save our own judgment shall forbid us from trying. And that is our Declaration of Independence.

THE LIBRARIAN OF THE DESERT

BY HARRY LYMAN KOOPMAN, *Librarian of Brown University*

[PREFATORY NOTE.—In the very heart of the Libyan Desert, the most barren and inaccessible portion of the great Sahara, is situated one of the most influential libraries of the modern world. It is the great library at the headquarters of the Senussi brotherhood, which is the chief unifying force in modern Islam. Hither, to the oasis of Kufra, the central government of the brotherhood moved about 1893 from its former seat in Jarabub, which occupies a more exposed position about three hundred miles further north on the border between Egypt and Tripoli. Jarabub still remains the burial place of the great founder of the order, and supersedes Mecca as an object of pilgrimage not only for the followers of the Mahdi, but even for other Mussulmans. The great library, however, which was formed by the Mahdi's learned brother, to whom was entrusted the charge of ecclesiastical affairs and education, was removed to Kufra. Its transportation required 500, some say 800, camels. From this remote center the Mahdi stretches out his influence, for good or evil, over the whole Mohammedan world. Most writers accuse the Senussi of political designs, and look to see them lead all Islam in a revolt against Christianity and European civilization. To other authorities, like Professor Toy, they "appear to have for their object merely to secure a territory in which they may retain their customs and practice their religion in peace." The latter view is essentially that which I have ascribed to the Senussi librarian, into whose mouth I have put my poem. The reader who wishes may pursue the subject further in Arthur Silva White's volume, "From sphinx to oracle."]

WHERE the giant stairs lead down,
Boulders, and shingle, and sand,
From the lofty northern land
That fronts the far blue main,
To the vale of the Sacred Town,—
Where low on the southern plain
The wizard of Heat and Drouth,
With a sunbeam for a wand,
Upbuilds his world of deceit,
Palm grove and rippling pond
And garden and cool retreat,—
Even from north to south,
O'er the shimmering desert's face,
My laden file I trace,
My peaceful marching line;
Yet the mightiest army, I ween,
To conquer a darkened world,
The desert's eye hath seen,
Since Okba's troop was hurled,
In the might of the Prophet's word,
From the Nile to the trackless brine:—
Yea, into the sea he rode,
And, baring to heaven his sword,
He cried: "Did not the deep,
O Allah, my prowess tame,
Westward still would I sweep,
And the knowledge of Thy law,
In mercy on man bestowed,
Yet wider spread, and the awe
That is due to Thy holiest Name."

Nay, never with mine may dare
The mightiest army compare,
Not even Iskander's own,
Which hewed the world to a throne.
Nor more my little worth
To glory like theirs must yield
Than the proudest armies of earth
To the victor host I wield;
For not against spear and shield,
Nor the strength of a man's right arm,
Nor the speed of a horse's feet,
Nor the arrow's, deadlier fleet,
Nor the unseen bullet's harm,—
Not against these they war,
The weakness of men and brutes,
But against the demon powers
Behind the clouds that lurk,
That fly under heaven free,
That burrow in dank and mirk
Below the mountains' roots,
That haunt the caves of the sea,
That beleaguer these hearts of ours,
And God and his prophet abhor.

Four are the legions of might
That muster at my command:
The first is the awful Word,
Eternal, uncreate,
Yea! dateless with God's own date,
Unuttered and unheard,
But written in rays of light
On the mighty table of stone
Where future and past are shown,
That leans at God's right hand.
Thence, for the weal of men,
In a book whose leaves are gold,
That jewels and silk enfold,
That was writ with an angel's pen,
It was brought from its high estate
Through the heavens to the lowest heaven
By Gabriel — such God's plan —
In the blessed, mystic even,
On the night of power and fate,
In the month of Ramadan.
But not, O crystal sphere,
In thee lay the Word concealed;
God willed that year by year
Its truths to the Prophet's ear
Should, line upon line, be revealed;
Whether with chime of bells,
Gabriel the message tells;
Or thoughts, with silence shod,
From the Holy Spirit come
Into the secret place
Of the heart; or the very God
Veiled, or face to face,

By day or in dreams of the night,
Speaks, and the heavens bloom bright,
Speaks, and the hells are dumb.

The next of the legions arrayed
To conquer at my behest,
In the warfare of Worst and Best,
The holy TRADITIONS be,
Which age unto age enshrine
The wisdom, the power to aid,
Of the Prophet's words divine
To his friends, the trusted few;
With the holy deeds of his hand
That were done for their eyes to see,
An example of deeds to do
In every time and land.
These in men's hearts locked fast,
Unto children's children told,
And onward as heirlooms passed,
Richer than lands or gold,
After long centuries flown,
By holy men at last
Were gathered and made known,—
Saints enlightened by prayer
To mirror the Prophet's heart,
To winnow the false from the true,
To sift the weak from the strong,
The low from the lofty to part.
For "Wo be unto you
If ye utter my sayings wrong!
But guard them with anxious care;
And be mindful that ye assign
No words to me save you know
In truth they are surely mine."
So, in warning and ruth,
Spake the Prophet long ago.
And lo! the Traditions abide,
Mighty to strengthen and guide,
To chasten, to check, to impel,
To comfort, reprove, inspire,
And weak are the weapons of hell,
And they fall in fruitless ire
On the sunbright shields of the Truth.

Behold, as they pass in review,
The legions of the CONSENT!
The mustering of the Laws,
The saying and doing blent
Of the learned and devout,
Men who saw clear and true,
Not fools in their folly blind,
Nor drunken with pride of doubt,
Nor scoffers that, snarling behind,
Snap at the heels of the Cause;
But the first of the Blessed, they,
The Prophet's helpers at need,
The mates of the Banishment,
The followers of the Flight.
Nor had these been all, but their seed
In every age might we count,
Had God for our sins not sent
Wrangling and fell despite,

Which have blinded our eyes to the way
That leads to His holy fount.
But yet shall the Faithful learn
The last, first lesson of Peace;
And the precious flood shall return
No more to the thirsty sands,
But be dipped by men's eager hands,
And the world's long thirst shall cease;
And, forgetting its fevered years,
Islam shall forward leap,
As the panting hart, that deep
Has drunk of a hidden rill,
Leaps and forgets its fears;
And they that strove shall be still,
And the evil shall cease from scathe,
And Islam, rousing its youth
As a mighty man from a swoon,
Shall renew its morn of Faith,
And the triumphs of its Truth
Shall round to a fadeless noon.

Last of my legions four,
The Decisions of the wise,
The new and the newer lore
That still from the old arise;
Yea, the new Truth wrought from the old
For the needs of the newer day,
Never the old to gainsay,
For the Truth is eternally true,
But only the old made new,
As a tale to the young retold.
The sun that smiled on the morn
Of the holy Prophet's birth
Rose to-day on the earth;
New to the new day born;
Even so, after centuries rolled,
The Truth abides the same,
And so long as sin its net
Shall spread, and the heedless fall
And for light in the darkness call,
Truth unto Truth shall be set,
And a new Truth forth shall flare,
As a new flame lightens the air,
When flame has been set to flame.

So march to victories new
My legions with victory bright.
But, lo! in their train a host
Of warriors doughty and true,
Heroes, although they boast
Only a mortal might.
The Roots of the Law they hight,
The Creeds from the one creed wrought,
The Renderings of the Laws,
The Comments on the Word,
The History of the Cause,
The Rules of Thought Unheard,
The Arts of the Spoken Thought.
Last, as if led in chains,
Follow in captive ranks
The books, in motley guise,
Of the lore of the prying Franks,

Who spare not earth nor sky,
Nor future nor moldering past,
But search with tireless pains,
If haply some golden grains
Of fact they may find at last;
Yet, never with knowledge wise,
And wretched for all their gains,
In doubt they live and die.

Mightiest force among men,
And swiftest fleeting, the breath,
Speech, whose birth is a death;
For, the ear of the hearer to reach,
On the speaker's lips it must die;
And, heard and uttered by each,
And uttered and heard again,
Who shall say for a sooth
That its message has not been wrought
In the limbec of men's thought
From the Truth to a semblance of Truth,
Which at heart is wholly a lie?
But the Book was born, and lo!
Like a footprint on the strand
That has hardened into stone,
The Truth, released from change,
Outlasting ruler and throne,
Abides, while centuries range,
While nations ebb and flow,
In every time and land
The Truth; else none might know
The thoughts of the great of yore,
For, ever the newer speech
The newer thought would teach,
Under the sheltering fame
Of the wise and ancient lore;
And the Truth,—like the desert mound
Slow shifting day by day,
Fill, ere one marks, it is found
New-shapen and far away,—
Would be changed in all but name,
Not abide, like the hills, the same,
Flashing the morn abroad
From their iron crests, which took
The rose of creation's dawn,—
Themselves the earliest book,
On whose carven crags, deep-drawn,
Stands written the Will of God.

Paint on the paling sky,
The Wolf-tail's white foreruns
The dawn's quick-coming red;
And our prayers go up on high
To the Lord of dawns and suns.
Then flames like darts are sped,
And lo, the sun! and anon
O'er the rosy mists he has clomb,
The terrors of night are gone,
The day with its cheer has come.

So, day after day,
For a score of days we press
Ever our southward way

Through a wilder wilderness,
To the region set apart
In the desert's deepest heart
To shelter our sacred lore.
There at last shall we halt,
Where the oasis lies enisled
In a hundred leagues of sand
That surge on every land,
By the hot winds driven and piled,
Barren as ashes or salt.
But, to the Faithful's eyes,
A blessed bound it lies,
No foe-man shall pass o'er.
Yea, in the desert's deep
To their grave in the sands might go
Army on army sent
To work our mission scathe,
And we should awake and sleep
And awake, and never know
Evil deed or intent,
Safe in our Stronghold of Faith.

O Desert, vouchsafed to be,
From all eternity,
The shelter of God's Truth,
As God's compassion large,
And lasting as the will
That wrought thee and endueth,
Receive thy priceless charge!
Accept the casket we bring
Of God's provisioning
For the healing of men's ill.
So guard it from every taint
Of the Unfaith that fills the earth,
That from it shall go forth,
Like rays of the strong sun's light,
The healing of Truth to fill
The lands where men sicken and faint,
In the twilight of Faith or its night.
All is confusion there
And blindness and whirling haste;
The days of their lives men waste
In hurrying everywhere,
And arriving nowhere at last.
They cannot see God's sky
For the smoke of their ceaseless toil,
And earth shows dull and awry
Through the dust of their mad turmoil.

Here, and only here,
Of all earth's regions trod,
Stands man, with vision clear,
Alone with the only God;
And the Truth forevermore
From the desert, as ever of yore,
On earth shall be shed abroad;
And the gardens of earth that bloom,
The gardens no less shall become
Of the holy Faith, and man,
In the desert brought face to face
With the infinite blessing and ban,
Shall live in every place
As under the eye of God.

THE RELATION OF LIBRARIES TO MUNICIPAL GOVERNMENT

BY DAVID A. BOODY, *President Board of Trustees of Brooklyn (N. Y.) Public Library*

AS one enters the harbor of New York his eye is pleased, and if an American, his patriotic sense is gratified as he beholds the Statue of Liberty, with one hand holding aloft a torch and with the other resting upon a tablet on which are written these words, "July 4, 1776." We are grateful to France for this expression of national friendship. If, however, an American artist had been selected, one not only familiar with our history, but imbued with the genius of our institutions, he might possibly have selected other emblems for this impressive and beautiful statue. It seems to me he could have placed, with great propriety, in that extended hand a book and on that tablet he might have written words like these, "By knowledge we live."

I believe there is no word which so completely epitomizes our national faith as the word knowledge. Go back beyond 1776, beyond colonial days, back to the time when the first settlements followed the landing of the *Mayflower*, and we see the faith which our fathers had in the power and usefulness of knowledge. As soon as the home shelter covered their heads they established the school and the church. They provided for the education of the mind and conscience. They were in a new country. They intended to construct a new state. They proposed to establish new institutions. But instead of following the custom that had prevailed for ages before their time of preparing for their physical safety by constructing fortified towns they prepared to fortify their hearts and minds through the power of these institutions for the work of life. We know their wise laws concerning the establishment and maintenance of free schools, but do we ever think of their sublime faith in the power of knowledge, in their establishment in the days of their weakness and poverty, years and years before the Declaration of Independence, of those great institutions of learning — Harvard, Yale,

Princeton, and William and Mary? Their long Atlantic coast could offer no resistance to an invading foe, but they knew that these institutions would teach a conception of life and duty and create a manhood stronger than all the hosts of oppression.

As population grew, as it became centered in towns and cities, the library came and the great educational trinity of America became complete. Our people were not the first to establish libraries any more than they were the first to establish governments. For ages collections of books had gone on under governmental supervision, but our people have been the first through the evolution of thought and experience to make the library an educational factor for the whole people. They are the first to give to it the character of the common school. They are the first to declare that it should be a part of the educational system of the community. The library may well receive the benefactions of the thoughtful and generous, but it should no more owe its existence to philanthropy than should the school. In our land it, like the school, should be the fatherly provision of the state, the city or the town for its sons and daughters.

Great cities have existed before our time, but never so far as we know cities so great. And never were cities growing as they are growing in our day; growing because the rural population is pouring into them; growing because men and women believe that the city provides a larger, if not a happier, place in life; growing because a million immigrants are yearly coming to our shores, the larger percentage of which immigration remains in our cities. Everybody realizes to-day that life's greatest problems, whether governmental or industrial or social, are being solved, or rather that men are seeking to solve them, in our great cities. These problems include not only the growth of our cities, but they also include the diversity of habits and

purposes and ideals which are centered there. New York to-day is a city of races, an American community of foreign nativity. How shall these mighty masses be unified in purpose, be Americanized in habit, be united in loyalty, in love of country and in the promotion of the American ideals of national and individual character? These are some of the problems of our day. You, as representatives of a great educational influence, are helping to solve these problems.

I have taken New York City, our largest city, as an illustration of the municipal problems which are crowding upon us. New York raises annually for municipal purposes over one hundred million dollars, and over twenty millions of that sum are annually devoted to the maintenance of her schools. And let me say here that these schools are excellent, progressive and an honor to that great city. Her school board is composed in the main of experienced public-spirited men. They generously give their labor without pay. Before the gift of Mr. Carnegie, it became evident to every thoughtful man that our system of education, splendid as it is, needed some reinforcement which should give it wider scope and enable it to reach all of our people. Our children leave school at the average age of fourteen years. If it be wise to expend twenty million dollars for them up to that age, shall we spend nothing afterward? Shall we do nothing for the tens of thousands of young men and women who come to our cities annually for their future homes, and upon whose intelligence and integrity our future safety and prosperity largely depend? Is it wise to spend this vast amount of money annually for our children while in our school-houses and provide no helpful educational agencies for our homes? In answer to these inquiries the branch library came into existence, and to-day Greater New York can number over sixty of these branches from which books are being circulated at the rate of at least eight millions of volumes per year. These branches are intended to reach and accommodate the whole people, as much as the schools are intended to accommodate the children alone. The

schools we cannot spare, and I think the time has come when we will all say, at least in our big cities, that the modern library cannot be spared.

The cheapness of this form of education should not be overlooked. Twenty millions per year for our children. One million per year the present annual cost of our libraries, for our children during the remainder of their lives and for the millions who come to our cities and never see the inside of a school-house. The public library as to-day administered, brought within the reach of every home, is both the cheapest and the most efficient instrumentality in the way of educating our people and in thus solving the problems of our day.

I have said that the modern library is an American institution. It is an evolution of the educational faith and purpose of our fathers. Years ago our library system, far inferior to what it is to-day, but far superior to that of any other nation, attracted the attention of the leading nations of the world. The *London Standard* in 1886, calling attention to the work it was doing, said, "Americans are our masters in many departments of literary administration." Attention was called to the great collection of books in the British Museum which were used by scholars for reference purposes, and in comparison, our American libraries were mentioned, reaching as they do and enlightening all classes of our people. The *Standard* goes on to say the American whose tastes are thus fostered are the greatest reading people in the world, and in illustration of this fact it says, of all the standard English books, many more in proportion to population, are read in the United States than in England. It continues by saying that the "Encyclopedia Britannica" had for its ninth edition 50,000 American subscribers to 10,000 in Great Britain. More than one hundred thousand volumes of Herbert Spencer's works were sold in this country before he ever visited us in 1882. And in illustration of how we subscribe for our own books, it states that the "American encyclopedia" had 120,000 subscribers and Grant's *Memoirs* 300,000 subscribers. Who shall to-

day attempt to measure the influence of sixty million volumes of books annually circulated among our people through the instrumentality of American free libraries? And consider the still greater influence when we shall perfect our branch system, making our libraries co-ordinate with and almost co-extensive with our public schools. Who shall attempt to measure this mighty influence as it touches municipal government, and throws its light upon all the industrial problems of the day? In the emergencies which have come to our nation, the world has been surprised at the skill, science, general knowledge and the complete readiness which have pervaded all classes of our people. The secret of this is

that we have believed in the power of knowledge and we have made effective the agencies for making that knowledge universal. We talk of a national tendency, the fear that wealth will absorb the minds and corrode the consciences of our people. Let us not be disturbed. Let us remember that the very intelligence which our educational institutions have provided would easily account for the accumulation of great fortunes from the unlimited resources of this great nation. Let us be comforted with the thought that this wealth is flowing back upon the people in amounts and ways unknown to any other people since the commencement of national life.

THE PUBLIC LIBRARY AS A MUNICIPAL INSTITUTION: FROM THE ADMINISTRATIVE STANDPOINT

BY HORACE G. WADLIN, *Librarian of Boston Public Library*

FIFTY years ago the public library was hardly established, although the public schools were well developed. Before the library in Boston was founded the scheme was so novel that it was necessary to support it by cogent reasons showing not only that the plan was feasible, but that it was a perfectly natural and legitimate step "to be taken for the intellectual advancement of the whole community, and for which the whole community by its previous establishment of a system of public elementary education was then peculiarly fitted and prepared."

It may repay us, in our examination of the public library as a municipal institution from the administrative standpoint, if we glance for a moment at the argument which was effective in creating the library in Boston, practically the first great city library of the modern type. The line of reasoning seems trite to-day, and has become the merest commonplace of public library philosophy. But it was not so then; and, bearing this in mind, pardon me if I quote a brief paragraph which seems to me noteworthy in its clear comprehension of what the public library was to become if the

initial step were taken, remarkable also in its grasp of fundamental principles now generally recognized. They said:

"There can be no doubt that such reading ought to be furnished to all, on the same principle that we furnish free education, and in fact, as a part, and a most important part, of the education of all. For it has been rightly judged that, under political, social, and religious institutions like ours, it is of paramount importance that the means of general information should be so diffused that the largest possible number of persons should be induced to read and understand questions going down to the very foundations of the social order, and which we, as a people, are constantly required to decide, and do decide, either ignorantly or wisely. That this *can* be done—that is, that such libraries *can* be collected, and that they will be used to a much wider extent than libraries have ever been used before, and with much more important results, there can be no doubt. . . . To accomplish this object, however, which has never yet been attempted, we must use *means* which have never before been used. . . .

What precise plan should be adopted for such a library it is not, perhaps, possible to settle beforehand. *It is a new thing, a new step forward in general education, and we must feel our way as we advance.*"

Fifty years have passed. The public library is still, comparatively, a new thing; and we are still feeling our way as we advance. But the germ was contained in the few sentences I have read, and those who in 1852 put such considerations before the public, and, immediately, supported by the public to which they appealed, proceeded, with more or less success, to put their theories into practice, deserve to be called the fathers of the public library movement in America.

Their prescience was still more remarkable since they were building far better than they knew. They could not have foreseen the modern city and its peculiar conditions. They were unconsciously aiding, I must believe, in the development of a modern municipal institution, impelled by forces which they did not, at the moment, clearly apprehend.

To-day the public library as an established department of municipal administration meets conditions essentially modern in a field not hitherto occupied. This inevitably changes its character as compared with the great libraries of the past, fixes its policy, and determines its methods of administration.

In this use of the word modern I contrast the present with no earlier period than the mid-nineteenth century. Since then the world for most of us has been transformed. Not only were there then no public libraries of our type, but there were in the United States no cities like those which now exist.

The tremendous industrial changes, within the memory of men still young, have created a social revolution. The old life was self-centered, peaceful, orderly; the new is complex and restless. Then our population was homogeneous, derived from a common source, moved by similar beliefs. Now we have wide contrasts in material condition, severe industrial competition, and many shades of opinion. The incoming tide of immigration, the era of machinery, the friction of class with class, have turned our larger towns and cities into

battle grounds wherein the forces of evil are constantly combatting the forces of good.

Moreover, our ideals of education and of social opportunity are slowly changing. To-day we ask not merely opportunity for ourselves but for every one, without distinction of sex, race or nationality. There is, as Professor Griggs has said, something thrilling in the unquestioning faith and enthusiasm with which the world is turning towards this ideal.

Meanwhile economic changes have forced books to the front as instruments of education more prominently than ever before. The dominant forces in progress in the past — brute strength, personal bravery, material wealth — all these, even the so-called natural resources of a country give place to-day to the general diffusion of intelligence.

"God," said Napoleon, "is on the side of the strongest battalions." If that was ever true, it is not the gospel of to-day. God is to-day on the side of developed intelligence. Precedence in the future will be given to the nation, city or individual whose intelligence is most perfectly developed and applied in the arts of peace.

The highest word in education at present is self-expression. Nevertheless, paradoxical as it may seem, in proportion as books have multiplied and become cheap, they have become more than ever the principal tools of education, the means by which the power of self-expression is attained.

I am aware that pessimists deplore our present literary standards, and nothing is more common, perhaps, than the opinion among scholars that the public to-day has little love for books. In England this is especially marked. A noted bookseller in Piccadilly said, not long ago, "No one can point to a single school in England where boys are taught to make friends of books. No one is taught how to use books, how to get the best out of them, how to be genuinely amused by them all the year round." Even the public library has been criticised as a destroyer of literature and of the literary atmosphere.

On the contrary, I believe that the intellectual life, rightly considered, was never so full as to-day; that the fruits of the intellect were

never so widely applied for the benefit of man; that the experience of the race was never so fully recorded in books as now, and that books were never so generally used as now to the end that what is obtained from them may be turned to useful account. Some years ago Charles Dudley Warner put to the scholar this pregnant question as the present-day query of the man in the street, What is your culture to me? There were never so many as now who could give to that question a satisfactory answer.

The privileges of the intellectual life have been opened to the people, and its opportunities broadened to include those who were formerly without its pale. While there are perhaps no longer the great isolated peaks, the general mass has been raised to higher levels. The intellectual hunger, the hunger of the child, frequently noticed in the adult, the period of intellectual awakening not being entirely a question of years, was never so keen as to-day. It is the purpose of the present to satisfy that hunger; to extend as widely as possible the area of privilege. It is here that the public library finds its peculiar work, and, especially in cities, its administrative success is largely proportioned to the results it achieves in this direction.

Under modern conditions a library, considered as a municipal institution, must be so administered as to reach, as no other educational institution can reach, all classes in the community. Such a library can no longer remain merely a storehouse for books, a museum for the collection of rare volumes, nor a quarry for literary artists.

However important these functions, and I do not question their importance, the peculiar work of a library as a modern municipal institution covers a wider field. The theory that a library exists principally for scholars is not applicable to such a library. Mr. Henry James has recently said, you remember, apropos of a visit to Boston, that "a library without *penetralia* is but a temple without altars." The great public library, it must be admitted, loses something of the poetry, something of the atmosphere of philosophic calm and enviable repose, the exquisite charm that be-

longs to the typical libraries of the past—to the Bodleian, for example, or to the smaller libraries in some old university town. Yet even in Boston there exist *penetralia*, not obvious to the casual eye, else they would not be *penetralia*.

But the library that properly fills its place as a municipal institution must adapt itself to present conditions. There are others than scholars whom it can help, and who do not now use it very largely. Its administration should be directed toward reaching them. It should reach the business man, the working-man, the new woman—I use that term without reproach.

These, except in a limited way, have not yet learned to use it. It must, in short, expand upon its democratic side, and in this way become the intellectual center of the life of the community, the true university of the people, extending, so far as it may be done through books, the gospel of "sweetness and light" and the power of a higher civilization. Since no similar institution was ever needed before it finds few precedents for action, but must gradually evolve them.

From the administrative point of view the functions of the modern librarian, therefore, fall naturally under two heads, namely, to inspire and to direct. Since such a library comes in contact with readers of all stages of development, from the primary school to the university, and deals largely with an entirely untrained public, frequently but one generation removed from illiteracy, and consequently, so far as the resources of the library are concerned, merely children, one of its important functions must be a wise discrimination in the selection and circulation of books.

To the objection that this implies censorship, I reply that censorship there must be, if by censorship is meant that some books are to be selected, others rejected; some freely circulated, others restricted, others not circulated at all. Everybody recognizes, I suppose, that there are unfit books, immoral books—books whose general influence upon the individual, and through him upon the community, is bad. If that is true, there is every reason why such books should not be circu-

lated by a public agency. We who administer a municipal institution have certain responsibilities that did not rest upon the librarian of the old school, or that do not attach to the private circulating library even now. We stand in this matter as the custodians of the public welfare, and have no moral right to disregard our responsibilities. It can only be asked that such censorship as we exercise shall be administered in a liberal spirit, in harmony with the principles of a liberal democracy. We shall make mistakes, undoubtedly, for we are fallible. We may sometimes offend. But just as it is admitted that there must be selection according to high standards in the field of municipal art, even in the sort of gardening that is to be permitted in our parks, or in the character and form of teaching in our public schools, so also there must be discrimination in the administration of a public library. Liberty but not license; freedom but not disregard of the accepted canons of morality to say nothing of taste—these are as necessary here as in other departments of municipal activity.

The notion that one may be turned loose in a library and left to browse, in the serene conviction that the result will be the natural selection of the book best fitted for his reading, is a theory applicable only to those who have already reached a certain stage of mental development, or who have the right sort of appetite, either inherited or acquired. It does not fit the conditions which now exist in our great cities, nor is it applicable in dealing with large groups of untrained persons, of inchoate literary taste, of many different nationalities, and of various temperaments and aptitudes. Such persons need to be helped, if you prefer that word to the less agreeable word "directed." They need to be inspired, to be carried out of their limited and often sordid world into the larger companionship which the printed book, wisely selected, may afford.

It is not a question of departments of literature, whether, for example, much or little fiction should be circulated. Questions of that kind, I take it, will settle themselves once we are agreed upon the direction toward which our administration should tend.

To make better citizens—not merely better voters, but better men and women in all civic relations, this is the prime end of the library as a municipal institution. This may or may not be the end which one has in view in collecting a private library. In that agreeable task one may gratify his private taste, and to a large extent his private whims or fancies. The society or club library, also, may be limited to the peculiar needs of its proprietors. But the public library exists for public ends; its aims are social, not individual.

Since the scholar is necessary to society it must remember the needs of the scholar, and, in doing so, preserve the traditions of the libraries of the past, modified only by the greater demands of modern scholarship. It ought to have its place for meditation and reflection, its rooms set apart for that purpose, dedicated to the appropriate gods, if you please. I have no quarrel with Mr. James on that point. If I emphasize here the more popular phases of its work, it is because these distinguish it from the libraries of older type, and because they seem to me the more important.

Since the civilization of the present rests upon the development of industry and commerce, the library should offer to the artisan assistance in developing his skill, and to the employees in our great business houses the opportunity to broaden their knowledge. There is a great reading constituency in both these classes who might find direct personal benefit within our walls. The shortening of the hours of labor, urged especially that the workingman might have more time for reading, will gradually enlarge this constituency, if we are prepared to supply its needs.

And beyond the utilitarian, there is the cultural use of books—the reading not with strenuous purpose, but for the pure love of it. It ought to be possible, for example, to show the woman who now reads fiction mainly that there are other pleasant places in the fields of literature and to lead her into them; to show the man who reads science or politics mainly that a little fiction now and then may operate as an alternative—that even poetry opens a wide vista that a man of hard common sense might well enjoy; to meet the child just de-

veloping a taste for reading and to cultivate the library habit along other lines than those of the imagination; to take the raw material that is poured upon us like a flood out of the old world, and, so far as books may help to do it, to Americanize it—these are all problems of administration, and the administration that best promotes these things is the best administration of the library considered as a municipal institution.

Questions of cataloging, bulletins, reference work, open or closed shelves—the numberless questions of detail are all to be tried by this standard: Do they help to get the right book into the hands of the right person at the right time, with the least formality and red-tape, or aid in attracting and benefiting the widest possible constituency with the least possible friction.

To summarize, the administration of the public library as a municipal institution, in American cities, at least, tends inevitably toward (1) bringing the book close to the people by means of an organization comprising a central library and outlying branches, co-ordinated under a single administrative head; (2) the confining of restrictions upon access to the book in the building or upon its circulation to the narrowest possible limits; (3) the cultivation of the library habit within the largest possible constituency; (4) direct educational work with the children and with the untrained of adult age; (5) the promotion of the use of books as helps toward enlarging the power of the individual, industrially and otherwise, and toward raising the standard of citizenship and civic responsibility; and, finally, the development of a higher literary taste among readers and the stimulation of a love of reading among those who have not heretofore felt this inspiration.

Shall we succeed in the work we are undertaking? I believe we shall, although it may be frankly admitted that the best municipal library now existing is far from realizing the high ideal I have in mind. But, as against Sisera, the stars in their courses fight on our side.

Below the turmoil and strife of the present, the disheartening array of moral delinquen-

cies, the civic corruption and individual selfishness with which we are at this moment made unpleasantly familiar, there are the great forces that in their own way are slowly advancing upon what Emerson called chaos and the dark. The institutions of society that make for peace and righteousness and civic betterment will not fail. Of these the public library is not the least.

Our task is far from light. I have no roseate dreams about it. It is to educate and guide the community in the use of books; to draw those who have never yet felt the need of anything we can offer them; to open to a constituency which has but yesterday learned to read all the companionship that may be gained from books; to help men and women to a wise and sane use of a part of that leisure which, in spite of the strenuous habit of our modern life, was never so abundant as now. In this we compete with the club, the place of amusement, and other less reputable attractions. In alluding to the work before us Dr. E. A. Birge, in his admirable address before the Wisconsin Library Association, recently said:

"It ought to be recognized that in undertaking this work the public library is entering a new and almost unexplored field of effort, and also that it is trying to extend its influence to classes of the community it has not hitherto reached, and along lines of knowledge which it has never seriously attempted to follow. In such a work there must be many experiments and many failures, and the positive result will be small for a long time." But though we may not reach the many, we shall reach those who by their influence will make good the promise that the future holds.

Thus the library, through the stored-up record of the ages which form its collections, may bring to the hungry present the knowledge of the past out of which we came, that we may cry:

"Mother Age,—for mine I knew not,—help me as
when life begun;
Rift the hills, and roll the waters, flash the light-
nings, weigh the sun.
O, I see the crescent promise of my spirit hath not
set.
Ancient founts of inspiration well thro' all my
fancy yet."

THE SONG OF THE LIBRARY STAFF

By SAM WALTER FOSS, *Librarian of Somerville (Mass.) Public Library*

OH, joy! to see the Library staff perpetually jogging,
And to see the Cataloger in the act of cataloging.
("Catalogs — Log-books for cattle," was the school-boy's definition, —

A statement not to be despised for insight and precision)

Every language spoke at Babel in the books that pile her table,

Every theme discussed since Adam — song or story, fact or fable!

And she sweetly takes all knowledge for her province, as did Bacon,

All the fruit that's dropped and mellowed since the Knowledge tree was shaken,

All the ologies of the colleges, all the isms of the schools,

All the unassorted knowledges she assorts by Cutter's rules;

Or tags upon each author in large labels that are gluey

Their place in Thought's great Pantheon in decimals of Dewey;

OH, joy! to see the Library staff perpetually jogging,
And to see the Cataloger in the act of cataloging.

See the Reference Librarian and the joys that appertain to her;

Who shall estimate the contents and the area of the brain to her?

See the people seeking wisdom from the four winds ever blown to her,

For they know there is no knowledge known to mortals but is known to her;

See this flower of perfect knowledge, blooming like a lush geranium,

All converging rays of wisdom focussed just beneath her cranium;

She is stuffed with erudition as you'd stuff a leather cushion,

And her wisdom is her specialty — it's marketing her mission.

How they throng to her, all empty, grovelling in their insufficiency;

How they come from her o'erflooded by the sea of her omniscience!

And they know she knows she knows things, — while she drips her learned theses

The percentage of illiteracy perceptibly decreases.

Ah, they know she knows she knows things, and her look is education;

And to look at her is culture, and to know her is salvation.

See the Children's gay Librarian. Oh, what boisterous joys are hers

As she sits upon her whirl-stool, throned amid her worshippers,

Guiding youngsters seeking wisdom through Thought's misty morning light;

Separating Tom and Billy as they clinch in deadly fight;

Giving lavatory treatment to the little hand that smears

With the soil of crusted strata laid by immemorial years;

Teaching critical acumen to the youngsters munching candy,

To whom books are all two classes — they are either "bum" or "dandy";

Dealing out to Ruths and Susies, or to Toms and Dicks and Harries,

Books on Indians or Elsie, great big bears, or little fairies.

For the Children's gay Librarian passes out with equal pains

Books on Indians or Elsie, satisfying hungering brains;

Dealing Indians or Elsie, each according to his need,

Satisfying long, long longings for an intellectual feed.

See the gleeful Desk Attendants ever dealing while they can

The un-inspected canned beef of the intellect of man;

Dealing out the brains of sages and the poet's heart divine,

(Receiving for said poet's heart oftentimes a two-cent fine);

Serene amid the tumult for new novels manifold, —

For new novels out this afternoon but thirty minutes old; —

Calm and cool amid the tumult see the Desk Attendant stand

With contentment on her features and a date-stamp in her hand.

As they feed beasts at the circus to appease their hungering rage,

So she throws this man a poet and she drops that man a sage,

And her wild beasts growl in fury when they do not like her meat, —

When the sage is tough and fibrous and the bard not over-sweet;

And some retire in frenzy, lashing wrathfully about,

When the intellectual spare-rib that they most affect is out.

But she feeds 'em, and she leads 'em and beguiles 'em with sweet guile,

And wounds 'em with her two-cent fine and heals 'em with her smile.

Oh, the glee some Desk Attendant — who shall estimate her glee?

Get some mightier bard to sing it — 'tis a theme too big for me!

Now my Muse prepare for business. Plume your wings for loftier flight
 Through the circumambient ether to a super-lunar height,
 Then adown the empyrean from the heights where thou hast risen
 Sing, O Muse! the Head Librarian and the joy that's her'n or his'n.
 See him, see her, his or her head weighted with the lore of time,
 Trying to expend a dollar when he only has a dime;
 Tailoring appropriations — and how deftly he succeeds,
 Fitting his poor thousand dollars to his million dollar needs.
 How the glad book agents cheer him — and he cannot wish them fewer
 With "their greatest work yet published since the dawn of literature."
 And he knows another agent, champing restive to begin
 With another work still greater will immediately come in.
 So perfection on perfection follows more and more sublime
 And the line keeps on forever down the avenues of time —

So they travel on forever, stretching far beyond our ken,
 Lifting demijohns of wisdom to the thirsty lips of men.
 See him 'mid his myriad volumes listening to the gladsome din
 Of the loud vociferant public that no book is ever "in";
 And he hears the fierce taxpayer evermore lift up the shout
 That the book he needs forever is the book forever "out."
 How they rage, the numerous sinners, when he tries to please the saints,
 When he tries to please the sinners hear the numerous saints' complaints;
 And some want a Bowdlered Hemans and an expurgated Watts;
 Some are shocked beyond expression at the sight of naked thoughts!
 And he smooths their fur the right way, and he placates him or her,
 And those who come to snarl and scratch remain behind to purr.
 Oh, the gamesome glad Librarian gushing with his gurgling glee! —
 Here I hand my resignation, — 'tis a theme too big for me.

THE BASIS OF TAXATION FOR PUBLIC LIBRARIES

By JAMES HULME CANFIELD, *Librarian of Columbia University*

LESS than a hundred years ago — considerably less! — any discussion of taxation in this country would doubtless have set as the limitations of government action the necessity of the government itself. In those days we said that the less we knew of government the better, that almost without qualification it was a necessary burden and a social and economic evil which we would gladly put away if we could, that it was an accident or incident of fallen humanity, and that the higher men rose in the scale of rational and enlightened existence, and the purer they became, the less would they need government and the less would they perceive the existence of government. We would have said that the chief purpose of government was to decide in an apparent conflict of rights, or to prevent a conflict of rights; or we would have summed up its sole object in the single sentence that the purpose of government is to secure to all who labor the fruits of their labor.

To-day, however, we occupy much broader ground, and what we really believe to be much more sane and safe ground — although sometimes we fear that the pendulum in its upward swing may go too far. That is a detail, however, of administration, rather than a defect in principle. To-day we say that government is the agent for the people, established to do whatever the people wish to have done. It is no longer simply the common laborer, like one who kindles our fires, sweeps our offices, cares for our horses, and does the other odd jobs of life — leaving us free to give undivided attention to our more important business; but it is the concrete manifestation of a system of co-operation, by which we do jointly everything which we can do better that way than each working for himself.

This statement of course broadens the whole field of taxation.

Taxes may be defined as enforced, equitable and proportional contributions from persons.

and property, levied by the community not only for the maintenance of government but for all public needs and advantage. Taxes are the contributions of the people for things conducive to the common welfare. The citizen pays the tax that he may enjoy the benefits of organized society. The points or expressions in these definitions on which we need to lay emphasis are "equitable and proportional contributions," "public needs and advantage," "common welfare," "organized society." In other words, taxation regards the general benefit and welfare of political society, through which it necessarily but indirectly reaches and advances the individual. It is hardly too much to say that it pays but indirect regard to the individual as such.

It may be remarked incidentally that under this view taxation has no practical limitation except the public welfare. Taxation is arranged for the general good and keeps pace with it. There is really no principle whatever by which taxation may be arbitrarily limited. The effort in nearly every state in the Union, possibly in every state, to fix or to attempt to fix by statute, the limit beyond which taxation shall not go, is a surprising confession of distrust in our general system of government, and of weakness in our system of levying as now administered. Legislation may with entire propriety limit the amount of indebtedness which a given community may incur (because this is placing an unjust load upon future generations and avoiding personal and present responsibility), and legislation may protect the minority by requiring certain definite majorities in order to secure certain expenditures, or possibly by limiting suffrage with regard to certain forms of tax levies. But with no propriety or safety whatever may legislation curtail the amount which a community may be entirely willing to contribute and expend. Economy, frugality, wisdom in expenditure, integrity, cannot be enforced by law. There is too much character involved in each. Then, too, economy and frugality do not necessarily mean small expense or low taxation. Indeed, the connection between the two is so slight as to form almost no ground whatever for judgment in this matter. Other factors are so numerous and controlling that the solution of

the problem of wise taxation goes very lame and halting on this factor alone. If taxes are so collected and expended as to make them a good investment, then they may be carried to any extent that individual expenditure may reach. Taxation may be high and yet actually a matter of profit, as where the cost of water works and a sewer system is more than offset by the general rise in property values, the reduction in insurance rates, the decrease in losses by fire, and a lessening of the expense attending sickness. Or taxes may be high and gladly sustained although bringing no money returns, as in the case of great public comfort, convenience or advantage. Just as an individual may be very willing to limit his expenditures in many ways in order that he may have attractive grounds about his house, or may own a well-filled library, or make a yearly pilgrimage to the metropolis; so the people of a town may, very properly and wisely, make actual sacrifices in personal expenditures in order to secure through taxation efficient schools, a public library, a beautiful park, or some of the advantages of the metropolis in a course of public lectures. All these should be considered rather as extraordinary expenditures, to be met by special action—since for all general purposes taxes may be and ought to be such as to demand no very great sacrifice; but such extraordinary expenditures ought not to be barred by statutory enactment.

We should keep in mind always that the purpose of taxation is to make possible a product of greater value than the amount collected. This is one of the surest tests of the wisdom and integrity of both levy and outlay. Expenditure should be clearly remunerative. Every possible effort should be made to establish the fact that the amount paid to the tax-collector is one of the best investments that citizens can possibly make. Let it be clearly understood that no money is wasted, that public service is just as efficient as that of a private corporation, that schools and libraries and roads and parks are worth all we put into them, and there will be very little hesitancy or dishonesty on the part of the public in tax matters.

It may be well to answer still more emphat-

ically the inquiry as to who are the proper beneficiaries of any collection and expenditure of public revenues. Possibly as communities and states we ought to occupy higher ground, but at present we certainly do very little for individuals as such. Taxes are levied not because the taxpayer wants something, but because the public wants something. The benefits of a tax are not redistributed to each taxpayer according to the size of his tax receipts. Thousands of dollars for making good roads are contributed by people who never ride over them, a large part of the school tax is paid by those who have no children to enjoy the educational privileges thus secured, parks are built and museums are maintained and public libraries are opened by people who never visit them. The results of taxation as enjoyed by the individual are not a great and generous giving upon the part of the community to the individual as such. The welfare of the community as a whole is always in mind, and the direct results to any individual are so entirely secondary as to be almost negligible. In fact, the community may even inflict injury upon the individual for the sake of the community—as when in the exercise of its right of eminent domain it takes a homestead from an individual and creates a highway. It is true that reasonable damages are awarded—but time and again monetary damages cannot make good all the suffering which such action involves.

Having laid this broad yet sound foundation, we find ourselves faced with the question, What is the purpose and intent of the public library? I can answer this most briefly by saying that what is sought by the public library is precisely what is sought by the public schools, and something more. If we carefully analyze this expression "something more," we will find that to education and information the public library adds recreation and that rather intangible and indefinite something which we call culture. But all this comes within the field of legitimate taxation; just as we levy a tax the result of which is to be the utility of good roads, yet make further expenditure for the comfort and pleasure of the traveller by planting shade-trees along the side; just as we create breathing places in a great

city by the purchase of grounds and buildings and the destruction of the buildings, and then beautify the spot by greensward and shrubbery and flowers; just as we teach the three R's, the so-called fundamentals, in the public schools and then add to these fundamentals instruction which develops and directs both ethic and æsthetic taste and is conducive to sound morals.

This brings us immediately to a most important and fundamental view of the public library, the only viewpoint from which we can see it in true perspective and in true relations, the only position which we can assume with any safety whatever when we discuss the question of public taxation, and that is that the public library is an integral part of the public and free system of education. When we have thus determined we are on absolutely safe ground. All public education rests back upon the constitution and laws of each state. No commonwealth has expressed the fundamental reason for public education better than has the state of Massachusetts. Its constitution (Chapter v., Section 2) declares that "Wisdom and knowledge as well as virtue, diffused generally among the body of the people, being necessary for the preservation of their rights and liberties, and these depending upon spreading the opportunities and advantages of education in the various parts of the country and among the different orders of the people; it shall be the duty of legislatures and magistrates to . . . cherish the interests of public schools and grammar schools in the towns." It was with this thought in mind that our fathers and our fathers' fathers planned the scheme of general advancement and enlightenment which in its scope and in its success has far outrun the limits of the initial thought, and has grandly fulfilled all their early hopes.

It was the Puritan theory of life that lay at the bottom of the whole system of popular education in New England. Crude indeed as was their thought of individual responsibility, which always calls for individual intelligence; hampered as they were by custom and prejudice in following even their own ideals, yet they broke new ground and sowed new seed, and under God the increase is our own. It

was a sort of instinct of the race, that quick insight which has marked the American people at every stage of their progress, that ready grasp upon all the details of a practical movement which is so peculiarly characteristic of us—it was this temperament that early appreciated the necessity of general education under public control and supervision if we were to be successful in building a free state in the wilderness. This educational system is not something that has been thrust upon us by a few designing people; it is not a hobby on which some small segment of the public may ride; it is the magnificent result of steady growth under steady and intelligent demand. It is a system organized by the state, maintained by the state, and the wisest and surest means of self-preservation possessed by the state—all of which marks it as a public system, sharply differentiated from any and every form of private instruction.

The state accepts and maintains this educational system quite as much through a sense of necessity as through choice. A free republic without a system of public education common to all would be short-lived indeed, because the intelligence and morality of its citizens are its only safeguards, its only promises of perpetuity, its only sureties of endurance. The act of the state in education is a selfish act; an act grounded in enlightened selfishness it may be, nevertheless grounded in selfishness in the very best sense of a much abused word. It is simply an act of self-protection. It may well accept as the best expression of its reason for being the statement in Washington's Farewell Address that "In proportion as the structure of government gives force to public opinion it is essential that public opinion should be enlightened."

We must not forget that the American people are their own masters, for good or for ill; since freedom means freedom for self injury and cannot mean less. That this may be a mastery for good and not for ill comes this general and public and imperative demand for general public enlightenment and intelligence. The proposition that only an enlightened and an intelligent people can make self-government a success is so self-evident as to make argument but a vain repetition of

empty words. And yet we know that the public school side of our system of free public education is as yet only able to secure five years schooling for the average child in this country—an all too narrow portal through which to enter upon successful citizenship. There is an imperative demand then for the establishment and the development and for the wise administration of that other branch of our system of free public education which we know as the public library.

We must understand clearly that the beneficent result of this system of education, bifurcated if you choose to call it so, is just as possible to the son of the peasant as to the son of the president, is just as helpful to the blacksmith as to the barrister, to the farmer as to the philosopher; and in its possibilities and in its helpfulness is a constant blessing to all and through all, and is needed by all alike. By what may be termed an instinct of humanity all governments from the very earliest day, even before the coming of modern civilization, have recognized that good citizens are more to be desired than great cities, and that to place wisdom and integrity in the service of the state is better than to gather silver and gold. No nation has forgotten this and escaped destruction. No nation is in existence to-day that does not owe its present vitality to a wise observation of this natural law.

The most worthy mind, that which is of most value to the world, is the well-informed mind which is public and large. Only through the development of such, both as leaders and as followers, can all classes be brought into an understanding of each other, can we preserve true republican equality, can we avoid that insulation and seclusion which are unwholesome and unworthy of true American manhood. The state has no resources at all comparable with its citizens. A man is worth to himself just what he is capable of enjoying, and he is worth to the state just what he is capable of imparting. These form an exact and true measure of every man. The greatest positive strength and value, therefore, must always be associated with the greatest positive and practical development of every faculty and power.

This then is the true basis of taxation for

public libraries. Such a tax is subject to all the canons of usual taxation, and may be defended and must be defended upon precisely the same grounds as we defend the tax for the public schools. Only as we place the public library squarely upon this foundation, and entirely within the lines of a great scheme of public education, established for the general reasons and purposes just outlined, can we really defend it at all. Once this position is taken and accepted, we are safe against all comers. And this will make exceedingly simple and plain the general problem of administration of the public library. The community will soon come to understand that their relations to the library are precisely like their relations to the other branch of the system of public education, the public schools; that if they desire any change in administration it must be found in the usual way, through a change of directors at the proper time and in the proper manner. The taxpayer will no more think of insisting that because he is a taxpayer he has a right to demand a certain book or certain books through the public li-

brary, than he will think that as a taxpayer he has a right to demand the instruction of his children in a specific branch or in specific branches which the directors of the public schools have not yet included in the curriculum. There will come also to the librarian the same sense of security that comes to the teacher of the public schools. While each branch of our system of education is wisely under its own directors, a differentiation which ought to be continued, the possible co-operation between all officers and workers in the two at least equal parts of this great field is multiplied indefinitely by a correct understanding of the relations and possible co-ordination of these parts.

Let every teacher and every librarian, therefore, and every director of school or library, every sincerely patriotic citizen, adopt at once as a fundamental proposition the statement that the public school and the public library are integral parts of one great system of public and free education. This makes our educational future absolutely sure for all years to come.

THE WHOLE DUTY OF A LIBRARY TRUSTEE: FROM A LIBRARIAN'S STANDPOINT

By ARTHUR E. BOSTWICK, *Chief of Circulation Department, New York Public Library*

AT a former meeting of this section the present writer had the honor of reading a paper in which he made an attempt to show that the trustee of the public library is the representative of the public and, as such, interested especially in results as distinguished from methods, which are the business of the librarian as an expert administrator. In making this distinction I urged trustees to give particular attention to the formulation of such results as they should consider desirable, that librarians on their part might confine themselves more to the consideration of appropriate methods for the attainment of these results. So far as I know, however, this work remains to be accomplished, and it is because I still think it desirable that I welcome this opportunity of restating the situation and making some attempt to illustrate

it and to indicate what may and should be done in the premises. According to this view it is not only the duty of a board of trustees to consider what should be the results aimed at by its library, to formulate its conclusions, to communicate them to the librarian and then to hold him responsible for their attainment, but everything that the board may properly do may be brought under this head; and to state it broadly is therefore to set forth comprehensively the "whole duty of a trustee," which may serve as the justification of my somewhat ambitious title.

The layman's influence, control exercised by and through the viewpoint of the general public, is a most excellent thing, however much the expert may chafe under it. This is apparent in every art and craft. The expert, the man who has made a study of

technique, of the way to do it, comes more and more to think of the method rather than the result—to elaborate detail and manner and to take keen joy in their recognition and comparison. So it is with the worker in art or in literature, and thus we have what are called painter's pictures and musician's music and poet's poems—works that interest and delight those whose business it is to produce them, but which leave the general reader or hearer cold. It is evident that these, no matter how valuable or interesting they may be from one standpoint, are not the highest examples of their class. Better are the crude attempts of native genius which kindle enthusiasm and arouse the best impulses while breaking every canon of art. Best of all, of course, are the works where the technique and the result are both admirable and where the technical resources of the worker are brought to bear consciously, directly and successfully upon the attainment of the result. And to produce such works two forces must generally co-operate—the trained skill and enthusiasm of the artist and the requirement of the general public that his work must appeal to them, interest them, take them a message. Now this is of interest to us here and now, because, just as we occasionally have "composer's music" and "architect's buildings," so, it is to be feared, we may have librarian's libraries—institutions that are carried on with the highest degree of technical skill and with enthusiasm and interest and yet fail of adequate achievement because the librarian makes the mistake of regarding the technique as an end instead of as a means—of thinking that if his methods be precise, systematic and correct, good results must needs follow, instead of aiming directly at his results and adapting his methods to their attainment.

It is here that the trustee, as the official representative of the general public, may apply a corrective influence. In the case of the artist or the writer this influence is brought to bear generally in a financial way—by a wealthy patron who will order a picture or statue provided it accords with his own ideas—by hostile criticism, public or private, that drives away purchasers. In a public library, public opinion rarely makes

itself felt in this way; indeed, it could do so only in cases where disregard of the public amounted to mismanagement and led to the reduction of appropriations or the discharge of the librarian. Public criticism, as in the press, might also affect a librarian's course; it undoubtedly often does, but it need not; and he may safely disregard it as a general thing. When, however, his board of trustees calls him to account, he must listen, and when it tells him what he is expected to do, it is then his business to devise the best way to do it.

A rough classification and analysis of the results that a librarian may be expected to accomplish may not be out of place here. We may treat them under four heads: financial, educational, recreational and social.

Financial results.—A library must show a good material return for money expended. By this is meant that its books and supplies must be purchased at fair rates, its salaries reasonably proportioned to quantity and quality of services rendered, its property economically administered. A board of trustees is derelict in its duty if it does not require all this, and also hold its librarian rigidly to such requirement. This means that it must, along the broadest lines, know the ratio of expenditure to return in these various departments; it does not mean that the librarian should be hampered by the prescription of details. It means, for example, that the expert administrator should be called to account if his bills for lighting and heating are excessive, and that he should be asked to show cause why they should not be kept within bounds; it does not mean that he should be required to use lights of a certain candle-power or turn off the light in a particular room at a given hour. In most libraries, the making of annual appropriations under designated heads and the requirement that cause shall be shown for a transfer from one of these categories to another, are sufficient measures of financial control.

Among the financial results that have already attracted the attention of the public and hence engaged the interest of boards of trustees is the attainment of a proper ratio of expenditure for books to the expense of administration. This ratio is generally regarded by the lay critic as abnormally small, but

trustees have generally acquiesced in the librarian's explanation of the causes that seem to him to make it necessarily so. It is undoubtedly the trustee's duty to call his expert administrator's attention to this and all other seeming discrepancies in expenditure, and to make sure that they are not carrying the library too far toward technical perfection at the expense of practical efficiency.

Educational results.—It is only right to require that a library should be able to show that it is increasing the educational content of the community, or raising its educational standard, or at least that it is exerting itself to do so, both directly and by co-operation with other agencies, especially with the public schools. A board of trustees is certainly justified in ascertaining by any means in its power whether this is being done, and if not, in asking an explanation of its librarian. Does everyone in the community know where the library is? Is everyone who would be benefited by it making use of it? Is it a help to the schools, and do the teachers recognize this fact? Does the community in general regard it as a place where material for the acquisition of knowledge is stored and discriminatingly given out? These are questions that can be settled not so much by the examination of statistics as by ascertaining the general feeling of the community. It is much easier for a trustee to find this out than it is for a librarian; and trustees, both individually and as a body, should continually bear in mind the value to him of information along this line. Librarians are apt to talk a good deal about the educational function of the library as an adjunct and supplement to the school. It is to their credit that they have made it an educational force not under pressure but voluntarily, as a recognition of the necessities of the situation. But where such necessities have not yet been recognized or where their full import has been slow of realization, the educational side of library work remains undeveloped. Let the board of trustees notify its executive officer that it expects him to look to this feature of his work as thoroughly as to the condition of his building or the economical expenditure of his lighting appropriation, and all such institutions will experience a change of heart.

Recreational results.—Nothing is more im-

portant to the physical and moral health of a community, as of an individual, than the quality of the recreation that it takes. The question of whether recreation is or is not taken need not be considered. Everyone takes recreation; if means for the healthy normal variety are not provided, the other kind will occupy its place. And the healthy, normal individual—child or adult—prefers the first kind if he can get it. With the physical variety the library has nothing to do; but to purvey proper intellectual recreation is one of its most important provinces. Is this adequately done? Is it done at all? Does the librarian exalt other functions of his great machine and neglect this one? The large amount of fiction circulated in most public libraries is generally taken as an indication that the quantity of its recreational content is considerable, whatever may be said of the quality; but this is a very superficial way of looking at the matter. There is educational material of the highest value in fiction and nearly every non-fiction class contains books of value for recreation. Moreover, what may be recreation to one man may be the hardest kind of study to another. The enthusiast in higher mathematics may extract as pure amusement from a book on the theory of functions as his neighbor would from the works of "John Henry." In short, it is very difficult to separate education and recreation. Good work presupposes good play. It is simply our duty to view the library as a whole and to decide whether it contains the means of satisfying so much of the community's demand for recreation as is wholesome and proper. Whether it does this may be judged from the freedom with which the library is used for recreational purposes compared with other agencies. A proper admixture of physical and intellectual amusement is required by everybody; is the library doing its share toward the purveying of the latter form? I do not know any better way of finding out than for the library trustees to use their eyes and ears, nor any more effective remedy for inadequate results along this line than the pressure that they can bring to bear on their librarian.

Social results.—Under this head we may group a very large number of results that are apt to be overlooked or taken for granted.

They may perhaps be summarized in the statement that the library should take its proper place in the institutional life of the community. What this is will depend largely on the community's size and its social content. In many small towns the library naturally assumes great social importance; in a city it may be relatively of less weight, though perhaps its influence in the aggregate may be even greater. Whether it is doing this part of its work properly may probably be best ascertained by comparison with the work of other institutions that go to build up the social fabric—the church, the home, the club, the social assembly. Does the dweller in the community turn as naturally to the library for intellectual help as he does to the church for religious consolation? Does he seek intellectual recreation there as he seeks physical recreation at his athletic club or social entertainment at a dance? And so seeking, does he find? Does he come to regard the library as his intellectual home and the librarian and his assistants as friends? What, on the other hand, is the attitude of the library staff toward the public? Is it inviting or repellent, friendly or coldly hostile, helpful or indifferent? Here is a whole body of results that are, in a way, the most important that a library can produce, and yet it is impossible to set them down in figures; they can scarcely even be expressed in words. The social status of a library is like a man's reputation or his credit; it is built up by thousands of separate acts and by an attitude maintained consistently for years; yet a breath may blast it. Of this position a board of trustees should be particularly proud and its members should do their best to uphold it. If they realize by those many delicate indications that we all recognize but cannot formulate, that the library is failing to maintain it, the librarian should hear from them. They should let him know that something is wrong and that they expect him to right it. If he does not know how, that is an indication that his personality and ability are parts of the failure.

This, then, from the writer's standpoint, is the whole duty of a trustee—or rather of a board of trustees—to see clearly what it wants, to give the librarian his orders, and to require an accounting.

I am frequently struck with the attitude of librarians toward their boards of trustees, not as shown in their public acts, but as revealed in conversation among themselves. A board is apt to be adjudged good or bad, satisfactory or unsatisfactory, as it takes a more or less passive part in the administration of the library. If it acts simply to approve what the librarian does and to see that he gets the necessary funds, it is regarded as ideal. All that most librarians seem to want is to be given plenty of money and then to be let alone. This is a view of the whole duty of a trustee with which I do not sympathize. On the other hand, it is not to be denied that boards of trustees have done much to encourage this attitude because when they are really active in their interest their activity looks too closely to detail. They are then apt to interfere in the regulation of methods rather than to require results and afterward ascertain whether and in what degree these results have been reached.

A board of trustees is the supreme authority in a library. I would have this fact realized in its fullest meaning by both trustees and librarian. And I would have the board exercise its supremacy in what may be called the American manner. The people constitute the supreme authority both in Great Britain and in the United States. In the former country, however, this authority is symbolized by the person of a monarch, who reigns but does not govern; and the minutest details of administration are attended to by the people in the persons of their parliamentary representatives and of the cabinet, which is, in effect, a parliamentary committee. In this country, on the other hand, we entrust administrative details very largely to our chief magistrate and his personally appointed advisers. We tell him what to do and leave him to do it as he thinks best; and though Congress is disposed at times to interfere in the details of administration, these usually consist more largely of departmental decisions and rulings than of definite provisions of a legislative act. The President of the United States is the people's general executive officer and administrative expert in precisely the same sense that the librarian occupies that office in his own library. Congress and the board of trustees bear similar relations to

these officers. And although this may be carrying the comparison of small things with great to the point of absurdity, it shows clearly that the American idea of delegated authority is to make the authority great and the corresponding responsibility strict. That the best results have been attained in this country by following out this plan in all fields, from the highest government positions to the humblest commercial posts, seems to be undoubted; and I believe that the library has been a conspicuous example.

Appoint a good man, then, as your administrative expert; give him a free rein, but not in the sense of allowing him to dictate the whole policy of your library. Decide for yourselves the broad lines of that policy, relying on your own common sense together with his expert advice; require him to follow out those lines to a successful issue, and hold him responsible for the outcome. So doing, you shall fulfil, so far as the limited vision of one librarian enables him to see, the whole duty of a trustee.

THE IDEAL RELATIONS BETWEEN TRUSTEES AND LIBRARIAN

BY MELVIL DEWEY

AS a glittering generality the *ideal* should be mutual confidence, harmony and good will, and the more personal friendship the better. A foolish notion is widespread that the trustee, like the architect, is of necessity the natural enemy of the librarian. The trustee's position in its very nature attracts only the best citizens, who have public interests at heart and give their services freely. Sometimes these best men with the best intentions are out of harmony with a librarian of great ability and high character, simply because their mutual relations have not been defined or understood by either party. The librarian is perhaps justly conscious that he knows vastly more than any of his board about his work, and feels that he should not be meddled with. Unconsciously he is in the attitude of wishing to be a beneficent autocrat in his library world. But our public system will not tolerate autocrats. We demand a legislature with full power to make laws as well as an executive to administer them. The trustees are the legislature. The librarian is, or ought to be, the able and respected executive. The trustees should settle policies and make by-laws. They are responsible to the public, which will not tolerate the excuse of "leaving it to the executive" or "to their associates," as has been made very plain during the recent insurance discussion. The librarian, however able, has no right to ask his trustees to

ignore their responsibilities and give him *carte blanche*, as in many cases, to do exactly as he pleases with the public property entrusted to their care. The best governor in the Union would have little sympathy if he ignored his legislature.

On the other hand, the trustees have no right to usurp executive functions, as is so often done by boards, committees and sometimes even by individual trustees. It is analogous to a member of legislature or a committee undertaking the direct administration of the laws he has shared in making. No one questions the rights of the absolute owner, and yet if because of these property rights he should from time to time seize one or both reins from the driver of his spirited horses, or now and then grab a lever of a great automobile, he certainly would lose his driver or chauffeur, if such were worthy the name. A competent librarian has the same right to have all orders pass through his hands, and to control the purely executive details according to the methods which he has proved will give the best results to the largest number at least cost, that the experienced driver has a right to demand from his employer.

When the trustees recognize this right in their executive officer, and he in turn recognizes fully their supremacy as the law-making body responsible to the public, we shall have an ideal relation between them.

THE NEED OF AN AMERICAN LIBRARY ASSOCIATION COLLECTION OF PLANS OF LIBRARY BUILDINGS

BY CHARLES C. SOULE, *Boston, Mass.*

HALF a generation ago library skies were bright except in one quarter. The American Library Association, founded in 1876, had held a dozen annual conferences. The *Library Journal* had been started as a forum of discussion. The first library school had developed vigorous life. The librarians of the country, at first bewildered and unorganized before the rapid growth of the library movement, had got together and developed their calling from a mere occupation to one of the learned professions. The skies were indeed bright with promise for the future save for one dark cloud that portended disaster.

To hold and shelter the libraries which were coming into existence, to allow full play for their use, to give effect to the labor-saving devices and practical systems of administration which busy brains were inventing, new buildings were needed, especially planned to meet the new wants—needed not only in one place or a few places, but all over a land long fallow, now bursting into a sudden harvest of library appropriations and benefactions.

New buildings had hardly started from the ground when a school of architects and trustees appeared whose motto—to put it barely—was “Show, not use.” An architect, in the columns of a leading newspaper, argued that library buildings should be treated as monuments rather than as workshops, and must be made architecturally beautiful even at the sacrifice of all considerations of utility. Our city of especial culture, our “modern Athens,” planned a magnificent library building without asking advice or even suggestions from the library profession, although there were within its very gates librarians who had acquired worldwide reputation for wise counsel and executive ability. A trustee of that library was reported as saying that it was useless to consult librarians because no two of them agreed on any point of library architecture.

To this slur the American Library Association responded promptly and effectively. At the conference of 1891 a paper was read and unanimously adopted, embodying twenty “Points of agreement among librarians on library architecture.” The first points enforced were these:

A library building should be planned for library work.

The interior arrangement ought to be planned before the exterior is considered.

No convenience of arrangement should ever be sacrificed for mere architectural effect.

A library should be planned with a view to economical administration.

Although these “points” sound now—and sounded then—like truisms, it was stated in that paper that no library buildings in existence conformed to all, and that many buildings conformed to none, of these axiomatic requirements.

The effect of this expression of opinion, and of the propaganda instituted by a committee on architecture appointed by the Association, was immediately and widely felt. It was found that the school of show, which had thus loomed as a threatening cloud on our horizon, was itself more show than substance. Architects throughout the country sought the advice of experienced librarians in planning new buildings—sought so eagerly, so intelligently and so constantly that the thanks of librarians should be uttered at every conference to the architects who have proved their practical American capacity for grappling with new library problems, by solving them in buildings which combine both utility and artistic beauty.

But while so much of the planning has been intelligent, the results have not been wholly satisfactory. Trustees, architects and librarians are fallible. Their solution of library problems, even when guided by the best motives, has not been uniformly successful. Libraries have been built by the hundreds

since 1891, some of them excellent, many good, some half good and half bad, and some, alas! wholly bad. Of these different grades our Association has kept no record. New libraries are projected every week; most of them in towns where there have been no library buildings before, and where librarian, architect and trustees—without experience to guide them—are all at sea. They can get good advice, but advice and theory are not enough—they want models. The question which is often asked of librarians all over the country is this: Where can we get plans of a building costing about (such a sum), which has successfully stood the test of use and is recommended as a model by librarians? The American Library Association Publishing Board appointed a committee some years ago to edit a supplement to our tract on libraries, giving model plans for libraries of various kinds and varying cost; but that committee still hesitates to report, because it cannot find anywhere a collection of plans so comprehensive, so well arranged, so differentiated, as to furnish materials for a selection which will commend itself to librarians in all parts of the United States.

This weak point in our armor is a reproach to the American Library Association.

We began a good work when we presented our requisites and theories of construction, but we have failed to keep pace with the movement we initiated. We have let the embodiment of our ideas grow beyond their control. We have allowed our architectural affairs to come to such a pass that conscientious

builders are about as likely to hit on a faulty library for a model as a perfect one.

And there is no need for such a confusion of results. If we only say the word we can get together a representative collection of library plans with complete records of detail, materials and cost. We can file with each plan the mature judgment of librarians who have used the building since its erection, as to the merits and defects of each of its features. We can so mount and classify and index this collection that an inquirer from any community, from any kind of library, can be referred at once to models both for imitation and for avoidance; to figures of cost; to details of construction and furnishing; to the digested experience, in short, of the library profession of the United States.

Is not this a consummation devoutly to be wished? It is attainable if we so choose. It will need time, it will need money, it will need, more than all, a man—a man of energy and intelligence. But this conference has only to decide to open permanent headquarters for the Association with sufficient room for exhibits. It has only to secure a permanent secretary of proved executive ability. If it opens headquarters and puts the right man in charge the money is sure to come. Our membership of nearly two thousand librarians, all eager for results, all co-operating to the full extent of their ability, will assure a collection of "evaluated" plans which will harmonize and perfect future architecture and give fresh impetus to the planning of practicable libraries.

DESIGN AND CONSTRUCTION OF BRANCH LIBRARY BUILDINGS

BY RAYMOND F. ALMIRALL, *Architect, Brooklyn, N. Y.*

BRANCH library buildings are, speaking generally, either branches of a central library, relatively complete in themselves, or else public reading rooms. In either case they should be positioned throughout a city as convenient and pleasant centers of information and instruction. The comparative advantages to be derived from one or the other of the two types can perhaps only be ascer-

tained by a broad-minded consideration of the real purposes of the public library system.

While it is not my purpose, nor is it within the strict limits of my subject to enter upon a discussion of the public library system, as such, yet it must be borne in mind that architectural design and construction to be fitting must presuppose a full knowledge and appreciation of the objects, purposes, methods and

results of the system or institution proposed to be housed. Architecture is not art alone. It is knowledge expressed in art; and if branch library buildings are to be designed and constructed in a manner appropriate to their usage, a concrete knowledge of such usage, as well as an appreciation of art, must guide the designer's hand.

From my own somewhat extended experience in the character of designs and constructions now under consideration I have found that the purposes of branch libraries, when constituting parts of well organized public library systems, make advisable a similarity of plan in the accommodations and arrangement of floor space. Idiosyncrasies and individual or racial characteristics of readers may sometimes incline a librarian to the belief that fundamental variations of plan are required. But the trend of our national and municipal growth is toward amalgamation, and as the individuals comprising the population grow more homogeneous the library requirements become more uniform. Indeed, the branch library is one of our most effective crucibles in amalgamating and elevating the races, and uniformity of library design itself makes for uniformity of citizenship. Within the walls of a library may be seen a German investigator cheek by jowl with a French critic, and a Russian reader knocking friendly elbow with a Japanese student; all eventually to round out a homogeneous American citizenship.

In my judgment, then, there should exist a type, a common basis of design and of construction with a proper discrimination between essentials and non-essentials, as they may appear in the various applications. It must be observed in this connection that the design should also provide for future growth and development of the library system, to the end that progressive needs may be easily and scientifically met and, at the same time, the cost of operation and maintenance reduced to a minimum.

Practically considered, the fundamental and essential floor spaces with which every design should start are the delivery desk space, the adults' and children's reading rooms, the stack space and the boiler room.

The accessory rooms that make for the better operation of the work and convenience

of the readers in the branch library are the room in which books are received and sent away, the librarian's room, the lunch room, the study room, a small lecture room and public and private toilet rooms. As far as practicable all these rooms should be subject to the control of the delivery desk; and the fundamental necessary floor spaces, previously mentioned, should be subject to direct and easy supervision from the desk itself.

Naturally, then, the location of the delivery desk becomes the most important question in the planning of the branch library building. It must not only provide easy supervision and control, but also offer such convenient accessibility to the public that even children cannot possibly become confused in its use.

Having properly located and co-ordinated the floor spaces with reference to their utility, the question of risk from fire next calls for careful consideration. This question depends not only upon location of the boiler and coal rooms, from which fires might start, but also upon the method of construction employed. To erect a branch building in entirety according to the most modern fire-proofing method would entail a cost so excessive as to be prohibitive. A happy medium is, however, possible, and I am well within the limits of conservatism in saying that if the boiler and coal rooms alone are of fire-proof construction, and the electric work and fixtures properly installed in accordance with the best requirements, there is little chance of a fire starting from the interior. Fortunately, the usages of a branch library do not give rise to the ordinary fire risks. Fortunately, too, the fires of genius may brightly burn, but they do not consume such material things as stone and brick and concrete.

In considering the design and construction of branch library buildings, I could not do better than briefly recite something of the work accomplished by the committee for erecting Carnegie libraries in Brooklyn, with which your distinguished president is closely identified, and of which the eminent architectural scholar Mr. A. D. F. Hamlin is the professional adviser.

These gentlemen, with the single intention of giving a trial to their well-thought-out policy for the most successful application of Mr. Carnegie's large gift, with the proper

spending of which the committee was entrusted, prepared a truly remarkable as well as exceptional program of instructions to their architects. This program not only formulated the requirements in detail of the proposed branch library buildings, but established the relations that should exist between the architects themselves and between them as an advisory commission, and the Carnegie committee, chief librarian and professional adviser.

While clearly defining the ideas of those entrusted with the direction of the proposed works, the program manifested a serious appreciation of the difficulties to be anticipated in the most appropriate working out of the various designs, and while it furnished an ample working basis it was sufficiently elastic to meet any emergencies that arose.

As this program resulted from numerous conferences with librarians, visits of inspection to most of the branch and small library buildings then erected, and a study of all available drawings for such proposed buildings, it was natural that, directed by the experienced judgment of the chief librarian, Mr. Frank P. Hill, and counselled by the mature knowledge of Mr. A. D. F. Hamlin, the committee succeeded in successfully advancing a practical scheme of co-operative work.

The success of the task can be partially appreciated when it is known that after the erection of some fourteen branches it has been found that every need and demand has been provided for. This success is exceptionally remarkable on account of the recent phenomenal growth of the library system; indeed, it may not be too much to say that in this city the problem of branch library design has been worked out with discriminating foresight and broad-minded liberality. The natural result is that a noticeably homogeneous character in the design of the buildings has been obtained and at the same time a greater variety of types than occur in any or all the groups of similar buildings now existing in this country. If I might be permitted to drop into poetry with reference to the group of branches thus evolved, I could aptly quote Montgomery and say that they are "Distinct as the billows yet one as the sea."

In order to aid the advisory commission of architects in a practical sympathy with the project, an initial trip (previous to the designing of the first branches) was made to New England, where, in company with the chief librarian, the branches of Boston and the several separate library buildings in the neighboring small cities were visited and studied. On returning from this trip, numerous drawings of individual and branch library buildings were made accessible to the commission and discussed by them. After working out the first two groups of buildings, the commission, in company with the chief librarian and professional adviser, again visited several cities, including Philadelphia, Pittsburg, Cincinnati and Cleveland, studying critically the executed work and proposed designs.

With this mass of material in hand, the committee and its architects began their work, and have established an easy, quick and yet absolutely thorough method of procedure. Following the preliminary examination of the sketches and their correction, they are reviewed by the commission in conjunction with the professional adviser, and, when satisfactory, forwarded to the chief librarian for correction. Approximate estimates of cost are prepared and presented with the sketches by the architect before the Carnegie committee for approval. This approval is a requisite to the preparation of working drawings and specifications on which estimates are received.

This proceeding is described in the contract between each architect and the committee. These contracts are identical and carefully drawn in accordance with the "Schedule of professional practice and charges" of the American Institute of Architects. In this form of contract it is specifically provided that no one of the architects assumes responsibility for the work of another, which, contradictory as the statement may appear, has really permitted freer criticism than would otherwise have occurred.

After the completion of the working drawings and specifications, estimates are received by the committee. The bid sheet, contract and general conditions are uniform and drawn under the directions of the committee by its counsel. If required to bring the cost:

within the limit, the work is revised until satisfactory estimates are received.

During the construction of the buildings the committee employs a clerk of works who reports regularly to it on the progress and character of the construction of the buildings and on such details as may be from time to time of special interest, though it is not unusual to meet the alert chief librarian and the committee making a tour of inspection to satisfy themselves personally of the progress of the work.

On the certification of the architect that the contract is completed, the committee makes a final inspection and designates a time when it will publicly accept the building, and, through the board of trustees of the Brooklyn Public Library, of which the committee are members as individuals, turn it over to the city of New York.

These practical and far-reaching results have been accomplished only by a co-operative and intelligent effort on the part of all interested in the work, and by a bringing together in harmonious relation of diversified talents.

Co-operation of effort and the interchange of ideas have produced not only branch build-

ings of harmonious design and convenient working value, but have also insured what, in my opinion, is one of the greatest of the desiderata in constructions of the kind. I refer to a pleasing exterior and an inviting interior. The child and adult reader should be welcomed by a sympathetic, comfortable and comforting design and construction, and not frowned upon by a structure characterized by forbidding lines. Persuasion, not repulsion, should be the atmosphere of the branch library, and it is needless for me to outline to so experienced an audience what beneficial effect good architecture has, even unconsciously, upon the human mind.

With inviting and sympathetic surroundings the reader is placed in close and intimate touch with his pursuits, the very atmosphere becomes one of contentment, and in such an atmosphere one can well exclaim, in the words of Heinsius, keeper of the library at Leyden, "I no sooner come into the library but I bolt the door to me, excluding lust, ambition, avarice and melancholy herself, and in the very lap of eternity, amongst so many divine souls, I take my seat with so lofty a spirit and sweet content that I pity all our great ones and rich men that know not this happiness."

LIBRARY ARCHITECTURE FROM THE LIBRARIAN'S POINT OF VIEW

By W. H. BRETT, *Librarian Cleveland (O.) Public Library*

THE erection of a library building involves so many important considerations of location, of surroundings, of beauty, permanence and utility, each one of which must be considered in its relation to the rest, that the task is a difficult one; possibly even more so to the librarian than to the architect; for while the librarian no less than the architect desires to achieve in the fullest degree desirable surroundings, beautiful architectural effect, and good construction, he is, more than the architect, acquainted with the purposes of the library and the arrangements and appliances necessary to effect those purposes. If libraries were similar in size and purpose the problem would be more simple, but under the head "library

architecture" we embrace everything from the single room of the small village library to such buildings as the great structure now being erected in the neighboring metropolis, covering two city squares, beautiful in proportions and external effect, and including within its walls a world of varied activities, among which a circulating department which compares in size and extent of use with many well known libraries, a work positively large, is relatively an inconsiderable incident in the whole.

In what I have to say, I shall endeavor to outline certain general considerations, and speak of two or three special subjects which have impressed themselves upon me. But in so doing I am painfully aware that my

field of vision is comparatively limited, and also that in treating the subject in this elementary way, I am necessarily rehearsing to you things with which you are familiar. Any general discussion of library buildings implies that although differing widely they do involve the same important problems. The problems of the very small library are so simple as to afford little scope for discussion, but their wise solution with the judicious expenditure of even a few thousand dollars is no less important to the small community than is the larger expenditure to the larger one. On the other hand, each great library will invariably include important problems peculiar to itself, and beyond the reach of generalization. Nevertheless there are certain conditions which are almost universal. The first is that the responsibility rests with the board of trustees, that whatever may be the character of the library, the trustees decide that a library is needed and define its purpose. In the work of building it, they have the services of the librarian and the architect, each as their expert advisers, each in his own field, their right and left hand supporters, so to speak. The board has charge of the funds and knows the resources of the library. It decides as to the character and purposes of the library, the collection to be housed, the work to be done, and the amount of money to be spent. The librarian is its expert adviser as to that which is necessary to carry out these purposes—the space necessary for the various departments of the work, their relation to each other for convenience and economy, in short all the facilities for the selection, receipt and preparation of books, for their safe keeping, and for their use in and out of the building. It rests with the architect to enable these purposes to be carried out, to clothe these plans with the material garb, to transmute these visions into a substantial reality. Stated in this way, this seems very simple. The custody of the funds, the decision of important questions, responsibility of expenditure and results, rest with the board, the librarian being its expert adviser and supervisor as to all questions of library arrangement, the architect being its expert adviser and agent as to plans and construction.

The lines may be thus clearly drawn and each has its definite province. As a matter of fact, however, the best result is only obtained by a cordial collaboration of all, from the very beginning. In the preliminary questions to be settled by the board, as to the scope and character of the work, the advice of the librarian should be of value, and as soon as the question of a site comes to be considered, the architect may also well be called in, and, indeed, he may want, in addition, the advice of his co-worker the landscape gardener. In planning the building every question must be decided with reference to convenience and effectiveness, the librarian's province; with reference to proper construction and beauty, the architect's province; with reference to purpose and cost by the board. It is significant that we have in our discussion of the subject to-day the help of our friends, the architects, significant that we are realizing more fully the need of this close co-operation. It might be still more significant if this were a meeting of architects, and certain librarians were present to take part in a discussion of library buildings. However, I realize, as I say this, that the comparison suggested is hardly fair, in that while the subject of library buildings is of prime importance to the librarian, it is only one of several of at least equal importance in the field of the architect.

Among the various questions that come up for consideration in planning a library building, that of permanence is an important, a fundamental one. The general inclination is toward a permanent building. We like to feel that we are erecting an edifice which will endure through the changing years; will be of service to coming generations. We would use granite and marble and lasting bronze, material upon which the tooth of time will dull itself. But this is a question which has two sides. Only twenty years ago, two of the best, if, indeed, they were not the two very best library buildings in the country, were the Boston Public Library and the library of Columbia University, one at that time less than thirty, and the other possibly three years old. Both of these have been for several years out of use, and replaced by greater buildings. It is a question to be

carefully considered whether given, as usually is the case, a fixed sum to expend, it is not better to build the larger, more commodious and convenient building which the lighter construction will permit, and secure moderate permanence, than the smaller, more massive, more enduring building.

A question closely connected with this, depending upon it in a measure, is that of safety from fire. How fully should this danger be taken into account in planning a library building? My own view of this is, briefly, that there are two distinct questions involved: the really valuable collection, the rare, the irreplaceable should have all the protection that it is possible to give. This would include most reference libraries, the library of the student and scholar, but the popular circulating library is something entirely different; the books are modern, may be replaced, represent merely investment; their loss may be fully covered by insurance.

This consideration should also govern the methods of using a library which must be provided for, in planning the building. My own view may be stated very briefly: the greatest freedom in the use of all that part of the library which is of general interest and not of unusual value; the greatest care in safeguarding all that is rare, unusually valuable, and difficult to replace. Another question of importance is that of future expansion. We must consider not only the present, but the future needs of the library. Too much library building has been done without reference to either the present or the future. The building has been built and the library must fit itself to it. The consequence is a ready-made clothing effect. When a tailor is to make a suit of clothes he looks the man over, measures him carefully, fits all his peculiar angles, and tries on until the result is satisfactory. The clothes fit, but the man has no room to grow in them. Library building is more difficult. It is very often like the problem of making a suit of clothes for a ten year old child, which will serve him now, and not only fit him when he is a man, but also serve for each of the intervening years. In other words, to build a building for a small library which will also serve it when the growth of ten, twenty, or
